At Obidos I was in luck. My letters to the *delegado* and the *padre* were invaluable. Another letter to a *commerciante* put me in possession of a good room, and I soon had my little chest, double rifle, fishing tackle and hammock in good shape. The *padre*, Senor José Gualdina, introduced me to the best guide in Obidos, one Senor Dom Diego, who had just finished a *montaria* 28ft. long by 30in. beam. The *montaria* was thought to be the swiftest within a thousand miles. Dom Diego, with his crew of three *tapuyos*, had been practicing with her for three days before my arrival, and he was just hankering for a party to "take care of." I was his customer. In ten minutes we had struck a bargain, by which I was to pay $4 per week for *montaria* and crew, with rations, the voyage to last as long as I chose.

I gave him *carte blanche* on the *commerciante*, as regarded her outfit, and he did not abuse confidence. I laid in my own small stores to suit myself, and in two days we were off.

Dom Diego spoke the *lingoa geral*, Portuguese and a little English. The *padre* spoke English quite intelligibly. He made a bad mistake when he solemnly turned me over to Dom Diego as a sort of helpless babe-in-the-woods, to be carefully looked after, kept out of danger, and returned at the end of the cruise in sound condition. For the lithe, muscular *puntero* chose to consider himself as a sort of dry-nurse thenceforth, and the way he assumed charge of my physical safety and well being was most exasperating. For instance: The *padrone* or *capitaine* of a river boat is supposed to sit aft holding an umbrella over his head, while his crew do all the paddling—a style of amusement that is apt to become monotonous after the few first hours. Now, I had bought a fine Indian paddle in Para; and was disposed to use it, at least enough for exercise. But hardly had I made a dozen strokes when the Dom walked aft, calmly took the paddle from my hauds, and politely substituted the spread umbrella in a fatherly, superior way that led me to conclude that he thought that I thought myself not so much *capitaine* as an infantile charge.

Again, with the wonderful fish stories of Prof. Agassiz in mind, I had laid in a supply of handlines, squids and artificial minnows, all of which had failed to take fish on the lower Amazon. But I said that this might be on account of the muddy water, and the Trombetas was clear; just the water where fish ought—if anywhere—to take a spinning bait. So I got out a trolling line with a bone squid for a lure, and commenced fishing, when the Dom walked calmly aft, and remarking that it was *no bono*, commenced hauling in my line.

A man may take implements of manual labor away from me, paddles, hoes, axes, etc., and not excite me to a high pitch of wrath. Interfering with my hunting or fishing arrangements is a different matter altogether. Whence it happened that he got a furious box on the ear, at the same time the line being snatched from his hand. He took it with a look of reproachful surprise, as a mother might take a blow from a spoiled child, but subsided at once, and thereafter allowed me to fish as I pleased, only remarking that it was *muito mal, no bono*.

For an hour or more I towed the long line behind the swift-moving *montaria*, and then there was a jerk that nearly took me overboard. I thought at first it was a snag, but it turned out a veritable fish, and a lively one withal, also exceedingly handsome. I was obliged to call on one of the crew to help get him alongside, where he was stunned with a blow from a paddle and taken on board. He was entirely new to me. In color he was similar to a salmon trout, but his mouth was like that of a catfish, only not so coarse, and he had long barbels or streamers on either side of the mouth that were longer than his body. The caudal and dorsal fins were very much curved, and the outer spines of each were also ornamented with long pennants that streamed behind as he swam. And he was useful as well as ornamental, being excellent when cooked. I estimated his weight at 50lbs. Thereafter no attempt was made to interfere with my fishing, nor did we lack fresh fish.

* * *

On the whole, the trip was most interesting. The canoe, long and narrow, shot up the stream with marvelous speed under the four well-handled paddles, the scenery was constantly changing, and every mile brought to view something strange and novel. The hills on the Trombetas are higher, and approach the Amazon more nearly than those of any other tributary, so far as I have seen.

It seemed wonderful to me that so many *canos*, *furos* and *igarapes* (all meaning channels) should lead away from the river, away back into the unexplored, gloomy forest to heaven only knows where. No guide of the Amazon, not even Major Coutinho, ever was or ever will be acquainted with the interminable windings of these mysterious, endless water courses. Starting from the border line of Peru and Brazil, there are fifteen large tributaries which enter the Amazon between Tabatinga and Para. And there is not a living man who is a competent guide for any one of these, with its complicated network of waters. Human life is not long enough to learn the lesson. Local guides there are on every river, men who know the tortuous channels for hundreds of miles. But don't trust them too far. Their reverence for the educated white man, with his superior outfit, may lead them too deeply into the complicated depths of a trackless forest. Remember that the Amazon rises at certain points as much as 40ft. in the rainy season, at which time all creeks, *canos* and feeders set back into the forest with a strong current. Then the dry season approaches, the main river falls rapidly, and countless thousands of *canos*, creeks, etc., reverse their courses and flow toward the Amazon. Of course, at certain stages of the water some channels will have no perceptible current, while others will flew outward, and still others will be flowing to the central stream. And as of the Amazon proper, so of its larger tributaries; making a wilderness of waters so labyrinthine, puzzling and bewildering, that no one man is or can be a competent guide for the water channels of a single large river.

Probably this accounted for the fact that Dom Diego persistently refused to leave the main river for more than two or three miles, though I desired to make longer explorations, and called his attention to the fact that as it was the dry season all side streams must be flowing to the river. He in turn explained that there were several main rivers; that the back channels, *furos*, *canos*, etc., flowed to all points of the compass; that we might follow some of them for a week and then come out at last on the Amazon, or we might get lost. Then there were crocodiles, jaguars, and last, but not least, *gentes*, savages, who would ambush us and shoot poisoned arrows from their *pucunas* or blowguns. This last was the thing he feared—perhaps with good reason, for the Indians of the Amazon, who refuse to be domiciled in villages and submit to the domination of the priests, are treated precisely as on a footing with wild beasts; and in return it must be confessed that they do shoot poisoned arrows when they get a chance.

We were longer reaching the first rapids than was at all necessary, for I frequently ordered a halt for the purpose of exploring or hunting where the ground looked inviting, and also to climb some of the mountainous hills that seemed easily accessible. Truth to say, the hunting was not good, and one soon gets enough climbing in that climate, where, the blood being heated with the mercury above 90°, it is not easy to "cool off."

We saw many jaguar tracks, and at one point a well-worn path, where tapirs had a runway from the river to their feeding grounds, but the animals kept out of sight. At several places the Indians called my attention to the feeding grounds of the *peixe-boy* or fish-ox, but although I offered a new hickory shirt as a bribe, they could not put me on to a shot at one. Howling monkeys, spider monkeys and other simians were plenty enough, and the Indians, who like them cooked, were anxious that I should kill enough for camp use.

I tried it once—only once. They ran me up a channel in the direction of a band of howlers that were making more racket than a pack of wolves, and we happened to cut them off just as they were laying plans to cross the *igarape*. There were only six of them, but they made noise enough for six hundred. As the *montaria* came swiftly up they became silent and took refuge in the dense foliage of a huge *sipo*, where, had they chosen to remain in hiding, they would have been safe; but curiosity got the better of caution, and a face was constantly being poked through the leaves with a comical look of fear and inquiry. Finally, the one who appeared to act as leader showed within 30ft. of the ground and I dropped him with a bullet through the neck. As he lay at the roots of the *sipo* (pine), bleeding to death, he gave me a look of pitiful appealing misery—a look of little-old-man horror and reproach that haunts me to this day. The Indians made a stew of him, of which I did not partake; nor have I ever drawn a bead on one of the species from that day to this, despite the constant urging of my crew to shoot monkey enough for camp use.

I seldom went on shore where the land was high and dry without flushing the *n'ambu*, a bird with the markings and appearance of a wild turkey, but about the size of a common hen. I was anxious to get one, but the sudden flight, the thick foliage, and the fact that I could not catch one sitting, left the double rifle in a decided minority. Diego had a cheap .20cal. Belgian gun, which he never loaded with anything smaller than No. 1 shot, and with this he killed several *n'ambus*—always sitting. He did not think of shooting on the wing. When, subsequently, I borrowed his gun and cut one down on the rise at the first shot, he was half in awe of his gun, evidently thinking it bewitched.

* * *

What, with frequent landings and short excursions inland, it was late on the third day when we arrived within hearing of the lower cascade, and the *montaria* was turned sharply into the west bank, where there was a fine camping ground, with a *barrata*, or cabin. The cabin consisted entirely of posts and a *paula*, or palm-thatched roof, being open at sides and ends. The *paula* was well laid and rain proof, though not proof against reptiles, for hardly had we taken possession when a black scorpion dropped from overhead, and, with his tail elevated for fight, commenced to make his escape. He was despatched without ceremony, and Diego commenced punching the *paula* with a pole. This brought down a coral snake and a shower of spiders. I had misgivings about swinging a hammock where reptiles seemed so numerous, but Diego assured me it was all right; and, thinking I could stand as many snakes and scorpions as the next of the party, I stretched my hammock athwart the *barrata*, and prepared for a stay.

The spot was well chosen for a camp, and had evidently been used a great deal as such. The *barrata* was 20ft. long by 12ft. wide, and the open sides made little difference in that climate. The site was on dry, high land, in an open palm grove, and the soft murmuring roar of the rapids above came to the ear drowsily in the still night, with somnolent effect. And here, at last, just below the *caxoeiras*, were fish in such abundance as I had never before seen.

Probably salmon in the spawning season are more numerous in the rivers of Oregon, but these were of many varieties and did not come there to spawn, but to feed. And, so far as I could learn, they remain a constant quantity all through the year, not only on the Trombetas, but on the Toc-an-tins, the Tapajos, the Madeira and all tributaries where there are *caxoeiras*. At the foot of the rapids I selected a clear spot just opposite a promising pool, and whirling a bone squid around until it had sufficient impetus, launched it 30yds. away. As it struck the water several large fish dashed savagely at it, and one was hooked on the instant. He fought gamly as a trout, and my fingers were bleeding before he was finally landed. I judged him to weigh about 20lbs., and he had the general appearance of a Spanish mackerel, with the addition of rich carmine markings along the lateral line, and slender, graceful pennants on the first rays of dorsal and caudal fins. A handsome fish, and also game, making several high leaps before coming to hand. Two more casts resulted in as many fish, one of them similar to a yellow perch; and then it struck me I had enough, quite as many as the camp could use; and I do not fish nor hunt for the love of slaughter.

Just then Dom Diego appeared to me. In fact, he was always appearing. He was simply obeying the *padre's* injunction to take care of me, keep me in sight, and bring me back safely. I could not get away from him. When I thought myself alone there was always a silent, coffee-colored shadow on my trail, keeping mostly out of sight, not interfering with my movements and always within easy call. I came to like it. A Brazilian forest is a fearful place in which to get lost, and it inspired confidence to know that I always had a muscular, competent guide within whistling distance, and the Dom was cheap. A single guide in the Adirondacks, at home, would have cost me $3 per day and his board, say $4 per day. Here I had a crew of four men, with a first-class *montaria*, for $16 per month.

The Dom gathered the fish on a hooked stick and led the way to camp, where he took the liberty to explain that it was not at all necessary for me to fish, as the crew could take a week's supply in an hour by stunning them with a paddle; in proof of which three of them paddled out near the foot of the rapids, and returned in half an hour with more than 50lbs. of fine, large fish. They had a way of dropping some sort of lure overboard, and as the fish rose eagerly to it, they would select the finest at a glance and kill him with a sharp clip of the paddle. Such a plethora of large, handsome fish, allowing themselves to be slaughtered so foolishly, rather cooled my ardor as an angler; though I still claimed the prerogative of taking what we needed with hook and line. But the sport would have been much better had they been scarcer and harder to take.

* * *

It had been agreed that the *montaria* should go as far up the river as she could be taken in a month, or should stop at any point on the river I might chose, as long as I wished to stay, and I had intended to ascend for some two weeks, go into camp for a few days, and take one week for the return. But the 28ft. canoe of green wood proved too heavy for carrying, and it was such a man-killing job to truck or tow her up the *cavoeiras* that I gave it up at the first trial, and contented myself with making trips up the river on foot. On these trips I was always accompanied by Diego, whether I chose or not, for it was useless to order him not to follow me. He would mildly say "*Si senor*," as we say yes, to please a child: and when I was out of sight, pick up his old shotgun and stick to my wake all day. Sometimes I would not see him for hours, but I always knew he was not far off, and that if needed a shrill whistle or halloo would bring him to my side in less than two minutes. Oftener, however, I would have him along and let him precede me as guide.

Very interesting, very pleasant, were these foot excursions, sometimes up the river, sometimes into the deep, gloomy forest, at other times climbing one of the mountains that Prof. Agassiz says nowhere rise to an altitude of much more than 700ft. They looked much higher, and climbing one with the thermometer at 90° in the shade did not detract from the altitude. Once on the summit, however, one was well paid for the hot, toilsome climb. To the west and south the view was only limited by the power of vision, one vast, unbroken, monotonous forest, not of living green, as most people suppose, for a Brazilian forest is mainly composed of deciduous trees, and there is not a month in the year in which a portion of these are not bare and leafless. This gives, on a broad and distant view, a sort of dingy, brown foreground that is not pleasant, and as the endless dead-level landscape recedes into dim, smoky haziness, the scenery becomes absolutely depressing and dreary. Standing on the highest point of one of those mountains, I have gazed at the stupendous waste of wilderness until my senses seemed leaving me and drifting away to the bewildering labyrinths of these never-to-be-explored, mysterious regions, and it was with a feeling of relief that I turned to the northward and westward, where the monotony was relieved by successions of hills and mountain spurs.

There has been a deal of nonsense, written and spoken, concerning the wonders of tropical scenery. Mashallah! it is bosh. A bright June or October morning, viewed from a high spur of the Alleghanies or Adirondacks, is worth all the dull-dead-level scenery between Para and Peru.

I soon tired of climbing and took to long daily walks up the river or hunting about the *campos* and in the forest. (A *campo* is a small or large prairie-like meadow.) I haunted and hunted the *campos* a great deal because it was there that the beautiful little Brazilian deer came to feed in the evening or early morning, and I was anxious to secure a specimen. They are the neatest and most graceful members of the deer family it has been my good fortune to fall in with, and I think they are less than half the size of the Virginia deer, which they nearly resemble in every point except size. They were very wary and not to be had easily. Moreover, on the level dead-grass colored meadows my judgment proved faulty on distance, and my first shot fell far short. I amended this one morning when Diego drove a buck and two does within 30yds. of my stand, having made a detour of more than a mile to get on the far side of them. As they were loping leisurely past I sent a bullet through the buck's vitals and he subsided at once. A splendid little fellow he was, with a set of five pronged antlers, very symmetrical and very light—a similar pair of antlers from the head of a Virginia deer would weigh thrice as much. He was scarcely heavier than a black sheep, and Diego, wrapping the deer around his neck and bringing the legs forward, carried it whole to camp.

The buck was plump for that climate, but there was no fat on him, and the meat, though sweet and juicy, was tough, as is the case with all wild meat in the tropics. By dint of much hard pounding with the hatchet head I managed some excellent broiled steak; but the bulk of the meat was used by the crew in making a sort of hotch-potch stew, of which the basis seemed to be the fiery little peppers of the country. It was many degrees too hot for a northern palate.

* * *

Above the lower rapids, and two or three miles from the *barrata*, there was a fine, clear stretch of river, some two miles long by half a mile wide. The banks were rather open, rocky, and mainly free from jungle; and here it was that peccaries, deer, and even the lordly jaguar delighted to resort at night. The two first came to feed on the banks, drink and bathe. The jaguar came to fish. Now, if there was anything for which I was hankering, it was a fair shot at a jaguar; and I explained this fully to Diego, who simply threw cold water on all my plans in that direction. If I were to believe him, the jaguar was the most dangerous animal that roamed the forest. He could seldom be killed with a single shot, and always attacked the hunter who wounded him. Then, he was so powerful! Why, he could kill and drag off a *peixe boy* weighing more than a thousand pounds; and one could only get a shot at night, when the aim was uncertain. Much of which was true. All the same, I ordered my crew, who were mostly idling about camp, to build a new *barrata* on the west bank of the still-water, about half a mile above the rapids. People work very leisurely in that climate. Four pairs of strong hands were two days getting up and thatching a *paula* 10×12ft. But when done it was fresh and rain-proof. It was also a more pleasant camp than the one below, and I came to pass more than half the nights in it.

And here a word about my crew. Dom Diego, who liked to be called by his full title, is already sufficiently outlined. He was strong, active and faithful. Manoel, a light, tall Mameluco, a good paddler, but, after the manner of his race, indolent. Pedro, a Muri Indian, short, strong, a good worker, but surly and reticent. Lastly, Antone, a brisk little Cabozo from the Rio Branco; the best axeman of the crew, good-natured and a tireless paddler. On the whole, my crew was a good one. Perhaps decent treatment, good pay and no attempt to take unfair advantages of them made some difference. At all events, if I were about to make a canoe voyage in the Amazon valley, I would be glad to take my chances with the old crew.

* * *

In a general way we may reckon the grand valley of the Amazon at a length of 2,000 miles and a breadth of 500. Not reckoning the smaller streams, there are over twenty affluents, each of which is a large river, besides the three large streams which give the Amazon its grand inaugural from the base of the Andes. There are more than fifty smaller rivers, all of which are navigable by common river steamers many miles from their mouths.

Let us assume that the valley of the Amazon proper is that low-lying portion through which, in the rainy season, water will set back from the main river to the higher lands beyond. The distance will vary greatly at different points. On the Madeira we shall have over 400 miles of navigable river before reaching the *caxoeiras* or rapids, and the rapids extend for over 300 miles. Once past the rapids, there is more than 1,000 miles of navigable river among the plateau lands of Bolivia. The *caxoeiras* of other rivers, notably the Trombetas, are scarcely more than fifty miles from the mouth, and the rapids may not cover more than a score of miles.

Now, a northerner, making a canoe voyage through the low, swampy lands of the valley, is apt to consider himself in a very unhealthy region. But, on arriving at the *caxoeiras*, where bright water dashes and foams over clean, cool-looking rocks, with high, dry banks on either side, he infers that he has reached a much healthier region. The exact reverse is the case. With proper care one may live a boat-life along the Amazon for months, with no especial danger to health.

But every *caxoeira* is a Pandora's box for malarial diseases.

A little reflection will make this plain. All the larger affluents rise on the higher lands, far back from the Amazon, and as a rule, flow for a long distance through regions nearly level. In such a climate and country it goes without saying, that a deep, calm river, having a run of from one hundred to a thousand miles without break of surface—save from the ruffling of the breeze—must of necessity receive and retain an incalculable amount of minute vegetable and animal matter, which, being of about the same specific gravity as water, is quietly carried along with the current to the point where the plateau ends in a steep decline to the valley. Here the water is dashed and tumbled over a succession of rocky cascades and rapids until the whole volume has been aerated over and over, and all that it holds of malarial evil has been set free. Hence it is that the most unhealthy localities of northern Brazil are found near the *caxoeiras* of the larger streams.

I was well aware of all this, but I chose to consider myself exempt, and was not in the least surprised when the tall, graceful Manoel succumbed to a mild attack of *sezoengs*, and announced himself a subject for medical treatment. I dosed him with *cachâca* (raw cane rum) and quinine, which is the orthodox treatment; but he got no better and wanted to go home. All my crew complained bitterly of insect bites, and with good reason. The *moquims*, *sancudos*, flies, etc., were a constant quantity, active and venomous, and the scanty clothing of the natives affords little protection against them. None of the men had mosquito netting or any preventive. I had both and suffered comparatively little.

As regards these pests I cannot do better than quote from Herndon's "Valley of the Amazon," page 309: "From the rising to the setting of the sun clouds of insects blind the traveler, and render him frantic by the torments they cause. Take a handful of the finest sand and throw it above your head, and you would then have but a faint idea of the number of these demons who tear the skin to pieces." It is hardly exaggerated. I have seen northerners who had spent a season on the Amazon, whose faces and hands were turned to a dingy blue color by the bites of poisonous insects, and this in spite of the fact that they had mosquito nets, which afforded partial protection at night.

The comparative immunity I enjoyed from the bites and stings of these pests was attributable to the copious use of a "fly medicine," that I had found effective in the swamps of the north, where mosquitoes and gnats are nearly as bad as in the tropics. As it is cheap, simple, wholesome and inoffensive, I will give the recipe for the benefit of future travelers. It is as follows: Three parts pine tar, two parts castor oil, one part oil of pennyroyal. Simmer and mix thoroughly. Bottle for use and shake before using. Apply copiously at first until a good glaze or varnish is established, and don't wash it off, but add to it from day to day. Cleanliness may be next to godliness, but poisonous insects are simply diabolical.

* * *

It was in the new of the moon that the new camp was made above the rapids, and there was scarcely an evening on which I did not get out before sundown to hunt and haunt the banks of that placid river stretch for two or three hours. Tracks of the peccary, deer and even the jaguar were numerous and fresh, but the animals had a knack of keeping well out of sight. A week of pretty faithful hunting resulted in shooting one little deer and a stray peccary. I could do better at home.

It was not until the moon was nearly full that I managed to strike anything like an adventure—the party of the second part being a huge alligator, which was lying flat directly across my path. Mistaking him for a log, I was just raising a foot to step on or over him, when he suddenly raised up breast high, and, as I instinctively squatted to the ground, his powerful tail swept over me with a force that would have killed an ox.

I squattled away on all fours with more speed than grace, got an offing of some thirty feet, and gave him a couple of bullets just back of the foreleg in much less time than it takes to tell it. It altered his belligerent notions very sensibly. He scrambled down the bank and plunged into the river with a guttural, savage bellowing noise, like a strangling hog. And there, at my side, was Dom Diego. I had not seen him in two hours, but he had never lost sight of me. He was following the *padre's* injunctions—to bring me back safely. Just as he was giving me a mild scolding in bad Portuguese, the wounded cayman rose to the surface and commenced swimming aimlessly about in a zigzag manner, all the time keeping up a low, grunting, bellowing noise. Diego said he was mortally wounded. As my nerves were too much rattled for rifle shooting, we went to camp.

On the following day we made a canoe excursion several miles back from the river. Pedro, the Muri, was the only one of the crew who could use the *pucuna* or blow-gun; and he had one with him at my request, for I wanted to see it perform on game. Hitherto he had only killed small birds with it, but on this occasion he had a fair shot at a large howler, distance about 30yds. On receiving the slight missile the monkey quietly disappeared in the thick foliage, and for several minutes all was still. Then he came tumbling to the ground, stiff and helpless. He looked at us with a wild, terrified look, that I thought showed intelligence; and I judged that while the nerves of motion were paralyzed by the *wourali* poison, eyesight and consciousness were comparatively unaffected. It was half an hour before he was fairly dead. The crew converted him into a stew. I did not partake of it.

That evening I went again to the still water and met with another incident. It was hardly an adventure, but may be worth relating. Let me premise that a mile above the rapids there was a strip of clean, sandy beach, and in the edge of the river there were large rocks, several of them flat, and rising only a few inches above the surface at low water. Here it was that the jaguar came to fish. We saw his fresh tracks every day; but, though I had watched every evening for a week, I had not caught a glimpse of his spotted hide. Now that the moon only lacked one day of being full, I decided to watch until after midnight, or until the moon was low enough to throw the shade of trees over the western bank.

It was a tiresome vigil. The *sancudos* and mosquitoes drifted into one's face in a way to suggest a sifting of coarse sand; and though they did not bite through the glaze, they were quite capable of getting into ears, eyes and noses. I stood watch about two hours, when, having seen nothing to shoot at, I became tired, and started up the bank for a walk of a few hundred yards, then to return to camp. Some eighty rods above the rocks there was a clean grassy bank of some forty yards long by half as much in width. It was of a light, dead-grass color in the moonlight, and I had come to look on it as a land mark. On the present occasion I noticed as I approached it a dark brown patch right across the path, that I was certain I had never seen before. Still I walked on, and was within twenty yards of the patch when a voice behind me said tremulously, "Oh, senor! come back, wild pig!"

It struck me like a revelation.

There they were, a solid, silent, close-packed drove of peccaries, all heading toward me, their sharp noses and lance-like tusks ready for fight or flight, as circumstances might dictate.

Quietly and silently I changed step to backward march, cocking the rifle as I did so, in case of a sudden charge. There was a slight rustling and changing of positions in the closely-packed, brown mass, and my hair fairly stood on end as I thought they were about to charge, but they kept the peace. And I never saw a crowd I was so glad to get away from. An attack by a drove of peccaries, with no available tree at hand, means a horrible death.

* * *

It was on the very next evening that these vigils were at last rewarded by my first and last chance at a jaguar. I was watching near the rocks just after sundown, standing in the shadow of a palm tree, when a long, yellowish animal came gliding into the grassy open within twenty-five yards of me. My heart gave a hard thump and then stood still as I realized that I had a large jaguar at last within easy range.

Silently and quickly the cocked rifle came to its place as the practiced eye got the perfect bead; a moment more and the bullet would have done its deadly work, when a shadowy brown hand seized the rifle, elevated the barrels to an angle of 45°, and a powerful arm was wound about my waist with a vise-like grip, dragging me rapidly backward.

Diego, the faithful Diego, was there!

Disregarding orders and objurgations, he kept up a steady quick retrograde movement until we were out of the animal's sight. It was the culmination of cool cowardice.

The jaguar calmly raised its head and gazed after us with a wild wondering look, not at all as if in fear, rather as if debating whether this new game might not be preferable to fish.

When Diego had dragged me to a safe distance he released his hold, only remarking that he had saved my life.

I said nothing on the way to camp, but put in the time mentally arranging my scant stock of Portuguese and *lingoa geral* in the most abusive forms, mixed with some terse Saxon expressions that I thought might hurt his feelings. On arriving in camp I let him have it. I showered abuse on him in a jumble of three dialects for a quarter of an hour, but he was imperturbable, listening indulgently, as to a spoiled child. I grew pathetic, and explained that I had journeyed nearly 4,000 miles, my chief objects being the shooting of the jaguar and *peixe-boy*, or *Paca morina*. And his cursed meddling cowardice had defeated the prime object of the expedition. He listened patiently and acquiesced with a polite "*Si senor*." I was beaten.

* * *

I had half a notion of ordering a return on the following morning, but we had plenty of supplies, and one of the leading points of the trip had hitherto been neglected, *i. e.*, a search for the fine, dark, ornamental woods of Brazil. Some of these were said to be quite plenty on the Trombetas; and I issued orders for a raid on the

timber the next morning. The woods I wanted were *palo cruz*, *moira cata-a-ri* and *moira pinima* (tortoise shell wood). The latter is the most valuable and beautiful wood known to commerce. My crew did not take kindly to the change from lounging about camp to wood chopping, but I was in earnest, and they got out a little after sunrise for a tramp of two miles to a point where Diego assured me there was plenty of *moira pinima*. He was right. The trees were plenty enough—for such a crew of axemen as I had. It is true the trees were scattering, after the manner of Brazilian forests, where you may find 200 varieties of timber on a single square mile. At the north, two-thirds of the growth on a square mile would be comprised in from one to three varieties.

We were fortunate in finding a tree 15in. in diameter, which the natives declared to be *muito grande* (very large), and Antone set in to fell it with a light, thick, dull Brazilian axe. Our axes consisted of one clumsy boat hatchet, one Brazilian axe, my pocket hatchet, and a bright, keen, American axe, that I had put in order before leaving home. It was so sharp and thin that I was shy of using it on the hard woods of the tropics. But, after watching Antone hack and haggle for half an hour, I lost patience and struck in on the opposite side; in less than ten minutes I reached the dark, flinty heart, and almost immediately broke a liberal slice from the lower corner of the bit. Then I desisted and allowed Antone to finish the job.

The trunk made two straight logs of 9ft. in length, of which the only part of any value was the heart, and this was scarcely 5in. in diameter. All wood outside of the heart was light colored like our hickory or maple, and had to be hacked, hewed and split to get at the valuable portion. It was a slow process. My thin, sharp axe did more than half of the work, but when the sun set the task was not finished.

A single American axeman with proper tools would have done the job in less than a day, and the two sticks, 9ft. long, and 4 to 5in. in diameter, would bring from $5 to $10 in New York, according to color and grain. Occasionally an extra fine, dark colored stick of *moira pinima* will sell for a fabulous price. I saw $20 offered and refused for a small log 30in. long by 8in. thick. It was in the hands of a Paraense cabinet maker, who got it from the Madeira, and was the finest piece of tortoise shell wood I ever have seen. I should say that a couple of Yankee axemen, with two or three natives like Diego or Antone, might make a paying thing of "getting out" *moira pinima* and *palo cruz*. The labor of splitting and hewing the outside wood from the heart could be done with fine steel wedges and sharp axes in less than one quarter of the time taken by the natives, and the supply is never equal to the demand.

My lumbering operations on the Trombetas were not heavy, the stock consisting of five *moira pinima* sticks from 6 to 9ft. long. We could find no *palo cruz*. And the *moira cata-a-ri*, of which more than half the trunk is available, was too bulky for transportation in canoes. Moreover, Antone took it into his woolly head that he had the *sezoengs*, and went into hospital accordingly; while Pedro, the Muri, was beginning to weaken with a low fever.

Old Dom Diego and I held out. It was a cause for pride that, in the matter of health or endurance, I was outstaying the natives; but it came to a crisis.

* * *

One morning, in the hottest part of the dry season, I awoke in a cold sweat, with a general disposition to shake and clatter my teeth. I thought at first a cold wave had swept down from the north; but, finding the mercury at 87°, I concluded that the *caxoeiras* were getting in their work. I got half drunk on *cachaca* and quinine, which quelled the attack for the time; but at night I had fever and delirium, seeing tapirs, jaguars and peccaries enough to start a small menagarie. I had sense enough to know it was all illusion; but saw them just as plainly, for all that. Another chill in the morning, more severe than the first; more rum and quinine; and I ordered a move to the lower *barrata*, to be followed by a move down the river, unless there should be decided improvement among the invalids. A night at the lower camp did not mend matters in the least, and I decided to return. My crew could not conceal their delight at this decision; three of them were sick, and all had a wholesome dread of *caxoeiras*. They had been passively obedient, and though a little lazy, uncomplaining and faithful. They stowed the *montaria* with eager alacrity; and at 9 A. M. of a parching hot day in September we swung out into the current for the voyage to Obidos.

A canoe voyage down stream is one of the most pleasant things imaginable. No sail nor paddle is absolutely necessary to progress. You can lounge, smoke, take in the scenery, and possess your soul in patience, knowing that every hour brings you nearer your destination. But the crew were disposed to make time. Even the sick Manoel handled his paddle with some vigor, and long before sundown we reached the bank where we had last camped on our way up. Here, in an eddy formed by a bend of the river, we found the swollen carcass of a huge alligator, slowly turning round and round with the current. Diego was positive it was the one I had shot above, but to make sure, we laid him alongside and soon found the two bullet holes, low down, and about 3in. apart. At least one of them must have gone through the heart. When I remembered the way his tail swept over me as I flattened to the ground, I was not sorry for him. Judging his length by the *montaria* we estimated him as a little over 25ft. in length, which I thought immense, until I was assured on good authority that they had been killed on the island of Marrajo considerably more than 30ft. long.

As the river was low the current was not strong, but we made good headway, for the men who were anxious to reach Obidos and be paid off, kept the paddles going pretty constantly. And the sick mended rapidly as we got away from the malarial effects of the *caxoeiras*.

* * *

Only one incident on the downward trip seems worth special mention. We had landed on the left bank for dinner about 2 P. M. on the second day; and, as the walking seemed fine and dry to the eastward, I set the compass (I always did that) and strolled into the forest with the rifle, for anything that might happen to turn up. In less than half a mile I came to a narrow *igarape*, over which was a fallen log on which I might have crossed; but there happened to be a large wasps' nest hanging over the log, and I did not wish to excite the occupants. I quietly took a seat at the roots of a palm tree, and had not been there five minutes when I saw a beautiful *onca* (tiger cat) come to the opposite bank and gaze wistfully at the wasps' nest. The rifle came quickly to shoulder. The *onca* stepped out on the log, intent on wasps, when there was a sharp crack from the rifle, and he went overboard with a bullet through his head. And as he fell a swarm of wasps darted down on him and fastened on his spotted sides. They were soon satisfied. And at my side—as usual—there was the ever-faithful Diego.

He waited until the wasps were quiet, then crept out on the log and recovered the *onca*. It was a beautiful animal, lithe, graceful and with the yellow and black spots of the large jaguar. I put him in the *montaria*, and when we were afloat, spent the afternoon in taking off and preserving the skin. But I had only salt and alum, whereby it happened that the head spoiled, and I converted the balance of the skin into a knapsack—which I afterward lost by lending it to an honest friend.

* * *

It was late on the third day when we came in sight of the broad, open space of clear atmosphere, that told us we were nearing the Amazon, and in an hour we were passing to the left of the little island that divides the mouth of the Trombetas into two channels. As we swung around a bend into the grand river, the crew struck up an Indian boat-song, and bent to the paddles with a vim that brought us to the landing at Obidos in less than an hour. Obidos is about five miles below the mouth of the Trombetas. In another hour I was swinging in my hammock with all my impedimenta arranged about me. I dismissed my crew with instructions to come back the next morning for their pay; and addressed myself to rest and sleep, for I was weak and exhausted. But the *padre* and *commerciante* called around almost immediately, and the latter dragged me off to a late dinner, which, after a month of boat and camp life, I enjoyed hugely, though feeling far from well. The *commerciante* suggested that I had better let him settle with my crew; I was paying them too much; the month was not up, and he thought he could save me several dollars. The proposition was decidedly Brazilian. It simply meant that I should pay him the money and leave him to cheat the men with goods from his store. I explained that I had already made advances, and had given my word to pay the balance in coin of the realm; whereat he seemed disappointed and a little less cordial. It is bad for Brazil that she constantly cheats, discounts, overtaxes and degrades labor.

I slept well that night, with no fever; and on the following morning all my crew were on hand betimes. I settled with them for the full month and paid them in silver, besides making them presents of American knives and *Borba* tobacco. They were more than well pleased, and made some comparisons between American and Brazilian gentlemen, not very complimentary to the latter. Diego urged me to employ him with his *montaria* for a trip up the Tapajos in search of *moira pinima*, which he declared to be plenty within 100 miles of Santarem; but I declined—and was afterward sorry.

I spent a couple of days very pleasantly roaming among the cocoa plantations between Obidos and Alemquer; and then the steamer put in an appearance opposite the town on her downward passage. Dom Diego helped me on board with my traps, and I bade adieu to the pleasant little tropical town of Obidos forever. On the third evening thereafter, I was lazily smoking and swinging a hammock at my old quarters, the Hotel de Europa.

NESSMUK.

THE REPORTER.

I WONDER if we have reporters in America? What a question! Are not our newspaper reporters the best and most indefatigable in the world? But I do not mean the reporting *homo;* it is the reporting *canis* I am wondering about. Do we have reporting dogs in America? If so, I have not seen them, neither have I heard of them. Our stories about the pointing dogs revolve about "the point," and of the dog's sticking to it like grim death. "He's so steady on a point that you can't kick him forward on to the bird," says the dog trainer in highest praise of the brute he is trying to sell. And we all recollect the story of the crack Western dog, that was lost at the close of a day's shooting. Search was made next morning, and the dog was found in the brush, close to where he was missed the night before, and still pointing the game he had come upon as darkness overtook him. So I doubt if we have "the reporter" in the Land of the True, and perhaps a word about him may not be uninteresting to American readers.

I was out partridge shooting in the south of Sweden in the fall of 1884. I had a sprightly fellow, Joseph, as guide and bearer of cartridges and game, and was shooting that day over an old German pointer a friend had loaned me, so that I could give my own dog a day's rest. We had enjoyed a fairly good day's sport, and toward evening were returning down the valley of the river Nissa, toward our headquarters at Oscarström. We were tired, the shooting was over, and our dog was allowed to roam at will. As we sauntered along I saw old Lila make her appearance over the top of a distant heathery ridge. She looked up and down over the valley, and as soon as she caught sight of us came toward us in a straight line on a brisk gallop, wagging her tail in a joyful sort of way. Coming in she raised a forepaw, placed it on my leg, looked up in my face, wagged her tail briskly, turned about, took a dozen leaps back in the track she had come, then looked around at me and wagged her tail again.

"Well, what does all this mean?" asked I.

"Oh! Lila has got a covey of partridges over the hill yonder, and has come in with the report," answered Joseph.

"Nonsense!"

But Lila rushed on a dozen steps more, looked back, and seeing I did not follow, her came in, put up her paw and again went through all her motions.

"Well, old girl, lead on!" I said at last, "we'll follow and see what you've got at all events." So over the hill we went, Lila leading and ever and anon looking back—down across a valley, then straight up the further hillside where she came to a point at a bunch of bushes. Before I got within shot the partridges began to whirr up; at least a dozen flew, but old Lila stuck now to her point, and on my reaching her side the last bird of the covey flew, which I knocked over and Lila retrieved. We now hunted along the bosky hillside, and Lila pointed and I shot six more of this covey, bringing up my bag for the day to nineteen partridges and a hare.

"You din't know Lila was a seporter?" quoth Joseph.

"No, I did not know before this day that there was such a dog in the world."

Since then I have made the matter of "the reporting dog" the study of some leisure hours. The reporter occurs most often among German pointers, or in crosses between German and English pointers, but even among them not more than one trained dog in twenty is a reporter. The trait is rare among English full bloods, and I have never yet seen a setter report.

It is asserted that a dog cannot be trained to report. The reporting instinct must be born within him, and then he takes to it naturally. I, however, am inclined to think that any dog that "rings" game, or from any cause breaks his point to take up another, may be trained to report, by whistling him in, whenever he comes to a point, and then advancing with him to the quarry. "Reporters" have different ways of imparting their information; not every dog is so clear as old Lila. Some come back only till they make themselves seen, then return directly to the game. Others hop up on a hillock or stone and jump and wag their tails till you approach.

Here in Sweden a reporter readily sells for one-third more than an equally good dog without this faculty, and I can assure American sportsmen that the report lends an additional pleasure to the chase.

As the shooting season approached this year I looked about for a reporter, and at last bought a large, powerful pointer, a cross between the German and English. The German dog is exceedingly kind, faithful and obedient, but too heavy and slow. The English pointer, with all his good quality, is apt to be too hot and headstrong. The half-breed is best for Swedish shooting, and, I believe, admirably adapted for America.

I shot black cock and capercailzie over Nero, and as the season advanced partridges, but as I always kept well up with him never saw him report, and had half forgotten that he possessed the accomplishment. One day my boot hurt me, and leaning my gun against a fence I sat down, took off my boot, pulled off my stocking and made a general readjustment. As I was lacing up my boot in came Nero over a rise of the field, and looking up at me turned about and came to a half point, then looking up once more shot along the track whence he came. Following over the hills I came in view of the blue waters of Lake Nefode; Nero was still rushing on in a straight line over the field. When he reached the lake shore he came to a point at a tuft of dry rushes. But it was an easy kind of a point. Every few moments he looked back at me, and expressed his satisfaction at my approach with one wag of the tail, which instantly stiffened into business again. Reaching his side a little flock of seven partridges hustled up, and I had the pleasure of dropping a couple, and Nero the satisfaction of retrieving them. Since then I let Nero hunt as far and wide as he pleases, confident that he will come in and report all game he finds out of my sight. I frequently whistle him in when he points at a distance, and then advance over the field side by side with him. Sometimes when Nero points at a distance, and is sure that I see him, he will lie down, so as not to scare the birds, rising on his forepaws now and then and looking back at me if I make any unreasonable delay.

The other day he came to a point far away over a vast plowed field. Looking around and making sure that I saw him, he backed in his tracks a dozen steps and then disappeared from view as absolutely as if the black plowed field had swallowed up his white body. We kept on toward the spot where he was last seen, and after some five minutes' plodding over the soft upturned earth, Master Nero arose out of a dry ditch just in front of us and quietly resumed his point. Coming up with the dog, two great coveys of partridges arose, my friend made a right and left shot out of the flock to the right and I took a bird with each barrel out of the left covey.

The trait of reporting causes a dog to be freer and easier on his point, he is less like a cast-iron statue, more like a reasoning being.

As Nero and I advance on a running covey, he lifts his ears, looks up at me and takes in the situation "like a little man," pointing now here, now there, and ringing the game in between us if necessary.

A reporter really seems to go through a chain of reasoning something like this, "Here is game, but where is my master? Of myself I can do nothing. Here's for it. I'll go hunt him up, for it takes both of us to do the shooting."

Frequently when Nero makes game I hide to see him go through his motions. Gradually he stiffens into a solid point, then looks around, first one side, then the other. No master in sight. Then he slowly backs out of it, step by step, a dozen steps or so; next he turns round as slyly as a snake, then sneaks away, and in another moment is in a full gallop toward where he last saw me. I always meet him with a pat on the head and a "Bravo, Nero!" It seems to me that the advantage of a reporter is at once apparent, whether it be on the wide prairies of the West, in the hill country of the East, or in the dense woodcock coverts of New England. What a comfort and luxury to have a dog who will come in and report game and then lead you quietly to it. How many forced marches in the alder swamps one might save, and how lazily he could saunter along the ridges, leisurely waiting for the report of his faithful four-footed friend. Americans are never satisfied with anything short of the best. If we have not the reporter in America, we have not the best possible pointing dog.

Is not the subject worthy the attention of our dog breeders and dog lovers? Why not import the German reporting pointer and cross with our best pointers of English blood? Or why not develop and perfect the reporting instinct whenever it manifests itself among our own dogs?

Of one thing I am sure, the American sportsman who has once shot over a reporter has experienced a new joy in life, and this joy he will ever keep, if he can, among the many pleasures which give zest to the life of the true lover of the chase.

MARSTRAND.

STOCKHOLM, Sweden.

FIRST SPEAR.

THE PIG-STICKING EXPERIENCES OF A PAIR OF NOVICES IN SINDH.

HOW the years fly! I caught myself indulging in reverie on the enjoyment of a Christmastide, the scenes of which were as fresh in my memory—perhaps fresher than the scenes of any recent Christmas—and when I came to fix the date I found it was away back in the early sixties, when I was having my first experiences of sport in what I may call a really good game country.

My camp was at Metanee, a considerable village on the banks of the Indus in the rainless region of Middle Scinde, and consisted of a main dwelling about forty by sixteen, divided into sitting room and bedroom, with adjoining outhouses for servants, and stables. The walls of the buildings were simply basketwork, and the roofs thatch, and the buildings so arranged as to occupy two sides of an oblong square, the other two sides of which were inclosed with a high light fence.

Here I lived for five years far remote from any other Europeans, and twelve miles from the main road through the country, but I was far too busy a man to feel any sense of loneliness. I was running an extensive saltpetre refinery, which engaged my activities, physical and mental, from dawn of day until sunset, with the exception that, as the work became thoroughly systematized, I indulged in an occasional day off—generally once a week—for shooting, and this with my periodical trips to the Sukkur market, where I bought the crude material, rendered my life sufficiently diversified to be enjoyable. I had an occasional visit, too, from the officer in charge of the telegraph line, a young fellow of my own age named Keith, who generally once or twice in the course of the cold season would leave his camp on the road and ride over to spend a night with me.

Well, one 23d of December, I think it must have been either '62 or '63, I took a day off for shooting, and rode home at evening with a pretty fair bag of duck and black partridge, and on nearing my camp I saw Keith's groom approaching it with a led horse, and as I rode up to him he made a profound salaam, and reported that the Sahib was coming on his camel and might be expected immediately. This was good news. There was a hasty consultation with the Portuguese boy, who filled the office of chief cook and butler, another dish was added to the *menu*, and a quarter of an hour later the two of us were seated at the table, polishing our countenances in the sunshine of each other's presence, and as happy perhaps in the Scinde wilds as any two men in Christendom. Keith had planned his tour so that he might spend two days with me, and we were thoroughly resolved to have a royal good time of it.

"Have you done any pig-sticking yet?" asked Keith, as we sat back in our easy chairs after dinner, smoking and sipping our coffee.

"Not much," I replied, "I rode one half-grown pig and rolled him over as a bit of training for myself and horse, and after that I had a dashing gallop after an old tusker, but I didn't get him."

"How was that," asked Keith, "did he get into cover?"

"Well, not exactly," I explained, "but he turned the wrong end toward me. I was going along in grand style, spear well poised, when the high banks of a canal loomed up before me, and I made a burst to come up with him before he could reach it, for I had no idea of going into the canal without knowing how I should get out again. It was no use, the boar spurted too, and finding I could not come within twenty yards of him, I began to pull in. At that moment the boar reached the bank, wheeled sharply round and prepared to receive cavalry. My horse decided the matter for himself, wheeling round so suddenly that I had enough to do to keep my seat, and when at length I was able to look over my shoulder, it was quite a relief to find the boar was not after us. Wheeling round, I saw the old gentleman trotting leisurely along under the canal bank, and as that was on my left, I lost interest in the chase."

"But," said Keith, "you might have headed him and turned him back the other way."

"Possibly," I rejoined, "but he would have been wrong end on at the charge, and I was bashful."

We sat and chatted for an hour or two, and made plans for the following day's sport, and the programme included pig sticking if a pig could be found to give us a run. I had two spears, Keith was yearning to flesh one of them in a boar, and now that I had a comrade to aid me in the fight, I too was fired with a spirit of emulation.

With the first dawn of day we sat down to a breakfast of coffee and omelettes and good home-made bread and butter, and before the sun was well above the horizon we were in the saddle with our guns, trusting the spears to a servant who rode behind the camel man, and had charge of the luncheon.

A leisurely trot of two miles carried us across the barren salt tract that skirted the village, to some lands cultivated by water from the canal, raised by Persian wheels, and another mile brought us to a jheel or lake, the principal duck grounds of the neighborhood. A fringe of tamarisk trees skirted the lake in places, but with this exception there was hardly a bush in sight; on the wide undulating plain two or three flocks of blue crane were visible, and as we neared the lake an occasional *quack, quack* warned us that the ducks were at home.

We dismounted at a hundred yards distance, and headed for cover to separate points about a hundred yards apart. We made cover simultaneously, and before I had time to look round Keith fired, setting the whole lake in commotion; hundreds of ducks were on the wing at once, and a flock of mallards wheeling by me I shot at the duck and killed a drake which was following some six feet behind him, and a flock of teal following, I discharged the second barrel into the midst and brought down one. Keith had killed two mallards and wounded one, which was recovered with difficulty after some time, and after a dozen more shots which resulted in adding three more ducks to the bag, we left the lake and headed for the low *sailaba* lands on the banks of the river.

The *sailaba* lands are recent silt deposits, sometimes a mile or two in width, which, being under water all the summer, and containing a great deal of organic matter, are easily cultivated for winter crops such as grain, wheat, barley and vetches; but the population being scanty, and having their permanent homes in distant villages, only half the tract is cultivated, the remainder being covered with low tamarisk jungle, which is found in plots of from an acre to a hundred acres. This makes a splendid game country. The para, or hog deer, and the boar lurk in the jungle by day and feed in the fields at night; black partridge, quail and hare are in the fields nearly all day; and here too are the feeding grounds of the geese and blue cranes. It is a grand shooting country, and practically my preserve, for the native sportsmen seek only big game.

Reaching this country we opened out to nearly four hundred yards apart, the camel in the middle, and in this order rode slowly on for two or three miles in the quest for pig; we saw several flocks of blue crane and occasionally put up a black partridge, but we disregarded them. At length I sighted a hog deer feeding in the open, and signaling to Keith, he was soon cantering across country toward me. The deer sighted us and walked leisurely into a small clump of tamarisk jungle, and reaching the spot we sent the camel through the jungle, Keith and I riding at a walk a little to the rear on either side.

"Will your horse stand fire?" I had queried of Keith in a whisper.

"Oh, I think so, I don't know, I never tried him," he replied, "but at any rate he will stand while I am firing."

And so we started, but the camel went through from end to end without putting out the deer, and as it was only a narrow strip we made straight for another clump some two hundred yards ahead. Here we pursued the same tactics, and presently Keith's gun woke the echoes, and I pushed my way through, and saw him some fifty yards off pulling in his horse and feeling for his stirrups. He soon wheeled around, and meantime the camel-man had brought his camel out of the bush and was dismounting.

"Is he down?" called Keith. "I thought so," he continued, as he got the reply in the affirmative; "he just put out his head at about twenty-five yards and I fired, and after that I had enough to do to keep my seat and hold on to my gun." It was a small doe.

It was now too late in the day to give much chance of seeing pig in the open, and after a consultation we decided to shoot for birds for an hour or so, then lunch, and work down to a village some two or three miles off, get half a dozen beaters, and drive the plots of jungle for pig.

We were soon afoot, the camel man and the servant with the horses skirting the fields, while Keith and I went through them, doing our own beating. Scoring about half our shots, we made up a bag of five or six brace of partridge, two brace of quail and three hares, honors about equally divided, excepting that I shot all the quail, having had more experience with that bird than Keith, who missed all his.

We then sat down to lunch, which consisted of game pie baked the night before for the occasion, some bread and cheese, and a bottle of Bass, and by a supreme effort succeeded in disposing of everything but a piece of bread. Then, stretched on the light sandy soil, we enjoyed our pipes, the horses meanwhile getting their feed of corn, and the camel browsing the tamarisk, with a longing eye on an adjoining field of vetches. The two servants, too, had brought their dark cakes of bajri meal, and the scene was one of pleasant animal enjoyment.

While enjoying our pipes a quiet *honk* was heard from the river side, and apprised us that geese were feeding near at hand; we decided to look them up before we made for the village; and following the direction of the sound, which was occasionally repeated, we came on a flock of several hundred of them close to the river's bank. Between us and them was a bit of tamarisk jungle, and making straight for this, Keith and I dismounted, and having drawn our small shot and replaced it with wire cartridges, we crept through to reconnoitre. The geese were from 100 to 200yds. off, but the more distant appeared to be close to the edge of a high bank, which would give cover from the river side, and drawing back, it was arranged that I should remain in cover while Keith should make a long detour and approach them from under the bank.

He had been gone fully twenty minutes, when his shot rung out, and as the flock rose I saw one bird down at no great distance. They did not come directly toward me, but went straight down river. The nearest birds were perhaps not 80yds. from me as they flew by, and I raised my gun to fire, but as I did so the cry of a blue crane close at hand bade me pause, and looking up I saw a dozen of them within 20yds. of me, and in the act of wheeling to avoid me. Singling one of them out I brought him down dead, the cartridge having gone into him like a ball and burst, and as I picked him up I saw Keith in pursuit of a goose which he had winged. He stopped and gave him the other barrel, and then resumed the chase.

Picking up the crane I made for the goose which I had seen on the ground when the flock rose, and found him dead with a shot through the eye. The camel now came on the scene, and aided in the chase for the other goose and turned him toward me, enabling me to put in a shot at 70yds., which made him fall forward; he was up and off again in a minute, but after another 20yds. he staggered and rolled over.

Keith was astounded to learn that he had shot a second goose. He had covered his bird at about 40yds., and the second had fallen to a stray shot at least 100yds. from where he stood.

We then made straight for the village, about two or three miles off, got half a dozen beaters, and as we were ten miles from home and the sun two hours past the meridian, we turned our faces homeward, beating all the larger clumps of tamarisk, the beaters opening out and shouting as they went.

At the very first clump three half-grown pigs were put out on Keith's side, and he with a "whoop" started in pursuit. I cantered on to the edge of the plot, and saw him going at top speed across the fields, and not wanting to tire my horse I kept on leisurely until I saw him turn, ride back a few yards, and draw up. Then I knew that he had killed, and when I came I found him in high feather. It was a half-grown boar, and the spear had gone in high up and well behind the shoulder, striking downward and killing the beast in his tracks.

Another hour or more was spent in beating plot after plot of jungle without success, and the December sun was getting near the horizon, when on our way toward a big piece of jungle which was to be our last beat, an old tusker trotted out of the end, and was 40yds. from cover before he saw us. He made no effort to return to cover, but sighting us he gave a grunt and dashed off at top speed toward the river.

For the first half mile we gained nothing on him. We, too, had started at top speed, but knowing from reading, if not from experience, that that was bad tactics, I restrained my horse and called to Keith to do the same. There was a big piece of jungle about half a mile to our right, and the boar made at first as if he didn't want it, but as we began to gain on him he wheeled suddenly and made straight for its cover. This wheel gave me the lead of Keith, and I pressed on, steadily diminishing the distance between us and the boar. The 40yds. were reduced to 30, the 30 to 20, the 20 to 10, but now the cover loomed up not 40yds. off. Now for a spurt. I poised my spear, drove my heels into my horse, and the distance between me and the boar diminished at every stride. He was within a yard of cover, I urged my horse to a last effort, drew back my spear to strike, and with a misgiving that it was too late, I struck between the hams some 4in. below the tail.

With a savage grunt the infuriated boar wheeled upon us, my horse wheeled as suddenly, but I was no party to the maneuver. I saw dimly the black boar below me, as I shot out of the saddle and over his back into the tamarisk bushes, I felt the spear almost wrenched from my grasp as it drew out from the wound, and then as I fell I heard a groan and a heavy fall and the thundering of horse's hoofs.

Springing to my feet I shortened my spear for the charge. I could see nothing, for I was eight or nine feet inside the edge of the jungle, but I heard the sound of some animal struggling, and advancing cautiously to the open—there lay the boar pierced just behind the shoulder, and the spear standing in the wound. Looking further afield I saw Keith getting back from his horse's neck into the saddle, my own horse enjoying his vetches a few yards beyond, and the camel man trying to approach him. Then I drove my spear through the boar's ribs, and as the fallen beast bore it quietly, I gave a victorious yell for Keith. "First spear," I exclaimed as he dismounted. "Last spear," he replied, and then for the first time I realized the danger that his plucky charge had rescued me from, and we shook hands over it, Keith feeling exultant, and I that we had come out of it as well as might fairly be expected of a couple of griffins or tenderfeet as a Westerner would express it.

Before long the camel and the beaters, with my recovered horse, were on the scene, and giving the beaters a rupee on account, I instructed them to get as many more villagers as were needed and carry the two boars to my camp. They agreed to start about midnight, and covering the big carcass with tamarisk, to keep off the jackals, we made the best of our way homeward, reaching camp an hour after sunset, eating our dinner with hunters' appetites; and as we afterward lingered over our pipes and coffee, we experienced a thrill of satisfaction such as no later achievements in the hunting field could ever bring us.

C. F. AMERY.

ACADIAN AND CANUCK.

LAKE CHARLES, La., Sept. 13, 1889.

R. E. Robinson, Esq.:

DEH SEH—Meh fren' Miche Ahfod, haf to meh read a lill boogue whad you hwrite, call "Onc Lesha Shap," hwich mek heemsef to me hoff gret interess, hann the moah, biccause hwon mans in heem, Antoine Bissette, Ah thenk he been meh cussin.

Hwan the Hangliche, he drife meh hann cestors from Acadie, meh gran'-gran'-gran'-père, Emile Le Blanc, he come to Lou is si hannah, mais meh gran'-gran'-gran'-mère—Ah ham miss-tekhen—meh odder gran'-gran'-gran'-père, hon me modder side, Achille Bissette, he gone Quebegue. Diss Antoine, he wass be some discendence hoff dass Achille, yass?

Besside, hees hwife's name Ursule, dass de name meh holdest dotter, so Ah tink she mus been meh cussin, hein?

Hnex tam he see you, hit mek meh glad hyou tell heem Ah wrot you hann lake heem Ah lak ackshange pigshoo wid heem.

Hif e nod lak sau pigshoo, biccause he nod can hwrat de Hangliche, tell heem dass mek no deefence, he nod haf the hadvantage, possib, E nod live in Loo hi si hannah, dass nod hees faut.

Meh childen, he all can reads han hwrite Hangliche moss good hass me, hann Ursule—she ver' fine hed hucate, she mos cas whrite hlegal note, all she herseff. Poar mah, mos, sometams, peops tink me Mericain, Ah spik Hangliche so hwell—hann dey ver' moch supprise hwan odder peops say, "Heem Crehole, yass."

Hif you hwrite me leddah foh meh cussin, you hwrite heem to me fren, Miche Ahfad, Ah can gat heem so sooner hass hwan you hwrat heem mehseff.

E hwrite thees fah me, so hyou plis hegscuse misstek. Ah ham, votre, etc.,

ARSENE LEBLANC.

DANVIS, Vt., Nov. 10, 1889.

M'sieu Offa:

Hol' M'sieu Robyson he 'ld handle me dat lett what you 'll wrote for dat Frenchmans ant it what he 'll tink he 'll was cussin for me prob'ly 'f he 'll ant cussin for mah waf Ah do' know, me. Prob'ly he 'll was, prob'ly he 'll ant.

Ah 'll rembler hear mah granpere, he 'll gat great many hole wan he 'll come dead, spik of it hees onc' nem Arsene Bissette leeve in Quebec, Ah guess yas. But Ah 'll tol' you Ah 'll gat brudder-law me, what hees nem be Zhoe le Blanc w'en he 'll leev in Canada. Now he'll gat leev in Masschusin an' work on meel, he gat hees nem be Mistah White an' he 'll feel pooty plump, Ah 'll tol' you. Lak nough he 'll been cussin for you frien' fore he 'll gat White, Ah do' know 'f he 'll hown it naow.

Ah 'll be glad for see you frien' hees photygrab see 'f he 'll look lak mah peop. Ah 'll ant never see Crehole an' Ah 'll ant know haow was he look lak someboddee. But Ah 'll ant gat mah'n take so Ah 'll can' sen' heem of it. Ah do' know 'f Ah can wrote Angleesh, Ah 'll ant try, Ah 'll gat M'sieu Robyson wrote dis. He 'll gat so blin' of hees heyesaght he 'll mos' can' see, so 'f dese lett ant look putty goode you 'll ant blem to me.

Ah 'll was you frien'

ANTOINE BISSETTE.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

DOGS, DINGOES AND KURIS.

THERE is no point more undecided in natural history, or more difficult to decide, than the origin of the commonest of all domestic animals, the dog. The problem to be solved may be briefly stated thus: Firstly, is the dog a wild animal which has been domesticated? and, secondly, does it revert to a wild animal if it ceases to be associated with man?

There are, of course, many wild animals of the dog family, such as wolves, hyenas, jackals, foxes, and so on. But none of these become dogs by being domesticated. They always have been wild animals and they always will be wild animals. The dog, on the other hand, has been a domestic auimal at least as long as there are any historical records of human life; and even with the remains of pre-historic man are found the remains of pre-historic, but domesticated, dogs. The lake-dwellers of Switzerland, who lived in the "bone age," whenever that may have been, had dogs with which they hunted the bear and the deer. On the other hand, there is no instance known, as far as I am aware, of dogs having ever existed in the feral state.

The Eskimo dog was at one time supposed to be a wild dog brought into subjection by the Arctic races. But Lieutenant Schwatka shows not only that it is not a wild dog, but that it is not even a distinct type of tame dog. The Eskimo dogs, he says, include all sorts and conditions of dogs, and do not materially differ from the dogs in any American or European town.

In the course of my travels, I have come across three kinds of so-called wild dogs, and I shall be happy to describe them for the readers of FOREST AND STREAM.

In many parts of New Zealand the hills are infested with "wild dogs," which attack the sheep and often inflict great loss on the farmers more by harrying and terrifying the flock than by what they eat. The shepherds shoot them or poison them whenever they can, and liberal rewards are given for all that are brought in. I have seen numbers of these brutes and have shot a good many myself. They are merely the progeny of dogs which have strayed away from sheep stations or taken to the wilds from starvation when driven from some farm. They are nearly always a cross of the collie, or else of the pig-dog, which is a bull-mastiff or a large bull-terrier, and though they develop great size, strength and ferocity from their predatory life, they never lose their domestic characteristics. They are easily tamed, and are not then to be distinguished from the dogs ordinarily found about a sheep station or a farm.

Mr. Denton, an American gentlemen who made the tour of Australasia some years ago, and has published an amusing book upon it, makes great fun of the vast number of dogs which surround the visitor at every New Zealand homestead, and even—so he says—invade the cars and other places from which dogs are usually excluded. He exaggerates the facts a good deal, and fails altogether to see the good use of them; but there is something in what he says. Australia and New Zealand have more sheep than any other countries in the world, and New Zealand, being a small and fertile country, has its flocks closer together than Australia. But where there are sheep there must be dogs, for the whole management of the flock is done by dogs. Every shepherd and every man about a station has at least a couple of dogs at his heels, without which he would be perfectly helpless. Then a great many additional dogs are employed to kill rabbits and wild pigs and other enemies of the sheep farmer, and in some localities the boundaries of the run are kept entirely by dogs, which prevent the flock from mixing, though the fences are open where the roads pass through. Hence, it will be readily understood, there actually are a great many dogs about the homestead when the men are all in from their work. But there is not a single useless dog among them, and many of them are worth from twenty-five to a hundred dollars, according to their pedigree and their capabilities with sheep.

It is the strays from these that have produced the "wild dogs" of the hills, which are only wild in the sense that they do not belong to anybody and do not live anywhere in particular. In that sense there are multitudes of wild dogs in every American city except, perhaps, New York, which is singularly free from stray dogs.

There is, or was, another kind of dog in New Zealand, which has a somewhat better claim to be called wild. I allude to the Kuri or Maori dog, at one time supposed to be an indigenous animal. When the colony was occupied by the British fifty years ago, the Kuri was very common among the Maoris and was the only dog in the country. The Maoris ate its flesh and used its skin for robes or mats. I have often seen the Kuri in the early days, but now there is nothing to be seen of it but the skin—a good dog skin mat being an heirloom and a treasure in the families of the chiefs. I never heard that the Kuri was at any time a wild animal, and though it was commonly called the Maori dog, I am convinced that it was merely the progeny of European dogs put ashore by Captain Cook or some of the early navigators. The fact of the Kuri appearing to furnish a distinct and uniform type, as it undoubtedly did, is easily accounted for by the very probable supposition that only a couple of dogs or so were landed, for in those days a ship did not visit the islands once in twenty years or more, and that all the Kuris in the country came of one stock. They were small rough-haired dogs, black or bluish black, sometimes spotted with yellowish or rusty white, with a long muzzle, cocked ears and a thick tail, ugly little brutes on the whole and certainly not assignable to any known European breed. Yet there is practically no doubt that they were the offspring of some mongrels brought from Europe; and there is not a trace of evidence of their ever having been otherwise than domesticated. They were not at all numerous at the time of the European settlement, and after that they were soon crossed out of all recognition by the settlers' dogs, except in the remoter settlements, where the type survived until quite within recent years.

I now come to the Australian dingo, the most disputed of all "wild dogs." This curious animal has been commonly assured to be the progeny of a domestic dog gone wild, for a single reason. It is the only mammal on the continent of Australia or the island of Tasmania that is not marsupial. All the others, whether herbivorous or carnivorous, are pouched animals, a peculiarity which distinguishes them from all other creatures whatsoever in a very decided way. They form, in fact, a separate section of animated nature, of which only one or two instances are found in any other part of the world. Hence it is contended that the dingo, being something like a dog and not being marsupial, must have been introduced from other countries; but no such animal exists or has ever been described in any other country; therefore it must be the wild descendant of dogs brought by the early navigators.

This is not very logical reasoning, nor is it at all convincing to me. On the contrary, I think the evidence against the dingo being a dog gone wild, is overwhelming. In the first place, it is not really very much like a dog. It is a small animal, no larger than a coyote, but quite differently proportioned, being longer in the legs and shorter in the back, yellow in color, with a pointed muzzle, pricked ears, and a stiff brush tail quite unlike the bushy tail of the collie dog, which, in general, it resembles more than any other. Secondly, it is, or was, found all over Australia and Tasmania, and everywhere it presents the same appearance and characteristics. Now, Australia is a very large country, as large as Europe, and a vast proportion of it is uninhabited. It was only discovered two hundred and fifty years ago, and the first navigators founded no settlements and made no explorations. It was not until the latter part of the last century that the British came and brought their dogs with them. At that time dingoes abounded, and the settlers had the greatest difficulty in protecting their flocks from their ravages. If, therefore, the dingo is the progeny of domestic dogs introduced by the discoverers, it must have assumed the wild form and spread all over the continent, notwithstanding that large rivers and vast tracts of waterless desert intervene, within one hundred and fifty years. This is quite incredible, and in my mind, it settles the question of whether or not the dingo is a dog.

I have seen great numbers of dingoes in parts of Australia very remote from one another; but I never saw the slightest difference among them. One may be a little bigger than another, or a little darker or lighter yellow than the common herd, but the animal is just as distinct a type of animal as a fox or a jackal. The dingo is most numerous in Queensland, which is sometimes jocularly called Dingoland, the last of the Australian colonies to be settled and still a very wild country in parts. It is sometimes so fierce there that it will invade homesteads and even carry off children; though, generally speaking, it is a cowardly animal, skulking away from a man, and commiting its ravages by galloping through a flock of sheep, snapping right and left with a bite that is almost always fatal, and driving the sheep in terror in all directions. It is a nocturnal animal, and would never come out in the daytime, I believe, unless compelled by hunger. It seems always to be on the verge of starvation. The shepherds and boundary riders commonly carry a quarter of mutton, well dosed with strychnine, at their saddle bow, and as they ride along toward evening, they cut off pieces and throw them on the ground. If there are any dingoes about, they are pretty sure to find these tempting morsels and to be found stretched out with intense *rigor mortis* not very far off next morning.

Away in western Australia, at the other extremity of the continent, dingoes are also found, looking and behaving exactly as they do in the east; that is to say, looking and behaving like wild animals indigenous to the country.

One of the tests which has been sometimes propounded to prove whether an animal living in a wild state is identical with the domestic variety, is whether the two will interbreed or not. This, however, is in my opinion quite delusive. It depends entirely on the extent to which they will interbreed. I have known a dog and a fox to interbreed. A cross between a pheasant and a barndoor fowl is common enough. Yet no one would say that a fox is a wild dog, or a pheasant is a wild barndoor fowl. None of these mules have any progeny, which is the surest evidence of miscegenation. In this way dingoes occasionally interbreed with domestic dogs, and the cross is not by any means a bad animal. But the process goes no further than that. The Australian dogs do not become half-dingoes, neither do the dingoes become half-dogs. In New Zealand, on the contrary, the so-called wild dogs breed freely with domestic dogs, while the Kuri, the so-called Maori dog, as I have already said, is altogether merged in the various European breeds.

Then, there is another ingenious theory that the bark of the dog is an imitation of the human voice and that wild dogs do not bark, though they soon learn to bark if brought into the society of mankind. Upon that theory, dingoes ought to learn to bark because they constantly hear dogs barking and men talking at the stations. But they do not. They have a peculiar cry of their own, more of a howl than a bark, and this never varies, as far as I am aware. I have known several instances of dingoes being tamed, but they did not bark. They kept their own cry or else were silent. A friend of mine, an officer on a man-of-war, caught a young dingo in the far north of Queensland, and brought it up on the ship. It became a great pet of the sailors and conducted itself in a most exemplary fashion, though always rather too ready to snap and worry with its formidable teeth. The first time I saw it, my attention was at once attracted by its appearance.

"What an extraordinary looking dog," I said to my friend. "What sort of breed is that?"

"It is not a dog at all," he replied. "It is a dingo that I got in Queensland."

I then examined the animal carefully, and the more I studied it, on many occasions, the more convinced I was that it was a purely wild animal, not domesticated nor capable of being domesticated, in the proper sense of the word, but merely tamed by kind treatment from youth, just as foxes, wolves and even lions and tigers are sometimes tamed. The dingo has a foul smell, which also, I think, goes to prove its wild origin.

The notion that the "*bow wow*" of the dog is the result of an effort on the part of the faithful animal, through many ages, to imitate the voice of man, is very taking from the sentimental point of view; but I should doubt if there is a shadow of scientific authority for it. As well might it be said that the "*moo moo*" of a cow, or the "*baa baa*" of a sheep, or the "*meaow meaow*" of a tomcat is an imitation of the human voice. No dog that ever was pupped can imitate the human voice half so well as a jackal, for the very reason that the jackal does not say "*bow wow wow*," but articulates in all kinds of notes and cadences, like a human being under strong emotion.

While on the subject of dogs at the antipodes, I should like to mention a fact which is probably not known in America, but which is so remarkable as to be worthy of some scientific attention here. It is that, notwithstanding the great number of dogs in Australasia, and notwithstanding that a large part of that territory lies in the torrid zone—the mean temperature being higher at Adelaide than at any other spot in the British Empire—there has never yet been a case of hydrophobia there. I believe I am right in saying, that the disease is also unknown in South Africa; and from many inquiries I have made, I am inclined to think it is entirely confined to the Northern Hemisphere.

This belief was held so firmly for many years in the colonies, that no precautions were taken against the introduction of hydrophobia. Since the introduction of other diseases, however, from which the Southern Hemisphere had previously been supposed so be exempt, a six months' quarantine of dogs has been established, and is enforced with inflexible strictness. When the Earl of Onslow came some months ago to New Zealand as Governor, the Countess pleaded hard to have the garden of Government House proclaimed a quarantine ground, so that she might not be separated from her pet poodle. The authorities, however, were inexorable, and the vice-regal lap-dog had to go to the island set apart for that purpose, like any common cur. EDWARD WAKEFIELD.

THREE DAYS IN JAMAICA.

JAMAICA has been called a land of birds without song, flowers without perfume, and women without virtue. We visited the island in a fruit ship to see tropical scenery, and found the true picture at Port Antonio, more real than the imagined—mountain and valley clothed with fruits and flowers in green and gold; dense foliage from the water's edge running "over the hills and far away;" the cocoa palms in their plumage of oriental-like fern, saluting with solemn grace those who sought their welcome shade. The cocoa palm grows luxuriantly on the shore, in the valley and on the mountain.

Jamaica is all mountain and valley. The mountains and valleys are one mass of foliage. The white houses of the estate owners may be seen perched on hills overlooking the estates, monarchs of all they survey. The chief item of export is the banana, several fleets of steamers being employed in carrying this fruit to United States markets. Sugar, limes and oranges are cultivated for export. The estates are owned by single individuals and by companies who own the steamers that carry the products of the island. The negroes of the island carry everything, including fruits, on their heads. We saw an umbrella with the inside to the gale carried on a negress's head, and we are told that the first wheelbarrow was carried on the head. It is a pleasing sight to see thirty or forty colored lads and lasses loading a fruit ship, carrying bunches of bananas on their heads, chanting ditties, lightly dancing, with their figures presenting the fine arched appearance that the custom of carrying everything on the head gives. The natives are polite and cheerful. We were told that on Sunday those coming from country places to church carried their clothes and shoes till near the town, where they washed in the river, and then donned their Sunday's best and marched "all dressed to heavenly rest."

The whites on the island are open-handed in their hospitality, admitting strangers freely to their houses without introduction, and entertaining them liberally. Our host's house at Port Antonio was built on a hill overhanging the town, reached by a white shell lane, and embowered by tropical fruit trees, with sufficient space on the plateau to form an escarpment around the house, from which a view of the town, harbor and bay could be had in front, and of the mountains inland. The cool verandahs looked out on the deep blue sea. Our dinner consisted of mountain mullet, turtle steaks and turtle eggs, ring-tailed pigeon and cocoanut pie, with abundant choice of yams, bread fruit, okra, tchaw-tchaw, plantain, banana fritters, guava jelly, pineapple jelly and blanc mange of arrowroot.

At St. Ann's Bay, where we loaded some fruit, Mr. Gordon Black, chief of constabulary, in the neighborhood of whose house we photographed some tropical scenes, took us in hand, and with his wife and daughters procured us cuttings of tropical shrubs, flowers and ferns to raise in our vineries at home. Negro boys were made to climb palm trees and procure us green cocoanuts for refreshing drinks of cocoanut milk, which is drunk with Jamaica rum. A negro boy with red cap, climbing the delicate stem of a palm tree and peering his head through the great palm leaves, as he forces the cocoanuts from their nests, is a sight to be remembered. Mr. Black introduced us to the merchants of St. Ann's Bay and put us in the way of making a fortune out of the innumerable commercial products of the island.

The roads of Jamaica are composed of a hard white shell-like stone. They are clean and pleasant to look at. There were no flies toward the end of June, so that our fears of centipedes and tarantulas were groundless. We did not even get a mosquito bite. It was cooler in Jamaica than in Philadelphia, and here we were pleasantly disappointed again, for we expected to get yellow fever at least, if we did not leave our sun-baked bodies on the island. Extreme heat in Jamaica seems impossible with such health breezes from the mountains, and when the projected railway is built around the island, Jamaica will no doubt become a favorite winter resort.

The mongoose has cleaned out snakes and rats, also the quail, which used to form the chief source for sport. Fruit and poultry are now the mongoose's food. His introduction to kill rats has proved a remedy worse than the disease.

We loaded with fruit at Annato Bay, Port Maria, Oro Cabessa, Orange Bay and Buff Bay, besides St. Ann's Bay and Port Antonio. The flying fish of the Gulf Stream did not roost in the rigging of the ship as is popularly supposed. Every morning the sailors soused us with sea water from the ship's hose, and what with sea baths, swinging in hammocks and drinking soothing drinks, singing and banjo playing on the ship, the scenery of the island, the climate and the agreeableness of the people—all this rendered our trip an enjoyable one. F. J. M.

BIG GAME IN BOER-LAND.

LYDENBERG GOLD FIELDS, Spitzkops, Feb. 9.—*My Dear* ——. Another new year started; they seem to be about one-fourth the length that they used to be at school. My beard is getting gray in the center of the chin. * * *

I had two months hunting in the fly-country; I asked a friend from Pilgrims, who was very anxious to have a hunt, to join me. He was very keen, most excitable and a great talker; the best fun was to hear him at night giving his day's experience. We captured buffalo, lion, rhinoceros, giraffe, wild beast, zebra, koodoo, wart hog, impallah, rietbok, crocodile, waterbok, dinker, wolf, wild dog and jackal. Buffalo and lion were not bagged although knocked down. We found all the game driven off the open bush country where we used to find them, and had to hunt in thick thorny bush, with very bad going, sometimes creeping, and by the river reeds 12ft. high, where my friend's lion when wounded took shelter; also the buffalo bull; and it does not pay to follow either of these two animals when wounded into thick cover without dogs.

Two English farmers from the colony came to join us; they were very decent fellows, and this made a party of four, but two are plenty. They took a Scotch cart and six oxen. I took an American horse wagon, 14ft. long, and inspanned eight donkeys and two oxen in the pole. Five of their oxen died in fly and two donkeys of ours: but as I had four spare donkeys I was able to help them. The first night we camped in the fly we did not take the precaution to put two or three fires around the donkeys, and we all but had a mishap. One of the Kafirs heard something walking in the grass, and made the fires all blaze up, but said nothing until next morning, when we looked around the camp, and sure enough we saw the spoors of three lions within a very short distance from the cattle and the donkeys—8 or 10yds.—and they did not make a whimper, a pretty sure sign that they meant business. We killed twelve giraffe, one a magnificent specimen, a very ancient bull, the finest I ever shot. (It is next to impossible to prevent moths from eating heads and skins. Since beginning this letter I have had the skins out to air a bit, and one of my dogs has eaten three feet and claws completely off a tiger skin. I have shut him up so I may get the claws to send with the skin.)

One morning with two Kafirs I struck the spoor of a white rhinoceros bull, and from the direction I was afraid some of the party would cut the spoor ahead of me, and so I hurried along, but soon found on the spoor that one of my friends had also taken it; so when I came up with him we agreed to divide the spoil whoever shot it. We followed steadily until a half hour from sundown. Every two or three hours we would come across a big barrow load of dung; but now we came to one lot which was warm and a bed that he had just risen out of. He had got our wind, so we hurried on on tiptoe through the thick thorny bush, and heard a crash away. We ran our best, and presently saw the hindquarters of the huge brute, trotting ahead about 100yds. After running about a half mile he stopped for an instant and looked round. We took a snap shot through the bushes, and on again on a blood spoor; but he put on more steam, and we lost sight of him. I had to shoot with the Martini, as my Kafir was behind with the .577 express. My friend shot with a .577 express solid bullet, which I lent him. The Kafirs wanted to sleep on the spoor and follow on at daylight, but I objected. We had had nothing to eat since leaving camp; we never carry grub and I never drink all day. It is no use sleeping on spoor with Kafirs, they rise in the morning hungry, follow the spoor for an hour or two and purposely lose it, especially if it is after an animal that may show fight. Although it got pitch dark we reached camp all right, barring a few scratches. I was in great hopes of getting him, as my friend N. was a good shot and said that he took him behind the shoulder. When I fired I could not see his foreend at all. To our surprise one of the others had had a like experience with a black rhinoceras cow. He gave it a good shot in front of the shoulder with larger bore than .577, 6 drams powder; but she cleared out, and as she was dangerous and he was a long way from camp, he came back to sleep and to get another to help him.

In the morning we started two and two. We took our spoor from where we left off, a blood spoor showing on the bushes 4ft. from the ground, for a short time. To our annoyance we found that the other party had taken the spoor of our white rhinocerous instead of going after their black rhinoceros. However, we followed on grumbling, until we saw that they had disturbed him. He had gone off at a run, their spoor still on him. That put the finishing touch on, so with disgust we turned off for camp. We were tramping along a dry creek, when we suddenly heard a snort and saw 200yds. off the hindquarters of a rhinoceros. He had got our wind and was standing snuffing. Then he made a rush into the thick thorns. We lost no time after him, but crept silently on the spoor for about twenty minutes, when one of the Kafirs points him out about 60yds. off. I couldn't make out his form for a good shot until he moved his head, nose in the air, trying to get our wind. I fired and struck him in front of the shoulders, which dropped him. N. gave him one behind the ear to make surer. On examining him we found he was our friend of yesterday; we were doubly glad after two days' spooring. It was the first that N. had seen, so he took the head and I the tail, dividing the skin. Our two friends, after following our game and giving him up for lost, took their spoor of yesterday, and were following through the bush, when they heard and half saw a big scrimmage in front. A lion jumped off a sloping bough of a tree and another sprung out of a dip in the ground immediately beneath him; but being in an awkward place they did not get a shot. However, they go on the spoor of a rhinoceros, and presently he was seen by one of them only, who opened the ball with a shot, but what followed I can hardly explain. There was a deal of rhinoceros snorting and prancing around, Kafir phelebags and ornaments lost, shirts torn in the thorns, some skedaddling, some up trees, and all terrified. My friend from Pilgrims eventually jumped down out of a tree and finished her. Nobody was caught.

I saw only one lion; there were plenty about, but the cover was too thick for them to be seen. The one I saw had heard me and stood up at 70yds. I was carrying the Martini at the time, and firing struck a bush behind him 2ft. too high. I shot through some bush and the bullet had tipped a couple of twigs, which threw it up. I set a spring gun for four lions that used to come and drink near our camp. I set the gun carelessly, and it shot a little bit out of his cheek only. I was on the spoor when I got the fresh spoor of a black rhinoceros, which we followed in the afternoon, when every minute I expected to come up with it. We could hear it, for it had caught our wind, and went crashing away. We hurried on through the thick thorn. At last I could see it, but indistinctly. I moved to one side to get a clearer shot. It was standing 60yds. or 50yds. off, nose in the air, dead on, facing me. I waited a second until it turned its head to one side; then I shot it behind the head, smashed the neck bone with my .477 solid bullet and 6 drams. I never use hollow bullets for big game. The rifle is one of two we had made to order, 9½lbs., Martini-Henry action, India rubber heel plate, and it cannot be improved so far as I can learn.

As I had only one Kafir and one little boy with me, we left the rhinocerous to the mercy of lions and wolves until next morning, when we took the wagon for it. When we got the skin off and the head, I let about ten Kafirs loose, each with a knife. My Pilgrim friend and I stood back out of the splash. After getting what they could outside, they went inside, half up to the knees in blood and dirt, scrambling and squabbling and pushing, just like a lot of youngsters for pennies. One or two got cut, but not badly. However much beef a Kafir has, he always wants more. I think he will eat as much beef at a sitting as any twelve or fifteen white men; and for dessert immediately afterward a bath of porridge that a big Scotchman could not manage.

I have been getting a few koodoo here at home lately. A koodoo bull will weigh 400lbs., and is about the handsomest animal in South Africa, having long spiral horns, 4 or 5ft. long. *

A RUN AFTER THE LONGTAILS.

SINCE Australia has become such an important commercial factor in the enterprise of the Southern Hemisphere, especially regarding India, and steam communication advanced to the stage of a weekly service between the two countries, it has grown to be the place before all others where heat-fagged Indian officials may pass a short sojourn and recuperate. The Australian bush or upcountry life is not now what it was years ago, for with the rapid advance of civilization the supply of large game has sensibly decreased, but hospitality still reigns supreme, and visitors to the leading cities, no matter what their nationality, find little difficulty in procuring through their consul a traveler's introduction to the clubs, from whence to the station or ranch is a certainty, for the squatters are only too glad to extend invitations, if properly introduced, for a month's stay among the longtailed marsupials.

Australian sheep stations or ranches are conducted much the same as those in the western United States, excepting perhaps that the head station is arranged with better regard to comfort, so that visitors have every luxury of city life combined with the outdoor sports peculiar to the country, the most popular of which is hunting the kangaroo. To be successful a kangaroo hunt requires no little judgment, a good horse and a couple of brace of well-trained dogs, for although when undisturbed he is as harmless as a rabbit, an old man kangaroo when brought to bay is an ugly customer, and one not to be carelessly tackled. Since cattle raising has reached its present enormous magnitude, and proved so safe and lucrative an investment, anything that interferes with its success must go under, hence the marsupials have been slaughtered by the thousands to preserve feed for the stock. Owing to this fact a few days are required to arrange a hunt.

When the day has been determined on, a few of the black hands employed on the station are told off to scout the district for new tracks. The Australian aboriginal, although the lowest type of humanity to be met with, is a keen sportsman and can run down an animal by its track, with as unerring certainty as a full-blooded hound. He is thus an invaluable help on a kangaroo hunt, and enters into the pursuit with a zest which always insures good sport to those joining in it. Kangaroos are run down by sight with coarse strongly built dogs, a cross between the mastiff and rough Scotch deerhound, speed combined with enormous strength being essential. So soon as a kangaroo has been located, the news is brought to the head station, when each mounts his horse and follows the guide. The approach must be made from leeward, as the animals scent is peculiarly sharp, not allowing the dogs too much law through fear of dispiriting them. The dogs are not slipped as in coursing hares; they merely follow the guides anxiously, jumping in high occasional springs when any sign is given them that game is near by. At first a kangaroo takes matters easily, seeming to think a novelty has been sprung on him for his especial amusement, but when he finds the dogs are pressing him close, notions of danger and the necessity of clearing out bursts on his feeble imagination, and away he goes like the wind, in a series of such comical bounds, that one leans to the idea he half flies. No time must now be lost saddles are tightly pressed and the well-trained horses obey every knee motion and keep close to the yelping dogs. If the chase is across the open, no danger exists except from an earth fissure or a passing snake, either of which entails a cropper with perhaps a broken limb or an ugly sprain, but my experience is that such mishaps seldom occur, if the horse is altogether trusted, for as a rule the Australian bush horse is so perfectly trained that it can be safely depended on. But when the line runs under low-hanging gum and wattle trees, with a thick undergrowth of scrub, no little caution must be used, else a mishap similar to Absolom's may ensue.

Forward you bound, with your horse yielding every ounce to keep the dogs in sight; past immense gnarled primeval denizens of the plains, which at another time would demand undivided attention, over dry water courses in steeple chase desperation; onward, until the pace begins to tell and your animal shows unmistakable signs of being pumped out, and a "not-in-at-the-death" record awaits you. Should it be your first hunt, this will inevitably be the case, unless you strictly follow your host's tactics, when you will find many little short cuts taken, prompted by his experience of kangaroo habits and his knowledge of the ground. Perhaps your horse has bottom enough, and bravely carries you close to the hounds, until suddenly, a few yards in front of you, you almost ride over the varmint and the dogs engaged in a determined, but cautious, encounter. The dogs, not unmindful of many previous engagements, are wary of approaching too near, for they have a wholesome remembrance that sharp claws tear and that a kangaroo can kick straight and strong. Such a contest might last a long time, but dogs and horses are done up, so you use your revolver or sporting rifle and humanely dispatch the game; otherwise your dogs may grow desperate and become so maimed as to be of no further use in the field.

A kangaroo runs, or rather jumps, hard for his life; and the pace in following a pair of good dogs in hot pursuit of an "old man" is simply terrible, for unfortunately little judgment is used. The horse, excited beyond measure, acts on his own training and experience, and his rider, unconscious of the animal's motion, and regardless of mishap, is so carried away by excitement that he becomes completely forgetful of consequences in his endeavor to keep the chase in view.

When the game is brought to bag a great deal of caution must be observed. In illustration of this, the writer once saw an old man kangaroo (full grown and standing nearly 5ft. high) snatch an immense hound in its arms and deliberately rush into a neighboring creek up to its loins in the stream, where it submerged the dog's head and endeavored to drown it. In this it would have succeeded had not a bullet released poor old Bismarck from such an unexpected bath. W. H. L.

CHAT FROM MEXICO.

I AM going to write a little letter that will scatter as badly as the old army musket with which I hunted when a boy. Dear old musket of the battered breech pin that wouldn't come out, the big nipple and the mighty hammer. How closely you are associated in my memory with a barefoot, sun-tanned boy, now far from the hills and fields he carried you over and the creek which ran among them, waded in summer, ice-bridged in winter! And let me record it to Old Betsy's credit that if she did scatter, some of the load always "got there," and by my being liberal with shot both as to quantity and size, the meat was mine. Many a cottontail and squirrel—we wouldn't waste a shot on Bob White—and not a few ducks and turkeys answered to its friendly voice. But what a trial that big nipple was! Rarely could we get any caps adapted to it, and it flattened out an ordinary one till it looked like a wind-turned umbrella. Sometimes in this state it would stick in the hammer, sometimes lie on the nipple, sometimes by an unguarded moment fall off or lose the precious fulminate. Well do I remember the Christmas morning when I stood in the falling snow fumbling with that misfit cap while two long-necked young turkey gobblers stood on the hillside about 30yds. above me and said *put, put!* Now this that I have written about that old musket was a part of the scatter load I really wasn't prepared for.

I sympathize with "Podgers" on the dog question. Haven't I had my trials? My wife doesn't like dogs; that is to say, she is afraid of dogs in general, and does not make proper distinctions. I have tried to beguile her into some of my enthusiasm by reading the best dog stories I could find in FOREST AND STREAM and elsewhere, but about half the time she sniffs with skepticism. And of all the places in which to inspire one with a proper regard for the canine family, Mexico is about the worst. Of all the currish, mangy, sneaking, filthy, barking, quarrelsome, detestable dogs the world affords, the average Mexican dog is about the worst. He is an exceedingly numerous individual, too. Mexican houses are usually built without yards, so the dog's place is either in the house or in the street, usually the latter. The theory of the "survival of the fittest" gets a black eye here surely, unless the standard of fitness be wide of that usually accepted by dog fanciers.

Another difficulty I have contended with is luck. It must be that. True, I haven't, like "Podgers," spent much money on dogs—written a (check)book in their honor, so to speak. But I have tried in various economical ways to secure a good dog, a sensible, intelligent dog, that would be useful as well as companionable. The only one my wife liked was a handsome English setter of shady pedigree, which learned to follow the baby's buggy and allowed the aforesaid baby to cuff him and pull his tail. His only other accomplishment was to decorate the front yard with fragments of the morning paper. Hammond's counsel and my patience were alike wasted on that numbskull; he absolutely could not or would not learn a thing, and I gave him away in disgust. Next I had a little black witch, a crossed Gordon setter and spaniel, that was as bright as the other fellow had been dull. She was a perfect little prodigy for field work, and though not allowing the baby so many liberties, was fairly welcome in the house. While trying to settle down into a new home we lost her. This was all in balmy California.

There are a very few good dogs in Mexico. I got hold of a smart young dog, of German blood, I think, that was quite intelligent, but had a strange and unnatural antipathy to little children. I say unnatural because I never before saw a case. Is it not unnatural? So I am dogless.

This is a poor country for dogs anyhow. The cactus and thorns and horrible dryness would be a dreadful trial to a good dog, and as the quail will not lie close and there are no woodcock nor grouse, duck retrieving is about all the use—aside, of course, from companionship—which one has for a dog. And yet a gun without a dog seems but half an outfit for hunting.

I went to San Antonio recently. That is quite a lively town in shooting matters. And from all I could learn I suppose that Corpus Cristi, a sleepy little town down on the Gulf, is about the finest spot in the United States for winter wildfowl shooting, with deer and turkey and quail in easy reach. There are three varieties of quail along the Texas Mexican border, Bob White, the California valley quail (which some of your correspondents have recently spoken of wrongly as mountain quail), and the Mexican quail with a white topknot (*Cyrtonyx montezumæ*). I make this statement not from personal observation, but from what I have heard. I only saw from the train Bob White and the Mexican quail, the former after crossing into Texas in great abundance. In fact I saw none on this side of the line, though they are doubtless there. It seemed just as it should be to be greeted on Uncle Sam's soil by this little brown sprite, whom I had not seen for five years, and I was sorry press of business did not allow me to pay my respects to him. AZTEC.

SAN LUIS POTOSI, Mexico.

AS THEY LIVE IN JAPAN.

TEN THOUSAND YEAR HOUSE, Tokio, Japan, Sept. 12.—One's first impressions of Japan are as if he had been suddenly deposited in an enchanted fairyland. The hurry and bustle of the small people as they clatter on their stilted wooden shoes; the streets crowded by the ubiquitous ginrikisha man, always on a run with his baby-like carriage; the crowded shops where every one sits on the floor with his curious wares around him; the pretty girls in pejamyas; the Kate Greenaway-dressed babies carried on their mothers' backs; the ghastly look of the married woman with her shaved eyebrows and blackened teeth; the heavy loads hauled by men; the bullock carts; the carriage of some official preceded by his runners; the grotesque-looking junks and sampans; the naked boatmen and workmen—all form a sight bewildering to the foreigner.

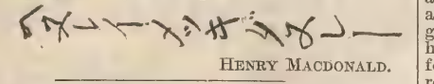
The harbor of Yokohama is too shallow to admit vessels landing at the wharf, so when ours anchored it was at once surrounded by boats called sampans, which are in appearance a cross between an Indian canoe and a gondola. The sampans are for hire, and some of them have hotel runners, who at once rush on board and "rustle" for customers; the hotel runners are not encumbered with clothes, being usually contented with a small breech cloth; others, more pretentious, wear a shirt, but all are excessively polite, bowing with the grace and freedom acquired from unencumbered limbs.

I went at once to Tokio, a city of more than a million inhabitants, and with the cleanest and best conditioned streets I have ever seen.

There is an European hotel here, but wishing to see the country *au naturelle*, I took up my quarters in a Japanese one, with a mental proviso, to help myself on the outside on the food line, a precaution no one can appreciate who has not dined *à la Japanese*. Shoes of all description are required to be removed before entering any Japanese hotels, temples or houses, a necessity required by the construction of their buildings. The woodwork of the interior is polished and beautifully finished; the floors are of handsome bamboo matting, which shines from constant polishing. The closets of the rooms, and they are many, close with sliding doors, every joint being fitted like cabinet work. Each room is furnished with a Liliputian tea set; a box containing charcoal fire, over which constantly simmers a kettle of hot water, with which to make tea; a little box with a bronze cup containing fire, with which to light a pipe, a bamboo cane about 6in. long, for a spittoon; a toy bureau with a swinging looking glass, and a half dozen leather mats to sit on. The walls are sparsely decorated with pictures of impossible beings. The ends of the rooms are paper screens which are left open in the daytime. Privacy is unknown; every one, from the dish washer to the proprietor, comes in without notice—except to bow the head to the floor—takes a seat on a mat on the floor and proceeds to drink tea with you. The beds are simple comforters, laid on the floor with a pillow like an oblong box, made of wood and covered with leather. This pillow is an exquisite implement of torture, which I feel convinced must have been invented by some Japanese sage, as a terror to sluggards. In the morning, before I am up, the women come and make tea for me, and then, despite my modest protestations, insist on dressing me, and help make my toilet. In fact the whole Japanese domestic economy exhibits a total want of what we usually call modesty, although they are extremely moral. I have never yet seen a street quarrel, nor a sign of vice, drunkenness nor beggary. They are extraordinarily polite, acquaintances when meeting or parting, bowing almost to the ground. They are not at all servile, however; and you can distinguish by the proud step and haughty demeanor the disarmed two-sworded man, whose former business in life, like that of our old knights-errant, was resenting fancied injuries. The foreigner, by his ignorance of the punctillios of Japanese life, often unwittingly gave offense to these high-minded gentry, and I was shown the grave of one unfortunate Englishman, who by crossing the street, between the knight and his prince, was at once killed to satisfy the offended dignity of the two-sworded Quixote. The English Government demanded reparation in the shape of a fine and execution of the murderer; the fine was paid, but a meaner victim was executed; and I am told the real offender lives in Tokio to-day.

The feuds of rival nobles and clans in Japan would furnish material for an Iliad, or a chronicle that would rival those of the Scottish Highlands.

The Japanese vegetables and fruits are all different from ours. Their watermelons are good; but their peaches are hard and ill-tasting; pears are juicy, but taste more like a raw potato; muskmelons look like our cucumbers. Even the animals have a peculiar look; cats are tailless; very diminutive bantam chickens are numerous; other roosters have tail feathers from three to four feet long, and there are many small red fish who in tail development endeavor to rival the roosters. The horses are of a Tartar breed; the cattle are East Indian.



In the center of the city is the palace of the Mikado, where a large space is surrounded by a wall and moat; this is surrounded in a circular manner by other walls and moats. All the Government buildings are in the walled portion; the moats are crossed at short intervals by bridges, which can be easily defended from an enemy. The troops present a creditable appearance. The streets are sprinkled by large buckets, with a bottom like a sieve, carried on a bamboo pole across the shoulders. Workmen are naked except a breech-cloth, and sit on the floor at their work. Carpenters pull the saw toward themselves. Almost all work is done by hand power. Rice is ground by being poured into a hole and pounded by a heavy hammer-headed lever, which is worked by a man jumping on one end of it—a most laborious task. The women appear to have an easy time, as their house-keeping is very slight. They throng the streets, hair plastered in a peculiar manner, and faces painted so prodigally as if to assure the passer by they could afford the paint.

Some of their streets present a gay appearance by night, lighted up by lamps and lanterns of every possible pattern. Some are for the exclusive sale of flowers and shrubs, which are presented in the most marvelous profusion and beauty—shrubs loaded with fruits and flowers of endless types and colors. Other streets are devoted to one-cent shows and performances, pictures of horrible dragons and monstrosities, jugglers, swordmen, fakirs, etc. The weird music, constant drumming and shouts and speeches of the actors, present a wonderfully stirring and grotesque entertainment.

The principal mode of conveyance is by ginrikisha, a neat little carriage on two wheels, drawn by a man whose clothes consist of a blouse and drawers about 6in. long. He will carry his passenger with tireless speed for seven cents an hour, his bare feet never becoming sore, and his legs showing a model from development.

In religious matters the educated classes are agnostics or Buddhists, but the belief of the great majority is Shintoism. Christianity is not noticeable. The Buddhist temples are comparatively bare, but the Shinto temples are rich in grotesque ornamentation. The principal ones are about the size of Solomon's temple, and, like it, the worshipers do not enter, but pay their devotions from the outer court. The entrances to the temple grounds are high gates, guarded on either side by terrific, ogre-like giants, about eighteen feet high and large in proportion. The walls of the inclosure are a mass of ornamented woodwork in bold relief, lilies, cactus, lotus and other flowers, in inextricable confusion, with peacocks, lions, tigers, dragons and the nightmares of Oriental imagination. Inside the gates, a stone pavement a half mile long leads up to the temple, through an immense avenue of stone lanterns about twelve feet high. Scattered through the grounds are colossal statues of lions with forked tails, dragons, obelisks, saints' tombs and stone statues of saints with halos. The temple stands on an elevation reached by stone steps, sometimes as many as a hundred. Inside all is gilt and tinsel, with lanterns, some the size of a small balloon, pictures and images; all of which, in their hideous grotesqueness, look like the tortured dreamings of insanity. At the principal shrine is a large money box, about twenty feet long by ten wide, covered by diamond-shaped slats, into which the worshiper throws his coin before praying. Before each shrine is a large gong with a rope hanging in front of it. The devotee grasps the rope and gives it a jerk, which sounds the gong to summon the god. The signal in the East for summoning an attendant is to clap the hands together, and as the Shintoists stand with bowed head or kneels before his shrine, rubbing and counting his beads, he frequently claps his hands to insure the attention of his saint, while he mutters his prayer in a monotone. Nowhere have I seen people so devout. The stone pavements are worn by countless feet; the prayer-log they kneel on is polished like glass by numberless knees; while a shower of coins is constantly poured into the money receptacles. There are shrines for almost everything. Stone saints with halos round their heads have tapers burning before their shrines. Sacred horses, pigeons, roosters and turtles are fed by food, sold in little plates, and purchased by their admirers. Some of the stone images in the shrines are Japanese forms answering to the Madonna and Child, and are usually hung with some offering. Others have fox heads or monkey heads, and one I saw with a pig head. One shrine is a large prayer-wheel, 12ft. in diameter, filled with prayers. The worshiper puts his money in the box and turns the wheel. This is religion by wholesale. The most crowded shrine was a wooden image of a woman seated. The worshipers rubbed that part of their own bodies they wished healed, and then rubbed a similar part of the goddess. Cripples wishing their limbs cured, childless women wishing children, ugly girls wishing beauty, struggle with each other to get a chance to put their money in the box and place their hand on the goddess. It speaks strongly for their vanity, that every feature of the face was rubbed off, and its smooth surface glistened with a brilliant polish that only the smoothing of countless hands could give it. The worshiper forgets his former failures. The faith of superstitition is immortal. Every shrine has its money box. Credulity always pays those who administer to it.

But taking Japan from every point of view, it is a pleasant country to live in. It is beautiful, it is cheap, and its climate is unsurpassed. The people are industrious, obliging, orderly, clean, polite, moral and honest.

HENRY MACDONALD.

FISHING À LA MODE.

I SAW in some newspaper recently a description of a dude sportsman, gunner or fisherman, I forget which, and "that reminds me" of a fellow I saw one day last summer, just outside of Paris, fishing in the Seine.

To prelude, the laws are very strict over there in regard to fishing and shooting. The seasons open and shut like a jack-knife with a snap, and woe to the transgressor. On a certain day in July, I think, the season opens, and long before daylight of the day the banks of the river all along the Bois de Boulogne are lined with fishermen sitting side by side and almost elbow to elbow. I strolled down to the river one day and witnessed the sport. Taking out a cigar I paid a woman two sous for a chair, and sat down to get a wrinkle in French fishing. For half an hour all sat in silence, with not a movement. Presently one fellow had a nibble. Immediately every eye was turned on the little red float on his line. The float moved perceptibly. The man, with every nerve strained and eyes riveted on the float, breathless with excitement, watched. The float dipped again. The man pulled, the cork came to the surface, but no fish. All along the line of fishermen there was an ejaculation of *Ah!* The disappointed fisherman put on a fresh bait and waited. Presently the fish took hold again; and this time he had him. Carefully he worked him in to the bank; and an attendant slipped a delicate landing net under the fish and carried him up the bank. There was a cry all along the line of fifty or more fishermen of *Bon, bon, très joli.* Several laid down their rods and gathered around the basket, lined with leaves, in which the fish was carefully placed. He was a monster, nearly six inches long, and must have weighed about four ounces. Then all went at it again with renewed hope and courage.

Presently a cab drove up, and there descended from it a dude in an elaborate sporting costume—eye-glasses and a broad-brimmed hat. Walking leisurely to the bank, a man who had evidently been sent ahead to secure a position, vacated. A servant brought from the cab a folding stool and placed it on the bank; returning to the cab he produced a delicate rod and satchel. The rod was put together; the satchel was opened and a small silver bait box, a towel, a piece of soap and a bowl were placed on another stool alongside.

The servant opened an umbrella and held it over the fisherman's head to screen him from the sun, and the fishing began. It was a long wait for a bite. Finally there was a nibble and a miss; several more nibbles and misses, and presently there was a fish, sure enough. The excitement all along the bank was intense. With the aid of the landing net the fish was secured. The servant essayed to take it off the hook; but the fisherman anticipated him, and held it up in triumph. But this operation wet the dude's gloves, and he took them off and threw them away. Things were getting interesting and exciting, and blank the expense. Presently another fish, which being secured, the servant dipped up water from the river and handed the dude the soap and towel; and he washed his hands. This was repeated every time he caught a fish. All this time a gen d'arme had been walking up and down; and approaching the lucky fisherman, there followed an animated conversation, with much gesticulating, seemingly a protest against such indiscriminate slaughter. The dude waxed indignant and quit. The servant unjointed the rod, gathered up the stools, umbrella and fish basket, and placed them in the cabs which had been waiting. The dude entered and was driven off with his catch, numbering about six, the aggregate weight of which might have been 2lbs.—an immense success. I have no doubt this great catch made an item in next morning's paper, with the usual lie about the weight of the string and the big one that was lost.

I had learned how the French do it. Evidently a little fishing goes a long way with a Frenchman. No doubt my little man went home, took a rose water bath, and lay down for a rest after such a fatiguing and exciting episode. I thought to myself, how I would like to get that chap out in the Rockies on a thorn brush creek, of a hot day, and make him wade the stream, with an occasional stumble over a slippery boulder and a souse under. What a power of good it would do him, and what fun for me!

PODGERS.

QUAIL SHOOTING ON THE LOUP.

AFTER my Thanksgiving dinner last year I sat down and spun a yarn for FOREST AND STREAM, and I am minded to-night to tell of how I procured my dinner. Last year I had a chum and we were joint monarchs of a bachelor's sanctum; but he went back to New York last summer and returned with different game from that which we had been accustomed to pursue. "'Twas ever thus." Just as soon as I set my affections upon a man he gets married, and for a year quail and chickens have no attractions for him.

Last Sunday there was a good tracking snow, and early the next morning Ben Marston and I were off for the Loup. I was disabled as to one foot, and so was useless except as driver; but I wanted to see the sport. We took Dude, a Llewellin before mentioned in these columns, and about twelve miles north of Kearney picked up another sportsman, Grant, who owned a most villainous pointer, that accompanied us during our subsequent rambles. About 2 o'clock we reached Uncle Billy McCord's, on the Loup, and as it had again commenced snowing, we spent the remainder of the day in telling stories, smoking and discussing dogs.

An early breakfast put me in first-rate condition for the day's work. Ben and Grant took guns and dogs and I followed with the team. The Loup at this point divides, making a large island, heavily covered with timber and underbrush—just the place for quail, but most vexatious to the hunter. Here my confreres were to do their work, while I watched them from the bluff. The sky was clearing and we had every prospect of a pleasant day. When I reached the bluff a strange scene presented itself. The river was covered with thin ice near the edge, but was open a few feet from the shore. Here was an immense flock of mallards, while around and close beside them the cattle were taking their morning drink. The hunters had already seen them and were sneaking up among the steers, with the dogs well to heel. Grant was a considerable distance in the lead, and under cover of a great red two-year-old reached the water's edge. Then his impatience got the best of him, and without waiting for Ben he showed himself and blazed away as the flock rose. I could almost hear Ben's pious ejaculations, but he fired at long range with both barrels, and each shot counted. Eleven fat young mallards were the result of the first hour's work, and it was only 8 o'clock.

I drove down to the river and picked up the game, while Ben and Grant put on their hip boots and waded to the island. In a few moments the music began. It was one crack followed by another, and the work had to be quick, for a quail no sooner showed himself than he was lost to sight. Dude stood his birds like a little man, and it was a pleasure to see him strike a scent, follow it in an instant with wagging tail and then stiffen like marble. He invariably found the dead birds, even in the thickest underbrush, but he has not yet got retrieving down to a science. But Grant's dog! It riles me to think of it. He ran for every gun crack. When Ben fired he would leave his master, and when Grant fired he would desert Ben. This took so much of his time that he forgot to exercise his nose, and so failed to demonstrate the ability of which his master had been so confident. Finally Ben persuaded his comrade and the "purp" to cross the river, and from that time all went well, as the quail when flushed on one side of the stream flew to the other, and gave each hunter a shot. About 11 o'clock they returned to the wagon with about three dozen birds, and we hurried back to Uncle Billy's for an early dinner, as we wanted to reach Kearney before dark.

The afternoon was quite cold and we devoted a portion of it to pot-hunting. It was unsportsmanlike, but it could not well be helped. Whenever we passed a timber claim there were chickens in the trees, and when we passed haystacks there were chickens on them. Being in Nebraska we could not find stones to throw at them, so we had to take them sitting, but then we limited ourselves to just what could be used at home.

A day or two since, Dr. Amos, of Kimball, Neb., and P. T. Lambert, of Kearney, went up Wood River, and as a result of an evening and morning shoot bagged 137 quail. Indeed, quail shooting this season has more than compensated for the lack of chickens. Ducks have been fairly abundant ever since August, nor do they yet show any signs of departing for the south; but geese are much scarcer than they have been for many years.

Antelope are quite abundant from Lincoln county north and west, and a few small bunches are to be found south of North Platte, between the Union Pacific and Burlington & Missouri railroads.

SHOSHONE.

KEARNEY, Neb., Nov. 28.

DAYS WITH THE ELK.

THE ELK.

THE elk is exceeded in size by only one species of deer; that is the moose. But while the moose is long-legged, short-necked and big-headed, the elk is as delicately proportioned as the Virginia deer, and no more thrilling sight can be imagined than a band of these animals trotting swiftly and gracefully through a mountain park.

The elk is nearly as tall as a small horse, but is more light of limb and shorter coupled. Its speed is great, and it takes a very good horse to overtake one on the trot. The elk's gallop, while faster than its trot, is also much more fatiguing, and a running elk will soon tire itself out; while the trot can be kept up all day without apparent fatigue. The body of the elk is a rich cream color, which changes on the neck, head, legs and rump to dark brown. On the rump about the tail is a large triangular patch of pale cream color, which shows out very distinctly against its border of dark brown. The tail is very short, the ears small, and the horns widely spread, graceful and branching.

The range of the elk formerly extended over the greater part of this continent. They were found from the Atlantic to the Pacific Ocean and from the longitude of Hudson's Bay south to Mexico. This range is now greatly restricted. It is possible that there may be a few in Minnesota, but there are now no localities where elk are plenty east of the Rocky Mountains. In the Yellowstone Park, where all large game is protected, the elk may still be found in large numbers. They still occur in western Washington in moderate numbers.

The articles which accompany the illustrations will give a good notion of the habits of the elk.

AN ELK HUNT.

DEEP in the Rocky Mountains, not very far from Fremont's Peak, and within sight of the Three Tetons, stands a great mountain. High up on its eastern slope, from among the rough blocks of lava, which lie piled up in confused masses as they fell from the beetling cliff above, flow tiny streamlets, which with cool tinkle and noisy rush take their way down the slope, and joining together as they advance, at length form a mountain torrent. It hurries on with never a pause, past giant boulders, among tangled willow thickets, under bending alders, by close groves of young pines, through gloomy gorges and thick forests, until at last, reaching the valley, its headlong speed is slackened, and it flows with a more even current, at length pouring itself into the Yellowstone River and joining the flood which after watering the wide plains and the States of the South finally empties its drops into the great Gulf. In the wide rolling meadows on the upper western slope of this mountain, rise other springs of clear cool water. These flow toward the west; at first gently, with pleasant shallow pools in which you can see the tiny trout slowly oaring themselves against the current, or if alarmed darting like silver flashes to the shelter of the banks, or up or down the stream. By and by these rills, like the others, come together; like the others form a wild rushing torrent, and like them at length reach a valley. But this stream pours itself into the Snake River, and after long and devious journeying across the plains of Idaho, Oregon and Washington, is lost at last in the waters of the great Pacific.

Here on the Continental Divide is still the home of the elk.

The Geologist and I had started out to climb this great mountain, which, high as it is, has not yet been deemed worthy to receive a name, since it stands among others nearly as huge. We had ridden our unwilling horses nearly to the summit, and then leaving them at the foot of the rocks had dismounted and breasted on foot the last of the steep ascent. At length we reached the comb of piled up lava blocks which formed the summit's crest, from which we could see, far in all directions, mountains piled on mountains.

To the northwest the Three Tetons reared their pinnacles toward heaven, superb in their covering of newly fallen snows, while to the south other mountains, only less high, presented a jagged mass of gray, verdureless rock, seamed here and there by cañons, which, though to us they looked like mere fissures in the mountains, must be both deep and wide. To the east and north were lower timbered mountains, separated from each other by deep black gorges, with here and there a gray rock peak, sometimes patched with snow, rising far above the dark green of the coniferous forest.

In the wider view there was nothing of the picturesque, but its immensity, its grandeur and its majesty awed and held speechless the men who looked upon it. For a while they said nothing, for they were striving to take in the view, and even when their wondering intelligences had become somewhat accustomed to the scene, they had no words in which to talk of it. At such times a gesture, a hand pressure, or even a movement of the head, is more expressive than any language, if only there subsist between the gazers that perfect sympathy which is necessary to true companionship everywhere, but which is above all needed in the mountains. Long they gazed on the wide view spread out before them, thrilled by its immensity. Gradually, as they became more accustomed to it, they began to look at what lay closer to them and to take in the details of the mountain on which they stood.

On all sides, save one, the mountain broke off sharply; but off to the south stretched for two or three miles a rolling, grassy tableland, dotted here and there with thickets of quaking aspens or with patches of low willows, and watered by many a tiny rill. The grass was sere and brown now, and the leaves of the deciduous trees were yellowing in the crisp September air. From the height on which we looked down on this tableland we could see no irregularities of surface; it looked like a great park, smoothly undulating, well kept, picturesque and charming. Looking at it more carefully, examining the aspen thickets in detail, I saw that this tableland was peopled with elk. Some were so distant that it was only by careful inspection with the glass that they could be seen, and then it would be necessary to watch the objects for a little time until they moved in order to be certain that they were not rocks nor old stumps. Other groups, nearer at hand, could be made out with the naked eye, and in others, still nearer, the bulls could be distinguished by their horns, and each movement detected.

Less than half a mile from where we sat on the mountain crest, and almost at the base of the great cliff which fell away from beneath our feet, was a grove of aspens which gave shelter to a family of elk. We could see a number of cows lying in the shade of the trees, and several heifers and calves picking at the grass or drinking at the little brook, but the master of the herd, the great bull that ruled it, was nowhere visible. Although we could not see him, we knew that he was near at hand, watching his family, and ready to do fierce battle for his rights as its lord. He was feeding on the other side of the trees, or was lying down in some dense thicket among them, or perhaps he was cooling his sides in the thick black mud of some spring which gave rise to the little brook that flowed out of the timber. Even as we sat there intently scanning the scene, his appearance was heralded by a distant bugle call, like the whispered strain of an Æolian harp, or the faint trumpet tone of some elfin horn sounded by gnomes who dwelt among the crannies of the piled up rocks about us. A moment later the grand bull appeared among the trees. He paused for a moment and then walked slowly out into the open and drove back to the edge of the thicket one or two cows that had strayed further away than he liked. As he walked toward his cover he stopped, and facing the west threw back his head and looked long toward the distant mountains, while his smooth coat glistened in the sun, and the white polished tips of his mighty antlers reflected its rays. He made a fine picture.

The elk which we were watching could have been readily approached by a careful hunter, but we did not disturb them. Our camp and our horses were on the other side of the mountain, and to have killed an elk on the south side would have meant a long climb carrying heavy loads up one side of the mountain and down the other, with every probability that we would not reach camp that night. We contented ourselves, therefore, with watching the unconscious animals, an occupation to my mind always far more interesting than killing them.

At length it was time to move, and putting up our instruments we walked, scrambled, slipped and slid down the mountain side to where our horses were tied. The way was so steep that we led the animals instead of riding them, and down the hill we plunged. Over steep grassy hillsides, through patches of cool green timber and down slippery dirt slides we took our way until we had gone down perhaps 2,000ft., and were just passing out of a piece of green timber and about to start down a long sharp slope, rough with the fallen trunks of great trees killed by some fire of long ago. At the foot of this hill was a little grassy bench, and beyond this could be seen the tops of evergreen trees, showing that the mountain fell off sharply below. As we were about to pass out on to this open hillside, my eye was caught by a little yellow patch on the yellower grass of the bench at its foot. It looked like the back of an elk, but the head could not be seen. I made a sign of caution to my companion, who stopped; dropped my horse's bridle to the ground and ran cautiously to the top of a little knoll near by. Here raising my head very slowly and looking through the dead branches of a fallen tree, I could see two cow elk, one of them feeding, the other walking up the hill.

Returning to my friend I told him what I had seen and asked him if he wished me to kill an elk. "By all means get one if you can," said he. "Trout are very good, but it is possible to get tired even of trout. We need some fresh meat in camp."

"Very well," said I, "I will do the best I can, but the wind is wrong and they may catch my scent before I can get within range." Slipping off my coat, glasses and barometer, I tied the lot to the saddle, and then with rifle in hand, started down the mountain. For the first few hundred yards there was no difficulty in keeping out of the elk's sight, for the hillside was seamed with little gulches, whose crests were rough with rocks and fallen timber. The wind gave me some anxiety; it was blowing diagonally up the mountain side, but as yet the currents of air which passed me went well to the right of and above the point where a part of the band of elk were probably lying. I could now guess at the probable distribution of the herd.

On the mountain side above the little grassy bench already referred to and overhung on three sides by vertical cliffs, was a shallow basin, timbered with pines, spruces and aspens. From this basin a little brook flowed across the grassy bench, scarcely more than 200yds. from where I then was. Beyond this brook rose a steep knoll 100ft. high and plainly marked by half a dozen game trails. I made up my mind, judging from the time of day and the general surroundings, that most of the elk were lying down in the timber, and that those which I had seen were only some outlying members of the herd. This made the matter of approaching within shot still more difficult, the animals being scattered, and some of them no doubt above me on the mountain side. It appeared probable, however, that when the elk ran they would either have to pass down the draw near me or else over the high knoll beyond the brook, and as they had 200 or 300yds. to run from the timber before they could pass me, I should very likely be able to race down, cut them off and get a shot at 100yds. Keeping as high up the hillside as I could without exposing myself to the view of the keen-eyed sentinel, I worked my way along toward the stream. In crossing the little ravines I only had to stoop low, but over the ridges I wormed myself along on my face, careful never to crack one of the dry sticks with which the ground was strewn, creeping under logs, around great rocks, by tangled clumps of sage brush, until I began to see that whatever the position of the elk I should surely get a shot.

I was still a hundred and fifty yards from the brook side, when I heard among the trees a shrill note of alarm that told me that the game had either seen or winded me. At the same moment there was a tremendous cracking of sticks and a hammering of many hoofs upon the ground, and there burst forth from the clump of timber thirty-five or forty elk—all cows and calves—which in a close body trotted like the wind down the valley toward the high knoll. A moment later these were followed by two or three others, and immediately behind them came a splendid bull, traveling with great speed, and threatening with his long horns any one of the herd that showed the slightest disposition to lag. As they rushed from their cover I left mine, and raced down the steep slope toward the brook to cut them off. I had little more than a hundred yards to go before coming within shooting distance, and they had three hundred to cover before passing over the crest of the hill and out of sight. By shooting at the thick of the herd from where I was I could probably have killed three or four, as they strained up the slope broadside to me, but I never like to take shots of this kind. Besides what you may kill, you are almost sure to break legs, shoot through the paunch, or in some other way to maim and cripple from two to half a dozen animals that you do not get. In this case I was not obliged to "brown" the herd.

After running perhaps fifty yards as hard as I could, jumping gullies, bounding over logs, and in all ways making the best time that I could, I had thrown myself on the ground about a hundred and twenty-five yards from where the elk would pass. I had a brief space to look them over before they reached the crest of the hill, and was trying to select my meat. The bull I did not want, for as the rutting season was well advanced, his flesh, though fat, would have a strong taste. As I looked at them and threw up my rifle to draw down upon a fat cow, I saw out of the corner of my eye two other cows to my left, and hardly seventy-five yards from me. They had evidently been lying down away from the main bunch, and were probably the two that I had first seen on coming out of the timber. They were apparently not themselves alarmed, but were running because the others ran. Just as I saw them, the hindmost, a fat two-year-old heifer, slackened her pace, and in a moment stopped and looked over toward the bull, which seemed surprised at the appearance of these two, and a little undecided as to what he should do. The position in which the heifer was standing was a bad one. A single dead pine tree, two feet in diameter, stood on the knoll, and the cow had stopped just behind this, so that her whole body from tail to shoulder was covered. In turning her head to look at the bull, however, she exposed the whole neck. The distance was only about seventy-five yards, and I felt pretty sure that even if I missed her neck, I could kill her before she reached the top of the hill. Throwing up the rifle, and catching a fine sight for a point on the neck vertebræ about ten inches below the ears, I fired, and through the clearing smoke could see the cow rolling down the hill, now with all four legs in the air, and again tumbling end over end down some steep bank.

I lost no time in hurrying toward her, for I thought it possible that she might be merely creased; that is to say, that the ball might have passed so close to the neck bone as to merely stun the animal, instead of breaking the vertebral column and killing her. I have lost not a few head of game at which I have taken the neck shot, by slowness or carelessness in going up to them, and I wished to make sure of this cow. As I walked toward her, I saw that a number of the herd had stopped and were looking back at me, while the bull had come up to within 50yds. of where the cow had stood when I shot her, and seemed disposed to approach still nearer. Finding that I paid no attention to him, and continued to advance, he at length thought better of it, trotted off a little distance, stopped and looked back again, and then tossing his head defiantly, gathered up his scattered cows and drove them off before him.

It proved that there had been no need for haste in going to the cow—she was stone dead, her neck broken. As I rolled her over and drew my keen knife to take off the meat, I looked back at the hillside and saw my friend slowly approaching with the horses. By the time he had reached me, I had removed both hams, and it did not take long to cut out the sirloins. Then taking the lariat and putting it through slits cut between the tendon achilles and the bone of each leg, just above the hock, I lashed the hams firmly together at this point. The cinches of my saddle were now loosened, the saddle set well back, since we were going down hill, and the latigoes drawn pretty tight. I then tied the sirloins behind the saddle by its strings, and with some effort drew one of the hams across the seat of the saddle, so that the two would balance each other and ride well. With the remainder of the lariat I lashed the load on, so that I felt quite sure that it would be secure; and then, after a wash and a drink of the cool water—for the butchering was warm, disagreeable work—we started on toward camp. Yo.

AN ELK FARM.

THE fact that elk are readily captured, tamed and reared, has suggested to a number of ranchmen who live in an elk country, the idea of raising these animals for beef, and we know of several ranches where there are small bunches of these animals. One such is mentioned in a Wyoming newspaper which bears the suggestive name of the Platte Valley *Lyre*:

"Between the two forks of the Grand Encampment Stream, in the upper portion of the Platte Valley, lives Cushman, the hunter. Mr. Cushman, known to his many friends as 'Cush,' owns a magnificent hay ranch, comprising 250 acres, all under fence. But Mr. Cushman owns something else besides this noble ranch, and that something else is his dog Thong. And now you see that spot of fifteen acres in the midst of Cush's hay lands, and which is inclosed by a fence fourteen poles high? Well, it is entirely owing to Thong, the dog, that those fifteen acres are so inclosed and that they graze the stock they do. In that inclosure there feed and thrive five elk, and they were all caught by Thong.

"In one spring Thong caught seven young elk. Two of them his master sold for fifty dollars each, and the other five are inside the 14ft. fence. From these five elk Cush proposes to breed, and in a few years his magnificent hay ranch will have attained the unique and profitable distinction of an elk farm. The five elk now possessed by Cush are thoroughly domesticated. They will come at his call, eat from his hand, and in the winter occupy stalls in the stables, and feed from hay racks with the same facility and fattening results as do the horses and cattle.

"Cush's ranch is finely adapted to the purpose of elk

ELK.

(*Cervus canadensis* ERXLB.). INSTANTANEOUS PHOTOGRAPH FROM LIFE.

raising. It is near enough to the mountains to be as much of a home to the elk as their own wild and native feeding grounds; it is dotted with springs, and has, besides, the peculiar water source of an immense snow bank which lies for three-fourths of the year on the mountain side overlooking the ranch, and from which are sent streams of purest water to traverse and enrich the broad hay lands calling Cush master; and again, the ranch, situated as it is in the immediate vicinity of mountain and forest, affords the best of opportunities for Thong to recruit the domesticated elk herd by timely raids on the wild elk bands.

"Thong is of mixed bull and staghound blood, giving him endurance, speed, courage and tenacity of grip, and is nearly as famous for his exploits in defeating the mountain lion as in the capture of the elk."

THE TRAIL OF IT.

Three men, including the maker of this brief chronicle, were seated on a bench before a fire in a log cabin on Grand River, Colorado, smoking and elaborating adventures. These narrations differed from the usual, because they were true in every particular. You can see if you read the following, which is a sample of many, that it has the plain, rugged appearance of the inflexible fact.

One of the trio, a man of Scotch descent, fifty years of age, a mountaineer and hunter of rare experience, told of a scuffle he once had with a bull elk. He looked at the fire as he talked, twirling his pipe in his fingers by way of emphasis, and spoke in the measured tones of one who has outgrown the necessity for dramatic illustrations.

"I was over in the Wet Mountain Valley winter before last helpin' some men tend 800 head o' cattle. We put up a cabin, 'bout like this, and made a corral that took in nigh on to three acres of ground. The fence was, well, say ten foot high, of pine poles, good and strong.

"One time the boys was off, and the corral had not been used for a week. The big gate was open, squirrels played on the fence, grouse come and lit on the stakes, and things generally was layin' 'round loose. Sometimes I could hear panthers jump off'n the fence by the gate, where the woods made a kind of corner close up. It was a little lonesome when a fellow had to stay there alone, but we got used to it, you know, and didn't mind it much.

"Sometimes the greasers would come 'round, mostly when the boys was away, but they knowed the guns we had could talk, and say what you will, there isn't a greaser, or an Injun, or any of 'em that likes to have a shooter stuck into their faces.

"One mornin' 'bout daylight, I heard something walkin' 'round in the corral. It's hard work, you know, to tell every time just what kind of a noise it is that wakes you up out'n a sound sleep. You know it's a noise, but what it is and where it is, is hard to settle on. With us it was a rule to git up and find out all about it, and then you're satisfied. So I got up and looked out o' the winder.

"Well, sir, you can call me Dennis if there wasn't two elk out there, a cow and a big fellow with tremenjus horns, makin' for the haystack at the other side of the corral.

"'Good enough,' I said to myself, with a sort of chuckle, 'I'll just go out and kill a couple of elk. Just think of it!' I kept on saying, 'Two elk in the yard, already delivered, and no express charges! Why, it'll be easer'n falling off a log.'

"I put on my duds lively, took my carbine, one of the old-timers, slipped some cartridges in my pocket, went and shut the gate, and there I had 'em. 'Scotty, old boy,' I said to myself, still feeling good, 'you hold a purty hand, three aces and a gun!'

"Of course, there was no use being sly about it, so I just walked right out, and when I got to about sixty yards, the elk buckin' up agin the fence and tryin' to git over, I just pealed away and downed the cow right in her tracks.

"And there's where I made a mistake. The old bull saw it, and came for me worse nor a runaway horse, and tossin' his horns in a way I did not like. Quick as possible I put in another cartridge and blazed away. The ball struck too far back, and 'stid o' gittin' him down, it only made him madder. I couldn't load agin before he'd be on to me, and so I skipped for the fence. But the old fellow got there about the same time, and while I was tackling the poles he got his horns where there was a good deal of purchase, and I went over backward like a flapjack, and landed 'bout ten foot behind the bull. Of course I lost my gun, and got a gash a foot long in my arm—there's the trail of it now," said he, rolling up his sleeve and showing an ugly scar.

"You'd better believe I got behind that haystack mighty quick, the bull follerin', snortin' and tearin' up the ground. He knowed it was a fight for life. He knowed it well as I did, and he made it lively fur me. Five or six times he made me hop 'round that haystack. O! he meant business, and he trembled all over, he was so mad. Finally he stopped to notice the cow, her big eyes glarin' right up at him. Just then I made fur the gun, and when I got it I never loaded a carbine so quick in my life. It was like this: in-down-snap-cap-ready! and blood all over everything, from that arm.

"I was runnin' all the time, the bull after me, every snort soundin' like he was cussin' me fur killin' his mate. Then I whirled, and excited as I was, I handed him one right between the eyes.

"If you believe me, that elk turned a perfect summerset, his hindlegs comin' within two inches of me as he went over!

"Well, that let me out, and I got to the cabin as quick as I could, and tied up my arm, and fell over on the bed the tiredest man you ever see. When the boys came in at noon and saw my arm in a sling, and wanted to know if there'd been any Injuns to see me, I up and pointed out o' the winder, and told 'em it wasn't as easy to kill a bull elk as you'd think, even when you've got 'em in a corral, with the gate shut, and everything comfortable."

And then half musing, he said: "I'll tell you, boys, I've found out in the last forty years, that lots o' times when you think you've got a snap makin' money, or gittin' married, and prospectin' generally, it may be one of the most disappointing things you ever tackled."

JEROME BURNETT.

THE ELK IN HARNESS.

THE elk, although naturally of a stubborn disposition, can, if properly and carefully handled, be made perfectly tame and can also be made to do light driving.

The best time to capture these animals is when they are young calves in May, when they are from two to four weeks old. They can then be easily reared on diluted cow's milk. After the first six months they grow rapidly, and I think become stronger than if they had run wild. At from six to eight months they should be made to wear a halter and be taught to lead, and from this on they should be constantly handled until they are past yearlings. At this age a light harness may be put on the animal, and after it has become used to this it should be hitched up with an old steady work horse. It should be driven frequently in this way until it is past two years old, when the amount of work can be increased until the animal is from three to four years old, at which time it is in its prime and ready with its mate to take a light buckboard 100 miles "between suns."

The hardest part of the work is halter breaking, which takes three or four days of hard patient work. I use a hackamore and nose ring on the head, which serves well to guide the animal.

In rearing calves it must be remembered that the bulls after they are yearlings are very dangerous to handle during the latter part of September and October.

My experience has not been so much with rearing young calves as in capturing older elk out of large bands on their prairie winter quarters. And as the method by which this is done may be new to some of your readers I will give an account of the best run we made.

Two of the boys came in one night and told us that during the day they had seen and run into a band of 700 elk, mostly cows and spike bulls. They reported them as quite tame. The next morning at sunrise five of us caught up our "top" horses and started to find the band.

We went about six miles before we struck their trail, then followed it for a mile, and then changed horses. About a mile further on we found the band feeding in a gulch in the "bad lands" and about 250yds. distant from us. They were quietly feeding and did not seem to be in the least afraid of us. After a short consultation we started toward them and got about 100yds. closer before they "strung out" on that peculiar long trot for which elk are so noted.

The fun then began. To say it was exciting is to put it mildly, for no one except a person who has experienced such sport can understand the sensations experienced by a man going along at full speed in a foot of snow, not twenty feet from a band of nearly 1,000 elk, never thinking of any of the possible mishaps of the wild ride, but just vainly trying to turn them from their course. At first we endeavored to head the band for the ranch, but this proved impracticable and at last we gave it up in despair, and then each man got down his rope, and "took after" a single elk. In a few minutes we had two two-year-old cows and a yearling, and were at work "hog tying" them. Just then one of the boys, who by mistake had got his "twine" on an old bull, yelled out, "Boys he's on the fight. For God's sake give me a hand;" but we were all busy with those we had caught and could not go to him, so he was forced to cut his rope and the old bull, after giving a parting snort, joined the band and that was the last we saw of them.

Two of the men went back to the ranch, harnessed up four horses to the sleigh and started back to haul in the captives, and it was late at night when we got in with the three cows, after one of the most exciting days I ever experienced. One of the two-year-old cows that we captured has since died from an old bullet wound in the neck. The other two are doing well. They eat hay, and are particularly fond of oats. They drink four large bucketfuls of water every day. My old pet elk Calamity, that I caught two years ago, treated the newcomers with the greatest disdain. She positively refused to stand or eat near them. During the first three or four days after their capture these elk were perfectly gentle, but after that they became sullen, and if they got a chance would strike, kick and bite. In such a case the person in charge must at once conquer them, and often has to resort to very harsh and even cruel means to do so. This point of breaking their will is of the utmost importance. Should an elk once find out that you are afraid of it, it becomes worse than useless.

My latest experience with elk raising, however, is as follows:

Last May I caught two bull calves. They were about two weeks old, and exactly the proper age to commence work on. For the first two or three days I kept them tied up in the stable, and fed them every two hours on milk and luke-warm water, making the solution very weak—about one part milk to three of water. After three days I turned them loose, and they showed no inclination whatever to escape. In fact they became perfectly tame and even affectionate, followed me and seemed to seek my company at all times. When hungry they made the fact known by vigorous bleating. I gradually strengthened their diet, until at the end of ten days from the date of their capture I fed them pure milk, and from that time on they improved rapidly. The milk treatment I dispensed with when they began to graze, which was in about two months.

When about six weeks old I made a hackamore for each of them, and began the work of breaking them to lead. Being young and having been handled from the first, the work was comparatively easy, and at the end of the seventh week I could not only lead them, but could walk behind and drive them nicely. I worked on them in this way an hour or so every day that I was at home, and noticed that they became more and more tractable. When they were hungry, however, they were unmanageable, and manifested their repugnance to working on an empty stomach by striking and kicking at every one about.

About the first part of September I harnessed them up in turn with an old work and pack pony to the front wheels of a light wagon. For several trials they balked and showed in every way that they did not know what was expected of them. The old horse would drag them along until at last they would start off with a plunge. I was entirely satisfied with the results of my labor and was looking forward to having the "top" team of the country, when one morning Jeff (one of the calves) was taken sick. He seemed to have difficulty in swallowing. I examined his throat and took out of it three bones about as large as the end of my thumb, which were lodged there. This operation seemed to relieve him somewhat, but in an hour or two he was worse again and finally became so weak that he could not stand. Next morning he was barely alive, so I had one of the boys put him out of misery. To satisfy myself that the cause of his death was an accident I cut him open and to my astonishment found in his stomach some meat and five or six bones. He had evidently been eating the refuse elk meat lying about, and I have never been able to account for his unheard of appetite. If any of your readers have ever known of elk eating meat I should be obliged for the information.

I was nearly heart-broken at poor Jeff's death, but shall of course try to supply his place next spring. His loss was the harder to bear because last June my favorite elk cow Calamity was killed by the vandal bullet of one of Uncle Sam's highly-privileged red gentlemen. There was no color of excuse for the shot. The poor thing was dragging a fifty-foot rope at the time, and was wearing a large cow bell. She was known for miles around as my property. As her carcass and hide was untouched it cannot be surmised that she was killed for food or gain. "Pure cussedness" is the only explanation of this and many another Indian outrage.

The experience I have had with elk confirms me in the opinion already expressed, that the animal is not only susceptible of domestication, but can be made eminently useful for light draft purposes. It would hardly pay to breed them for sale in the market as a staple of food, but the scheme of raising and training them for work seems to me quite feasible. At all events I propose to undertake it, and as I have a splendid hay ranch, and can conveniently make a corral pasture, I am confident of success.

CHARLES M. DONNELLY.

WYOMING.

OLD JOE.

IT is many a long day since I promised to write you about Joe, the elk belonging to the Post Percheron Horse Association. He is now four years old. He was purchased when a few months old from a hunter who captured him in the Casper Mountains, Wyoming. He is spending this winter at the home ranch. His most intimate companion is a motherless colt. I have several times noticed Joe taking his afternoon nap in a little snow-drift in the southeast corner of one of the corrals, while the horses and cattle would be getting all the warmth they could on the opposite side.

Last summer he had the run of the creek from the home ranch to the Schwartz ranch, visiting as he took the notion all the intermediate ranches, and stopping a day or two at each. Occasionally he would go out into some of the immense pastures, and joining a bunch of cattle would at once show he was the controlling spirit. The middle ranch was a favorite watering place of quite a large bunch of cattle under the leadership of Joe. Late in the forenoon they would come down to the creek to drink and rest. When Joe had had enough of it and ready to go back to the grazing grounds, he would stir up the bunch; and if none were disposed to move, Joe would down his head, giving them to understand that it suited his convenience for them to go; and they invariable went. He always followed the bunch and kept the stragglers well up.

Wire fences four or five strands high are no impediment to his roving notions, he can change his pasture at a bound. He is a great favorite, and will come at the call of his name as quickly and willingly as a well broken dog. He shows no displeasure at being handled, and dearly loves to have his head scratched.

He is continually picking up pieces of rope, getting them tangled and twisted in his horns, and then asking as plainly as in words for some one to take them off, and standing quietly while it is being done. An old gunny-sack or a piece of blanket is a rich find for him. He will take it on his horns, and trotting around, shake it among the cattle, until tired of the fun, when he will drop it off if he can, or if unable to do so he will whistle for some one to come and help him. Once he got all tangled up in an old horse power, and found out the best thing he could do was to whistle for help and wait until it came. He was fast horns and legs and had too much sense to hurt himself by struggling to get free, and we lifted him out without hurting him, but he has given the old machine a wide berth ever since.

He weighs now about 700lbs. and is as handsome and graceful as can be. The extreme points of his antlers are 34in. apart.

MILLARD.

ARIOSA, Wyoming.

AUSTIN CORBIN'S ELK.

THERE is in the neighborhood of New York city a fine band of elk, which when we last saw them were in excellent condition, and give a capital notion of the elk in a state of nature.

This band of elk, the property of Mr. Austin Corbin, of this city, are at this gentleman's country place at Babylon, L. I. Here these animals share with about thirty deer and a few antelope a fine range of seventy acres, part of it meadow, part woodland, and a part dense underbrush. It would be hard to find a location more admirably adapted to the elk than the one on Mr. Corbin's farm, and judging from the condition of these elk they are doing just as well as we should expect. The band of eighteen elk includes two large bulls, two young ones, and fourteen cows and heifers. They form a beautiful group, and are well worth traveling a hundred miles to see.

There seems good reason to believe that with care and patience Mr. Corbin may in time have a fine herd of elk on Long Island. The specimens he has there now came from Montana and Dakota, and it is understood that he purposes increasing his herd by further importations from the West, as well as by the natural increase from breeding. That the elk does well in captivity is shown by the experience of Judge Caton, who in his park at Ottawa, Ill., bred them with success for many years. In his excellent work on "The Antelope and Deer of America" he tells us that not far from one hundred were born in his grounds, and there is no reason for believing that the conditions on Long Island are less favorable than were those in Illinois.

The progress of Mr. Corbin's experiments in domesticating and breeding the elk will be watched with much interest.

RUNNING DOWN A PENNSYLVANIA ELK.

In the latter part of the winter of 1854, the last one, or one of the last remaining elk that were left in the wilds of Pennsylvania, was run down and captured alive by three Indians. It was a doe, and was supposed to be three years old. When led out of the woods it was a sorry-looking animal, poor in flesh, with much of the hair and skin worn off its legs by the snow crust, and otherwise badly used. But after being housed and well fed for a few weeks, and when it had shed the winter coat it became quite a respectable looking elk. Subsequently it was purchased by my brother and turned in with a small herd of elk which he kept in a park. She soon became as tame as the others, and in the latter part of the following April she dropped a buck fawn. Now, this fawn, as it grew up, was very wild, much more wild than the others, of which there were three or four of nearly the same age, and during the summer and fall he kept out of sight much of the time, which he could easily do, as the park was large and full of woods, thickets and brush. As he grew older his wildness seemed to increase rather than to diminish. He remained in the park through the first winter, also through the next summer, but late in the fall he broke out of the inclosure.

The park was situated on the western border of a pretty extensive tract of rough and mountainous forest land, so that the elk had a free run and was, in fact, as wild and untamed as his ancestors that roamed over the same ground half a century before. It was seldom that he was seen during that winter, but his tracks were discovered occasionally near the park.

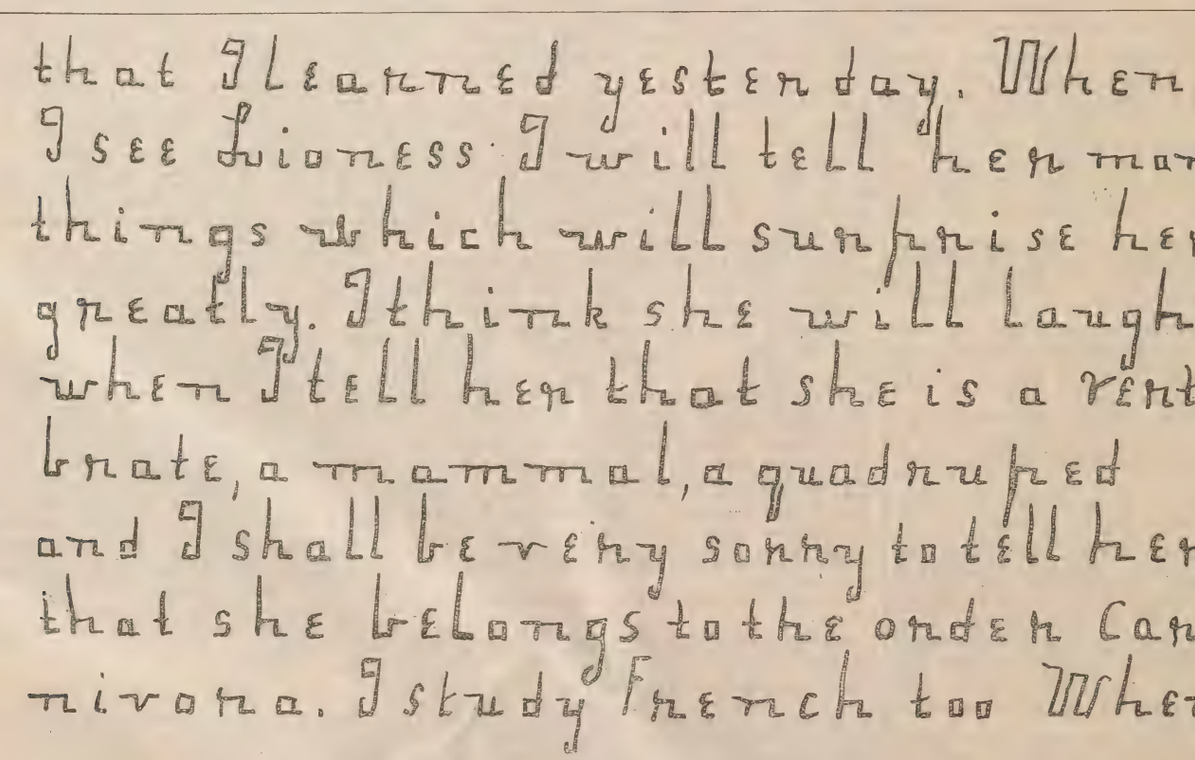
The next summer he was hardly seen at all. It was rumored that he had been shot at by some hunters; if so, it only sharpened his instincts, and he never was wounded by a gun shot. In the fall, after the first snow fell, two or three young hunters offered, or rather craved the privilege of hunting down and shooting that elk for a share of the meat. Accordingly they started, and did find his track, and followed him two days. But he was too sharp for them and they gave it up. I have had some experience with elk; I have studied the nature and habits of the animal both wild and tame, and I have yet to find the creature that I believe to be more keen or sharper-scented than the elk.

I heard no more rumors of this elk until after the middle of January, when it was reported that his tracks had been discovered on the mountain side, not very far from the park. The snow had been 2½ft. in depth, but had settled to about 2ft.; a stiff snow but not a very sharp crust. Now, a live elk when caught was worth much more than a dead one, so I proposed to my brother that I would put on snowshoes and make an effort to find him, run him down, and tie him up. My brother thought it possible that if the elk were found he might be run down, but the tying up was a matter of doubt.

I started the next morning at early dawn, taking thirty feet, more or less, of strong hemp rope, and after walking three-quarters of a mile across the park I reached the main woods, where I strapped on my snowshoes. I was as much at home on snowshoes as an amateur skater would be on skates, and although I was somewhat past my prime, there was enough of the boy left to prompt me to try the speed and endurance of that elk, providing that I could start him in the early morning. I struck out over the mountains, and had the good luck to start him before I had traveled more than a mile. It was yet early, and the chances seemed to be good. I thought from the appearance of the track that he ran the first half-mile pretty quickly, when he turned around, evidently watching to see if he was followed. But I saw no more signs of his turning around again until the end of the race. I noted that his jumps grew shorter after the first mile; and I thought that he spread his tracks too much for his own benefit. An elk is an awkward jumper anyhow. This one had to jump or to walk, whereas his natural gait is a shambling trot; but he could not do that, the snow was too stiff.

He led me a long, circuitous route before I saw the first glimpse of his yellow rump; but in the afternoon I saw him often, for he would squat in the snow until I came in sight, and then run again; and he kept on repeating this maneuver until late in the afternoon. Finally, when some twenty rods in the rear, I saw him follow up a small gully or dry brook up to the extreme head. Here was a small basin or depression formed by the water course, and here he turned around, backed up against the bank and would go no further. I walked along near the edge of the gully until I came within three rods of his elkship. There he stood sullen and defiant, and looking about as savage as an elk can look. To say that he was mad would hardly express it. I do not believe that I could have driven him out from there if I had attempted it.

I unstrapped my snowshoes and sat down in the snow for a few minutes' rest. My success had depended wholly on a forced gait, which had been kept up for nearly ten hours, without stopping or slacking up in the least, and I believe that I was as nearly fagged out as the elk. He had led me a long, circuitous route, besides many smaller circuits, and had run to earth not far distant from the place where he started in the morning. The abrupt bank which curved around the upper side of the nook, into which he had backed, was some 6ft. high, including 2ft. of snow; and I noticed some saplings which were standing on either side, a circumstance which proved an important factor in the capture of that elk.



I uncoiled the rope, made a strong noose at each end and cut it in two; and near the edge and on one side of the basin, I tramped a slightly broken path on a curve with the bank until I made the end of a half circle of perhaps 20ft., the elk pacing around and keeping a wicked looking eye on me all the time. I moved near the edge, and he came up as far as the bank would admit, looking furious and curbing his neck just enough to throw his horns forward, when I dropped a coil of rope over one horn and took a hitch around a sapling, leaving him some slack rope. He did not mind the rope at all, but kept curbing and watching my motions; and in less time than it takes to tell it I had a noose over the other horn. I walked back on the path a few steps; and the elk moved along; and as soon as he straightened the slack of the first rope, I made a quick move and tied up to another sapling, which stood at the other end of the path. When he found that he was caught (as he did almost before I had taken the last hitch), he cut a sorry figure for a few moments. But he could do nothing, and soon ceased his struggles. He was securely tied with the two ropes, their ends being fastened at points nearly opposite and somewhat higher than his head; and I concluded that he was safe for the night.

I now felt the need of another short rest, but the lateness of the hour would not admit of such a luxury. I had started out, of necessity, thinly clad, and had kept warmed up to white heat through the day; and now, the night being cold and stormy, it began to dawn on my mind that if I was to get out of the woods that night I must make the effort pretty soon. So I put on my snowshoes again and pushed out. I succeeded in getting out, or rather getting in; but I was—well, I was played out.

The next morning some less than a half dozen men went in to lead that elk out of the woods. But there was one who did not go. I had had enough of elk hunting, had a surfeit in fact, and was quite willing that any one else should hunt elk who wanted to. They found him, where I had left him, and brought him in. He was not poor in flesh, was of fair size for the age, and carried a very pretty pair of horns. He was put in a stable and kept until some time in May, when he and two or three others which were taken out of the park were shipped to some foreign port.

ANTLER.

Grand View, Tennessee.

FROM A LETTER WRITTEN BY HELEN KELLER.

HELEN KELLER AND HER MASTIFF.

Readers of *St. Nicholas* will not have forgotten the account given in the last September number of the little blind mute Helen Keller. Born in 1880, she was at the age of eighteen months afflicted with total deprivation of sight and hearing, and as a consequence, of speech. The relation of how, when she was in her sixth year, her little mind was released from its dark prison, and how by the patient, ingenious and in many respects remarkable instruction of her teacher, Miss Annie M. Sullivan, of the Boston Perkins Institute for the Blind, she was taught to apprehend and express ideas by use of the touch alphabet; and how eagerly and with what marvellous rapidity she acquired knowledge; all this is a most pathetic story, and yet full of brightness and cheer and courage and hope. One of the child's strongly marked traits is that of exceeding tenderness toward animal life. Here is an extract from her diary, given in *St. Nicholas*, which appears to have been written when Helen had first learned of fishing:

March 8, 1888.—We had fish for breakfast. Fish live in deep water. There are many hundreds of fish swimming about in the water. Men catch fish with poles and hooks and lines. They put a little tiny fish on the hook and throw it in the water, and fish does bite the little fish and sharp hook does stick in poor fish's mouth and hurt him much. I am very sad for the poor fish. Fish did not know that very sharp hook was in tiny fish. Men must not kill poor fish. Men do pull fish out and take them home, and cooks do clean them very nice and fry them, and they are very good to eat for breakfast.

"While we must all pity her intensely," says Miss Florence Howe Hall, the writer of the sketch, "for her sad deprivations, we should remember that even these afflictions have their bright side, and while they wrap her from the outer world, as in a dark garment, they also shield her from all unkindness, from all wickedness. Every one who comes near little Helen is so moved with pity for her infirmities that all treat her with the utmost gentleness—she does not know what unkindness is, her teacher tells us, and we may fully believe it. Thus, while she can neither see the trees, nor the flowers, nor the bright sunshine, while she cannot hear the birds sing, she knows the best side of every human being and only the best. She lives in a world of love, and goodness, and gentleness. Were we speaking just now of pitying little Helen? It may be she does not need our pity—perhaps some of us may need hers! You will not be surprised, after what I have said, to hear that our little friend is very kind to animals. When driving in a carriage she will not allow the driver to use a whip because, as she says, 'Poor horses will cry.' She was much distressed one morning upon finding that a certain dog named Pearl had a block of wood fastened to its collar. It was explained to Helen that this was necessary, in order to keep the dog from running away; but still she was not satisfied, and at every opportunity during the day she would seek out Pearl and carry the block of wood herself that the dog might rest from its burden."

One of the illustrations in the magazine shows Helen with her pet dog. Seeing this, and being moved by the child's tender love of pets, one of our correspondents, who is well known to the readers of Forest and Stream, but whose modesty forbids our making public his name, sent to the little girl a choice mastiff puppy. In return he received from her a letter, which we take to be in all respects the most valued and cherished of all the returns he has ever received or is likely ever to receive in exchange for a dog. This letter he has loaned to the Forest and Stream, and a portion of it, with the text of all of it, is here given. The page of the original, written in pencil, which we have had engraved, is given full-size, just as it was written. This is the letter:

South Boston, Mass., Nov. 20, 1889.

My Dear Mr. ——:

I have just received a letter from my mother, telling me that the beautiful mastiff puppy you sent me had reached Tuscumbia safely. I thank you very much for the nice gift. I am very sorry that I was not at home to welcome her. But my mother and my baby sister will be very kind to her while her mistress is away. I hope she is not lonely and unhappy. I think puppies can feel very homesick as well as little girls. I should like to call her Lioness for your dog. May I? I hope she will be very faithful and brave too.

I am studying in Boston, with my dear teacher. I learn a great many new and wonderful things. I study about the earth and the animals, and I like arithmetic exceedingly. I learn many new words, too. Exceedingly is one that I learned yesterday. When I see Lioness I will tell her many things which will surprise her greatly. I think she will laugh when I tell her that she is a vertebrate, a mammal, a quadruped, and I shall be very sorry to tell her that she belongs to the order *Carnivora*. I study French, too. When I talk French to Lioness I will call her *Mon beau chien*. Please tell Lion that I will take good care of Lioness. I shall be happy to have a letter from you when you like to write to me.

From your loving little friend,

Helen A. Keller.

P. S.—I am staying at the Inst. for the Blind.—H. A. K.

PAWNEE HERO STORIES.

Editor Forest and Stream:

Of all books carrying us out of doors, none has so bold a sweep and so strong a wing as Mr. Grinnell's Indian book, "Pawnee Hero Stories and Folk-Tales." It sets us down among a people whose life was altogether that of the open air, a people of warriors, hunters and campers. I confess I had grown somewhat skeptical as to the ability of any book to interest me again, for there comes to any one who writes a contempt for writers and for authors, and a horror of paper and type; but I am honest when I say that it appears now there was room for another book. The sensation is novel—to read a book that is really interesting. I remember the first novel I ever read. It was "Ivanhoe," and I never dropped the book from beginning to end. I treated this book the same way, and felt the same pang that the volume was not longer.

Mr. Grinnell's book is interesting and noteworthy, for all or any of three reasons. First, because of its literary matter; second, because of its literary style; and third, because of its historical value as regards the little-known and fast-fading Pawnee tribe. I place this reason last, because so few know enough about the Pawnees as to be really interested in their history. After one has read this book, so that he really does know something about the Pawnees, and about their history and habits, he will be entitled to place, and doubtless will place this reason first, where beyond doubt the author intended it should be. For Mr. Grinnell wrote this book for love of the Pawnees, because no one who really did understand them was saying anything about them, and because they are changing and passing away. He wanted it to be, not his own book, but the book of the Pawnees. He had a field for that one reason, and doubtless many will read the book for that reason. Beyond all doubt, the book has on this ground a great historic and scientific value.

When you say "history" or "science" you drive some people away, and we ought to be careful how we apply such terms to Mr. Grinnell's book. Certainly any one who begins the book will soon forget those words and fall at once upon the second merit of the book, which is its beautifully simple style. This is the English of little words, and that never does fail to hold and charm us, though often we do not stop to ask why. This is not "Indian talk," bombastic, figurative, imaginative and imagined, but the actual talk of the Indians, given just as the author actually took it down. This is unique literary handling in these days of indirect, bodyless, technical or would-be pyrotechnic stuff. Mr. Grinnell disclaims credit for this, but it is not probable that very many men would have had sense or ability to do this thing in just this way.

In his preface the author says, "Finally, I have refrained from commenting on the stories, though there is abundant opportunity for comment." Well, if he can't comment on them it is time somebody else should. Each of us may claim the privilege of liking a book for any reason he pleases. I prefer to like the Pawnee Stories for my first reason, because their literary matter is worthy of the comment that the author is afraid to give lest he be charged with lack of modesty in finding it. The fact is that instead of a few turgid, childish or foolish Indian stories and stories of Indians, there are in these covers nothing less than a bundle of strong American epics. They are epics of the plains, stories fit for men, and above all purely belonging to this country. If we look to Homer for our heroes, we shall find that Homer's heroes fought under heavier armor than the Pawnee heroes, that Greek or Trojan strategy was not finer than that of the Pawnees, nor any Homeric disregard of life above the personal bravery of some of these plains Indians. The Crusades do not show us any more general war or more persistent system of attack, or more skill or courage in defense. And if we come to sentiment, I don't know that any of our novels go much beyond the heroism of Comanche Chief, who loved a girl at first sight, stole back into her house in the midst of his enemies, lay down upon the bed beside her, and calmly said when discovered, "Kill me if you will, for I would gladly die for her." Nor do many novels end better than with a marriage and reconciliation of two peoples who had been at war. And if we go into super-naturalism, does even Mr. Haggard do more for us than the story of the Dun Horse; or can spiritualists ask much more than the story of the Ghost Bride; or did Æsop give to animals quainter attributes of human life than we have here in the *Na-hu'-rac;* or did the wise men of Egypt do, or appear to do, much more than make ripe corn grow in an hour, or to kill a man and then bring him back to life; or does our philosophy hold anything much simpler and stronger than the *credo,* "From this we were convinced that there is a life hereafter"? Any one of these lines of literary matter would serve and has served for a whole book. What book has them all? They say the world is divided into men, women and hired girls. Then here are thrills for the hired girls, love for the ladies and thought, and war for men. Room enough for comment.

Our interest is that of men. The Pawnees were men. I submit that the following advice given to Lone Chief by his mother is good talk for men, and good for some of us to remember, in our heartless, ungenercus, unfaithful and all too unmanly social scheme: "Take pity on people who are poor, because we have been poor, and people have taken pity on us." "Love your friend, and never desert him. If you see him surrounded, do not run away." "It is not the man who stays in the lodge who is great; it is the man who works, who sweats, who is always tired from going on the warpath." "It is better to be killed in the open air than to be smothered in the earth." "Be killed on a hill, high up!"

There is tone, stimulus, manhood, in every word of that philosophy. "Be killed on a hill, high up!" We white men have inglorious wars and ignoble enemies every day. We have nothing better to offer to a man than that injunction. The Pawnee man who had such teaching was worthy of triumph over the despondency that overtook him when he was "poor in mind," and worthy of the friend who said to him, simply almost as did Naomi of old, "Wherever you go, I will go, and whatever you do, I will do."

There is nothing wrong in a book like that, and nothing wrong in the idea of offering such a book to the world to read. The only twinge the bright and lofty pages give one is the mournful one that comes when we think of the fading away of the old order of things. It is like the Passing of Arthur,

E. HOUGH.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.
COLT 10 and 12, Oct. 24.
FOLSOM 10 and 12, Sept. 26.
FRANCOTTE 12, Dec. 12.
GREENER 12, Aug. 1.
GREENER 10, Sept. 12, Sept. 19.
HOLLIS 10, Nov. 7.
PARKER 10, hammer, June 6.
PARKER 12, hammerless, June 6.
REMINGTON 10, May 30.
REMINGTON 12, Dec. 5.
SCOTT 10, Sept. 5.
L. C. SMITH 12, Oct. 10.
WINCHESTER 10 and 12, Oct. 3.

TUBULAR BULLETS.

Editor Forest and Stream:

The "Weed bullet," described in the numbers of your paper for July 11 and Nov. 7, is an illustration of a fact which I have frequently noticed, that similar ideas are liable to occur to men either living at widely separated periods of time or living at the same time in widely separated countries, without any apparent means of communication with each other.

A tubular bullet was invented many years ago by the late Captain Forsyth, Conservator of Forests in Central India, and perhaps one of the greatest experimenters with rifles that ever existed. In the second edition of his book, "The Sporting Rifle and its Projectiles," published in 1867, he says, after describing a large-bore rifle for explosive shells: "I have lately been trying tubular projectiles, and am satisfied that they meet all the requirements of a sporting projectile. Their trajectory is remarably low and accuracy quite equal to that of a solid ball. The resistance they receive from the air is quite insignificant, which accounts for their very high mean velocity. It would be easy to show that the moment of rotation in this form of projectile is the highest of any; it will, therefore, shoot accurately with less twist than a solid ball of similar length. The weight of a tubular projectile, with the hollow equal to half the diameter, and two diameters long, is scarcely greater than that of a spherical leaden ball of the same gauge; the extra friction in the grooves is amply balanced by the absence of resistance in the air, and thus you have a projectile with a very low trajectory, large striking surface and extreme accuracy, which can be used with a light shell rifle."

An engraving is given showing a projectile for fitting the grooves mechanically in a muzzleloading rifle. Forsyth says, "It will be seen to be hollow from end to end;

a *b*

a thin sheet copper wad *a*, and a thick felt wad *b*, are placed behind it to receive the force of the powder, and drop behind as soon as it is out of the rifle."

To obtain the best results, these projectiles should be hardened and the hole must be exactly central from end to end. No roughly made bullets can be depended upon. I tried this in 1886 from a .450 express rifle with 110 grains of powder, and again last February from a .550-bore muzzleloader with 90 grains, but could not make either of them shoot very closely, doubtless owing to the projectiles being inaccurate in form. I made them by casting hollow pointed express bullets and then boring the holes through to the base, but could not always bring them exactly in the center with the tools at my command. Wooden wads about as thick as a half-dollar were placed under the bullets and felt wads between those and the powder.

It may be asked why, if the tubular projectiles tried by Captain Forsyth were so perfectly satisfactory, they did not, like the large-bore rifles invented by him, come into general use among British sportsmen. The fact is that the .450 and .500 express rifles brought out within two or three years afterward, soon superseded all other weapons for killing thin-skinned animals, because they combined better than any others, the various qualities of lightness, accuracy, flat trajectory at sporting ranges, and power of killing quickly. For use against very thick-skinned game with large bones, Forsyth's spherical ball rifles from 8 to 12-gauge still maintain their ground among sportsmen of the greatest experience.

In FOREST AND STREAM of October 17, there is a short paragraph about a man seeing a bullet during its flight. Many doubt the possibility of this, but bullets even at high rates of velocity can be seen under certain circumstances. At Wimbledon in 1888 I was standing behind a noted marksman who was firing with a Ballard .38-55-255. Looking closely over the shooter's shoulders I repeatedly saw the bullet, like a thin streak of light, about 50yds. in front of the rifle.

J. J. MEYRICK.

NORTH DEVON, England.

CHICAGO AND THE WEST.

CHICAGO, Dec. 10.—A good commentary on advertising in general and advertising in FOREST AND STREAM in particular has recently fallen under my notice. Something like a year ago a manufacturer of a good sporting article placed an advertisement in FOREST AND STREAM. I saw him not long ago, and he told me he had received over 1,000 and he thought nearly 1,200 letters naming this paper as the cause of their inquiry. Very many of these letters contained money and orders for the article in question, and the great bulk of them meant business. "I could have made sales in three-fourths of these cases," said the manufacturer, "if I had had the goods to ship, although unfortunately I lost some orders by not being able to fill them fast enough. As it was, the advertisement has proved a valuable investment for me."

This gentleman sold a $25 article. Suppose he sold 400 orders at a profit of $7.50 each, a profit which he ought to make, at least. The net result would be $3,000, out of which he could pay for his advertisement two or three times and still have a decent living for himself, or could add to his capital. Therefore it would require no capital to advertise, but the result would be an increase of capital. For other papers, I can't say whether advertising in them pays or not. I am only speaking for FOREST AND STREAM, and I know what I am talking about when I say that it don't cost anything to advertise a good article in it. Once in a while I grow thoughtful in this way, but this mention is offered simply because of the casual statement made by the gentleman above referred to.

E. HOUGH.

THE TODD CASE.—Anent the case of Mr. Frank Todd's alleged deer hounding at Simquash Lake, Maine, of which we copied the Bangor, Me., *News* report two weeks ago, a St. Stephen, New Brunswick, paper says: "Since the appearance in some of the papers of the severe and damaging articles accusing Frank Todd, Esq., of St. Stephen, of grossly violating the Maine game laws, we have interviewed that gentleman. He says he feels sure if the editors who printed the articles had only taken time to inquire into the matter, or even to reflect, they would never have given them a place in their columns, they being unreasonable on the face. Mr. Todd's dog was shot, the warden claiming that he was following the track of a deer. This Mr. Todd most emphatically denies, as the dog had been with him but a few moments before, and was only a short distance away when shot. The dog had never hunted or followed a deer, had run foxes hundreds of times, where there were deer tracks in plenty, and paid no attention to them. Mr. Todd says that he, and every member of his party, was innocent of intent even to hunt illegally, and the warden evidently came to the same conclusion, as he wrote to Mr. Todd, under date of Nov. 26, that he had withdrawn the complaint, that he was now convinced that Mr. Todd did not intend that his dog should hunt deer, and that he regretted shooting him. Mr. Todd is not and never has been a game warden, but is in full sympathy with the game laws. While we believe in game law rightly administered, we feel that a law allowing any one to shoot a dog following a deer is liable to abuse, as any irresponsible person can shoot a dog, claiming he is hunting deer, and make, if he wishes, trouble and cost for his owner."

WEIGHT OF GROUSE.—*Editor Forest and Stream:* Under the above caption Mr. Von Ohl in FOREST AND STREAM for Dec. 12 describes the killing of a ruffed grouse weighing 2lbs. 1oz. There is something very odd about the development of these two-pound grouse, and I would suggest that hunters examine similar specimens for the purpose of determining whether these large specimens may not be "capon grouse." The average weight of the fully developed northern ruffed grouse is about 23oz., and it is rarely that a fat old drummer will weigh 25oz.; but every now and then some one kills a grouse that weighs 32oz. I have seen perhaps half a dozen of these two-pound grouse, but none of intermediate weight (between 25 and 32oz.). If a young male fowl be caponized, we know that the resulting capon reaches a very large size, and it has occurred to me that the extraordinarily large grouse may have rudimentary organs. I have not had an opportunity to make any observations on this point, or since the explanatory idea came to mind.—ROBERT T. MORRIS, M.D.

DEATH FROM WILDCAT'S BITE.—*Editor Forest and Stream:* I send you this clipping from a Colorado paper: "Trinidad, Colo., Nov., 2.—[Special.]—Nearly a month ago a young man who worked on a ranch twenty miles from Folsom, a nephew of F. D. Wight, came to Trinidad nursing a sore hand. While looking after his cattle he ran across a catamount, and was attacked by the animal. After the wounds were dressed they began to heal, and it was thought nothing bad would result, so he returned home. News came to town to-day that the young man was suffering from hydrophobia in a very bad form. As there are no trains running south, there is no means of reaching the man with medical aid except by driving across the country. Dr. Palmer and F. D. Wight left this afternoon in a buggy, but before they had been gone long word was received that the young man was dead." It would be interesting to learn of other cases of like death from the bites of wild animals.—W. N. B.

A MOUND-BUILDING RAT.—Mr. J. C. Van Hook, of San Diego, Cal., informs us that the city park at that place contains, among numerous other curiosities, a great number of mounds constructed of sticks and leaves, sometimes reaching a height of 4ft. In the center of these mounds is a small and softly-lined nest, whose occupant he vainly tried to capture. Indians told him it is a rat. He had great difficulty in opening the mass of debris even with a pick. The rat is said to be a species of *Neotoma,* probably *N. mexicana;* but little definite is known about the relationship of the animal. The nest-building habit, however, points to this identification as the correct one, for the best known species of *Neotoma* are notorious for the enormous nests which they construct.

LEWIS COUNTY, N. Y., NON-EXPORT LAW.—Lowville, N. Y., Dec. 10.—*Editor Forest and Stream:* During the present session of the Board of Supervisors of this county a bill was passed to prohibit the shipping from the county ruffed grouse, woodcock, hares and speckled trout. Credit for the passage of the bill is especially due Supervisors Partridge, Kent and Boshart. It is believed by all sportsmen that this law will stop in a great measure the snaring and pot-hunting which was fast robbing us our game birds and fish. Quite a number of foxes have been killed in this section this season, but as the snow has left us for a time the foxes and also rabbits are having a rest.—OSCEOLIO.

SKUNK TRAPPING.—The Gloucester *Daily Times* reports that a young man in East Gloucester has recently secured 42 skunks by trapping and shooting. He has orders for all he can get at one dollar each. The skins have a market value and the fat is said to be utilized. The correspondent very justly remarks: "The aroma as they are passing a given point is anything but pleasant." The favorite fur known to the trade as "brown marten" is skunk pure and unadulterated.

MR. H. C. MINER, of this city, has recently been duck shooting at Back Bay, Md. He reports excellent luck, getting from nine to eighteen at each flight, *i. e.*, morning and evening, shooting from batteries. Mr. Miner has leased the Miller ducking shore, which is opposite the famous ground of the Carrol's Island Club, where the shares are held at $6,000 apiece; and it is one of the best shores in that region.

PATTERN AND PENETRATION TESTS.—New York, Dec. 16.—*Editor Forest and Stream:* We are delighted with the excellent showing Mr. H. E. Thompson's little featherweight hammerless ejector Francotte gun made at your trial, and are much obliged for your fair report of the same. As we wish the little baby gun to get all the credit due it for beating the big ones, we wish to draw your attention to your statement as to the velocity of the wind, which was certainly more than six miles an hour. The wind was from the south on the afternoon of the trial, and Sergeant Dunn of the Weather Bureau records the velocity of the wind during the hours of the trials at from 12 to 20 miles per hour in New York city and vicinity. It is fair to assume that at Claremont, where the wind had a clean sweep across the bay, it was nearer 20 miles than 12 miles per hour. At any rate, it was so strong that it was almost impossible to keep the paper on the target, so that your representative suggested to shorten and postpone the trial. Was your statement of 6 miles per hour not simply a mistake?—VON LENGERKE & DETMOLD. [Our notes of the test show a record of 12 miles of wind per hour, and it was so marked on the copy, but the types made it otherwise.]

SNOWSHOES.—Dec. 14.—The Hackensack, N. J., division of the Oritani Snowshoe Club turned out in full force, including several lady members, on the evening of Dec. 14, and enjoyed one of the finest snowshoe tramps we ever took. The unhappy residents of New York city would not have recognized the pure white glistening mantle that covered the earth to the depth of 7in., but it was snow, the first we have had of any account since the famous blizzard.—W. H.

A NEW JERSEY GUN TAX.

Editor Forest and Stream:

The 14th of the present month will see the close of the quail shooting season in New Jersey; at least it should close on that day; but the probabilities are that while the evening of that day will see the true sportsman putting away his gun for the winter, and calling his dog to heel for the last time, the market-shooter and his relation the pot-hunter will continue to kill Bob White as long as one of the birds remains outside of the market stall or within the outlaw's reach.

And right here is a fact well worth bringing to the Jersey sportsman's mind, viz., that the game laws are the least observed, I might say the only unobserved, laws of his State. And another equally important, following as a sequence of the former, is that the constant violation of these laws is rapidly putting the opportunity for the enjoyment of legitimate sport within the State's bounds at an end.

He must remember that every year increases the number of shooters, and consequently the slaughter among the birds, and in the same ratio every day increases the need of a thoroughly enforced closed season.

In old times, when few men owned or could use a shotgun, the violation of the laws, although wrong *per se*, and much to be regretted, did not to any appreciable extent diminish the amount of game that was at the sportsman's disposal with every recurring season; but now all this is changed. Where there was one gun (even ten years ago) there are now twenty, and where there was one man who could shoot on the wing ten years ago, there are now forty. And yet the birds have less protection in proportion from the laws now against the increased number of guns than they did ten years ago, against the one man who could then shoot on the wing.

There is an old saying that he who runs may read; but another way of expressing the same idea in relation to shooting would be that he who stops and looks the facts of the case squarely in the face, can easily see the end of quail shooting in New Jersey.

It is full time then that something should be done to prevent this indiscriminate slaughter, some law passed and enforced, and the market-shooters, pot-hunters and their kind taught that the laws are made to protect the game, and are not merely for the purpose of preventing the law-abiding citizen from shooting and allowing the outlaw to do so with impunity, which is practically the effect of the laws now as administered.

To attain this most desirable end and give the necessary protection to the game, there is another element necessary besides the mere passing of acts. There are laws enough now upon the books for this purpose, if they were enforced; but unfortunately that is just what they are not. It is undeniably true that any law, which every individual in a community is capable of enforcing against a wrongdoer, is the very law which every individual in that community leaves for his neighbor to attend to; and as a consequence, this duty is more honored in the breach than in the observance. This state of the case renders necessary the creation of a corps of men, whose duty should be to hunt out and bring all offenders to trial, conviction and punishment—in other words, game wardens. And to maintain this corps, all guns should be subject to a certain yearly tax. The sum to be raised would provide ample funds for this purpose, and secure us once more, not only our game birds, but also our song and insectivorous birds, now so indiscriminately slaughtered.

Therefore, by all means, let us tax the guns.

ELBERON, N. J., Dec. 12. HAPPIE-GO-LUCKIE.

A GAME PROTECTION SCHEME.

Editor Forest and Stream:

Midway between Cayuga and Seneca Lakes, New Yark, lies the hamlet of Mecklenburg, in Schuyler county. Situated at the opening of a long valley, hemmed in by wooded hills, where the lordly grouse, the dainty quail and the frisky squirrel thrive in fair numbers, the inhabitants live bountifully upon the products of the soil of the Hector foothills and possess an average amount of intelligence and education. Like all rural centers, the population owns hundreds of muzzleloading arms and scores of fairly made breechloaders, supported, however, by a large contingent of heedless game exterminators. Hitherto the region has been kept under a fairly respectful observance of the game laws, but this fall the ruling spirit of destruction broke loose in the persons of some thirty-two self-styled sportsmen, who organized a hunting match with sixteen guns on each side to go forth and slay by fair or foul means every living thing found wild in the field and forest, and at the round-up the party that has committed the least slaughter provides the champion lot of butchers with a supper. And this is sport, sanctioned under the present system of game legislation.

Much has been written of late on taxing the gun, while other propositions have been considered for the preservation of game. Every mind is probably capable of formulating some sort of theory and believing in its efficacy, be it tenable or not; and perhaps among the pile of chaff accruing may be found a few good kernels that can be added to the accumulating store, from which the lawmakers will grind out the grist of laws. Pending a revision of the game laws and anticipating the annual tinkering of the batch existing on our statute books the following propositions are submitted for consideration and criticism:

1. Enact a general State law making the open season available for shooting and fishing only when game has reached maturity, protecting not only the breeding season, but also caring for struggling infancy.
2. Abolish spring shooting of wildfowl.
3. Prohibit the taking of game by any means other than by the firearm, and prohibit the capture of fish by means other than angling with hook and line.
4. During the open seasons prohibit hunting and shooting on the first three days of the week.
5. Forbid the use of large caliber rifles in settled communities as a precautionary measure, and limit shotguns for hunting to a bore not exceeding 12-gauge with a shell not exceeding 2¾in. in length.
6. Limit each person to 20lbs. of undressed game or 15 birds on any day excepting the present deer regulation.
7. Tax heavily a non-resident for the privilege of hunting in this State.
8. Issue annually any male resident desirous of hunting and fishing at a moderate fee (permitting boys under 16 years to angle for fish without license). Compel the registry of such license in the town clerk's office where the licensee resides, requiring him to take and subscribe an oath to observe the game laws. Furnish him a copy of the game laws at cost and enter his oath in the duplicate or attached thereto on file with the clerk and make a violation a misdemeanor.
9. Prohibit exportation from the State of any game at any time.
10. Make possession of game during the close season a misdemeanor.
11. Grant the power of arrest to any citizen witnessing a violation of the game laws.
12. Appoint or elect a game warden in each township; swear him to perform his duty, pay him a salary and punish him for wilful neglect.
13. Prohibit the organization or participation in any hunting or fishing match for game.
14. Require all sportsman's clubs owning preserves or lands to annually stock their premises with game, and require the officers thereof to file articles of incorporation in the County Clerk's office and pay a special license with a bond for his faithful observance of the game laws, also require each member thereof to enter in a docket kept by the club the daily extent of his capture, which he shall attest or sign, submit this docket or report of the officers at the annual meeting of the board of town auditors. Grant at all times public inspection by the game wardens of the property and premises.
15. Set apart a fund for annually restocking the lands and waters of each township, the service to be in charge of the game warden.
19. Offer by law a premium to the person who shall rear and turn loose when half grown to run wild any litter of four-footed game or flock of game birds or fowl named in our game laws from stock imported from another State.
17. Pay annually, to any land owner a sum per acre, not exceeding twenty acres of woodland or brush, who shall maintain such cover for game, and throw same open to public shooting during the open season. This applying only to agricultural townships, where the arable land exceeds at least by 75 per cent. timber and brush land.
18. Make ample provisions for stocking public waters with game fish.
19. Provide a premium annually per acre to owners of marsh tracts, adjoining public waters, who shall sow and grow thereon wild rice, wild celery or other natural food of wildfowl and throw same open to public shooting.
20. Require any person or association, not owning, but leasing the exclusive privilege of hunting any lands or fishing any waters, to take out a special license, at a fair fee per acre.
21. Require every person who shall market any game, to file on the first of the month with the town clerk, a sworn statement of the amount and kind of game sold the preceding month, in what town captured and to whom sold or consigned. Also require every consignee or dealer, at the close of the open season to file a sworn statement of all game received and sold and where procured.
22. Let every annual reissue of any license be given upon payment of the fee, and the applicant making oath that he has not violated his expired license. CAYUGA.

THE DEATH OF DR. JOBS.

HAVING seen many contradictory statements in the papers as regards the sad accident that befell Dr. Nicholas O. Jobs, of Springfield, and among others that the accident was caused by his drawing a loaded gun toward himself by taking hold of the muzzle and thus discharging it, I think it only right to give the full particulars to his many friends, and to show them that although he might have been careless in some respects, that such a foolhardy piece of business was not the cause. On Friday afternoon, Nov. 15, Dr. Jobs, having an hour or so to spare, decided to go for a little hunt on the side of the Springfield Mountain. On his way he picked up his friend, Mr. George Pudney, and on arriving at the place where they intended to leave the horse, George jumped out and started to tie the horse, the Doctor remaining in the buggy to get out the blanket to cover her. While George was tying the horse he heard the report of a gun directly behind him, and naturally looked all around to see what the Doctor had shot at. While thus engaged he heard, "George, I'm shot. Catch me." Running around to the right hand side of the phaeton, he was just in time to catch the Doctor, as he fell out, while trying to get out by himself. He told George to tie his handkerchief above where the wound was. This was promptly done, and seemed to stop at once the flow of blood. On going to untie the horse so as to back her out, he found that both guns had slipped out of the buggy and were fast in the left front wheel. Dr. Jobs was tenderly conveyed to his home, and on the arrival of Drs. Chandler and Pierson from Orange, it was decided to amputate the arm at the shoulder, but before this was finished Dr. Jobs had passed away, surrounded by friends who saw that everything that was possible to be done was done. His wife and son were away and did not reach home until late the next morning.

As regards the cause of the accident, it is evident that the guns slipped out of the phaeton, and in so doing one of them struck the side of the lower part of the frame of the phaeton, breaking off the thumb piece of the hammer; and breaking the rebound, allowed the plunger to strike the primer, thus exploding the shell. On the frame of the body is a dent fully half an inch deep, showing with what force the hammer must have struck, and the broken part of the same was found in the buggy next morning. Too much credit cannot be given to Mr. Pudney for what he did under the trying circumstances.

Dr. Jobs was a man esteemed and loved by all with whom he came in contact, and the loss to this community is appalling and far reaching. Not a dry eye was to be seen when the news spread that he was dead, and every one felt that they had lost a near and dear friend, as well as the best physician in the State. Whenever any one was sick, his presence seemed to inspire confidence and hope, no matter how grave the case might be, and the sick one would brighten up the moment his step was heard in the house. He was a friend well worth having, and was always the same, clinging to you through everything. Taken away just in the prime of life and usefulness, it seems strange that such things can be. The once happy home, where all was sunshine and light, a devoted wife and loving son, now all is sadness and gloom. They have our heartfelt sympathy, but the dear one is gone forever, never to return. J.

SPRINGFIELD, N. J., Dec. 16.

Sea and River Fishing.

KENTUCKY FISH AND GAME.

A PARTY of the United States Geological Survey penetrated last summer into the wilds of southeastern Kentucky and carried on explorations in a region which is full of interest for the lover of unconventional nature. In order to reach the scene of our duties we traveled from Washington by Louisville and Nashville Railroad to London, and thence by wagon across country about seventy miles to Hazard, in Perry county, where we established our camp. Travel is very rough, principally on paths; roads are scarce, and we were often obliged to cut our way through the undergrowth. The whole region is a mass of hills ranging to 1,000ft. in height, and densely timbered to the top with trees which do not decrease in size with altitude. Poplar and walnut are the principal species. The former grows to a diameter of 4ft. and sometimes exceeds 100ft. in height; it is as straight as an arrow. Five logs, worth from $5 to $7 each, can be cut from a single tree. The biggest walnut does not much surpass 2ft. through. Logs are drawn down to the forks of Kentucky River by oxen and then floated onward at high stages of water. A magnolia with flowers as big as a man's head is one of the characteristic trees of the country. Laurel everywhere makes a dense and well nigh impenetrable undergrowth. There is no good grazing land, and flowering plants are not common. Cannel coal occurs here abundantly in veins 7 to 10ft. thick; pieces can be broken off and lit with a match.

The Kentucky has three forks in this region, known as North, Middle and South Fork, and there is an abundance of small streams besides. The water is warm enough for comfortable wading. The streams are from 6in. to 10 or 15ft. deep, and it is said there are pools 40ft. in depth.

Fishing is good at almost any time from April to November; men were fishing in the early part of November when we left the field. Anglers come in wagons or on foot from places 100 miles away to fish for pike; they camp out in the timber and keep their lines working day and night, sometimes varying the routine by a lively coon hunt. Pike are said to grow 4ft. long in the forks; we did not see any of this size, but the statement is never challenged by any one. This fish is sometimes caught on hooks baited with large minnows. One man will watch three or four lines. The lines are supplied with cork floats. The rods are long hickory poles, weighted at the butt. When a large pike is hooked he needs to be played carefully up and down the stream until a companion can strike him with a gig or spear fastened on a long pole. V-shaped fish traps are used here, and I am sorry to say dynamite, although interdicted by law, is freely employed. Seines are in use, and one measuring about 100ft. took 500 fish at a haul. Besides pike, the chief fish are black bass, redeye, suckers, catfish and perch. In the forks bass vary from 1lb. to 5lbs. in weight.

One party of nine able-bodied men was kept well supplied with choice fish every day by Capt. Billy Martin, of Hazard. The Captain is a great fisherman, and thoroughly enjoys the pastime with his entire 300lbs. of anatomy. Nature was in a generous and sportive mood when she called forth Billy Martin, and he is a credit to her handiwork. He scorns traps and repudiates dynamite, but when he go a-fishing he enteres into the spirit of the thing soul and body, for he always dives after the fish and either catches them with his hand under rocks and logs, or spears them with a three-pronged gig. It seems to us occasionally that the Captain remained beneath the water two or three minutes at a time.

This region is full of game too. Raccoons, possums, quail, pheasants and squirrels are all very common. Bear tracks are seen frequently. Fifteen years ago deer were in excess, but now none are to be found. Snakes! Reader, are you afraid of snakes? If so you will shun Perry county, Kentucky, in spite of its wild beauty and its populous streams and forests, for there are snakes and snakes in that county, and they are not of the kind that circulate under a hat band. While traveling along a stream from 9 to 12 one morning, I counted fifty-seven so-called water moccasins. Rattlesnakes are found chiefly in wheatfields and cornfields; copperheads are more abundant than rattlesnakes, and frequent the same localities. A rattlesnake which almost struck a guide was shot by one of the party, and found to contain a whole gray squirrel. The county is full of black snakes. The people have very little dread of these reptiles, and we were not much annoyed by them.

The nights are very cool and comfortable. Mosquitoes and other insect pests are unknown.

Guides charge from $1 to $1.50 per day for their services. Provisions can be obtained from London and Hazard, and the necessaries are for the most part very cheap. Chickens are ten cents each, eggs eight to ten cents a dozen, butter ten cents per pound, and all of them are excellent. Therefore, if you are not afraid of snakes and love the wild woods and the clear cool stream with its redoubtable knights in armor of scales, go to Perry county, Kentucky, and teach new and better ways of fishing. C. G. VAN HOOK.

U. S. GEOLOGICAL SURVEY, Washington, D. C.

BOAT FISHING FOR STRIPED BASS.

THERE is pleasure in being comfortably seated in a spacious fishing boat, anchored in a tideway, and in angling for the striped bass that forage there for succulent crustaceans and other tempting bits of food. At such a time there comes to the appreciative angler a joy and satisfaction at once ineffable and supreme. He is conscious of the full enjoyment of every pleasing thing that contributes to his environment. The motionless heron on a distant rock, intent on securing one more morsel before winging his lazy flight to his secluded haunt, admonished by the coming day; the sprightly kingfisher, chattering his sweet notes from his vantage ground hard by, as he awaits with keen eye the approach of a luckless minnow; the flight of garrulous crows, alighting in yonder meadow for their morning meal; the kindly influence of the morning sun; each in turn serves to render the situation one of contentment and fascination. It is in the midst of such surroundings, with the air laden with sweet perfumes from the neighboring fields and saline odors from the ocean, that the lot of the salt-water angler frequently falls and that he finds himself contending for the mastery over his sulking adversary. Amid these peaceful scenes he brings to boat his beauteous and noble spoil. The summit of his happiness is reached, when in a lucky moment he is signalled from the far end of his well-placed line that the lure has been taken and the hook fastened to the object of his quest. Then, with rod buckling in a graceful curve to the strain imposed on the flax by a 20lb. bass 200ft. away, alert to every movement of the wily fish, giving line in play only on compulsion, never voluntarily, retrieving as opportunity offers, then it is that he brings every energy into action to the end that his hopes may be realized and his arts successful. In the fight for supremacy the well hooked fish, now tugging with persistent and savage jerks at the unyielding line, and anon, with a vigorous show of strength, and despite the pressure of the thumb on the half vacant spool, adding a dozen yards to the distance between himself and his antagonist, tests to the full the skill of the angler. The veteran is never given to the rashness of snubbing the fish in one of these furious breaks. With prudence born of experience he patiently humors its eccentricities and confidently awaits the first intimation that his is the master hand. Nor long is the delay, for the violent efforts of the fish to escape and the killing influence of the rod's spring so tell against his powers that his giving over is foreshown by the relaxation of the line and the approach of the rod to its accustomed rectitude. With rod well in hand and eyes fixed on the pool beyond, the angler, well at ease, inch by inch at first and soon with greater speed, lessens the distance between himself and his prize. The victim nears the surface, and, breaking water 50ft. away, makes a last desperate effort for his life. Down comes the ready thumb on the revolving spool: lightly at first but quickly, then with added power, the rod buckles and trembles a moment from tip to reel, then the revolutions of the spool cease, the line slackens and the combat is at an end. In another minute the lost line is recovered and

the fish, open-mouthed and exhausted, is drawn floating on his side within reach of the gaff. With a deft insertion of the pointed steel beneath the chin or gill-cover, and a single dexterous movement, the dying fish is transferred to the bottom of the boat. Stretched full length he lies before the victor's gaze with no trace of blood revealed to mar his beauty nor to mark a clumsy use of the gaff.

This is not a fanciful sketch, brother anglers. It is a portrayal of the experience of many of us who find solace and health within sight and sound of the sea. Some of our brothers find their greatest enjoyment along the mountain streams and meadow brooks in whipping the auspicious pools for speckled trout. Others in braving the wilds beyond our northern border for the dreamed of bout with the salmon and winanishe. These avenues of enjoyment have many votaries and yield generous returns. But comfort, ease and the full need of recreative pleasure unattended by hardship, can be more readily attained in boat fishing than any other way, and that which has for its object the capture of striped bass occupies a foremost place. One of the chief features of boat fishing is its companionableness. Where three or four congenial fishermen are anchored, each in his own boat, and all within easy chatting distance, anecdote, repartee and small talk add a charm to the occasion not vouchsafed to the lone fisherman ashore.

For this style of striped bass fishing most any boat that can be obtained, if the angler does not possess one, will serve the purpose. To be the owner of a boat is much more satisfactory. With a rod of two pieces only—butt and tip—its length between 5 and 6ft., an easy running multiplying reel holding a linen line not heavier than 12-thread and 200yds. in length, an assortment of knobbed hooks, a scoop net and a gaff, the angler has an equipment that will afford him much enjoyment if he can only get among the bass.

Allusion has been made to the satisfaction derived from being the owner of a boat. With such a possession the angler is sure of being well boated, and finds in the care of his craft much pleasing occupation when not otherwise engaged. To tinker around a boat is never distasteful, for every true fisherman takes naturally to such work. I have in mind a well-known bass fisherman who will spend a day in odd work about his boat as contentedly as can be imagined. A strong attachment centers around a boat that remains long in one's possession, and a good one is always parted with reluctantly.

On a fishing station like that to which attention has been drawn in this brief sketch, one makes many acquaintances among those of like inclinations with himself. Friendships come into existence that make men brothers. It is the good fortune of the writer to number among his fishing companions many that are famous as striped bass fishermen, some of whom are long past the meridian of life. In the breasts of the latter, who in the days of their active business life were prominent among men, the ardor of youth is securely lodged, and each year they find undiminished enjoyment in casting their lines in the familiar waters. Truly the gentle art, in a pre-eminent degree, holds fast to a spot in the bosoms of its followers that remains perennially green.

ARTHUR MARTIN.

ANGLING NOTES.

THE Potaluck Rod and Reel Club, of Newtown, Conn., instituted a criminal prosecution last spring against one John H. Parmalee, for fishing in a certain stream, which the club claimed to own. The statute under which the prosecution was brought requires that a notice shall be posted adjacent to the stream forbidding entry for the purpose of fishing. The defense of Parmalee was that at his request the stream in question had been stocked with trout by the Fish Commissioners of the State, and that this made it a public stream free to every one. The case was tried at Bridgeport last Thursday, and the defense made by Parmalee was absolutely overruled by the Court. It said that such a claim was not only repugnant to the spirit of the law protecting private streams, but that it was ridiculous to suppose that a stranger could in this unauthorized way make private streams public ones. The Court further held, however, that the notice above referred to should be signed, and as the club had not done this directed that Parmalee be acquitted. Although the club, through neglect to comply with the statute requiring the notice to be signed, lost the suit, they established a point that will enable them to fully protect their stream in the future, and it is also a decision of great value to other clubs.

MORE ABOUT BURNING OUT A BRASS FERULE.—*Editor Forest and Stream:* It looks as if your correspondent, Mr. Thomas Clapham, has experienced a backset and been delayed somewhat in getting in his information on the effects of heat on brass. He writes in FOREST AND STREAM of Dec. 12 that "some correspondent has made the curious discovery that plunging heated brass in cold water hardens it like steel or iron," or words to that effect, and then goes on to tell that this treatment makes it "softer than copper," etc. Now, in FOREST AND STREAM of Sept. 19, '89, in giving brother Hough and others of the craft a pointer on burning out a ferule, I wrote: "When brass is heated red hot and plunged in cold waters the effect is exactly opposite that produced on iron or steel. It takes the stiffness out and makes it so soft that it may be readily chipped or whittled with a knife." If Mr. Clapham refers to this "curious statement" (and I have noticed nothing else in FOREST AND STREAM on the subject), he must have read it holding the paper upside down, or be the possessor of obtuseness that has never been through a "softening process."—KINGFISHER (Cincinnati, O.).

ARTIFICIAL FLIES IN ALASKA.—We are informed by a member of the U. S. Fish Commission that Paymaster Williams and Ensign McCormick, of the Albatross, caught 300 Dolly Varden trout in about one hour's fishing in a small lake near Eagle Harbor, Shumagin Islands, last summer. The trout were from 5 to 8in. long and were hooked so fast that the fishing ceased to be fun and really resembled the hardest kind of work. We have not learned what flies were used, but presume they were small and showy.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

COLORADO.—A Denver correspondent writes: "I have been too busy this summer to go a-fishing. Did not cast a line. But the fishing in Grand River and its tributaries was exceptionally good the past season. It has been improving year by year for three or four past. There was the greatest abundance of young trout in the streams the past fall that I ever saw in any water outside of a fish hatchery. I was by the water every day.—B."

NATIONAL ROD AND REEL ASSOCIATION.—*Editor Forest and Stream:* The storm of last Saturday evidently restrained many members from attending the annual meeting of the National Rod and Reel Association called for that day; and the meeting was adjourned until Saturday, Jan. 11, at 2 P. M., in the laboratory of Mr. E. G. Blackford, Fulton Market, New York.—G. POEY, Sec.

THE KENTUCKY FISH AND GAME CLUB had an informal supper at Alexander's Hotel, Louisville, Tuesday evening. As our columns have testified, this is one of the live game protective societies of the country.

Fishculture.

SAWDUST AND FISH.

Editor Forest and Stream:

In the Halifax (N. S.) *Herald* of Nov. 29 a letter on the benefits of sawdust in rivers appears, signed W. H. Rogers. Mr. Rogers was formerly Inspector of Fisheries for Nova Scotia. A certain river in Nova Scotia, called Le Hare, has a lot of sawmills on it. For years sawdust has been allowed to escape, so blocking the channels and harbor that where formerly a 1,000-ton ship could load, a light schooner is now unable to float, and the fish have deserted the stream. The Minister of Fisheries, in reply to a petition asking leave to continue the desecration, plainly and forcibly shows the fallacy of their demand, and says stop it, burn up your sawdust, or quit. This I would expect from his previous acts, and it is better late than never to lock the stable door.

Mr. Rogers in supporting the mill owners, describes the sawdust as becoming vegetable soup, so necessary for the sustenance and production of anadromous fishes, although he admits they eat nothing while in fresh water, excepting an odd drink of this soup of his. True, we find no food in the stomach of the salmon while in fresh water, but the trout is not so particular; he requires something stronger than soup; anything from a salmon smolt up to a mouse or a squirrel is more to his taste; he may take a little sawdust as dessert, but don't make a practice of it. "Mr. Rogers describes truly the clean rapids which are selected by those fish in which to lay their ova," instinct no doubt teaches them, that the sawdust is death. Some of our pisciculturists could decide this question easily, by giving a tray of eggs a coating of Mr. Rogers's favorite sawdust. Mr. Rogers repudiates the idea of sawdust getting into the gills of a fish or their being killed by swallowing it. No man ever yet found sawdust in the stomach of a newly killed fish, but it is a well-known fact that dead fish are often found with the gills ulcerated and the sawdust adhering. Mr. Rogers in describing the mode adopted by the fish in laying their eggs tells us, "The fish plow furrows a few inches deep with their nose and after depositing the 'fertilized ova,' cover it carefully over several inches deep with their tails." I fear Mr. Rogers never had much experience with the salmon family; if he had, he never would have written such nonsense.

The facts are simply these. The salmon never touches the gravel with his nose while excavating the redd, the work is performed solely by the action of the tail and body, and by suction, lifting the gravel by the hard quick motion of the strong membranes and holding it in solution while the rapid current sweeps it clear of the redd, and not a few inches deep satisfies the fish; the general depth is from 8in. to a foot. As to the fertilizing process, it is often the case that the male may be engaged in a fight with another, or chasing some big trout who approached too near, and the male can be often seen alone ejecting the fertilizing fluid on the redd, allowing the germs of life to find their way to the eggs lying in the interstices of the gravel. Owing to this fact thousands of natural-laid eggs are never fertilized, the male fluid never reaching the egg. Mr. Rogers closes by declaring that all who dispute his theory of facts, are uninformed or have political axes to grind. I have none, but I have had some experience both with fish and sawdust, practically, not theoretically, and must say so far as it benefits rivers, harbors or fish, I am ANTI-SAWDUST.

RESCUE OF ILLINOIS FISHES.

THE U. S. Commission of Fish and Fisheries is informed by Dr. S. P. Bartlett, of Quincy, Illinois, who had charge of the work of rescuing and distributing native fishes of the Mississippi Bottoms, that he has sent out by the cars of the Commission 131,311 fishes, as follows: Black bass 64,951, crappie 18,434, redeye (*Ambloplites rupestris*) 350, sunfish 7,028, ringed perch (*Perca americana*) 15,483, wall-eyed pike 700, striped bass (*Roccus chrysops*) 10,484, white perch (*Aplodinotus grunniens*) 350, pike 270, buffalo 2,285, spotted catfish 10,976. These were forwarded to localities in Arkansas, District of Columbia, Illinois, Indiana, Iowa, Kansas, Kentucky, Missouri, Montana, Nebraska, Ohio, Texas and Wisconsin. The cars traversed a total of 28,000 miles to accomplish this work. In appreciation of the value of the undertaking the railroads hauled the cars without charge all but 1,000 miles of this distance.

The fish rescued and distributed to living waters would have perished by desiccation of the ponds in summer and freezing in winter. They were all half-grown and adult, varying in length from four to twelve inches. Besides the number shipped to distant points Dr. Bartlett states that more than a half million were deposited in the Mississippi and other rivers of Illinois at or near the place of capture.

U. S. FISH COMMISSION WORK.

CAR No. 1 has brought from Illinois for distribution in the East 500 black bass, 400 striped bass (*Roccus interruptus*), 600 crappies, and 300 ringed, or yellow perch. The crappies will be deposited in the headwaters of the Shenandoah River. Some of the black bass have been distributed in Howard county, Maryland. The work of taking whitefish eggs is closed for the present season. The total number of eggs taken is 220,000,000. This is about twice as many as were taken last year.

Sandusky and Alpena hatcheries are full. Northville has 60,000,000, which are to be cleaned up and sent to Duluth; 10,000,000, are to be hatched at the Erie station by the Pennsylvania Commission for Lake Erie; 10,000,000, are to be developed at Washington, D. C. These will be planted in the eastern portion of Lake Ontario.

BLACK BASS PLANTED IN VIRGINIA.—About Dec. 5, 1889, the U. S. Fish Commission deposited 675 large-mouthed black bass in the North River, at Lexington, Va. This river is a tributary of the James. Mr. E. R. Lucas was in charge of the shipment.

ALASKAN SALMON PACK OF 1889.—In order to give our readers an idea of the abundance of salmon in Alaskan rivers we record here the largest catch known in the Territory to date. 634,260 cases, representing fully 6,000,000 fish, were shipped to San Francisco, and the number of barrels of salted salmon was 6,930½ containing 200lbs. each. The total number of salmon, therefore, was not less than six and a quarter millions, taking 5lbs. as the average weight of a fish in the marketable condition. The value of this catch exceeds $3,000,000. If we could transfer one-half of these noble fishes to eastern waters what an outing our experts with the rod might enjoy.

SALMON CULTURE IN MAINE.—Excellent result have been obtained by the U. S. Fish Commission at the Craig's Brook station during the season just closed. From 110,000 eggs of the sea salmon collected in October, 1888, upward of 83 per cent. of yearling fish, numbering 92,000, were reared, 78,000 of these were placed in the Penobscot and the balance will be kept another year. 36,000 Schoodic, or landlocked salmon eggs, furnished 17,000 yearlings, all of which have been planted in Green Lake, to establish therein a supply of breeding fish for future operations in salmon culture.

PENNSLVANIA FISH COMMISSION.—The annual meeting of the Fish Commissioners of Pennsylvania was held in Washington, D. C., during the present week, to give the members of the Commission an opportunity to confer with the U. S. Commissioners and investigate the methods of work by the Government.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. —, 1890.—Meet of the Brunswick Fur Club, New Meadows, Me.

EASTERN COURSING CLUB'S MEET.

[*Special Report.*]

AFTER many trials and tribulations, the members of the club met at Hicksville, Long Island, Dec. 11, and concluded the meeting, which had been commenced on the previous Saturday, which had been stopped after the first course by the S. F. P. C. A.

The case of the slip steward McGregor having been disposed of Saturday night and the culprit acquitted, the trial of slipper Black, put down for Tuesday at 5 P. M., had also resulted in an acquittal. The case was prosecuted for the Society by Mr. Elliott, assisted by Mr. C. J. Peshall, who, loaded down with legal tomes, presented a very formidable appearance as he swooped down upon the Hickvillites. He did not disconcert them nor the jury very much, for with the law, (which he expounded from his books) and the eloquence of Mr. Elliott, the case fell flat for want of legs to stand upon, and Judge Weller, the club's counsel, scored every point to a "finish and kill." In fact so to shreds and tatters did he tear the Society's case that at one time it looked as if Justice Steiner would issue a warrant for his arrest for "willfully, cruelly and with fiendish inhumanity lacerating and otherwise killing the Society's case." In an able and impartial charge the Judge gave the case to the jury at nearly midnight. The interest on the part of the citizens never flagged for a moment; and when the jury went out, the room was being crowded into by new faces anxious to know the result. A half-hour's absence brought the jury back to their places and the verdict of acquittal brought forth a salvo of cheers that was simply deafening. The jury no doubt looked upon the case as striking at the very root of their liberties, and so they defended them with their verdict.

The club, anticipating a verdict of acquittal, inasmuch as the S. F. P. C. A. had at the very best a poor case, had agreed to conclude the meet on Wednesday. The day broke most wretchedly. It did not rain, it simply poured; and the outlook for a successful meet was anything but encouraging. Soon, however, the rain ceased, the sun came out, and with it the spirits rose. Mr. Watson met Mr. Peshall, and the outcome of it was that the latter took the first train to New York with a proposition to Mr. Haines, of the Society. Word was given that no movement would be made toward coursing till 12 o'clock, which would give Mr. Peshall ample time to telegraph the result of the conference. Having given Mr. Peshall an hour's grace, even as the club gave the jacks fifty extra yards of law, the members quietly started for the coursing field, while Mr. Watson engaged the Society's officer in earnest conversation. Everything being in readiness, the first brace was ordered to the slips.

First Series.

BALKIS AND HAZELHURST.

This was a most unfortunate drawing, as Balkis was the sire of Hazelhurst. The former had severed an artery four weeks ago while in training, which, of necessity, laid him up in the hospital for that time. Consequently, when he went to slips he was greatly out of condition, not having a mile's run for weeks. Nevertheless, there being but fifteen dogs entered, Mr. Huntington concluded to let Balkis run and so fill the sixteen-dog stake. The jack was let out of the preserve and proved to be the big black tail so much desired on Saturday. Out of the lane he went like a shot. Mr. Black made a most elegant slip at about 125yds., and Balkis started at a pace simply marvelous, leading up to the jack and making the first turn in true workmanlike style. Hazelhurst now forged ahead and got a go-by and two turns in rapid succession. Balkis coming up at a rattling pace scored another go-by, then two turns and holding his jack well in hand, made a wrench. So closely did father and son

work together that the jack, though he turned repeatedly, could not get to the plain. From this point on Hazelhurst scored all the points, Balkis keeping close in the rear. The jack was a very strong one, and gave Hazelhurst a good gruelling, till he by sheer force of speed drove her close to fence and killed in grand style. Balkis was thoroughly pumped, while Hazelhurst was not perceptibly the worse for his hard work. Hazelhurst won.

WANDA AND HIGHLAND CHIEF

were slipped on a strong whitetail. Wanda was at first unsighted, which gave Highland Chief fully 50yds. lead. Wanda soon sighted, however, challenged Chief, and together they worked to the jack in fine style, Wanda turning the jack to Chief. From this point on to the finish Chief kept selfish possession of the jack, got in some very quick work and won with a good kill. Wanda being very much out of condition was consequently greatly pumped. Highland Chief showed great speed from start to finish, scoring 10 to Wanda's 6.

HARMONY AND TUNOR.

For the first 25yds. Tunor led toward the jack, when Harmony got settled down to a rattling pace, took a go-by with perfect ease, wrenched, turned, wrenched again and killed in short order. From first to to last she did all the work, beating Tunor pointless. A course of moderate length, made so by Harmony's quick and beautiful work.

GIPSEY AND ANDY M'GREGOR.

This was, with one exception, the longest slip of the day, the jack getting fully 125yds. away before the dogs were let go. After a short gallop Gipsey stopped working, but soon recovering started off at a beautiful pace, but not fast enough to prevent Andy from quickly getting in two turns, coursing the jack down toward the lane, when he quickly turned her, forcing her back over the upper field. Here Gipsey again sighted, challenged Andy, and together over main field and adjoining one they coursed her in beautiful style, till Andy, forcing the jack toward the lower corner, wrenched, killed and won. An excellent course, occupying fully seven minutes. Gipsey was well winded.

ZOE AND FOREST QUEEN.

Despite the fact that she had had no training whatever, Zoe showed up in excellent style, being strong and full of fire. The jack was a rare good one. Zoe did all the work at first, scoring in rapid succession fifteen turns to Queen's eight. The two bitches did their work most beautifully from start to finish, which was made by the jack getting away, at which point the judge declared it an "undecided" much to the outspoken dissatisfaction of every one. From first to last it was never in doubt that Zoe won the course, and it might have been ended twice, in both instances making Zoe a very easy winner. This was indeed a marvelous decision and worthy of the judge's great experience. When asked by one of the stewards to give the score on which he based his award, he was utterly unable to do so, which fact did not tend to make matters any pleasanter.

GLENBOIG A BYE.

Wanda went into the slips with him, and they were let go on a marvelously strong jack which was given fully one hundred and twenty-five yards law. Puss made straight for the plain and reaching it was lost to sight before either of the dogs had got anywhere near her. With the exception of this very short run, Glenboig did literally nothing but jump up and down trying to locate the jack, which he was unable to do. The entire distance covered by him was not 200yds., yet the judge awarded Glenboig the course. This was all wrong and showed an utter want of knowledge of the first principles of coursing. If the spectators had the least doubts of his total ignorance as shown in his previous decision, this egregious blunder dispelled them. Glenboig ran the bye with a beaten dog, so that he should do as much work as those dogs which had had good punishing courses in order to put them all on an equality, and not let one score a bye doing no work at all. The result of the decision was that Glenboig not having done the slightest possible coursing was perfectly fresh and had one course scored to his credit. From this point on to the very finish of the meet the question as to which would be the winner was never for a moment in doubt. In every one's mind it was dollars to doughnuts that Glenboig must win, and any bookmaker would have quickly given odds of 100 to 1. No one member could have taken the decision to himself, yet all were affected by it. It was gross injustice to the dog himself, not to mention the disadvantage every other dog was subjected to. The owners of the next brace of dogs should have challenged the decision at once, and had it occurred in England it would not have been allowed to stand one moment; in fact, no judge would have dared to do it. A short course even with a kill may be judged an undecided one, as was done in the case of Mr. Webber's Sister in Black two years ago at Great Bend. The advantage here given to Glenboig was by far too great to be overcome by any of the remaining dogs, as Hazelhurst, Highland Chief, Harmony, Andy McGregor and Forest Queen had done all the work they cared to do, for a while at least. Mr. Black, the slipper, had up to this time kept his temper well down, but now he rose in his righteous indignation and threw the slips violently down, refusing absolutely to slip any more dogs to such decisions. Mr. Black, in his desire to see coursing introduced into this country, had again most generously agreed to slip for the club, though he felt quite sure of arrest. The annoyances of arrest and trial were bearable, but this judging was more than he could stand. He was, however, won over by Mr. Watson, and agreed to slip as before.

Third Series.

HAZELHURST A BYE.

Hazelhurst went into the slips with Gipsey. A very strong jack flew out of the lane and made for the plain in fine style. This sight drove Hazelhurst nearly wild with excitement and eagerness to get away. In some unaccountable manner he slipped his collar and made for the jack at lightning speed. Gipsey was held in the slips by Mr. Black, and Hazelhurst had to do all the work alone. Up and down he coursed the jack in true workmanlike style, making turns, wrenches and trips in rapid succession; but so strong was the jack that it was evident he would never be able to catch her. He, however, forced the jack by sheer work down to the lane, which it entered: then as the dog, greatly pumped, was taken up, the jack turned up the lane toward the plain. Mr. Lacy quickly dropped on his knees right in front of the jack, and before puss knew it, she was held fast in his hands. The spectators agreed she had won the right to life, so she was dropped back into the preserve. This very punishing and long course was indeed hard luck for Mr. Wixom, and a wonderful contrast to the running of Glenboig's bye.

HARMONY AND HIGHLAND CHIEF.

A good strong jack was let out to these two dogs, which left the slips like a shot. Chief did some excellent work at first, scoring three go-byes. Afterward Harmony came up, settled well down to her business and worked her jack up and down the main field in a beautiful manner, scoring five turns to Chief's four. Then came a straight run up, several wrenches by Harmony, when Chief killed. Both dogs had a very punishing trial. Harmony stood it remarkably well, showing both speed and bottom, but Chief was not so well off. Mr. Huntington's trainer, McGregor, had drawn his dogs for Nov. 15, the original day for the meet, but the repeated postponements of a month causing repeated change of diet and exercising was more than they could well stand. Chief was drawn too fine, though he showed wonderful speed and great fire and heart. Harmony won with many points to spare.

After Harmony's kill Mr. Black the slipper was again arrested by the S. F. P. C. A.'s remaining officer, who had put in an appearance after he found the club had left for the coursing grounds. Mr. Black was worn out, the road was muddy, and he could not walk fast; so by the time he was brought before the Judge and the officer got back to the grounds the meeting had been concluded. As soon as the officer had disappeared, Mr. Garbutt, one of the field stewards, volunteered to slip the remaining dogs, and performed the office very satisfactorily.

GLENBOIG AND ANDY M'GREGOR.

Mr. Huntington's nomination of Mr. Erastus Hopkins's black dog Andy McGregor proved to be a good one. Glenboig came to the slips as fresh as a daisy. This course was the grandest and most punishing of the entire meet. The best jack of the day, a big strong blacktail, rushed from the long lane like the wind, making straight for the plain. The slip was made at about 100yds., and then began a terrible gruelling. Up and down the first field they coursed in excellent style for over two minutes, Glenboig scoring four turns to Andy's three. Andy here pressed the jack so closely that she made a desperate break for the plains, he still leading, however, and holding her well in hand for over half a mile straightaway over the plains. Here Glenboig ran in, scored a go-bye, and ran fully a quarter of a mile further on with Andy hugging him close. Glenboig pressed the jack so closely that she turned and made a terrible dash for the fence far down to the left. As she flew under it Glenboig went through it and killed. Andy held on remarkably well, and at the finish was not 10yds. behind. The taken time from start to finish was nine minutes. Andy was thoroughly exhausted from this punishing course, and for a half minute reeled about like a drunken man and was hardly able to stand. Willing hands, however, were ready, a bit of brandy braced him up, and he was soon all right. Both dogs had a terrible gruelling; and had Glenboig not been so fresh on account of the bye he "ran," the result might have been different. Both dogs showed great fire, speed and bottom from start to finish and grit to a remarkable degree. As Andy had never seen a jack or cottontail before this meet, his work and kill were very meritorious. The judge was asked by one of the stewards for the score, but was unable to give it.

FOREST QUEEN AND ZOE.

A good jack was slipped to this brace of fawns and away she went at a rattling good pace. At the upper end of the field, all of a sudden, she squatted, to the surprise of every one. On came the dogs at full speed, and she let them get within about 10yds. of her, when up she jumped like lightning and sped over the field at full tilt, both bitches in hot pursuit. From this point on to the finish the gamy little Forest Queen did nearly all the work, and after a course of moderate length killed, winning easily with many points to spare.

Third Series.

GLENBOIG AND HAZELHURST.

A good jack made the pace for this brace. The slip was perfect, both dogs getting away together. The jack increased her speed to her full capacity, Glenboig leading well up to her in fine style. Hazelhurst now began working in earnest, feeling that he had an antagonist of metal and speed. From this point on to the finish Hazelhurst showed wonderful bursts of speed, holding his hare well in possession. The jack then made a dash and ran down the field, both dogs pressing her close. Here Hazelhurst made five quick turns to Glenboig's three, and with three go-byes and a trip turned the jack to Glenboig, who killed in fine style. The beauty of the latter part of the course was marred by the jack being forced so close to the fence, where the kill was effected. This was another one of Mr. Morris's queer decisions, and which, if it had been properly given, would have landed Hazelhurst a winner.

HARMONY AND FOREST QUEEN.

This was one of the most punishing courses of the day and both bitches received a terrible gruelling. From the very outset Harmony did all the work, only letting Forest Queen in at the turns. The latter is so very small, that she was enabled to turn herself more quickly than Harmony. Harmony, however, scored six go-byes in quick succession, fourteen turns and four wrenches, to the Queen's seven trips, eight turns and one wrench. Harmony showed marvelous speed from start to finish; and the course was ended by her catching the jack, dropping it and then turning it right into Queen's mouth, who caught and killed. Not a single point should have been allowed Queen for the kill, for it had no merit. The peculiarity of this course was, that every turn of the jack that Harmony made was just in the direction of Queen. The jack was a very strong one, and deserved to have gotten away. The judge awarded this course to Queen, who scored at least twelve point less than Harmony. This decision did not improve the general feeling, as every one saw it was Harmony's course, with plenty to spare. This course showed off her running as never seen before. Of all the greyhounds that had run, her motion was the most poetic and finished. She lacked nothing in style and worked her jack with consummate skill. Queen, a wee bit of a bitch, is a little wonder. She ran like a demon, held on to Harmony with wonderful tenacity and showed herself to be game from the word go, but was badly beaten.

The dogs now remaining to compete for the four prizes were Glenboig, Forest Queen, Hazelhurst and Harmony. Mr. Watson, the only steward on the grounds, had to go with Mr. Black and the officer. Mr. Garbutt, the field steward, was slipping, and consequently there was no one to attend to the drawing of the dogs. Glenboig and Forest Queen were ordered into the slips. Mr. Morris acted so queerly about the drawing that it caused most unfavorable comment. Repeatedly he had ridden up to the slipper, Mr. Black, and asked the names of the dogs then in the slips, which Mr. Black as often refused to give. This was perhaps the strangest proceeding ever performed by a judge on the coursing field, and many wondered why it was done. Queen was greatly distressed after this course, and had not recovered when again ordered into the slips for the

Final Series.

GLENBOIG AND FOREST QUEEN.

In Forest Queen's previous course she had had a terrible gruelling, and was, consequently, greatly distressed. Ten minutes after it she was ordered to the slips with Glenboig, who, on account of having done no work in the bye, was still comparatively fresh. The brace was slipped on a very poor jack, and as Forest Queen had not yet recovered entirely she had no show against her antagonist. Glenboig led up to the jack in fine style, and quickly scored four turns and five wrenches, while Queen could only get in two turns and two wrenches. Glenboig now increased his pace, and killing his jack, won a course of moderate length. This gave Glenboig first prize and the cup, with Forest Queen winner of second prize.

Mr. Morris showed his utter and lamentable ignorance in contending that Hazelhurst and Harmony should run off the tie for third and fourth prizes. Mr. Wixom, the owner of the two dogs, refused to run them, claiming justly that they should have been and would be properly guarded. Mr. Morris insisted that they should run, Mr. Wixom refusing to allow it. The result was that Mr. Morris was routed, and here ended his wretched display of ignorance of the very first principles of coursing:

SUMMARY.

RED.		WHITE.
Woodhaven Kennels' blue bitch Fleet	against	Mr. Watson's fawn dog Waverly.
Mr. Huntington's black and white dog Balkis	against	Hornell-Harmony Kennels' black dog Hazelhurst.
Mr. Caminoni's blue bitch Wanda	against	Mr. Huntington's white and black dog Highland Chief.
Hornell-Harmony Kennels' blk and w. b. Harmony	against	Mr. Lambert's black dog Tuner.
Mr. Griffith's brindle bitch Gipsey	against	Mr. Huntington names Mr. Hopkins' black dog Andy McGregor.
Mr. Webber names Mr. Rackham's Sister in Black	against	Messrs. Ide & McCoy's fawn dog Glenboig.
Mr. Growtage's Zoe	against	Mr. Garbutt's fawn bitch Forest Queen.
Mr. Work's br. dog Prince	against	Mr. Webber's w. and b. bitch Mother Demdike.

The result of the running was as follows:

First Series.

Waverly beat Fleet.
Hazelhurst beat Balkis.
Highland Chief beat Wanda.
Harmony beat Tunor.
Andy McGregor beat Gipsey.
Zoe and Forest Queen undecided.
Glenboig a bye.

Second Series.

Hazelhurst a bye.
Harmony beat Highland Chief.
Glenboig beat Andy McGregor.
Forest Queen beat Zoe.

Third Series.

Forest Queen beat Harmony.
Glenboig beat Hazelhurst.

Final.

Glenboig beat Forest Queen.
Glenboig first, Forest Queen second, Hazelhurst and Harmony divided third and fourth.

Great credit is due to Mr. Watson, the treasurer, and Mr. Huntington, the worthy secretary, for their indefatigable efforts and untiring zeal. These two gentlemen had everything to contend against, and together they saw to the purchasing of the jacks, renting of ground, designing of preserve, corral chute, securing of counsel for defense, etc., and to them belongs all the praise for making the meet such a success. It was deeply regretted and openly deplored by every one on the ground that neither of these gentlemen secured any of the prizes. Time after time, to their own loss, they gave up their trainers and sent them down to Hicksville to oversee the carrying out of their designs, not seeming to care whether they won or not, provided the meet was a success. It was a case of want of selfishness which should be thoroughly appreciated by the club. Mr. Huntington, however, has the consolation of having bred the third and fourth prize winners, Harmony and Hazelhurst, the former being by Doubleshot out of Clio, and the latter by champion Balkis out of champion Cassandra.

It is a thousand pities that Dr. Cryer could not have attended the meeting of Wednesday. The decision which he gave on the Saturday previous in the Fleet-Waverly course was prompt and intelligent, in marked contrast to Mr. Morris's bungling work. The interference of the Society was annoying enough, but the judging of Mr. Morris was such that it spoiled the pleasure of the whole meet. This gentleman grossly imposed upon the club, and convinced them somehow that he was perfectly capable; and relying upon his statements he was allowed to officiate in a capacity to which he himself should have known he was wholly unfitted. He sought notoriety and got it, and the Eastern Coursing Club had to suffer irreparably by it. Had Mr. James Black or Mr. Landon been appointed, everything would have passed off satisfactorily, for both gentlemen are eminently qualified to act.

I have repeatedly referred to the decisions Mr. Morris rendered and which caused such unfavorable comment both from the members and the spectators, and to substantiate it all I will quote from Mr. Morris's report in a Chicago paper of Dec. 13. Speaking of the Fleet-Waverly course he says: "And when about 100yds. distant the two dogs were slipped. Waverly threw up his head in fine style and kept well up with Fleet's superior speed." Mr. Campbell, one of the greatest coursers that ever lived and breeder of Canaradzo and a hundred other grand greyhounds, wanted his dogs to run "low in front and high behind." Mr. Morris wants his dogs to run high in front, heads up in fine style. I leave it to the public to decide how much weight is to be given to Mr. Morris's opinion, decisions and remarks. How he dared palm himself off on the club in such a manner passes all comprehension. Time after time he was asked by the stewards for the scores and was unable to give them and he also acknowledged it. The question then arose, how could he make his decision? At every turn and corner his ignorance was most apparent and deplorable. His assumption marred the entire meet and the Eastern Coursing Club now realize how they were imposed upon.

The evil done, however, cannot be repaired now. The jacks were strong, wonderfully strong some of them, and quite used up the dogs. The dogs were all thoroughbred, of the very best blood that England can boast of, and some of them as beautiful as they were fast. The work both of jacks and dogs was of excellent quality, being equal to many and superior to that shown in some of the large meets held in England. The sport was conducted in a perfectly legitimate manner.

Sister in Black and Mr. Webber's beautiful bitch Mother Demdike, who ran into the last four at Haydock Park, were on hand Saturday to try conclusions, and it was deeply regretted they were absent on Wednesday. The running of these two noted dogs (Sister having been in the Great Bend meet two years ago) was looked forward to with great pleasure. The rain that came pouring down early Wednesday morning no doubt led Mr. Webber to conclude there would be no meet, but the sun finally coming out enabled the club to carry out its programme. CARNARIS.

NEW JERSEY KENNEL CLUB.—The adjourned annual meeting of this club was held on Tuesday, Dec. 10, at Taylor's Hotel, Jersey City. In the absence of the president, Mr. K. E. Hopf occupied the chair. The treasurer's report showed a balance of over $400 in bank. The motion of C. J. Peshall, to reduce the annual dues from $10 to $5, was carried, and on motion of Mr. Shotwell the dues for the present year were remitted to the members. The advisability of holding a bench show next spring was discussed, but no decision was arrived at. The following officers were re-elected: C. J. Peshall, President; E. R. Hearn, Vice-President; W. Shotwell, Treasurer; Geo. Wilson, Secretary; and A. C. Wilmerding, delegate to the A. K. C.

LADY TEMPLE'S EUROPEAN TRIP.—Cauusett Kennels, Lloyd's Neck, N. Y., Dec. 11.—You may be interested to know the Caunsett Kennels' The Lady Temple (Beaufort—The Lady Margery) sailed on the steamer Holland on Dec. 14, to be bred to Mr. W. K. Taunton's Hotspur.—R. H. DERBY.

CENTRAL FIELD TRIALS.

THE ALL-AGED SETTER STAKE.

THERE were sixteen starters for the All-Aged Setter Stake of the Central Field Trial Club when the drawing came. They were drawn to run in the preliminary series in the following order: Cora of Wetheral and Chance. Princess Beatrice II. and Little Gift. Count Howard and King Leo. Cassio and Desmond II. Rowdy Rod and Roger. King's Mark and Whitie. Blue Mark and Miss Monarch. King's Dan and Dash.

Preliminary Series.

The running of the preliminary series began on Friday, Dec. 6, after the finish of the Pointer Derby. Messrs. Davidson, Wallace and Tallman were the judges.

The well-known bench show winner Cora of Wetheral, and the equally well-known field trial winner Chance, opened the ball. Cora was in the worst possible condition for work, being very thin and weak and lacking muscular development. She made a wretched exhibition so far as speed, range and searching for birds goes; she made a couple of very pretty points to singles and showed considerable style. We hardly knew what to make of Chance; he was not the same dashing, free-going dog that we saw at High Point, his speed and range were not nearly up to his form, although at times he let out, and seemed himself for awhile, he did not get away as he usually does, and two or three times he worked over the same ground twice, and seemed afraid that he would lose his handler; he was also somewhat uncertain when on birds, and instead of going up boldly, as is his usual custom, he more than once stopped to foot scent; and although he drew on and located his birds, it was not done in the snappy, positive manner in which he generally does his work. At the end of the heat we inquired of his handler the reason for the change, and he informed us that during the running of the Derby the judges had explained to him their ideas as to the manner in which a dog should do his work, and that in order to bring Chance down to the required form he had used the whip to keep him from ranging so wide, and consequently the dog was all broken up. We cannot believe that Mr. Avent correctly interpreted the opinions of the judges, for we think them to possess too thorough a knowledge of what constitutes good field work to promulgate any ideas or give any intimation that would force a handler, in order to win, to break up a dog with such high courage and grand natural ability as Chance. In any case, it was a mistake, and great injustice was done a noble animal.

Princess Beatrice II. and Little Gift were next put down. Princess was in the same bad condition as her kennel companion Cora, and was unfit to start. She went a trifle better than Cora and did some fair work on birds. Gift got around fairly well, doing some good work and some bad. She showed some style when on game and hunted her ground fairly well, but did not range very wide.

Count Howard, like the others in Mr. Windholz's string, was in no condition for work, and he showed no inclination to hunt. King Leo did fairly well, but was not up to his usual form.

Cassio and Desmond II. were put down at 4:42, and after a half hour's work were taken up for the night to finish their heat in the morning. On Saturday they were put down at 9:55 to finish their heat. Both had shown up well the previous day, pointing, backing, retrieving and working out the ground in good form. No birds were found in the last half of their heat, although they went at a good pace and hunted well.

Roger and Rowdy Rod both showed up well, although Roger was a trifle unsteady once or twice. He showed good pace and range and considerable bird sense. Rod went full as well as he had in his previous heats.

King's Mark and Whitie were the next brace. Mark showed up much better than he did at High Point, going at a better pace and ranging much wider. Whitie appeared to be stale from overwork and did not show to advantage.

Miss Monarch and Blue Mark did nothing to show that they were worthy the praise bestowed upon them by those who have seen them in every-day work, and the heat was rather a tame one.

In the next heat Dash also went back on his record and did nothing brilliant. King's Dan ran fairly well, but had not much chance to show up on birds.

This was the last heat of the preliminary series, and the judges in selecting the dogs to remain in performed their duties in a praiseworthy manner, keeping in some that had shown considerable merit.

Second Series.

The judges selected 8 of the 16 starters to run in the second series and they were drawn to run in the following order: King's Dan against Rowdy Rod, Little Gift against Roger, Chance against Desmond II. and Cassio against King's Mark. As King's Dan had run in the last heat of the preliminary series, it was decided to run Little Gift and Roger first. Roger won easily, running in good form and behaving nicely. He had much the best of it in pace and range as well as in the work on birds. Gift ran fairly well and showed considerable style when on game.

Chance and Desmond II. were next put down at 4:37 and taken up in half an hour to finish in the morning. The work was not at all satisfactory in the evening, but when put down on Monday morning both started off well and ran a very good heat. It was uncomfortably warm on Monday, with a slight breeze from the south. Scent appeared to be fairly good, although not many birds were found, as they were not moving. Both did some very good work on birds, with not much of advantage to boast of by either, but the superior pace, range and style of Chance landed him the winner.

King's Dan and Rowdy Rod were next put down, and although Rod had some fun with the birds all to himself he won his heat, being vastly superior in pace, range and bird sense.

The next brace, Cassio and King's Mark, were put down at 11:36. Mark ranged better than in his previous heat and did very fair work on birds. Cassio also ranged well, and hunted his ground out better than Mark, but he became rattled when on singles by the loud handling of Barker, who was cautioned by the judges, but Cassio did not regain his confidence, and Mark outworked him and won the heat. This ended the second series with the result as follows:

Rowdy Rod beat Kings's Dan.
Roger beat Little Gift.
Chance beat Desmond II.
King's Mark beat Cassio.

Third Series.

After lunch Rowdy Rod and Roger were put down in a large field to run the first heat in the third series. Tom Aldrich, who handled Roger, had the misfortune just before the dogs were put down to injure one of the small tendons in his right leg and was unable to walk. John Lewis took the dog in hand and landed him a winner. He ran in good form and showed that he was well trained by the manner in which he worked for and obeyed a comparative stranger. Rod went in his usual dashing style, but the handlers were ordered to change their course so often that he was lost a portion of the time, and although the dogs were run 15 minutes over the hour, the only birds found were a bevy that Roger pointed, and he also got another point to a portion of the same bevy and was backed by Rod a second or two, when he caught scent of other birds and also pointed. With the exception of a flush by Roger this was all the work on birds during the heat and was not enough to enable one to form an opinion as to the relative merit of the dogs when on birds, in fact, Rod had no opportunity to show whether he would point or not and more time should have been taken before deciding the heat.

Chance and King's Mark were the next brace. They were put down at 2:45 and when the allotted hour had elapsed Mark had to his credit a point to a bevy that he stumbled on in a small thicket while Chance had pointed two bevies, one of them in about the same manner in which Mark had found his, and the other by making a wide cast and working out a bit of stubble in masterly manner, deserving of the highest praise. Not only was the character of his work greatly superior to that of Mark, but he was also ahead of him in pace and showed much more bird sense, and we thought him clearly entitled to the heat; the judges, however, thought otherwise, and ordered them on, and at the expiration of 50m. more they decided the heat in favor of King's Mark. If in the opinion of the judges the dogs were equal at the expiration of an hour they were justified in giving the heat to Mark, as toward the finish he was going a trifle the best and had found two singles and a bevy while Chance had found none. It is due to Chance, however, to say that he was not going up to his usual form, which was owing in a measure to his having been called back more than once to hunt out ground that he had already been over. It was now 4:35 and no more work was done.

Tuesday Roger and King's Mark, the only dogs left in, were put down at 9:33 to run for first place, and at 11:30 they were taken up and the heat was decided in favor of King's Mark, and he was declared winner of first prize. The heat was a long and tiresome one, and for a heat for first money it was the most commonplace imaginable, no brilliant work was done, and but little that was even ordinary, while a portion of it was decidedly bad. Neither dog went with any dash, Mark starting very stale but picking up a little near the middle of the heat for a short time and then slowing down again. Roger did not go nearly up to his usual form, but he started fairly well and maintained his pace throughout the heat much the best. Neither ranged wide nor hunted out the ground at all well, and the work of both was of far less merit than that of their previous heats.

We then went to lunch, and after a long rest Roger and Chance were put down at 1:43 to run for second place. Chance ran much better than in any of his previous heats, and had no trouble in beating Roger, and when the hour was up he was awarded the heat and declared winner of second prize. Roger appeared a little tired, but the example of his competitor put new life into him, and he ran better than he did in the morning. The judges placed Roger third, and the setter division of the All-Aged Stake was finished. Following is the summary:

Preliminary Series.

Cora of Wetheral and Chance.
Princess Beatrice II. and Little Gift.
Count Howard and King Leo.
Cassio and Desmond II.
Rowdy Rod and Roger.
King's Mark and Whitie.
Blue Mask and Miss Monarch.
King's Dan and Dash.

Second Series.

Rowdy Rod beat King's Dan.
Roger beat Little Gift.
Chance beat Desmond II.
King's Mark beat Cassio.

Third Series.

Roger beat Rowdy Rod.
King's Mark beat Chance.

Final for First Place.

King's Mark beat Roger and won first prize.

Final for Second Place.

Chance beat Roger and won second prize. Roger placed third.

First, King's Mark, $250; second, Chance, $150; third, Roger, $100.

ALL-AGED POINTER STAKE.

There were 32 nominations for the pointer stake, 14 of which filled. The preliminary series was run as follows: Arthur and Duke of Hessen, Bannerman and Roger Williams, Rod's Gal and Tammany Boy, Sally Brass II. and Rip Rap, Ajax and Pontiac, Meally and Lebanon, Duke of Vernon and Lalla Rookh. Eight were left in for the second series and they were drawn and run with the result as follows:

Second Series.

Duke of Hessen beat Lalla Rookh.
Bannerman beat Sally Brass II.
Lebanon beat Rip Rap.
Pontiac beat Roger Williams.

Third Series.

Duke of Hessen beat Bannerman.
Lebanon beat Pontiac.

Final for First Place.

Lebanon beat Duke of Hessen and won first prize.

Final for Second Place.

Duke of Hessen beat Pontiac and won second prize.

Final for Third Place.

Pontiac beat Bannerman and won third prize.

Absolute Winners.

King's Mark beat Lebanon and was declared absolute winner of the Setter and Pointer All-Aged Stake.

THE DERBY.

Rip Rap beat Rowdy Rod and was declared absolute winner of the Pointer and Setter Derby.

THE FOUR-HOUR STAKE.

There were 6 starters in the Four-hour Stake, drawn to run as follows: Nora against Rowdy Rod, Roger Williams against Chance and Lebanon against Roger.

Nora beat Rowdy Rod in a close heat and Chance beat Roger Williams in rather a poor heat. Chance appeared to be entirely out of condition and did not run nearly up to his usual form.

[*Special to Forest and Stream.*]

LEXINGTON, N. C., Dec. 17.—In the Four-hour Stake today Roger beat Lebanon and Chance beat Nora. Weather cool and cloudy. Birds plentiful, and the work has been first-class. Roger and Chance will run the final heat on Thursday.

SOUTHERN FIELD TRIALS.

[*Special to Forest and Stream.*]

AMORY, Miss., Dec. 17.—Derby started fourteen. Bettie M. won first. Simonides and Transit to run tomorrow for second. X.

THE ST. BERNARD CLUB PRIZES.

Editor Forest and Stream:

The St. Bernard Club of America offers the following club prizes to be competed for during 1890 (competition open to members only):

Westminster Kennel Club Show, New York.—Sterling silver cup, value $25, for the best smooth-coated stud dog with two of his get.

Sterling silver cup, value $25, for the best rough-coated stud dog with two of his get. (The dogs, competing with their sires, must have been sired in America and must be the produce of different dams).

Club medals, one each for the best American-bred smooth dog and bitch over 18 months. For the best American-bred smooth dog and bitch under 18 monts. For the best American-bred rough dog and bitch over 18 months. For the best American-bred rough dog and bitch under 18 months. Total, two cups and eight medals.

Mascoutah Kennel Club Show, Chicago.—Eight club medals, same as for Westminster K. C.

New England K. C., Boston.—Sterling silver cup, value $25, for the best smooth-coated brood bitch with two of her produce.

Sterling silver cup, value $25, for the best rough-coated brood bitch with two of her produce. Eight club medals, same as for Westminster K. C.

Buffalo K. C.—Four medals, one each for best American-bred smooth dog and bitch, and for best American-bred rough dog and bitch.

The awards have to be made in accordance with the rules of the St. Bernard Club, and the acceptance of these specials on the part of the respective clubs (or bench show committees) makes it binding for them to provide the same number of classes and to offer the same premiums for smooth-coats and rough-coats alike.

You will notice that with the exception of the cups for stud dogs and brood bitches, all the prizes are for American-bred dogs exclusively. This was done so as to meet the wishes of many members, who did not think it was fair that the cups offered at the different shows should be won by the same dogs, as was the case this year. In offering a larger number of specials (of small value, it is true) the committee on prizes (composed of Mr. W. H. Joeckel, Mr. John Lohman and Mr. K. E. Hopf) has endeavored to encourage the small members of the club rather than the owners of large kennels. K. E. HOPF, Pres.

LORENZO DANIELS, Sec'y.

FOXHOUNDS IN BENCH SHOWS.

Editor Forest and Stream:

At the recent field trials of the Brunswick Fur Club, the position of the foxhound in our bench shows was freely discussed, and every one thought something should be done to give the hound the prominent place he deserves. The managers of the bench shows seem to think that the foxhound is of so little importance that a passing consideration is all that is necessary, and a few paltry prizes only are offered for his competition. Now, the Brunswick Fur Club has determined to do all in its power to improve the position of the foxhound, and at the field trials voted to agitate in every possible way the offering by the various bench shows of prizes for the best bitch, best puppy under 18mos., best brace and best pack to consist of not less than four dogs. The club owns some fine dogs, and if the managers of the shows will put up these prizes, entries will be made in every one of these special classes. It is earnestly hoped that the managers of the bench shows throughout the country will consider this matter and show their appreciation by offering the prizes asked for.

The club further discussed the question of a standard for judging American hounds, and asks that a special standard be inaugurated for them next season. It is manifestly unjust to place American hounds in the same class with English, as was done at the Boston dog show last April, and give the first prize to an English dog simply because he happened to be large-boned, rough-coated and cropped. Let the English and American hounds be separated, or rather let the English hound have a special class to himself, for he is a variety, only one being shown at Boston last April.

The Brunswick Fur Club will have another hunt next February. A. C. HEFFENGER, Director of the Hunt.

PORTSMOUTH, N. H.

DOG TALK.

MR. E. B. SEARS, of the Wyoming Kennels, Melrose, Mass., writes of his newly-imported Hesper thus: "My late purchase, the rough-coated St. Bernard dog champion Hesper, has arrived; and I am pleased to say is a much better dog all round than I expected. I inclose his stud card, which gives an honest opinion of him by the press of England. I weighed him to-day, after being here one week and two days, and he turned 180lbs.; he was very light in flesh on arrival. He has the name of being a poor feeder, yet I hope to get him in show form by the time the shows begin."

The Buffalo Kennel Club has at last secured a suitable building, the Curling Club Rink, for their dog show, which will be held April 15 to 18, 1890. Mr. John Davidson will judge pointers, setters, foxhounds, beagles, deerhounds and greyhounds. Spaniels, mastiffs, St. Bernards, collies and all other classes will be judged by Chas. H. Mason.

Mr. E. B. Goldsmith, the well-known forwarding agent of this city, received on Monday on the steamer Holland, from London, the fine mastiff dog Ormonde, owned by Mr. Charles E. Bunn, of Peoria, Ill., to whom the dog was forwarded. He is from the kennels of Mr. Charles W. Cunningham, of West London, England.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pancks, Alfarata and Juniata Belle. By T. S. Thompson, Thompsontown, Pa., for white, red ticked, English setter dog, and white, black, tan and ticked and black ears, white and ticked bitches, whelped Aug. 15, 1889, by Warwick Belton (Belton High—Magnolia) out of Garda (A.K.R. 4190).

Brady, Buckeye, Bumper, Logan and Jolly Joe. By McMurray, Rogers & Peters, North Baltimore, O., for one black and tan, one brown, white and tan, one white, brown and tan, and two white, black and tan foxhound dogs, whelped July 14, 1889, by champion Brave out of Blanch.

Mage C., Lady Sport and Blanch. By McMurray, Rogers & Peters, North Baltimore, O., for white, black and tan foxhound dog and white, black and tan and black and tan bitches, whelped June 2, 1885, by Sport (Frank—Spot) out of Queen (King—Coaly).

Bob G., Norma, Madge E., Essie, Manola and Bettie. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pugs, one dog and five bitches, whelped Oct. 19, 1889, by Hayseed (Douglass II—June) out of Ruby F. (champion Bradford Ruby—Flossy).

Pete, Beno, Dido and Ding Dong. By Geo. H. Sherman, Poughkeepsie, N. Y., for sable collies, two dogs and two bitches, whelped Aug. 30, 1889, by Scotilla (Dublin Scot—Flurry II.) out of Lady Bess (James—Haight's Bess).

Natural Gas Foxhound Kennels. By McMurray, Rogers & Peters, North Baltimore, O., for their kennels of foxhounds.

American St. Bernard Kennels. By C. H. Tobey, manager, for kennels of St. Bernards, situated at Tomah, Wis., removed from Eau Claire, Wis., and formerly Coughcura Medicine Co.'s Kennels.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Columbine—Spotswood Tiger. J. Lee Tailer's bulldog bitch Columbine to John H. Matthews's champion Spotswood Tiger, Dec. 6.

Beatrice—Spotswood Tiger. John H. Matthews's (New York) bulldog bitch Beatrice to his champion Spotswood Tiger, Dec. 3.

Young Venom—Hinks. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Young Venom (Old Prince—Venom) to his Hinks (White Sam—Duchess III.), Nov. 19.

White Daisy—Hinks. Robt. Carnahan's (New Haven, Conn.) bull-terrier bitch White Daisy (Bendigo—Rose) to F. F. Dole's Hinks (White Sam—Duchess III.), Nov. 21.

Dinah—Bendigo. J. H. Naylor's (Mt. Forest, Ill.) bull-terrier bitch Dinah (Young Marquis—Nell) to F. F. Dole's Bendigo (Marquis—Kit), Sept. 26.

Royal Rose—Bendigo. J. A. Stevens's (Hoboken, N. J.) bull-terrier bitch Royal Rose (Randolph—Nell) to F. F. Dole's Bendigo (Marquis—Kit), Oct. 13.

Nell—Hinks. D. S. Gamble's (New Haven, Conn.) bull-terrier bitch Nell to F. F. Dole's Hinks (White Sam—Duchess III.), Oct. 13.

Garda—Warwick Belton. T. S. Thompson's (Thompsontown, Pa.) English setter bitch Garda (A.K.R. 4190) to W. D. Reynolds's Warwick Belton (Belton High—Magnolia), June 19.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Loo. C. G. Hinckley's (Lec, Mass.) pug bitch Loo (Othello II.—Stael's Loo), Nov. 25, four (two dogs), by H. C. Burcher's Cricket (imported Tuck—Toodles).

Garda. T. S. Thompson's (Thompsontown, Pa.) English setter bitch Garda (A.K.R. 4190), Aug. 15, eight (four dogs), by W. D. Reynolds's Warwick Belton (Belton High—Magnolia).

Marie. F. O. McGuire's (Bangor, Me.) Yorkshire terrier bitch Marie, Dec. 3, four (three dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

Queen Bendigo. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Queen Bendigo (Bendigo—May), Oct. 20, three (two dogs), by Fred Hinks's White Sam (Silver King—Kettering Maggie).

Daisy. Onota Kennels' (Pittsfield, Mass.) Irish setter bitch Daisy (Chief—Leigh Doane) did not prove in whelp to Desmond II.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Belt of Dutchess. Sable collie bitch, whelped Aug. 30, 1889, by Scotilla out of Lady Bess, by G. H. Sherman, Poughkeepsie, N. Y., to Eugene Ham, Meadow Brook, Verbank, N. Y.

Rover L. Sable collie dog, whelped Aug. 30, 1889, by Scotilla out of Lady Bess, by G. H. Sherman, Poughkeepsie, N. Y., to John N. Lewis, Annandale, N. Y.

Lady Clare. Red Irish setter bitch, whelped March 18, 1886, by Bravo out of Leonie, by Fred T. Munson, New Haven, Conn., to R. H. Burr, Middletown, Conn.

Dudley Tyng. Pug dog, whelped April 23, 1889, by champion Treasure out of Ruby F., by Eberhart Pug Kennels, Cincinnati, O., to J. W. Porter, Binghamton, N. Y.

Klip Glenrock. White, black, tan and ticked English setter bitch, whelped Aug. 15, 1889, by Warwick Belton out of Garda, by T. S. Thompson, Thompsontown, Pa., to Dr. L. M. Thompson, Mahanoy City, Pa.

Pancks. White, orange ticked, English setter dog, whelped Aug. 15, 1889, by Warwick Belton out of Garda, by T. S. Thompson, Thompsontown, Pa., to E. B. Peale, Schuylkill Haven, Pa.

Warwick Belton—Garda whelp. White, black and tan English setter bitch, whelped Aug. 15, 1889, by T. S. Thompson, Thompsontown, Pa., to Mr. Platt, Hazelton, Pa.

Juniata Belton. White, black, tan and ticked English setter dog, whelped Aug. 15, 1889, by Warwick Belton out of Garda, by T. S. Thompson, Thompsontown, Pa., to W. D. Reynolds, Mahanoy City, Pa.

Lala. Black cocker spaniel bitch, whelped July, 1887, by champion Black Pete out of Miss Nance, by F. F. Dole, New Haven, Conn., to F. P. Comstock, Providence, R. I.

Hinks—Starlight whelps. White bull-terrier dogs, whelped Aug. 3, 1889, by Frank F. Dole, New Haven, Conn., one each to Mr. Kolker, same place; Albert Wetmore, Warren, Pa., and W. T. Hubbard, Toledo, O.

White Sam—Lady Melline whelp. White bull-terrier dog, whelped July 25, 1889, by F. F. Dole, New Haven, Conn., to Mr. Bolton, Bangor, Me.

White Sam—Queen Bendigo whelp. White bull-terrier dog, whelped Oct. 20, 18-9, by F. F. Dole, New Haven, Conn., to Arthur F. Wilgren, Cobourg, Ont.

Independence. White bull-terrier dog, whelped July 4, 1889, by Rocky out of Nell Bright, by F. F. Dole, New Haven, Conn., to Dwight Moore, same place.

Kaiser. Black and tan terrier dog, whelped February, 1887, by Punch out of Young Luce, by F. F. Dole, New Haven, Conn., to R. B. Sawyer, Birmingham, Conn.

White Daisy. White bull-terrier bitch, whelped Aug. 23, 1887, by Bendigo out of Rose, by Frank F. Dole, New Haven, Conn., to R. Carnahan, same place.

Young Bendigo. White bull-terrier dog, whelped July, 1887, by Bendigo out of Queen of Spain, by Frank F. Dole, New Haven, Conn., to D. S. Gamble, same place.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

S. VAN W., Hackensack.—1. Beagle pup six months old is greatly troubled with worms. 2. Which are the best dogs for rabbits, German or English beagles? Ans. 1. Give thorough purge of castor oil one or two teaspoonsful, follow this in 3 or 4 hours by a large pill, 30 grains, of powered areca nut. The pill can be made of lard and forced down the throat. Before, during and after the treatment for a few days feed milk only. 2. For rabbits choose the "American-English" beagles.

Rifle and Trap Shooting.

NEW ENGLISH ARMS.

TWO important rifle matches were fired at Hythe last month, the details of which will doubtless prove of much interest at the present time, affording some comparison between the shooting capabilities of the old and new arms at the fixed distances of 200, 500 and 600yds. The teams consisted of 8 men on each side, all belonging to the School of Musketry Staff, and the conditions were that every man should fire with the Martini-Henry rifle and also with the magazine rifle, 7 shots at each of 3 ranges, with Wimbledon targets, position and scoring.

In the first match Maj. Harley's team fired first with the Martini-Henry rifle and then with the magazine at each distance, Lieut. Dutton-Hunt's team commencing with the Magazine; but in the second match the order was reversed, this arrangement being made so as to make the conditions of light, etc., as fair as possible for both rifles. The swords on the Magazine rifles were fixed at 200yds. to enable the men to use the lowest or "fixed" sight, which is true for 300yds. when the swords are not fixed, and about true for 200yds. when they are fixed.

In considering the results it must be borne in mind that the competitors had had, comparatively speaking, very little previous experience in shooting with the new rifle, and that the new "Lewes" sights, without doubt, require a considerable amount of practice before one becomes quite accustomed to using them correctly; further, the Magazine rifle is sighted to shoot a "nitro" powder, but, as this particular powder has not yet been finally adopted, a compressed black powder is being used as a temporary measure, and this does not give such good result, more elevation being required at the longer ranges. The light failed on both days during the shooting at 600yds., but, notwithstanding this, the shooting was very good. The highest individual scores were two 98s, made in the second match by Captain Bagnall and Lieut. Dutton Hunt, made up by the former with 33, 35 and 30, and by the latter with 32, 34 and 32, at the three distances; both these scores were made with the Martini-Henry rifle, and it may be noticed that 98 has never been beaten in a School of Musketry match on the Hythe ranges. The highest score with the Magazine rifle was 79, made by Q.-M.-S. I. Hills, also in the second match, with 31, 33 and 33. It may be mentioned that all the officers and non-commissioned officers who belong to corps forming part of the First Army Corps, and who are undergoing the present course at Hythe, are armed with the new rifle, as also are all the officers at the temporary Musketry School at Aldershot.—*Canadian Militia Gazette.*

RANGE AND GALLERY.

PHILADELPHIA, Dec. 11.—Dan Wray's rifle gallery, 1402 Ridge avenue, was not large enough to-night to accommodate all the rifle shooters who assembled there to witness the rifle contest between "Mexis," the rifle queen, and Thos. H. Willsey, of the First Regiment, N. G. P. Thus match was a 100-shot match at 20yds. off-hand, plain open sights. Stevens rifles were used by both contestants. Mr. W. W. Ulrich judged for "Mexis," J. J. Mountjoy judged for T. H. Willsey, C. D. Douglass referee, official scorers, Geo. W. Coulston and H. J. Mehard. Shooting commenced at 9 P. M. and finished at 10:15 P. M. "Mexis" won the choice and led off. It was plain to be seen after the first target of each contestant was finished that "Mexis" had a complete walk-over. Following are the scores in detail:

"Mexis."

Target 1	10	10	9	9	10	8	9	8	10	6—89
Target 2	9	10	9	10	9	8	9	8	10	10—92
Target 3	10	8	9	10	10	9	9	10	10	10—95
Target 4	8	9	9	10	10	10	9	9	9	10—93
Target 5	10	9	7	10	10	9	9	9	9	9—91
Target 6	10	9	9	9	9	9	10	10	10	10—95
Target 7	9	9	10	9	7	10	8	10	8	7—94
Target 8	9	9	10	9	7	10	8	10	8	7—87
Target 9	9	10	9	7	10	10	10	10	10	10—95
Target 10	10	10	10	9	10	9	10	8	10	10—96—927

T. H. Willsey.

Target 1	7	8	10	7	10	7	8	8	6	8—79
Target 2	7	9	5	10	7	5	8	6	6	7—70
Target 3	10	9	10	7	7	9	10	9	5	10—86
Target 4	8	9	9	8	10	8	10	8	7	8—85
Target 5	10	8	9	9	10	10	8	9	9	9—91
Target 6	8	10	6	8	10	8	10	10	10	7—87
Target 7	8	8	10	6	8	8	10	9	8	10—85
Target 8	6	9	7	9	9	5	9	9	10	10—83
Target 9	9	8	10	8	10	8	9	10	8	9—90
Target 10	7	10	10	10	10	8	10	8	9	10—93—849

Great credit is due "Mexis" for the remarkable score she made in this match, 927 points out of a possible 1,000—only four shots being out of bullseye. This match led to an argument if this score could be beaten, Dr. Openshaw offering to back "Mexis" against a number of those present, which was at once taken by several local rifle shooters present. As a result the following match was made: $500 per side that Mr. E. Travis could not equal "Mexis's" score of 927 points, Mr. Travis to use any .22cal. rifle off-hand, any ammunition, and to use one hand only, match to be shot at same gallery, 1402 Ridge avenue, on Friday evening, Dec. 13, commencing at 9 o'clock.

Dec. 13.—To-night at 9 o'clock the match was commenced as outlined above. Mr. J. J. Mountjoy shot alternate scores with Mr. Travis to rest him. Shooting finished at 11:15 P. M. Mr. Travis used a special .22cal. Wurfflein rifle weighing 7lbs., 20in barrel, plain open sights. The referee was Geo. W. Coulster. Judge for "Doctor," Dr. Wray; judge for Mr. Travis, T. F. Shonert. Scorers, W. W. Ulrich and H. J. Mehard. Considering that Mr. Travis had an average of 92 7/10 or 927 points to beat, it was seen that Mr. Travis had to shoot very strong and make an average of 93 or better to win. Many were in doubt as to the possibility of him accomplishing the feat, but he did it and won by 5 points, an average of 93 2/10 or total of 932 points in the 1,000 shots. Score in detail:

Target 1	9	8	7	10	10	9	10	10	9	10—92
2	10	10	10	8	10	10	8	9	10	9—93
3	9	10	10	8	10	6	10	10	8	10—91
4	10	8	10	9	10	8	10	10	10	10—95
5	10	10	8	10	9	10	9	9	9	10—94
6	10	10	10	10	8	10	10	9	9	10—96
7	10	9	10	10	10	9	10	8	10	10—95
8	10	9	9	7	10	8	9	10	9	10—91
9	9	10	9	9	10	9	10	10	10	9—95
10	10	9	8	8	9	9	10	9	10	10—90—932

Only four shots being out of black, tuis remarkable score with only one hand stands, I think, first in the records of rifle shooting both in this country and Europe.

SAN FRANCISCO, Dec. 8.—The inclement weather deterred many marksmen from visiting Shell Mound range to-day, and the consequence was that the club and company shoots were not as well attended as they otherwise would have been. The rain also made shooting somewhat uncertain and caused the marking of shots to be less accurate than usual. Company B of the 3d Regiment, N. G. C., held a monthly medal shoot. Company B is practicing hard for the Tobin trophy shoot, and present indications are that they will come out on top in the struggle.

The members of Company C and G of the 1st Regiment, composing the Nationals, held their monthly shoot, the following being the best scores at 200yds., off-hand:

C Meyer	5444554554—45	O Nolte	3454544544—42
A Johnson	4545444545—44	C Klein	3445454534—41
F O Young	4451554544—44	W S Alexander	3444445444—40
J E Klein	5444445445—43	E H Slitor	4443445434—39
J G Hult	4444454544—42		

The monthly medal competition of the San Francisco Schuetzen Verein resulted as follows: Champion medal, K. Werthoimer, 422 rings. First class, H. A. Kurlfinke, 380 rings; second class, H. Thode, 366 rings; third class, A. Mocker, 320 rings; fourth class, A. Koster, 286 rings.

The 50-shot match between A. Johnson and F. O. Young on one side and Howard Carr and Edward Hovey on the other, which was to have been decided at Shell Mound, was declared off, as the parties could not agree upon certain conditions insisted upon by Carr. The ownership of the much-coverted American field medal, for which the members of the members of the Bay City Rifle Club have been competing this season, has been declared in favor of A. Johnson. Six shoots were held, Mr. Johnson and H. R. Brown each winning two. The tie was to have been shot off, but the shooters decided to let the decision go on the aggregate of points made in their winning scores. Mr. Johnson's winning scores were 260 and 255, and Mr. Brown's 241 and 246. The former thus won the trophy, of which he becomes the permanent owner by a good majority.

SYRACUSE, Dec. 11.—There was a good attendance this afternoon at the shoot of the Onondaga Rifle Club at the Valley Range. Perhaps the most peculiar wind that riflemen ever encountered was met. It was longitudinal, latitudinal, diagonal, spiral, semi-circular, circular, above, below, inshoot, out-curve, and came from every conceivable quarter and in an infinite variety of shapes. A. A. Stillman, D.D.S., won the gold medal, and Fred A. M. Ball won the silver medal. There was considerable informal talk during the afternoon's shoot of forming a .22-caliber indoor rifle club for the winter. The next shoot will be on Christmas day. This is the score made in the different classes:

Rest.

Ward	11	9	11	8	7	8	9	9	12	11—95
Tuger	8	5	6	8	7	5	10	8	8	7—72
Smith	7	9	9	8	8	7	4	7	5	7—71
Lathrop	7	9	11	9	6	8	8	8	7	8—81
Ball	6	6	6	7	10	12	10	12	9	9—93
Zischong	10	8	8	10	11	12	10	10	7	9—95
Knapp	8	9	10	5	9	9	10	7	9	8—84
Stillman	9	10	11	9	8	8	11	9	12	7—94

Off-hand.

Dalley	5	5	5	6	6	4	9	7	8	4—61
Stillman	7	7	9	8	10	4	6	3	4	6—64

Knapp	2	5	3	0	2	5	4	4	0	8—30
Ball	7	5	5	2	6	1	1	0	3	7—37

NEWARK, N. J., Dec. 14.—The friendly rivalry existing for a long time between the Lakeside and Howard rifle clubs, of Newark, has at last been settled by a meeting between two representatives of the clubs. The Howards selected F. C. Dietz, whom they considered the best rifle shot of their team, while John Stadlehofer represented the Lakesides. The match was shot off on the Howard range, and was one of the most interesting meetings of the season. The rules were: Ten regulation targets for each man, 10 shots at each, or 100 in all. Stadlehofer made an average of 110 out of a possible 120, while Dietz's average was 108.90. Stadlehofer's highest score was 113, his lowest 107; Dietz's highest was 114, and his lowest 100. Stadlehofer fired his 100 shots in 67 minutes, while Dietz consumed 71 minutes. The score on the targets:

Stadlehofer	109	110	107	111	107	113	108	112	112	111—1,100
Dietz	110	111	107	100	106	113	110	110	108	114—1,089

QUEENS, L. I., Dec. 1.—The rifle match on the Queens Amateur Athletic grounds, Queens, L. I.—conditions, open to any team of three men from any amateur athletic or bicycle club, 7 shots each, at a Creedmoor target—began to-day. The score:

Queens Bicycle Club.		Hempstead Ramblers.	
T Lloyd	5534344—28	J Thouet	4323445—25
A L Stoutenburgh	4443443—26	G H Coakley	3433322—20
L R Doughty	3033453—21—75	G W Donner	2344420—19—64

PHILADELPHIA, Dec. 10.—About one-half of the members of the Gaiety Rifle and Pistol Club met this evening at the club's headquarters, 818 South street, for weekly competition of the gold and silver club badge, Mr. H. Buehn winning the gold medal and Mr. J. A. Felix becoming the owner of the silver medal. The weekly badges of the club for members in their respective classes were won as follows:

First class, Wurfflein medal, John J Mountjoy	93
Second class, silver medal, Geo Atkinson	83
Third class, bronze medal, J Hunsinger	68
Fourth class, booby medal, F P Maher	45

Messrs. Felix, Hays and Kirschner's scores placed them from fourth class to second class. Mr. J. Frank Carlin, of the First Regiment, was elected a member of the club. The club will not meet for practice on Tuesday evening, Dec. 24 (Christmas Eve), but will shoot on Thursday evening, the 26th inst. Official score at 30yds., Standard American targets (reduced), Wurfflein rifles, plain open sights, off-hand, 10 shots per score, possible 100:

First Class.

J J Mountjoy	10	10	10	10	10	8	10	9	6	10—93
Geo W Coulston	8	10	9	10	10	9	9	7	9	9—90

Thos Hays	8	6	6	7	10	8	7	8	7	8—75

SPRINGFIELD.

BOSTON, Dec. 14.—The shooting conditions were very poor to-day, as a thick snowstorm almost shut out the targets from the shooters. Munroe won the gold medal in the 20-shot rest match and Lee won the champion medal. Getchell won the silver medal. Following are the best scores made to-day:

20-Shot Rest, 200yds.

J B Munroe	212	T Warren	196			

Champion Medal.

H L Lee	84	T P Cullman	76	S C Sydney	56

Victory Medal.

A McBean	72	A S Hunt	65

Silver military medal, won by 10 scores of 42 or better by W. I. Getchell

	42	44	43	43	42	44	42	43	44	42

Rest Match, 200yds.

J R Munroe	108	Dr Ball	94	A B Barnes	90

Military Medal.

W I Getchell	44	H L Lee	42	A S Hunt	42
F J Lounsbury	44	G Williams	42	J F Farmer	42
A S Field	43				

WILMINGTON, Del., Dec. 9.—The air was as balmy as in early fall, the temperature mild and the sunshine sparkling. The light was rather changeable, requiring frequent changes of sights, but every one was in too glad a humor to kick, even the unfortunate who got a miss after claiming a bullseye. Generally good scores were made in all of the matches and are as follows, Standard target, off-hand:

Pistol Match—50yds.

E J Darlington	9	8	10	8	10	10	6	8	10	9—91
H Simpson	7	10	10	9	10	10	8	8	7	10—89

Pvt S Howard	4	5	4	4	5	4	3	5	4	4—42

ST. LOUIS, Mo., Dec. 11.—To-night's shoot of the Pistol Club is the last but one on the present tourney and considerable interest is manifesting itself owing to the extreme closeness of two of the members to quit high for the possession of the medal. As matters stand now there is such a slight difference between Alexander and Mohrstadt, that to determine who is in the lead on the general average it is necessary to carry out the figures into decimals before a conclusion can be reached. Alexander leads by three one-thousandths of a point and the indications are that the next shoot will be a most interesting one, as Mohrstadt will make a desperate effort to pass his opponent, and the latter will strive hard to increase his lead if he can. Alexander, as the score to-night shows, quit high for the night and the medal will be in his possession until next Wednesday night. Should he beat Mohrstadt out on the final, then it will be his personal property to do with as he likes. A 20yds. Standard American target is used for all shooting. The score:

G Alexander	10	6	9	9	10	10	9	8	9	8—88
E Mohrstadt	9	9	10	8	9	8	9	7	9	8—86
M Summerfield	9	10	6	10	9	7	8	7	8	10—84
W Bauer	8	9	8	5	9	7	9	8	7	10—82
W Hettel	8	5	9	7	8	10	10	7	10	5—79
A E Bengel	6	9	6	4	4	5	6	10	10	7—67

NEWARK, N. J., Dec. 16.—The standing of the clubs in the gallery association tournament to date is as follows:

	Won.	Lost.	Tied.	Average.
Howard	8	0	0	1,011
Essex	7	1	0	1,044¾
Excelsior	5	2	0	1,028⅝
Oakland	5	3	1	1,039⅝
North Ward	4	4	0	1,004½
Lakeside	4	4	0	1,026¼
Puritan	5	1	1	1,015¾
Annie Oakley	1	6	0	972⅜
Newark	1	6	0	969¾
Monroe	4	2	0	1,012½
Sheppard	1	7	0	970⅜
Electric	0	7	0	901¾

WORCESTER, Mass., Dec. 13.—At the meet yesterday of the Worcester Rifle Association, the first this winter, the following results were announced:

Sporting Rifle.

Creedmoor.	Standard.	Creedmoor.	Standard.
L Thomas..45	48—93	71 81—152	S Clark... 44 44—88	71 72—143
M G Fuller	45—90	72 74—146		

Military Rifle.

Macomber..43	43—86	58 67—125	Pepper.....40 46—86	44 68—112

The officers of the association have been reorganized as follows: President, Steadman Clark; Vice-President, Moses H. Lowe; Secretary and Treasurer, M. G. Fuller; Executive committee, the officers, also C. L. Macomber and L. J. Thomas.

"Baby McGinty," the only hippopotamus ever born in America, lifted up his voice at 4 A. M. yesterday (Dec. 4) in his cage at Central Park, delivered a last verbal message and departed this life. It was pneumonia that interrupted the brief existence of Baby McGinty. Until Thursday morning he was a baby that any hippopotamus mother might well be proud of. Then he sneezed. It is no slight matter when a hippopotamus sneezes, even a baby hippopotamus, and Baby McGinty's sneeze was the beginning of his end. In spite of quinine and hot foot-baths he sneezed himself into an early grave in less than twenty-four hours. He will be stuffed and presented to the Museum of Natural History.—*N. Y. World.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

CORRY GUN CLUB.

CORRY, Pa., Dec. 12.—The Corry Gun Club closed the trap shooting season of 1889 to-day with a grand team shoot. Had any sportsman without knowledge of the occasion happened upon the club grounds they would have thought a splendid tournament was in progress, so numerous were the participants, so uniformly good the scores made and so earnest and enthusiastic the contestants, with an entire absence of the bickering and unpleasantness so common on such occasions.

Corry has every reason to feel proud of its gun club, the rapid progress it has made and the high position among organizations of this kind it holds. Within the last year it has grown from nothing to one of the best in America. A year ago probably there were not two hammerless guns in the city. Now 50 or 60 of the members of the club are provided with the newest and best guns made. A year ago such a thing as gun club grounds was hardly thought of. Now our club has one of the finest, if not the finest in the world, with all the newest appliances supplied by the Keystone Manufacturing Company, of this city. Also a beautiful club house erected thereon for the use and convenience of the members and their friends.

The organization of this and similar clubs throughout the country has had a very beneficial effect upon enforcing the game laws, in getting large numbers interested in a subject that at the present time is of considerable importance, as through the unrestricted killing of game it would not have been long before it would have all been destroyed.

A great deal of the growth and success of the Corry Club is due to the courtesy of Captain Penrose, who organized it and has since carefully watched over its welfare.

The grounds furnish a place of recreation not only for the members, who annually break thousands of Keystone birds, but also for others who come and see the sport. Among the latter the ladies figure conspicuously, and it is anticipated that in the near future Corry will have a ladies gun club.

The club finds that shooting at the trap affords far more pleasure and gives better satisfaction than turning out and scouring the country for game, and hereafter it will decide by shooting at the trap which side shall settle for the supper.

To-day's shoot was by team to fix the payment of the annual supper, and the scores ran at Keystone targets from five traps:

Laurie's Team.

Laurie	1111111101101101110111111—21
Austin	1111100111111101111111111—22

Eastman	0000000000000000000000000— 0

At 10 o'clock P. M. the participants in the day's shoot assembled at the Phœnix Hotel, where Mr. and Mrs. Edwards had provided an elegant supper at the expense of the defeated team. The large and spacious dining-room was completely filled with the sport-loving gentlemen of the club, and no more glowing encomiums could have been paid the repast in language than each individual present exhibited in the absorbed and absorbing attention given it, and the extra dry which contributed to the hilarity and good feeling of the occasion. After brief and pithy toasts from Penrose, Lewis, Laurie, Marsh, White and others, in which good council and good cheer predominated, the gathering dispersed with the conviction that they had just enjoyed one of the pleasantest occasions of their lives, and with the fixed determination that this should be but one of many more to follow.

NIMROD.

KINGBIRD TOURNAMENT.

CATSKILL, N. Y., Dec. 14.—Fred Tolley's third kingbird tournament, took place Tuesday, Dec. 10, on the Catskill Gun Club grounds. It was a beautiful day, but the attendance was small. The 11:03 West Shore R. R. brought Levengston, Hanson and Pike, of Saratoga. Derby and Gardiner, of Albany. They having made arrangements to go to the Syracuse shoot the next day, took the 1:41 train, on their return to meet engagements. They made the most of their time while here as scores will show. On their departure two new arrivals put in an appearance, Pidgeon and Reinhard of Saugerties. The shooting continued, the one squad seemed to be the extent of shooters. About 3:30 Talmadge and Short, of Kingston, appeared on the grounds, which kept up the one squad order of shooting till dark. The Saugerties and Kingston gentlemen were so well pleased with the Keystone system of shooting, that they have joined the Catskill Club, in order that they may attend the weekly practice shoots.

First event, 5 kingbirds, entrance 50 cents:

Mattice	11111—5	Tolley	00110—2
Lewis	11100 —3	Shufelt	00110—2
Beach	01101—3		

Second event, 10 kingbirds, entrance $1:

Mattice	1111011110—8	Levengston	0101001011—5
Lewis	1111011111—9	Pike	0100101111—6
Hanson	0101010000—3	Beach	1011111011—8

Third event, 10 kingbirds, entrance $1:

Mattice	1011111111—9	Levengston	1101001111—7
Lewis	1111111101—9	Pike	1110111101—8
Hanson	1101011010—6	Beach	1101111113—8

Fourth event, 10 kingbirds, entrance $1:

Mattice	1111111111—10	Levengston	1111110111— 9
Lewis	1111111101— 9	Pike	1010111101— 7
Hanson	0101010100— 4	Beach	1101101L0— 7

Fifth event, 15 kingbirds, entrance $1.50:

The Catskill Gun Club is co-operating with the Fish and Game Clubs of Saugerties and Kingston in the endeavor to stock the territory of these three towns with quail and enforce the laws protecting them. On Friday the Catskill Club received twenty-five pairs of Southern quail or "Bob Whites," and turned them loose in various parts of the town. If these birds shall thrive, as to which there can't be much doubt, provided they are given anything like a chance by gunners, next year and each year other lots will be imported, until the fields have been well stocked with this variety of game. The black bass fishing in the Catskill and Cauterskill Creeks, and the vastly improved trout fishing in the other streams of the town, results of restocking the waters and enforcement of laws prescribing a close season, and forbidding wholesale destruction of the fish, are indications of what may be expected from the efforts to replenish the fields with birds. The expense of these undertakings is borne by a few persons, who intend to share with the general public the pleasures which are expected to follow; all they ask, and it certainly is reasonable, is that a decent regard be paid to the fish and game laws by others as well as themselves; if this be done, in a few years there will be abundant sport for everybody in the streams and fields of our town.

DE TOLL.

NEWARK, N. J., Dec. 12.—This afternoon, at their shooting grounds, near Newark, the members of the Newark Gun Club met for their regular monthly shooting at the traps, but with the club's president in North Carolina, the secretary away and seven members scattered through Maryland and Virginia, a large hole was made in the number of men usually present on these occasions. The shoot was: Ten birds each man, for money prizes and the club emblem of superiority at the trap, Hurlingham rules to govern: C. S. Hedden killed 10 straight, as did John Erb. They divided first money between them, and the score in the next month's shoot is to decide the possession of the club trophy. S. Castle killed 9 and captured second, C. R. Hedden, the club treasurer, got 8, W. Hollis 7 and J. Wheaton 5. After the main event a series of sweepstakes were shot as follows, $3 entrance, 2 moneys, 4 birds each man, ties to be shot off in the sweepstake following the one in which they were made:

Event No. 1.—S. Castle and J. Erb killed all straight and tied for first, C. R. Hedden and Hollis tied for second with 2 kills each, all others out of it.

Event No. 3.—J. Erb 4 straight, taking first money in this and preceding sweep, Castle and Hollis and C. R. Hedden tied for second, with 3 kills each. Hollis and C. R. Hedden divided second of the preceding sweep and the money of this one with Castle.

Event No. 3.—S. Castle captured first money with 4 straight kills, C. R. Hedden and J. Erb killed 3 and divided.

Event No. 4.—S. Castle and J. Erb divided first money in this sweep, making clean scores. C. M. Hedden and Hollis missed one each and divided. The others in the cold.

Event No. 5—Same conditions as the others, also the last of the afternoon, 8 entries, Castle and Erb clean scores and took first money. C. R. Hedden captured second all by himself.

Dec. 12.—This afternoon the Amersfort Gun Club and the South Side Gun Club, one of Flatbush, Long Island, the other of Newark, N. J., met on the grounds of the latter and battled for victory. For some months the question of supremacy was an open one. After much discussion regarding the skill of the members of either club at the traps, the Amersfort men sent a challenge to the Newarkers to shoot them a match on the following conditions: Fifteen men each club, 25 bluerock targets each man. American Association rules to govern the contest. The challenge so boldly issued was promptly accepted, with this result:

South Side Gun Club.

C M Hedden	19	Whitehead	21

TORONTO, Dec. 11.—The McDowall shooting tournament commenced to-day at Woodbine Park, and its opening was a great success. The weather was cold and very windy, but there was a large gathering of men and the shooting was exceptionally good. In fact it was above the average. Thirty experts faced the traps in the open shoot, which was not finished owing to darkness. Live pigeons were the targets, and the birds were extra strong flyers. Several blackbird sweeps were also shot, and altogether it was a grand day's sport. The scores: Open shoot, purse $150, divided, at 12 live pigeons each, 26yds, rise:

Capt Tyman	111111111111—12	J Draisey	111111011011—10
C Budd	111111111111—12	I Beldam	111111011011—10
Charles	111111111111—12	J Wayper	111111101011—10

W McDowall	011111111011—10	F Bright	11000w.
J Mitchell	111111111010—10		

Dec. 12.—McDowall's pigeon tournament at the Woodbine was brought to a close to-day, after two days' excellent sport. The birds were in splendid condition, and the shooting considerably above the average, as a glance at the scores will show. Mr. C. Charles shot in good form, grassing his 12 birds straight at 26yds, and 5 straight at 30yds., thus winning first prize. Capt. Tyman and C. Budd also did good work, winning second and third respectively. The following are the scores of the winners: C. Charles first, H. Tymon second, C. Budd third, D. Blea fourth, T. Sawdon fifth, J. Rice sixth, Chapman H-atherington divided seventh and eighth.

Sweep at 7 live pigeons, one barrel only:

McDowall	1111111—7	T Sawdon	1010111—5
Heatherington	1011111—6	C Budd	0101111—5
Wayper	1111110—6	W G Sinclair	1100101—4
D Blea	1011111—6	J Chapman	0011100—3
P Wakefield	0111111—6	H Dixon	1000100—2
Charles	0111101—5	J Draisy	0100100—2
F Bright	1001111—5	J Mitchell	0011000—2
C Tymon	1010111—5	H Symonds	0000w.

At the close of the tournament there was a match between C. Cockburn and C. Charles at 20 live pigeons for $25 a side. The shooting throughout was a fine exhibition of skill and was not won until the last cird was killed. The score:

C Charles	11111111111111111011—19
C Cockburn	11111110111101111111—18

Mr. Townson was referee. Mr. Sinclair was judge for Mr. Cockburn, and Mr. Blea for Mr. Charles. The pullers were Mr. Way for Cockburn and Mr. G. H. Briggs for Charles.

WALTHAM, Mass.—The Crescent Gun Club had one of their enjoyable dinners at the Prospect House, last week. After dinner speeches were made by several of the members. The secretary's report showed the club to be in a prosperous condition. After which the club adjourned for one year.—W. N. F.

CLASS VS. KLEINTZ.—Newark, Dec. 13.—At Erb's Park, today, the return match was shot between Frank Class and Frank Kleintz. The day was not one favorable to the making of good scores. There was no wind blowing and the air was too warm for comfort, and heavy overcoats were at a discount. The birds were fat and lusty, and had the wind been blowing never a better lot could have been asked for. As it was, many of them were slow in getting off. When they did go, however, they were rasp ers: out of the 200 shot at not less than 100 were hummers, so fast that the killing of them stamped the men equal as trap-shots to any in the country. Singular to state, the better birds were the ones that were downed. The easy ones, the poor in flight fellows, were the ones that got away. In the first half of the match Kleintz had the worst lot of birds, Class was in wonderful form, and got on his birds so quickly that pigeon after pigeon was grassed within a half dozen yards of the traps. This quick shooting did not give a good bird a chance to show his speed. It was a cry of pull, a bang of the gun, and a killed bird. Class was at least 10yds. the better of his opponent in this matter of getting on. Kleintz was wonderfully effective with his second barrel, but with his first many thought he "slobbered" too much. The match was for $500, 100 birds each man, Hurlingham rules to govern, except rise of 30yds. John Erb acted as referee. The shooting began promptly at 1:50 P. M. At 2:50, when one-half the match was shot, an intermission of ten minutes was had. The race was an interesting one, and was witnessed by some 200 spectators, who liberally applauded the best of the kills. Among them were E. Thompson, of Yonkers; A. Heritage, of Jersey City Heights; Milt F. Lindsley and E. Collins, of Hoboken; L. Campbell, of Little Silver; Mr. Campbell and W. Crommelin, of Orange, N. J.; P. Goff, R. Irwin and J. Carstairs, of Philadelphia, and W. Seigler and N. Cockefer, of Montclair. Newark had a large delegation, backing to a man the Jerseyman. The odds were on the start 10 to 8 on the Pennsylvanian. These odds rapidly veered to the side of Class, and increased in his favor as the match progressed.

Frank Class	2210112212121122112211220011—22 2121121120011121212110111—22 1111121212212212111101—24 1122111211112211212112021—23—91
Frank Kleintz	2202021212210221222201102—20 1122221201121011122201—21 2212222011021122210111120—21 2202222210211022022212111—21—83

Class used a Lefever hammerless, $70 grade; weight, 7lbs. 11oz.; Elcy pink shells, with special primers, in right barrel, loaded with 3½drs. American wood (Trap) powder, 1¼oz. No. 8 Leroy chilled shot; in left barrel, 3½drs. Curtis & Harris trap, Climax shells, 1¼oz. No. 7 Leroy chilled shot.

Kleintz used a $250 grade Greener hammerless; weight, 7lbs. 13oz.; 3½drs. Schultze wood powder (re-issue), in both barrels; 1¼oz. Spark's No. 7 soft shot, in Elcy pink and green shells, with special primers.

Each man had a dead out of bounds. Class used his second barrel 34 times, Kleintz 46. Immediately after the main event a few sweepstakes were shot with the following result:

Event No. 1, $8 entrance, at 4 birds, 2 moneys, 8 entries: Collins, Lindsley, Castle, Campbell and Kleintz tied for first money and at once shot it off, miss and out. Kleintz missed his first, Collins and Castle their second, and then Campbell and Lindsley div. Erb, Thompson and Williams tied for second with 3 kills and carried over to next sweep.

Event No. 2, same conditions, except 12 entries and 3 moneys: Castle, Erb, Thompson and Goff won first with clean scores and div. Collins, Lindsley, Williams and Kleintz tied for second with 3 kills and div. Third money went to Hedden and Carstairs.

BROOKLYN, Dec. 10.—The North Side Gun Club, of Long Island, held its regular monthly shooting match at Woodside today. Owing to the fact that the game laws allow open shooting almost everywhere at this time of the year, the attendance of members at the shoot was small. In the regular match the score was:

M C Manning	7	William Bohurcke	5
A Duryea	6	Dr Franz	4
E G Bussell	6	C Meyer	6
A H Eberhardt			5
Mr Helgaus			4

This was followed by a sweepstakes, at 5 live birds, $1 entrance: Manning and Helgaus div. the money:

Dec. 11.—At Woodlawn Park to-day the members of the Coney Island Rod and Gun Club held their regular monthly shoot. The birds, for the season of the year, were an excellent lot of flyers. Indeed, many of them were as good as were ever put in a trap for marksmen to shoot at. Very few had to be started by the trappers, and the majority of these were called no birds by the referee, and another pigeon ordered placed in the trap for the shooter to test his skill upon. Regular monthly meet, 7 birds each man, 5 prizes and club badge to be competed for, Hurlingham rules to govern (modified). Mr. Adolph Schwartz killed his 7 straight, using his second barrel but twice, and won first prize without a competitor. D. Blattmacher, C. Dettleiffsen, J. Kowenhoven and J. F. Schmadke killed 6 birds each and shot the tie off, 3 birds first and then miss and out. Kowenhoven missed his first and dropped out. Schmadke followed him on the second shot, and then Blattmacher and Dettleiffsen, having killed their 3 tied birds, divided second money. For third D. Monsees, O. Dwyer and L. Eppig tied with 5 kills each. The tie was shot out as above. Dwyer slipped out on his first shot, Eppig on his second, and Monsees killed all and got the cash. For fourth T. Buckley, A. Eppig and Frank Lanzer tied with 4 kills each. On the shoot-off each killed 2 out of their 3 tie birds and then shot off miss and out. Each of the three men missed his first bird. Buckley and A. Eppig divided the money, Lanzer having dropped out on a miss. Immediately the main event was concluded a sweepstakes was arranged. Three birds each man, $20 entrance; three moneys, 50, 30 and 20 per cent.; ties to be shot miss and out. Schwartz, Ayres, Monsees, Dettleiffsen and Blattmacher tied for first place with all killed birds. Dettleiffsen missed his first, Ayres his second. Monsees did the same and all stepped to the rear. Blattmacher stayed in to the fifth round, when he went out by a dead out of bounds, Dr. Schwartz capturing first prize. No less than five tied for second. They were Schmadke, L. Eppig, Buckley, A. Eppig and F. Lanzer. Schmadke missed his first and went out; L. Eppig, A. Eppig and Lanzer slipped up on goose eggs in the second round, Buckley taking the pot. For third money Lake Sheridan and Kowenhoven tied with one kill out of the three birds shot at. This was an exciting shoot-off. Lake went out on his second shot. Kowenhoven stayed in until the fourth round, when he missed, giving the money to Sheridan, who killed his pigeon in handsome fashion. Monsees, Ward, Ayres and Orr each had a dead out of bounds in the main event.

Dec. 12.—The Unknown Gun Club closed the season to-day with a well-attended and successful shoot at Dexter Park. Considering the difficult rules under which the club shoots the members acquitted themselves well, five of them succeeding in bringing down six out of seven birds. The rules provide that the gun shall be held below the elbow until the bird is on the wing, and that pigeons killed with the second barrel shall be counted as lost birds. These rules are strictly enforced, as well as the very proper one which imposes a fine on the marksman who indulges in discriminate shooting from the platform of the club house during the progress of the club shoot and the sweepstakes. The birds were a well selected lot with only a few sleepers among them. Club shoot for the club badge and three extra prizes; 12 entered; 7 birds each. Yroome (25yds.) 6, Boyle (25) 3, Cahill (23) 3, Van Staden (24) 2, M. Winchester (25) 6, H. Knebel, Sr. (26) 5, D. Monsees (26) 4, G. Hass (25) 6, Rankin (23) 3, Ellerhorst (22) 5, Dr. Schwartz (25) 5, G. Pfohlmann (25) 6. In the shoot off of the tie for first prize, 3 birds each, then miss and out, Vroome killed 2, Winchester 3, Knebel, Sr. retired, Hass 2, Pfohlmann 2. Winchester, who is one of the oldest members in the club, was the winner. Dr. Schwartz defeated Ellerhorst for second money by killing 2 birds out of 5 to Ellerhorst's 1 killed and 4 missed. In a subsequent sweepstakes, same rules, 5 entered, 3 birds each, H. Knebel, Sr. and Pfohlmann divided first prize on 3 straight each; Dr. Schwartz took second money and M. Winchester third.

OMAHA, Dec.—The Budd-Organ Elliott-Parmalee team match came off this afternoon, and the many spectators present had the pleasure of witnessing a great shoot. The weather was not the best. The sky was overcast, and the background was dark, caused partially by a heavy smoke from the smelter. But little wind was blowing, but what there was only assisted the birds to get over the boundary. The American Association rules governed the match. Each man used 12-gauge guns, at 30yds. rise. J. A. R. Elliott was the first man at the score, and from the start to the finish the enthusiasm was great, as his continued score of fifty straight caused him to be the favorite. Parmalee lost his 1st, 5th, 21st, 29th, 33d, 40th, and 44th bird, five being dead out of bounds. R. B. Organ lost his 7th, 12th, 15th, 19th, 21st, 24th, 25th, 31st, 43d, 44th, and 50th. Budd lost his 24th, 35th, 39th, 47th, and 50th. Considerable money changed hands, though the principals had but $100 up on a side. To-morrow R. B. Organ and Frank Parmalee, will shoot a match at fifty live birds each for $50 a side. The score was:

Elliott	1112222111222111111112211122122121211111223—50
Parmalee	o222c2112111211111212122222211102211111111o212111—44—94

oDenotes dead out of bounds.

WELLINGTON, Mass., Dec. 14.—The Wellington Gun Club held its annual all-day shoot to-day. The weather was favorable for the sport up to 2 o'clock, when a severe snow storm set in, making it difficult for good scores. In the silver pitcher match at 7 bluerocks and 8 clay-pigeons, Wheeler and Field tied with 14 each, and in the shoot-off Wheeler won. The other scores in this match were: Moore, Porter and Sanborn 13, Perry 12, Cowee, White, Lee, Brooks and Dan 11, Bradbury, Nichols and Short 10, Leslie 9, Chase, Roxton, Dickey, Stone, Green and Warren 8, Webster and Gale 7. The winners in the several events follow: 10 clay-pigeons, Chase and Melcher; 10 bluerocks, Lee, Chase and Dickey; 10 bluerocks, Chase, Wheeler and Leonard; 20 bluerocks, Bowker and Wheeler; 10 tin birds, Leonard and Chase; 6 bluerocks, Chase, Wheeler and Yerrington; 10 clay-pigeons, Wheeler; 10 bluerocks, Warner, Wheeler and Yerrington; 10 bluerocks, Yerrington and Wheeler; 10 tin birds, Cowee, Yerrington and Bradbury; 10 clay-pigeons, Bond, Wheeler, Yerrington and Perry; 5 pairs bluerocks, Keystone match, Perry; 7 tin birds, Cowee and Wheeler; 15 clay birds, Wheeler's favorite, Perry and Dill; 7 bluerocks, Roxton, Dill and Gale; 10 bluerocks, Keystone match, Wheeler, Roxton, Dill and Perry; 7 tin birds, Wheeler; 5 pairs bluerocks, Wheeler; 8 clay-pigeons, Field, Leslie and Lee; 7 bluerocks, Field, Wheeler, Porter and Moore; 10 bluerocks, Keystone match, Chase, Wheeler, Dill, Moore and Bradbury; 10 bluerocks, Bowker and Dan; 10 clay-pigeons, Perry and Leslie; 10 bluerocks, Keystone match, Wheeler, Moore, Bradbury and Short. The Wellington Gun Club held its annual supper and election of officers at the Crawford House in the evening. There were fifty members present, and among them were such old-timers and well-known experts with the shotgun as Dickey, Wheeler, Warren, Perry, Nichols, Schaefer, Gore, Tribble, Lee, Dan, Porter, Keating, Moore, Dill, Sanborn, Bradbury and Shumway. The business meeting of the club was held after dinner, President Warren presiding. Eight new members were admitted. The following officers were elected for the ensuing year: President, Chas. W. Dimick; Vice-President, Dr. C. G. Weld; Secretary, H. F. Amsdell; Treasurer, A. W. Gore; Executive Committee, G. D. Pushee.

TORONTO, Dec. 14.—In the Stanley Gun Club shoot for the McDowall gun to-day, Mr. T. Sawdon, Sr., captured the trophy for the third time with a score of 21 out of 25 at 24yds. rise. It now becomes his personal property. The gun has been shot for 15 times since it was donated by Mr. McDowall. The following are the scores of Saturday.

Gun shoot, at 25 birds, 5 traps, handicap:

T Sawdon, Sr (24yds)	1111011111100111111101111—21
W Boyles (18)	1111111111101111111010—20
J Draisey (22)	1010111011100111011011101—17
F Emond (28)	1000000001ret.
Beatty (19)	1010001100001011ret.
Sawdon, Jr (24)	1001010001ret.
G Morey (21)	1000011110ret.
White (23)	1000010010ret.
Fenelon (18)	1010100010ret.

Sweep No. 1, at 10 birds:

F Emond	10	T Sawdon, Jr	8 J E Cook 6
F James	9	D Beatty	8 W Tracey 7
T Sawdon, Sr	9	W McDowall	7

Emond first, James and Sawdon dividing second.

Second sweep, at 10 birds:

W McDowall	9	G Morley	8	W Tracey	7
F Emond	8	T Sawdon, Jr	8	F James	7
W Beatty	6				

Ties for second, at 5 birds:

Emond ....11111 11111 11111—15 Morley.....11111 11111 110 —13
Sawdon ...0

Messrs. W. Tracey and W. McDowall shot their third pigeon match for a stake of $20, Tracey winning by one bird, as follows, 25 birds each. 25yds. rise:

Tracey	1111111111010111101011—20
McDowall	0101111010111011111010—19

WALNUT HILL, Dec. 11.—Early comers at this range to-day were a bit discouraged by the driving rain, but at noon the weather condition changed, and the delegation which arrived at that time found the circumstances favorable for high scores. In the two main events of the day the shooting was remarkably strong. Stanton's clean score led in the gold coin match, while in the competition for the medal offered by the Standard Target Company both Bradbury and White scored full 20s. Summary of the day's shooting. Gold Coin Match, 15 clay birds and 15 standard targets; Keystone system of squad firing:

	Clays.	Standards.
Stanton	111111111111111—15	111111111111111—15—30
Perry	111111111111111—15	111111101111111—14—29
White	111111111101111—14	111111111111111—15—29
Wheeler	111111111111110—15	101111111111110—13—28

Standard Target Company's Medal,—Twenty standard targets, club handicap by classes: Bradbury (B) 20, White (A) 20, Nichols (C) 19, Brooks (B) 18, Chase (A) 18, Bowker (B) 17, Stanton (A) 17, Torry (B) 17, Wheeler (A) 17, Short (C) 16, Gale (C) 14.

WEST TORONTO, Dec. 13.—The several prizes not competed for at the annual shoot of the West Toronto Junction Gun Club last month, were decided this afternoon at D. Blea's grounds at West Toronto Junction. Owing to a misunderstanding in the date there were not as many members present as would have been otherwise, and the shooting was only fair, the wind being strong and the light bad. The birds, too, were unusually strong flyers. Those present, however, enjoyed themselves. D. Blea winning the live pigeon contest, killing his 10 birds straight, while C. Kemp captured the artificial blackbird contest after a tie with P. Wakefield. The scores:

Club shoot at 10 live pigeons, three prizes:

D Blea	1111111111—10	Boswell	1100101110— 6
P Wakefield	1111011111— 9	D Walton	1010111010— 6
C Hinton	1111101111— 9	Sinclair	1101000111— 6
C Kemp	0111010111— 7	E Gabel	1100001w.

Club shoot at 15 artificial blackbirds, five prizes:

C Kemp	111011111111101—13	D Walton	101101011111110—11
P Wakefield	110011111111111—13	W Blea	101101011101011—10
C Hinton	000111101111111—12	D Blea	010111010110010— 8

Ties: C. Kemp 111111—6, P. Wakefield 101—2.

CHICAGO, Dec. 6.—In the Omaha 50-birds shoot Messrs. Budd and Organ were handsomely defeated by Messrs. Parmalee and Elliott. The score: Budd 45, Organ 39—84; Parmalee 44, Elliott 49—93. Budd had 1 bird dead out of bounds and Organ 8; Parmalee 3 and Elliott 1. Elliott shot a beautiful race. The other scores were not very beautiful. The tie shoot between Messrs. Budd and Organ and Messrs. Riley and Elliott will be shot at Chicago about Jan. 1, at $100 a corner. Several shooters expect to go from here to Mr. Elliott's Christmas shoot at Kansas City, Dec. 24, 25 and 26. —E. HOUGH.

BLOOMING GROVE PARK ASSOCIATION.—New York, Dec. 14.—The return match at live birds between teams from the West Orange Gun Club and the Blooming Grove Park Association will take place on the grounds of our Association on Dec. 21. After the match sweepstakes will follow. A deer hunt and also a bear hunt may be arranged. Those intending to go at this time will please notify the secretary at once. The party will go up on Friday, Dec. 20, on the train leaving Chambers street ferry at 5:30 P. M.—CHAS. A. BILLINGS, Sec'y, 102 Broadway.

CAPT. BOGARDUS.—The veteran champion is again coming East. His young son, a lad of 14 years, comes with him. The Captain has arranged to shoot a series of matches with Frank Kleintz, of Philadelphia. The terms of these matches are 50 pigeons and 50 English sparrows, 30yds. rise, for $150 a side in each race, Hurlingham rules to govern. The Captain will also match himself against any man here for any reasonable sum, that he can kill 50 sparrows in 17 minutes. The first of the pigeon races will be shot at Philadelphia, the next at Erb's Park and the third at Trenton.

DITMAR VS. THOMPSON.—West Farms, N. Y., Dec. 13.—Carl Ditmar and E. Thompson shot a match to-day. The match was for $100 a side, 20 birds each, old Long Island rules to govern, viz.: Gun below elbow until bird is on the wing, single barrel only to be used. On the eighteenth bird Thompson had his opponent shot out, having killed 13 to Ditmar's 10. The young men will come together again, for neither was satisfied—Ditmar at being behind and Thompson with the poor score made.

WORCESTER, Mass., Dec. 15.—At the meet this week at Coal Mine Brook range of members of the Worcester Sportsmen's Club the principal contest was the Norcross trophy match, possible 50 birds, thrown from open traps. There were 28 entries: George W. Russell, of Fall River; H. E. Burbank, of Whitousville; E. T. Smith and H. W. Webber, of this city, each had 26, and they will shoot off the tie at the next meet.

ANNIE OAKLEY IN FRANCE.—Communication dated Lyons in Southern France, Nov. 27, tells of what one clever little American shot is doing in that section, it says: The Sportsman's Club arranged a pigeon shooting yesterday in honor of Col. Cody and Miss Annie Oakley. The king of the Wild West sent his regrets the last minute, but Miss Oakley upheld the honor of America in a truly brilliant manner against some of our very best shots. Shooting commenced at 10 o'clock. A splendid lunch was served at noon, during which a member of the club thanked Miss Oakley for kindly accepting the invitation of the club, tendering her at the same time a large and costly medal as a souvenir of the event. Miss Oakley thanked the members of the club in English. Shooting then recommenced, but a heavy rain stopped the pleasant progress at 3 o'clock.

KANSAS CITY, Mo.—The J. A. R. Elliott shoot will take place Dec. 24, 25, 26, 27 and 28. The shoot will be one of the most important held this year, $1,150 in prizes being guaranteed by J. A. R. Elliott. On each day there will be at least two guaranteed purses of $100, with $5 and $10 entrance. Budd, McMurchy and all the crack shots of the country have signified their intention of taking part. On the last day of the shoot there will be a match between Al Bandle of Cincinnati and Elliott for $125 a side. This race will be 100 live birds.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and the narrative includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

WHY WE DIDN'T.

HOW HARD WORK MAY BE AVOIDED.

"WHAT discount will you give us on this?" asked Ned of the grocer, pointing to a couple of barrels of provisions. "How would 10 per cent. do?" "All right," says Ned, and the bill is paid. These provisions are to be the sustenance of five canoeists for a three weeks' trip upon the West Branch of the Penobscot River. We were five, Ned, Ted, Jud, the Major and Jim. It was our plan to go down the West Branch in our canoes, two Robertson open paddlers and a canvas open canoe.

At five o'clock P. M. our party boarded the steamer Lewiston, bound for Bangor. We had the three staterooms aft of the pilot house on the hurricane deck. The sea was like a mill-pond, and we thoroughly enjoyed the sail. The moon shone in all her glory, and sitting in our little group we sang merry songs until 9:30, when we turned in.

Early the next morning the steamer stopped at Rockland, so we donned our shore togs and otherwise made ourselves ready to enjoy the scenery of Penobscot Bay and river, than which no other common every day steamer trip can boast finer. Passing up the river between rocky and wooded banks, we stop at Camden, Belfast, Bucksport, Searsport, Winterport, Fort Point, etc., finally reaching Bangor at half-past two. Here we found that trains were running up to Moosehead empty to bring down people to the State fair. So after meeting Supt. Brown we got permission to take the canoes as baggage if we would handle them ourselves. This we were glad to do, for if there is anything that will put a man into a cold perspiration it is to see a good canoe turned over to the tender mercies of a couple of brawny baggage smashers. The canoes are soon loaded into the baggage car bound for Greenville. Some more supplies are purchased at Bangor and at half-past five the train starts for the lake, arriving at midnight.

While on the way up the Major stretched himself out upon a settee in the baggage car and went to sleep. Presently Jud was seen to take up a long piece of rope and gently pass it around the settee and the recumbent form of the sleeping beauty. Going to the door near the Major's head he slammed it violently, disturbing the sleeper, at the same time shouting "Greenville! Greenville!" The Major, in a frantic attempt to get up, capsized the seat, and after every one had enjoyed a laugh he was untangled.

After reaching Greenville we bunked in the cars, getting up the next morning at 4:30 A. M. to allow the train to start on its return trip to Bangor, and at about noon we started for Kineo on the little steamer Fairy of the Lake, getting there at about two o'clock. Here we bought some fresh grub, and then started for Northeast Carry. Camped about sunset at Duck Cove on a rocky shore. Ned made his first loaf of bread for this cruise. Well, we ate it.

Next morning all were astir before sunrise, a phenomenal occurrence. Breakfast over we made our way to Northeast Carry, arriving at about 9:30 P. M. Here is the carry to the West Branch, and hiring the team the three canoes and duffle are loaded on to it and started across. We buy a loaf of fresh bread and some cookies from the proprietor of the Winnegarnock House, and eat them as we trudge across the carry behind the team. Here would be a fine place for a switch-back railway. As soon as the river is reached the canoes are packed and launched, and with a cheer we are floating on the bosom of the West Branch.

Everything was lovely, we were well fed, dry, rested and the sun shone beautifully. But, alas! for how long? After about three miles of dead water we began to notice that the current was rapidly increasing, and finally a line of rifts, so-called, hove in sight. We did not know the channel from a hole in the ground, but making a big bluff, we dashed on. Ilex leading, we took the rips, the Maj.'s and Ned's canoes soon struck rocks, and there were four men splashing and sputtering in the water. Ilex suddenly took a "chassez" up toward two big rocks between which the water was pouring; there was no alternative but to go between, and as Jim thought the distance was about equal to his beam, Ilex was headed for the narrow opening. The waters were dashing against the rocks and then gurgling through the opening, but with a few strong strokes the canoe was kept straight, and she dashed through in safety, just grinding the beading on the rocks. Waiting for the others to come up we continued until an old camp was found, where we camped. I need not mention the fact that what the guide book puts down as rapids are bad ones, and that about half the rips are not mentioned. To the guides these rips are of no account, but to the ordinary canoeist they do mean something. By comparison, what are known as rapids up there are like Hunt's Falls, on the Merrimac, at Lowell, when there is considerable water on them, and nine-tenths of the rips are worse than the quick water graced by the name of Mitchel's Falls, on the same river.

Between Northeast Carry and Chesuncook Lake there are about 30 miles of river, alternating dead and quick water all the way. Out of the 30 miles about one-half are rapids, and to go to Chesuncook one must pass through Lobster Stream Rips, Kemy's, Ragmuff, Big Island, Fox Hole and Rocky Rips, and finally Pine Stream Falls. Our camp was above Rocky Rips, and we ran the rapids and Pine Stream Falls, coming to grief in the latter, which are pretty violent, having a drop of about 12ft. in three falls. Farrar's guide says of them, "The most considerable so far, but easily run by an experienced canoe man." True, oh king! but it wants a good big canoe, too. Here we concluded that our canoes were not properly constructed for this work, all having more or less keel, so we decided to go back and camp on the lake. But now dark clouds had obscured the sun and it looked like sloppy weather.

The next morning it was cloudy, so we did not move our camp, preferring to keep as dry as possible in a good camp ground to going on in the rain. Opposite the camp were some big rocks, from which we enjoyed a swim. Jud neatly slipped off the rock with his clothes on, much to the amusement of Ted, who laughed so violently that he capsized the canoe in which he was sitting and wet his own clothes. In the afternoon it rained hard and we all stayed in the tent to keep dry. How tediously time does pass in such a case, but we worried it through some way or another. Pulling a rubber blanket over us we went to sleep and forgot the rain.

The next morning when we awoke, we could feel the spray coming through our not over-thick tent, and knew that it was still raining.

To while away the day we read a novel, each one reading a chapter aloud to the rest. Had a lunch of hard crackers, potted ham and smoked beef—oh yes!—and water, must not leave that out, variety is the spice of life. Entry in Jud's diary: "We are not exactly homesick, but I'd give anything to be back in Marblehead. This morning sang, "The Mill," "The Blacksmith," "Put Me in My Little Bed," "Tell Me, Beautiful Maiden," etc. made it worse. Played poker for about an hour and a half. "We'll probably be stuck in the tent all day. Oh, curse the weather, it's beginning to blow now," etc.

In the afternoon, however, the sun came out, the rain ceased and things began to dry out. The West Branch to Chesuncook is a regular thoroughfare, thirteen canoes passed in that afternoon. Some loggers came up and made their lunch on our fire. They drink tea altogether, and such tea. We tried it out of curiosity, and it was so strong that it fairly tanned the inside of our mouths. They put in a little fresh tea each time and then boil it for a short while, making a regular decoction of tannin.

We left "Camp Tired," as we called it, the next morning, Ned having baked a loaf of bread, a sheet of biscuits and a sheet of corn bread. We had decided to go back up stream, so started about noon and poled, paddled and walked up the rapids until late in the afternoon, when we made camp upon a high bank. After supper and a festive pipe, we turned in fairly early. The next day we finished up the rapids, and went up Lobster Stream into Lobster Lake. Jud shot a black duck and a sheldrake, so we had a game dinner. As one comes out from between the marshy banks of Lobster Stream into the lake he can hardly restrain an exclamation of admiration. We went to Camp Jumboline and put up our tent, made our fir beds and tidied up the camp. It was well we did, for in the afternoon a squall came up and we got some rain for a change. After an hour of poker it cleared up, and we had our game dinner. Camp Jumboline is a fine camp, but from the name we concluded that June and July were good months to steer clear of it. It being September, we were all right.

The following morning every one was up bright and early. Ted and Jud cut wood up the beach, while Jim carried it to camp in Ilex. This camp was about as pretty as any one could wish; it was near a beach of small pebbles and sand, and in a grove of white birch. It had seats and a table, etc. So passed a couple of weeks, shooting, fishing and boat racing, playing games, cooking, etc., to our hearts' content.

The boat racing is worthy of a word or two. Near the camp a brooklet gurgled over the pebbly beach into the lake; it was furnished with miniature rapids, dead waters, etc. Some one conceived the brilliant idea of racing chips down the brook, so we made little birch bark canoes and raced them down the stream for five-cent sweepstakes, whereby Jud and the Maj. each lost a quarter.

Jim went fishing one morning and Jud bet Ted that he (Jim) would not get a fish. However, James returned with a huge chub and Jud was again the loser. Jud got mad and bet Ted three ice cream sodas that he could not eat three inches of raw bacon. Ted ate it like a man, whereupon Jud bet no more.

A couple of loggers came into camp and Maj. and Jim ferried them across Lobster Stream. When they came back the Maj. capsized about 15ft. from shore. If there had only been a camera along, some star pictures would have been obtained. Jud with a sore throat had the legs of a pair of heavy drawers tied around his neck in a four-in-hand knot.

Saturday, Sept. 10.—More unpleasant weather, more poker, more out for Jud. We decided to start home early Monday morning if pleasant. It was a very cold night and in the morning there was a quarter of an inch of ice on the water in our birch bark water pail. We did not wash until the noon sun had warmed things up on that Sunday. At 7 o'clock there was ice on the pail, and at 11 a cake of chocolate melted in the same place.

Monday, Sept. 12, we started on our homeward journey, and after a light breakfast broke camp and left the lake. Arrived at N.E. carry at about 9 A. M. and went across. We swapped off our surplus flour, etc., for cooked food at the Winnegarnock House and here met two gentlemen sportsmen, Messrs. J. C. George, of Baltimore, and W. H. Addicks, of Philadelphia. We all sat down to Kineo together.

When we got down to Kineo the conductor of the steamer said that "a gentleman with a brown beard" had paid for us. We took his word for it, Ned remarking that it must have been Jim, who is smooth-faced. We took dinner at the Mt. Kineo House and then hired a special steamer to take three canoes, seven men and their luggage, twenty miles down Moosehead Lake, at half past ten at night, and all for $8. As our train went at 3:30 A. M., we woke the hands up, loaded on our canoes and then camped in the baggage car. The hands remembered us, and so with the aid of some cigars and quarters the canoes went as baggage. The train took nine hours to go 90 miles, getting us in Bangor at 12:50 P. M. Hastily putting the canoes aboard the steamer for Boston, we ate dinner in the depot, taking the "Flying Yankee" for Boston at 1:40 P. M., arriving at 9:35 P. M. This was the only trip where railroading had to be done upon which we have not had to pay big prices to take the canoes around. We saved $18 on freight fares, which fact Mr. W. H. Addicks told us not to send to FOREST AND STREAM, because no other crowd of men could work it. In the words of Farrar, "A canoe is indispensable for this trip, and if you take our advice you will also take a guide." As to the latter point—well, we didn't—but if you contemplate taking this trip without that useful creature, all we can say is don't.

JAMES W. CARTWRIGHT, JR., Sec'y Puritan C. C.

RED DRAGON C. C.

A REGULAR monthly meeting of the Red Dragon Canoe Club was held on Dec. 6 at the residence of the Commodore. The constitution was amended, making it necesary for an applicant for membership to be admitted to the A. C. A. The dues were raised to $12 per year, entrance fee to $5. The officers' reports were deferred until the meeting in January. The committee on new boat house after being heard was continued. The officers elected for the coming year were: Com., Wm. B. Haag; Vice-Com., H. M. Kreamer; Purser, F. W. Noyes; Captain, Woodward Norgrave; Quartermaster, Byron Fortiner; Bugler, M. Bond. The office of corresponding secretary will not be filled until the January meeting. Geo. D. Gibson, the well-known cycler, was admitted to membership. Great things are expected from him when he becomes familiar with a 10ft. paddle. It is just possible that the club will own a monster canoe in the spring, capable of accommodating sixteen, as negotiations are now being made with a well-known builder for its construction.

Editor Forest and Stream:

On Sunday night the Red Dragon C. C. house was entirely destroyed by fire, and with it the greater part of the fleet. The loss has been very heavy, but the Red Dragon is still alive and in large spirits. A new fleet will take the place of the old at once, though several schemes for next season's recreation will have to be abandoned until a more propitious occasion. Only four boats were saved of a fleet of twenty-five. The loss cannot be accurately computed, but cannot be less than $2,000. The most unfortunate feature of the whole affair is that we would have moved into our new quarters this week. However, we are putting on the best face we possibly can, and will replace what has been destroyed with all possible haste. Among the boats destroyed were Lassie and Ramona. MAX.

Editor Forest and Stream:

At a very early hour on Monday morning Mr. Daniel Haswell, of the *Public Ledger*, discovered flames issuing from the boat houses, located at the foot of Second street, Camden, and occupied by the Philadelphia C. C., Red Dragon C. C. and the Quaker City C. C. He immediately notified the fire department, who soon appeared on the scene.

Of the ten houses occupied by the three clubs eight were completely burned out. The Philadelphia C. C. presents the most desolate appearance, where but a few hours before in their berths rested a number of fine cedar canoes, nothing now remains but a few lumps of "canoe jewelry" strewn here and there among the ashes.

The canoes in the Red Dragon—those that are not totally destroyed—are beyond repair and of no use, save kindling wood. Of the 45 or 50 canoes in the two clubs, but four of the Red Dragon's were saved. The Quaker City C. C. and adjoining houses escaped the ravages of the flames. The loss is estimated at about $5,000, divided equally, although the Red Dragon Club will be the heaviest loser, having no insurance. The origin of the fire is unknown.

J. A. B.

ROCHESTER C. C.—Officers 1890: Captain, H. J. Wilson; Mate, S. B. Perkins; Purser, Geo. H. Harris; Meas., Ira S. Davis; Executive Committee, C. B. Wolters, C. F. Wolters, C. A. Bruff; Regatta Committee, F. F. Andrews, C. A. Moody, A. B. Dodge. The regatta committee reported the result of the 1889 series of races for the Wolters cup. F. F. Andrews 16 points, H. M. Steward 15 and Harry Moody 6. The last two prizes are A. C. A. pins. The cup will be contested in two more series—1890 and 1891.

ATLANTIC DIVISION REGATTA COMMITTEE.—Vice-Com Brokaw has appointed C. V. Schuyler, Arlington C. C., Chairman W. S. Elliott, Marine and Field Club, and James R. Steers, Jr. Knickerbocker C. C.

LARGE CLUB CANOES.—As was predicted last summer, when the big club canoe Unk-ta-hee was introduced at the A. C. A. meet at Stave Island by the Toronto C. C., it has introduced a new branch of canoeing and one that we think will add very much to the interest and sociability of the sport. It will introduce a new phase in competition, and racing these craft will give an opportunity for uniform and scientific training of crews. A race between different clubs will be a very exciting feature. The St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., anticipating the demand for these craft, sent a set of drawings to several different clubs for inspection and approval, and have already received orders for three of them.

BROOKLYN C. C.—On Dec. 10 the Brooklyn C. C. held its annual meeting. The reports of officers and committees showed the club to be in a remarkably healthy condition. The subject of incorporation, which has been under consideration for some time, was finally settled; and the necessary alterations to constitution, etc., were made, and trustees elected to govern an incorporated club. Two of the members' camp-fires have proven a success, and it is expected to terminate the series with one at which the club may entertain all their friends. It was decided to celebrate the fifth anniversary in the customary manner, with a dinner on Jan. 11. Officers elected for 1890: Com., R. J. Wilkin; Vice-Com., P. F. Hogan; Purser, M. V. Brookaw.

Yachting.

GEORGIAN BAY AND ITS ISLANDS.

POINT OF DEPARTURE.—"Swarthmore Camps" (consisting of a picturesque log cabin and cluster of tents), located on southwest shore of Georgian Bay, nestled amid a most charming compound of hill and dale, green forest, green glade and blue water.

Craft.—Schooner yacht Christine, about 30ft. long, moderate draft, with centerboard, not decked, except about 10ft. of a forecastle.

Party.—1. The Captain and owner, a good amateur sailor. 2. Will, who tried to pass himself off as an able seaman. 3. Jack, a youth of seventeen, having no experience in sailing, but feeling as large and competent as anybody. 4. The Scribe, about whom there is not much to be said, except that he was old enough to know better.

Destination.—Across the bay, and then as it might happen.

Log.—First day (in August, '88). The Christine, sailed by the Captain alone, came in from Meaford and cast anchor off the camp about 9 A. M. Stores got on board. The supply of groceries and provisions gave rise to impertinent inquiries of bystanders as to a trading expedition to the Indians or opening a store among the islands. Good-byes said, all hands embarked, anchor up and full sail set. Christian Island, our objective point, 26 miles off, just visible. Wind fair, but light. All jubilant except the Scribe, who is especially liable to seasickness on the slightest provocation. Captain steering and in general command. Crew not particularly obedient or respectful. Discipline loose in fact, but a feeling pervading that the Captain knew what he was about, and that it was best to do pretty nearly what he said, especially after some of his gentle admonitions.

When seven or eight miles out a thunderstorm appeared in the northwest, coming down pretty rapidly. The wind also changed some and freshened considerably. Before the storm came fully upon us the Captain had all sails down except the jib, as there was no telling what might come next. The shower passed and then all was calm. The sails were still kept down, waiting for the expected squall. After a while a slight breeze sprang up, and thinking that was all there would be, the sails were again set. The Scribe was given a lesson in steering by the compass, the sight of land ahead having been obscured by the passing thunder cloud. While he was watching the thing and wondering why the needle would persist in pointing in any but the right direction, the Captain shouted, "Put her up to the wind." What that meant was more than the Scribe could tell, but he guessed it had something to do with the tiller, so he gave it a push over, fortunately the right way. Just then something broke, and looking up, he saw the mainsail wrapping itself around the mast, and the crew, amid some excitement, trying to get the foresail down. The squall, or whirlwind, passed as quickly as it came, repairs were soon effected, and we were under way again, with a good breeze on the beam. Then came time for lunch, which was duly attended to. Christian Island and main land of Tiny came into full view. Made for the channel between them, and on past Beckwith's Island and Giant's Tomb to the North Shore islands.

The Christian Islands include the island of that name and Hope and Beckwith islands, and these and the mainland opposite are classic ground, as the scene of many of the occurrences so graphically related by Parkman in the most interesting of his works. The islands are still Indian lands, and on the largest an Indian village, though of a different tribe, keeps up the remembrance of the former inhabitants.

The sail along here was simply delightful, especially to a novice in such sailing. Approaching and among the other islands sail was shortened, as caution was required. The Captain attended to tiller, mainsail and jib, and Jack to the foresail. Will stood at the bow looking out for sunken rocks, and the Scribe attended to the centerboard, raising it when necessary to clear the rocks below. What between breaking his back lifting that heavy iron thing, and getting his head whacked by the boom when the vessel came about, every five minutes it seemed, he began to think there might be other things just as pleasant as sailing. Among the more intricate channels, or with fresh wind, the foresail alone was used.

These islands are of all sizes and conditions, from bare rocks just showing in or above the water to nicely-wooded ones of hundreds or even thousands of acres. They are all of the same Laurentian rock, some bare, but most of them have a light covering of soil, and vegetation wherever there is a chance for it. The outlying ones are generally barren and bleak-looking, but as the mainland is approached this appearance gradually changes to verdure and beauty, and delightful vistas open up in every direction. How many islands there are it is impossible to say. Bouchette is said to have charted 27,000. Double that number is a modern estimate.

After getting fairly in among the islands it was decided to lay up for the night. A landlocked bay was found and the yacht safely moored. Provisions and cooking utensils were taken ashore, a good fire made, supper cooked, heartily partaken of, and, needless to say, enjoyed. All did their best, but in cooking as in sailing the Captain was easily first. In the eating line there were others just as able as he. For night quarters a light tent was rigged extending from foremast to stern; excellent protection under ordinary circumstances, but hardly sufficient to keep out the storm that night. The Captain and Will bunked down in the cockpit, Jack and the Scribe one on either side of the centerboard. A thunderstorm that had been threatening for some time came on in full force soon after we had retired. It rained heavily, the wind blowing in all directions. The tent was hardly wide enough amidships, and the rain, beating on the deck edge, was driven inside. Jack was the first to stumble, and was discovered trying to keep off the wet with his tarpaulin. Presently the Scribe was engaged in the same way, and finally both took refuge in the forecastle. The lap-lapping of the water against the vessel's side, within a few inches of his head, was a new sensation to the Scribe, but it soon assumed a rhythmic form and sent him to sleep, instead of keeping him awake, as he first feared. A different tune was thus played every night, each having its own soothing effect as soon as the particular rhythm or cadence was caught hold of.

Second Day.—Morning fine and clear. Landed, cooked and ate breakfast. While tent and dunnage were drying, the Captain took the small boat to look for a channel, and the others rambled over the island, a large one, in a successful search for huckleberries. Got under way in due season, haste not having any show on this cruise. Found the steamboat channel. Stopped a little while at Muskoka Wharf, an uninhabited landing where goods are left for Musquash Mills and such campers as may be among the neighboring islands. Followed the channel for a few miles, and then the Captain determined to find a (to him) new way into the Musquash, the chief mouth of the Muskoka River. There was no direct channel or course; we just threaded our way, keeping as near the desired direction as the maze of islands would allow. In no place could we see more than 100 or 200yds. ahead, and a choice between two or more apparent openings had continually to be made. At length we met some canoes going to the "wharf," and felt we were near the right course. Further confirmation was given by meeting a tug. The Scribe, who was steering, asked the Captain which side of the channel to take. He replied, "She (the tug) will let you know which side to go on; if one whistle, to the left; if two, to the right." Just then two whistles sounded clear and distinct. The Scribe, who for the moment apparently thought himself on board the tug, at once turned toward her right, but soon recovered himself under the mild remonstrance of the Captain, and the passing was safely effected. At length open water was reached, beyond which the mills and village appeared. The yacht was anchored near the shore, the Scribe left on board to watch, and the rest took the boat and went over to the village.

All went well for a time, until a good breeze sprung up. The attention of the Scribe, who had been taking it very comfortably was attracted by a neighboring raft of logs, which appeared to be moving against the wind. The movement increasing, a more extended survey was made, when he found it was the yacht that was moving, the anchor having dragged. He then let down the centerboard and steered toward the village where the others were. All together again, the yacht was moored to the shore, and we landed for lunch. As to meals generally, we had a hot breakfast and supper, cooked and eaten on shore, with coffee or tea and a cold lunch at noon, with lemonade. The Captain and Will did most of the cooking, Jack attended to the fluid comforts, and the Scribe, well, he always managed to be on hand when meals were ready.

Lunch over, the Captain and Scribe visited the mills and spent some time there and at the village, leaving the boys to clear up. Sail was then again made, and we took the broader and more direct channel for the outer islands. Sailing nicely along, we had not got as far as intended to go that night, when a well sheltered bay, with a sandy beach attracted the Captain's attention, and there he determined to stay, though still rather early in the afternoon. Bathing was indulged in, and after supper Jack and the Scribe took the boat to troll for pike or bass. They did not catch any fish, but did find among the islands some of the most beautiful spots imaginable. One in particular they stayed long to admire. It was a rather deeply indented angle or bay in a large island, with small islands opposite. On these and the larger island the trees and shrubs came down in various shades of green to the water's edge, the white birch poles and graceful foliage showing on the higher ground. Between the islands were vistas, some extending quite a distance, of still waters hemmed in by green banks, broken here and there by brown or gray rock. The lights and shadows from the setting sun added to the beauty of the scene, and the perfectly still water gave back everything so distinctly that it was difficult to trace the line between reality and reflection. The Scribe has often regretted, and then more than ever, his inability to sketch from nature. But no sketch, or photograph, or description could do the subject justice.

Third Day.—This, like all the rest, was full of interest and enjoyment, but of our proceedings there is little to note. We sailed quietly along toward Parry Sound, dodging in and out among the islands or out to open water as whim or fancy suggested. Met the steamer Maxwell on her daily trip from Parry Sound to Penetang and Midland. Rounded Moose Point, a spur of the mainland reaching out through the islands almost to the open lake, as if to find out for itself what the latter was like. Passed a party fishing from a rocky inlet, who very gallantly read the name of our trim little craft as "Chestnuts." Lunched on one of the outer reefs. Called at a few camps on the islands. Visited a fishing establishment and saw the men unloading the day's catch, brought from the nets set far out in the lake. Admired their vessel, a long two-masted open boat, graceful in form, said to be quite safe, and with its deep centerboard, capable of sailing very close to the wind. Finally the Captain saw a place to his liking, and there we stayed for the night.

Our location was on a large island, chiefly a mass of gray granite, with some patches of soil and small timber and shrubbery. Before us was the steamboat channel, 200 or 300yds. wide. Directly opposite, the white tents of a party, said to be from Pittsburgh, made a picturesque addition to the scene. Further on were two small houses occupied by Torontonians, and near the latter a tug lay at anchor, wind-bound with her tow of logs. This was the only night during our cruise that we had anybody but ourselves within sight or hearing.

A nice boat on the beach near us caused some speculation as to its occupants and their whereabouts. Afterward a party of ladies appeared with pails of huckleberries gathered on our island. They had some difficulty in getting the boat launched, when Will's native gallantry overcame his diffidence and he rushed to their assistance, shoved off the boat and handed them in with all the grace of a Chesterfield. But he was so overpowered by the thanks and gracious smiles of the fair ones that his appetite for supper was taken away and his sleep so disturbed that the Captain lay awake a great part of the night watching him for fear of an attempt to emulate Leander or perform some other desperate exploit.

Some boating was done, as well as some bathing and some rambling about the island. In the evening the moonlit scene was beautiful, and interest was added by the passing of the Maxwell and her slowing up to land visitors or supplies for the camp opposite.

Fourth Day.—Took things very leisurely in the morning. Debated for some time whether to start for home or go to Parry Sound, eight or ten miles further on, and finally chose the latter. After going two or three miles, a clear channel opening out to the lake was a temptation the Captain could not resist, the rest yielded without demur, and the bow of the Christine was turned homeward. The wind was fair enough, but the Scribe soon found the open water too rough for his comfort, and, out of deference to his feelings, the shelter of the islands was again sought. Entering by the Haystacks, a pair of rocks somewhat of that shape, we passed a large American encampment on an island near where the remains of the ill-fated Waubuno lie. The Captain had never been at the Moon River, and having learned the approximate distance and compass bearing, he determined to try for it. This was, perhaps, the most pleasant sail of all. It was like sailing through a series of small lakes and short channels. The lakes had a similarity to each other in limited expanse of water, irregularly outlined by green banks, broken here and there by rocks, and with higher trees beyond; but each was different from all the rest, and had its own peculiar beauty, which for the time appeared to surpass that of the others. Uncertainty as to the course gave additional zest to the sail, and interest, then and throughout the cruise, was kept up by Will's numerous inquiries in search of information, and the prompt, though not always strictly relevant, replies of the Captain. Jack had by this time developed into a first-class sailor, and no doubt feels perfectly fitted to take command of a full-rigged ship. The Scribe was also getting along nicely, having learned how to dodge the boom and be out of the way when the centerboard had to be lifted.

Having at last reached something that looked like the mouth of a river, the yacht was moored in a side channel and the Captain and Scribe went forward to explore. After going for a mile or so they found open water and other channels, and that the mainland and river two small miles distance off. On returning, they found also that the boys had taken their lunch and had eaten all the Scribe's apple sauce, which he had taken so much trouble to make on the evening before. They attempted to cover their crime by pretending that it had got lost in their effort to keep it cool in the water.

Proceeding further, we found one of the fire wardens encamped on a small island. These men are employed by the government, and spend their time traversing the forest in all directions, watching and warning campers and settlers, and generally on the lookout to prevent forest fires, sometimes so terribly destructive. He had came down Moon River alone in his canoe, reporting twenty-seven portages in twenty-five miles. From him we learned that we were on the right course, and soon after we reached the river itself and went up to the first fall. It was not much of a river, as the greater part of the water was diverted to the main stream, or Musquash, but we had the satisfaction of finding it. The warden joined us, and after the locality was duly examined, entertained us until supper time from his stores of information as to forest, stream and lake. After supper the Captain determined to work out of the river. The task was a difficult one, as the wind was dead ahead, but was at last skillfully accomplished. It was then almost dark, the trees shut out the light of the rising moon, and there was some trouble in getting the vessel moored for the night. That done, the tent was soon put up, and all retired and slept soundly.

Fifth Day.—Up early and off, as the wind, though light, was fair, and not likely to continue so. After we had gone a couple of miles or so, it failed altogether for the time, so we anchored and prepared for breakfast. Just then the warden turned up again and suggested fresh fish. He thought it a shame not to have them when they were all around anxious to be caught, and volunteered to get some for us. We lent him trolling tackle, and almost as soon as the fire was ready he had an abundant supply, more than we could use, of pike and bass.

By the time bathing and breakfasting was over the wind sprang up again, almost dead ahead, and we started on our homeward way, the warden accompanying us. Observing a smoke in the woods he bade us good-bye, and went to reconnoitre. Soon after we met a party of ladies and gentlemen in boats and canoes, led by an Indian guide. The countenance of the latter plainly showed his disgust at seeing a yacht sailing along where he tried to convince his patrons that nothing but a small boat could go, and not even that, unless guided by him. About this time the Scribe was in a state of deep dejection at having lost overboard his hunting knife, a much prized present from the Northwest. His satisfaction at its recovery was all that saved the juveniles from being pitched overboard in punishment for practical joking and want of respect for gray hairs.

Going about, on one of our numberless short tacks, a shout called our attention to the warden, who was doing his best to overtake us. The smoke he had gone to see about was from the remains of a camp fire, and he had got there in time to prevent its spreading. He was trying to catch us to return our trolling line. We took him aboard and towed his canoe to near the outer islands, where he left us, and we saw him no more.

Outside the islands the wind was not favorable for an attempt to cross the lake, so we headed for the Western Islands, about twelve miles off. When within about four miles of these the wind fell altogether and we lay becalmed. We anchored and waited for the wind, which did not come. Then the Captain and Scribe took the boat and rowed to the islands. These are a cluster of rocky islands, mostly barren, lying away outside the other islands. Four or five may be half an acre or more in extent, the rest smaller, down to a mere speck. We estimated the highest at 70ft., and they are of all heights from that down to reefs at or below the water line. Only one is wooded. It is truly a scene of desolation, but the view is magnificent for all that. These islands are the summer home of hundreds of gulls, which resented our intrusion by almost deafening screams.

After a couple of hours there came enough wind to enable the boys to bring the yacht into the small and not very secure harbor between the larger islands. Climbing the rocks and enjoying the view; rifle target shooting and generally harmless shooting at the gulls, to say nothing of preparing and demolishing supper, put in the evening very pleasantly. All retired in good time, Jack and the Scribe to sleep soundly, not so the others. During the night the wind came on to blow hard, with changing direction, and the Captain and Will were on the watch, together or alternately, nearly all night. All that the Scribe noticed was a quickening of the tune played by the waves near his head.

Sixth Day.—Up early and anxious to be off. Wind dead ahead and lake rather rough. Captain decided it would not be prudent to attempt to cross the lake, and suggested running down to the Christian Islands. This was at once agreed to, as the idea of staying over among these rocks was not at all pleasant. Soon after starting the wind began to shift around to the northwest, and the Captain kept as close as he could, hoping he might yet be able to reach home that day. The wind freshened somewhat and all was going on nicely, the yacht keeping well up and making good headway, when all at once there was a crash, and the foremast with sail and jib disappeared over the side. Things looked rather bad for the moment, but the Captain soon took in the situation, and by his exertions, ably assisted by the boys acting upon his gentle suggestions, and all encouraged by the Scribe's serene contemplation of their efforts, the wreckage was got on board after a good deal of trouble.

We then drifted down under reefed mainsail only to Hope Island Light House for repairs. Obtaining tools there the mast was re-stepped, some 5ft. shorter than before, rigging set up and sails re-set. It was then about noon, most of the crew had worked pretty hard, and all were hungry. The boys set out their very best spread for lunch. In addition to this the good lady of the lighthouse sent us some fine fresh fish, cooked to a turn, and pies and fresh homemade bread. A right royal meal was enjoyed, and the whole party joined in certifying Hope Island Light a good place to be shipwrecked near, at least while the present occupants are in possession.

After resting a while the Captain suggested sailing down between the islands to Christian Island Light. This was soon done, and then came the question whether to attempt the open lake or not. The Captain wished to get home. Will was cautious and doubtful. Jack apparently anxious for the excitement, and the Scribe, looking out on the rolling waves, thought of his weakness, and prepared to submit to the inevitable and endure a few hours of misery and rather sided with the Captain.

Everything being close reefed, we set out, Will alone protesting. The wind was a point or two before the beam and kept increasing, but so gradually that it was hard to say when the gale, for such it came to be at last, actually began. The wind blew more and more fiercely and the waves rolled higher and higher and we found ourselves in one of the worst of the summer storms for which Georgian Bay is famous. After a short time even the reefed sails were too much, the jib and mainsail were stowed and we went on under reefed foresail alone, and making good time at that. The way the yacht, under the skillful guidance of the Captain, would climb one side of a wave apparently many times higher than itself and gracefully slide down the other was something wonderful to behold. A wave, higher than its fellows, would come rushing madly on, with top curled into foam and threatening to engulf our seemingly defenseless craft, so that escape from destruction appeared impossible. But as it came on the vessel would rise to it, higher and higher as the wave came closer until the top would be reached, and the yacht shake itself clear with a bound as of satisfaction or triumph, and the wave, as if disappointed with its prey, would hurl its combing at us in a final despairing effort. Even these high waves had something like a rhythm of their own, a maximum and minimum of height in apparently regular time, the lowest, however, quite high enough for all purposes. The Scribe regrets that he did not think of counting the waves in several of these periods, as he believes the numbers would correspond either altogether or alternating at regular intervals. Very little water was shipped and bailing was not required, though we all were thoroughly wetted by the splashes from the combing waves and somewhat chilled by the wind and wet.

The Captain tended the tiller and Will the foresail sheet. The latter, more cautious or timid than the former, would ease the sheet off as far as he dared under the watchful eye of the Captain. When it would go too far the Captain would mildly suggest hauling the sail closer, and Will, after making a great show of complying, would gradually let the sheet slip until the sail was again as far out as ever.

The boat had to be hauled close to prevent its swamping, and as it was, some of the provisions and cooking apparatus kept in it were washed out. The trolling line, which the warden had thrown into the boat, was also swept out, but the hook caught in some way, the line unwound, and the stick to which it was fastened came skipping over the waves 30 or 40yds. astern. Strange to say, the seasickness which the Scribe so much dreaded, did not even hint its presence. The Captain explained that old Neptune himself dare not undertake the contract of removing that lunch laid in at the lighthouse. This may be a useful hint for some who go down to the sea in ships.

The gale kept on increasing in violence, and when we got safely in between the piers at Meaford the waves were dashing high over them. Our vessel had been seen and recognized while still a long way out, and many were at the harbor anxiously watching our progress. Dry clothing and a hot supper put an end to the temporary discomfort, and no memories of the cruise were left save pleasant ones

Before closing, another word may be said about the islands. The scenery among them is in many places surpassingly beautiful, but there is nothing of the sublime and grand about it. None of the islands are high, few, perhaps none, reaching over 100ft. There is simply the ever-varying and ever-pleasing combination of water, wood and rock. For boating or camping parties it would be difficult to find a fairer spot. Weeks upon weeks could be spent among these islands, with daily or hourly changes of scene, and all with fresh water. Fishing is said to be good in many places. One drawback is the want of good, safe bathing facilities, nice sandy beaches being few and far between. And there would not be much satisfaction in a deep-draft yacht, as it would be confined to the principal channels. But even with such a yacht, used as a floating home, and plenty of boats or canoes to go around with, a capital time could be had.

S.

NEW YORK Y. C.—The special meeting of the New York Y. C. for a final action on the report of the Measurement Committee was held on Dec. 13, with Com. Gerry in the chair. The attendance, especially of yacht owners, the only voting members, was quite small. The first proposal of the committee, to adopt the Seawanhaka formula in place of that now used by the club, was adopted by a vote of 16 to 4. The other proposals relating to details of measurement and to the allowance tables, were also carried. The proposal to class by corrected instead of waterline length was briefly discussed. The report of the Eastern Y. C. was read, but no action was taken on it. A letter was read from Mr. Burgess in connection with the report opposing the proposed classification on the basis of the Seawanhaka rule; and also a letter from Mr. N. G. Herreshoff strongly supporting the proposed classification, and advocating even a heavier tax on sail than that proposed by the committee. After the discussion a vote was taken, and the proposal to class by corrected length was not carried. The same committee was continued as a standing committee to confer with other clubs in regard to a uniform classification and measurement rule.

YONKERS COR. Y. C., 1890.—Com., Alanson J. Prime; Vice-Com., Albert Skinner; Sec., William Clark; Treas., Halcyon Skinner; Fleet Captain, Howard Clapp; A. J. Prime, Thomas E. Booth and John Thorne, delegates to the New York Y. R. A.

YONKERS Y. C., 1890.—Com., Charles T. Mercer; Vice-Com., David Stewart; Corresponding Sec., Herbert Shipman; Financial Sec., W. H. Devon, and Treas. John Nesbitt.

CAPT. WM. SMITH.—On Dec. 15 Capt. Wm. Smith, of the schooner Montauk, died at his home in Brooklyn.

A SMALL SINGLE-HANDER.

ONE of the interesting features of the great maritime exhibition in Boston is the handsome little craft whose lines we publish beneath. The little yacht, a perfect example of good workmanship in all details, stands with sails set on the floor of the Mechanics' Institute. She was designed for a member of the Pleon Y. C., of Marblehead, to race in the 16ft. class, and will be used next summer by her owner.

The plans were furnished by the Boston Yacht Agency; and the yacht was built by Mr. James McIntyre, of South Boston, in accordance with his patented method of composite construction; the hollow spars are Mansfield's patent; and the sails are by Adrian Wilson, of Boston. Her dimensions are as follows:

Length over all	22ft. 2in.
L.W.L.	15ft. 5in.
Beam	6ft. 6in.
Draft	3ft. 6in.
Displacement	4,077lbs.
Ballast	3,000lbs.

Her construction is as follows: Keel, a hollow-cast iron trough 1ft. 6in. deep, bulkheaded at every 2ft., with stem and sternpost scarfed into it. The steel angle frames are riveted to each of these bulkheads, the former ¾×¾×⅛in., with a filling of wood, the face of which comes in and is beveled to the lines to receive the planking. Between each pair of steel frames are two wooden frames of the same dimensions as the steel frames. Her planking is of Spanish cedar ⅝in. in thickness in full lengths, except the garboards, which are of mahogany; deck of white pine in ⅞×⅞in. strips, sprung to sheer and blind-nailed. She is finished bright throughout, thus preserving the handsome appearance of the woods. Some further details will be found in the FOREST AND STREAM of Oct. 3. Her sails are of 8oz. duck, and spinaker of silk.

CLASSIFICATION BY CORRECTED LENGTH.

THE vote of the New York Y. C. on Friday last decides the matter of classification for the present in favor of the present method by waterline length. The question has been argued warmly for some time, the chief opponent of the change being Mr. Burgess, and though he has offered very little in the way of facts or figures to refute the arguments of the committee, the mere fact that he was opposed to the change has influenced many against it. Mr. Herreshoff, on the contrary, has warmly advocated the proposal of the committee. It would have been quite possible to have passed a classification by corrected length with the New York formula, but this so-called "compromise" proposed by the Eastern Y. C., that the New York committee should give up everything which it did want, while the other side accepted nothing which it did not want, was not received very warmly by the New York Y. C. The result is much better as it is; a classification by the New York formula would have been only a nominal change; and once in force it would have been difficult to alter it in the face of vested interests. As the matter stands now the New York Y. C. has gone a great way forward in adopting the Seawanhaka rule in place of its old one, and at the same time increasing the allowance tables. This brings the New York, Seawanhaka and Eastern clubs together with the same measurement rule, and practically puts in force a heavier tax on sail than has ever existed here before. It is now probable that both the Larchmont and Atlantic clubs will adopt the same rule, in which case one very great end will be gained, the union of the five great coast clubs under one common rule, and that a very good one so far as it goes.

The advocates of the new classification need feel in no way discouraged by such a result. The change they proposed was too novel to be instantly adopted in all the clubs, but it is one that improves on acquaintance, and we look for its general adoption within a couple of years. With one rule in use by all the clubs and giving general satisfaction, as it is likely to, the transition from a classification by waterline to one by corrected length may be made without any serious disturbance; and the final results will be more satisfactory than if the rule had been carried through now in one or two clubs in the face of determined opposition.

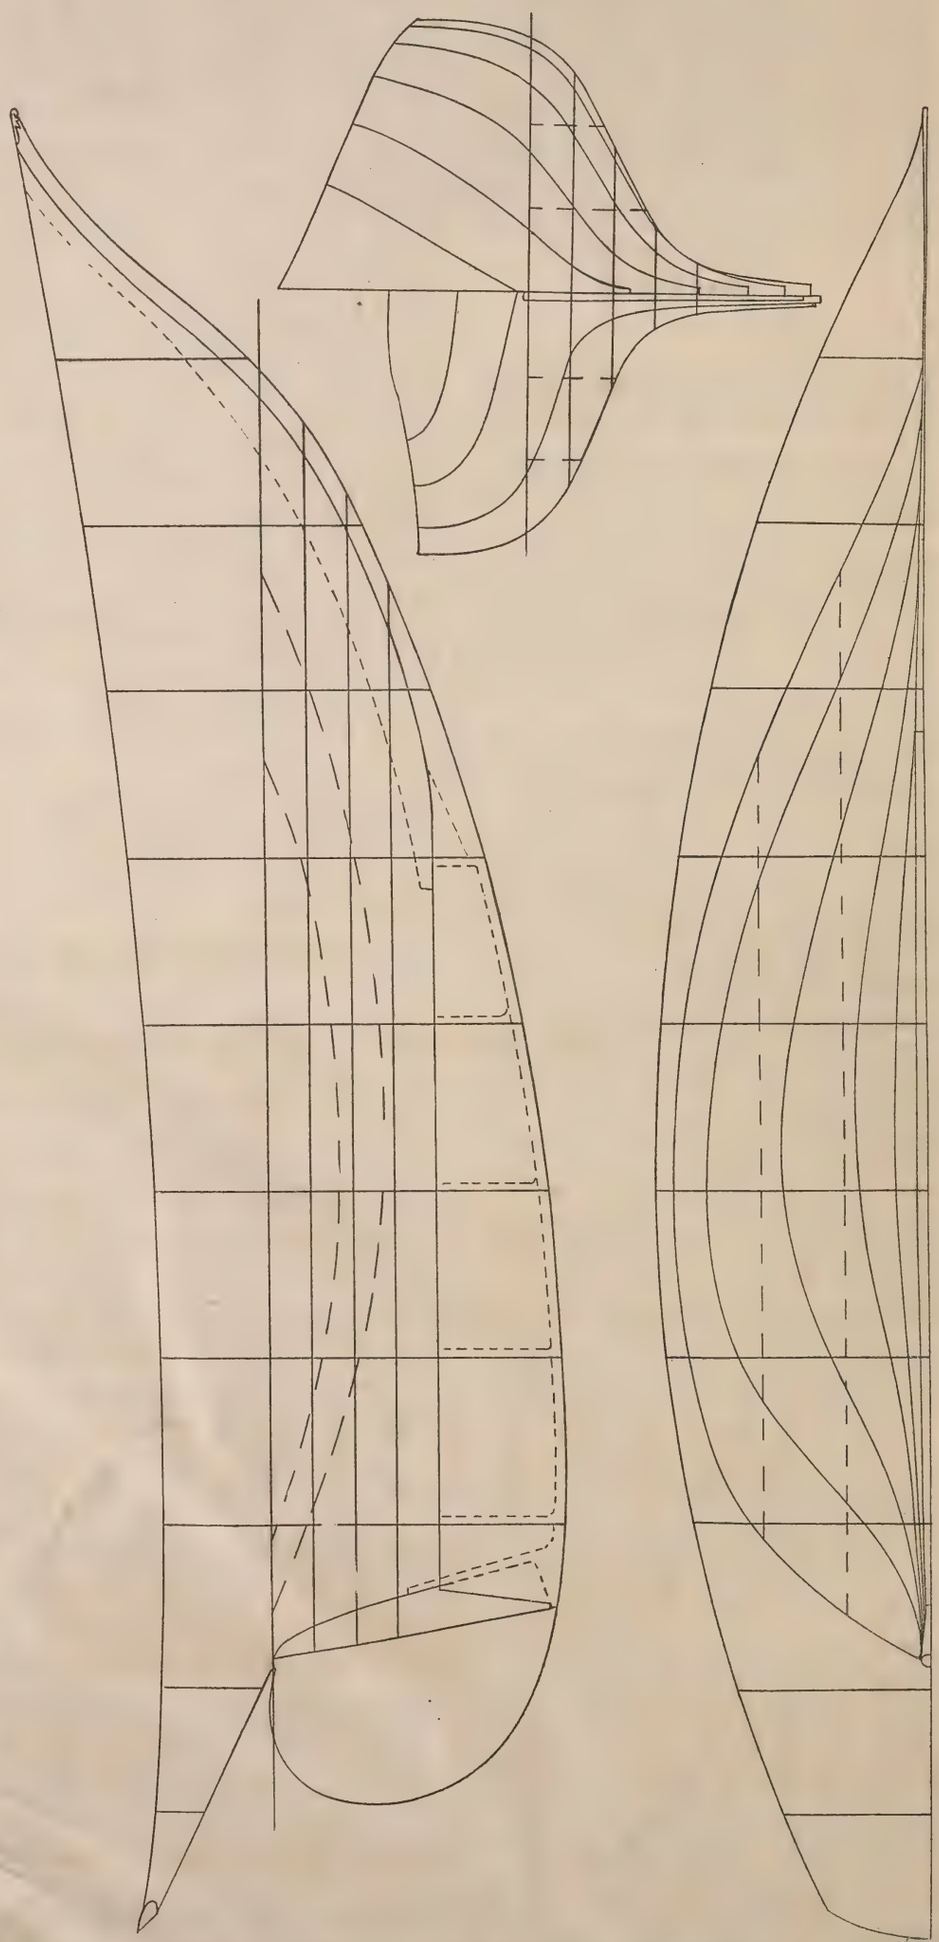
The tax on sail imposed by the Seawanhaka rule will of itself tend to restrict rigs to a certain degree, and for a season at least it will be very materially aided by the influence of Minerva, and the prejudice against the big forties, based on the mishaps of Liris. Thus there is no immediate danger of the extension of sail, and by the time that it does reappear men will be ready to accept corrected length as a necessary check on it. In the meanwhile there is plenty of work to be done in perfecting the many details, the measurement of sail, the limits of the classes, etc., so that when the measure is finally passed it shall be so complete and perfect as to be safely adopted for a term of six or seven years.

LAUNCH OF THE JET PROPELLER EVOLUTION.—The new jet propeller Evolution, built for the Jackson Navigating Co. under the direction of Dr. Walter M. Jackson, was launched at Lennox's yard, South Brooklyn, on Dec. 11. The craft is 108ft. over all, 99ft. l.w.l., 23ft. beam and 3ft. 4in. draft; and is built with a triple skin, two inner diagonal skins of cedar and an outer longitudinal skin of mahogany. Her motive power includes a 1,500 H. P. Roberts tubular boiler and a duplex compound Worthington pump, specially built for the purpose, the steam cylinders being 25 and 43.3in.×36in.; the pump cylinder being 9.25in. in diameter. The inboard delivery is by two 8in. pipes near the keel; while the water is forced out through nozzles but ¾in. diameter, which may be turned in any direction in order to steer. It is expected that the boat will attain a very high speed, and will revolutionize the propulsion of vessels by steam.

NEW YACHTS AT CAPE ANN.—Capt. Aaron Brown, owner of the well-known Black Cloud, has sold her and ordered a 30-footer from Mr. George Wheeler, of Wheeler's Point. The new yacht will be named Satan, and will be 40ft. 4in. over all, 29ft. 6in. l.w.l., 12ft. 9in. beam, 5ft. 6in. depth; with centerboard, cabin house, and 4,000lbs. lead keel. She will have a clipper stem and a big sailplan; mast 37ft. to hounds, 6ft. 6in. head; topmast, fid to sheave, 20ft., bowspirit outboard 18ft., with single jib. At Vincent's Point, Mr. Thos. Irving is busy with a 30-footer; 41ft. over all, 29ft. 6in. l.w.l., 11ft. 9in. beam, 6ft. draft, 2ft. 6in. least freeboard; 7,000lbs. lead keel. Mast 32ft. 6in., deck to hounds; topmast 27ft., bowsprit outboard, 18ft., mast from stem, 12ft., boom 38ft., gaff 25ft. Mignon, Mr. Babson's 30-footer, is at Essex for further alterations.

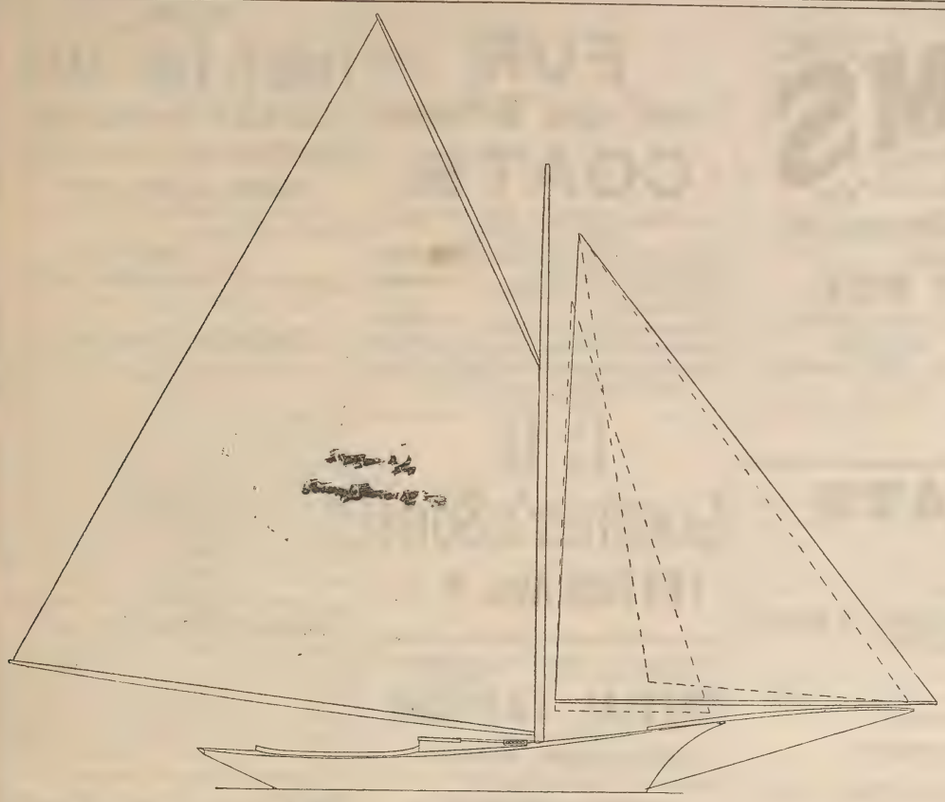
THISTLE, LENORE, VANDUARA.—Mr. Jas. Bell will change Thistle to the yawl rig this winter, and she will race next season with the yawls. Lenore, schr., will also be converted to a yawl and will join the racers. Vanduara, cutter, has been purchased by Mr. Hodgens, owner of Vreda, who will visit the Mediterranean this winter. Vreda is now for sale. Deerhound, the new 40 rating racer, will cruise in the Mediterranean, as will Lethe, the new Watson yawl; both taking part in the Nice races. Mr. Watson has orders now for 15 sailing yachts and a number of steam craft; Mr. Fife has 18 orders, and Mr. Arthur E. Payne has 8.

BISCAYNE BAY Y. C.—We do not look for new club books in mid-winter, but while the first snow was falling in New York there came to us the new book of the Biscayne Y. C., whose season only opens when its members find the North too cold for yachting. The club, whose station is on the southern point of the Florida peninsula, has a fleet of 24 yachts, its membership including some New York and Brooklyn yachtsmen; while strangers always find a warm welcome.



PAVONIA Y. C.—The officers of this club for 1890 are: Com., D. W. Kohn; Vice-Com., W. A. Smith; Treas., L. Mittelsdorf; Financial Sec., B. H. McClain; Corresponding Sec., S. A. Chester; Fleet Captain, A. P. Curtis; Fleet Surgeon, Dr. H. Schweig; Meas., R. Fowle; Delegates to the New York Y. R. A., N. L. Rowe, D. W. Kohn and R. Puhlman. The club will build a fine club house at Atlantic Highlands, opposite to Sandy Hook, the land, 250×50ft., having already been purchased.

MARGUERITE AND ŒNONE.—The cup for the record has lately been awarded to Marguerite in place of Œnone on a remeasurement of the latter. A correct measurement early in the season, as specially requested by the club of all owners, would have saved a great deal of trouble to the regatta committee and measurer.



EDWARD N. DICKERSON.—The death of this gentleman occurred last week at his home on Long Island. Mr. Dickerson was one of the leading patent lawyers of the country; he had been for some years a member of the New York Y. C., owning the schooner Wave Crest.

CRUISING.—Helen, schr., of Philadelphia, Hattie, sloop, and the steam yachts Reva and Wampanoag, are reported at Charleston and Beaufort on their way south. Iroquois, Mr. R. N. Ellis, and Nonpariello, Mr. S. B. Pomeroy, will also cruise in the West Indies this winter.

NEW ICE YACHT CLUB.—The Orange Lake Ice-Yacht Club was incorporated on the 17th inst., and a certificate filed with the Secretary of State at Albany. The deed of gift of the challenge ice yacht cup of America from Gardiner Van Nostrand to the Club was also recorded.

BODY PLAN, SINGLE-HANDER—MECHANICS' INSTITUTE, BOSTON.

SAIL PLAN—SINGLE-HANDER.

Answers to Correspondents.

H. C. S., Toronto.—Six and one-half inches will be large enough for the mast.

A. E. E., Lodi, O.—1. For squirrels, rabbits and birds, what bore would you have in right and left barrels of 12-gauge double-barreled gun? 2. What is best dog for rabbits and squirrels? Ans. 1. Right, cylinder; left, modified choke. 2. The beagle.

H. C., Boston.—Kindly inform H. C., of Boston, that I can give him a copy of the report of U. S. Fish Commission of 1879, containing some good information regarding the eel question.—H. E. B.

M. H. G., Canton, Ohio.—Will you kindly tell me if rabbits are classed as game in England, and if there is any law protecting them there? Ans. Both hare (*Lepus timidus*) and rabbit (*L. cuniculus*), are both considered fair game for the gun in Great Britain; and there are laws protecting them.

SOUTHERN CALIFORNIA.—Yachts are caulked with "caulking cotton;" raw cotton specially spun for the purpose in heavy strands. Oakum is not suitable. Paint the seams, using a narrow brush, as soon as the caulking is completed, then stop with putty. Marine glue is the best for deck seams.

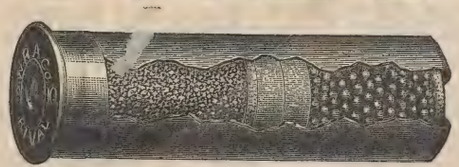
B. W. G., Shenandoah, Pa.—1. Are the produce of a red Irish setter dog and cocker spaniel bitch good bird dogs? 2. Would you recommend the cross? 3. Give me best food to feed dog before hunting to produce best scenting power? Ans. 1. Not so good as the pure bred animal. See recent notes on cross-breds. 3. Feed him sparingly on his accustomed food.

W. N. P., Whitman, Mass.—If a bevy of quail are not broken up will they breed as well and as fast in the following season? Ans. It is generally believed that there is a tendency on the part of quail that pass the winter undisturbed to remain in a park during the summer, but we fancy that this rarely occurs. The reproductive instinct comes with the spring and leads the birds to pair and separate.

F. W. U., Plattsburgh, N. Y.—To whom will I write to obtain trout fry to stock a brook with, and what will be the expense? Will wild rice grow and do as well if sown in the spring as in the fall? Ans. 1. J. Annin, Jr., Caledonia, Livingston Co., New York; W. L. Gilbert, Plymouth, Mass., and Troutmere, Osceola Mills, Wis., have trout eggs and fry for sale, and will send you price lists on application. 2. Yes, if sown early enough.

ANGLER, Philadelphia.—Please tell me why this city stopped fishing in the Wissahickon Creek, a tributary of the Schuykill River, how long it has been this way, and when we will be allowed to cast our bait again. Ans. A member of the Pennsylvania Fish Commission informs us that he thinks Wissahickon Creek was stocked with black bass by M. Russell Thayer, of the Fairmount Park Commission, in the fall of 1887, and was protected for three years. If that be the case it will be allowable to fish there in the fall of 1890.

J. E. W., Asbury Park, N. J.—1. In what month do bass deposit their eggs in New Jersey waters? 2. Do they protect the spawn after it is deposited or do they destroy it when there is ample other food? 3. Under favorable circumstances, what weight bass can be obtained in twelve months from the time they are hatched? 4. Should a hatching box be placed in still or running water? 5. Would you advise hatching or using the fish to populate a pond? Ans. 1. May, June and July are the spawning months of black bass in New Jersey. The female yields from 5,000 to 20,000 eggs, which are adhesive and stick to stones and twigs on the bottom. Sometimes nests, instead of being prepared on the bottom, are formed of vegetable matter deposited on the top of brush heaps, which extend almost to the surface of the water. Nests three or four feet in diameter are recorded by "Homo" in FOREST AND STREAM. 2. The parents protect the nests most vigorously and successfully against all intruders, and take the best possible care of their young. The average period of incubation is from eight to ten days. Small bass are said to prey upon one another for the first two or three weeks of their lives, but not afterward. When natural food is plentiful the probability is that they will not develop cannibalistic tendencies. 3. No less than 4in. 4. Black bass have not been hatched artificially so far as we know. 5. We would introduce the fish. Wonderful and almost universal success has followed the transplanting of bass. The fish thrive in ponds, when properly and sufficiently fed, as well as in open waters.



NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

BEECHAM'S PILLS cure bilious and nervous ills.—*Adv.*

Steam Yachts and Launches;
THEIR
MACHINERY AND MANAGEMENT.
The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.
By C. P. KUNHARDT.
This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*
Cloth, 240 pages. Price, postpaid, $3.00.
FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
SAMPSON, LOW & CO., London, England.

CANOE HANDLING.
By C. B. VAUX ("DOT.")
A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.
NEW YORK: Forest and Stream Publishing Co., 318 Broadway.
LONDON: Davies & Co., 1 Finch Lane, Cornhill.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

ANOTHER PHASE OF COURSING.

A CORRESPONDENT, whose communication is printed in another column, takes a pessimistic view of the introduction of coursing. His argument in brief is that in England, the great center of coursing interests, the sport has largely degenerated, until it has become simply a huge machine for gambling, and that once started in this country, although introduced by gentlemen whose motives may be perfectly proper, and their practice, as at Hicksville, devoid of objectionable features, the sport will here too degenerate into a feeder for the pool rooms, and be a new and eagerly welcomed device for gambling. This phase of the subject is quite distinct from any consideration of an element of cruelty, which some contend is involved in coursing, and it is more deserving of serious discussion than is the cruelty question. A parallel is found in the sport of carrier-pigeon flying, which from the diversion of a few amateurs has become a vast organized system of gambling, with its regular sale of pool tickets on the birds, similar to the betting systems of the race track.

While there may be no unreasonableness in the apprehension that inclosed rabbit chasing, if it shall ever become popular in America, will be on this low level, it would be a mistake to fail to distinguish between the positions occupied by the several coursing clubs, with respect to this contingency. The more nearly in spirit and practice the mode of coursing adopted by any club shall approach the spirit and mode of open, free field coursing, the less will it partake of the objectionable features deprecated by our correspondent. The Eastern Coursing Club, for example, is made up of gentlemen who would, if they could, course in the open; they are actuated by the same spirit that impelled the sportsmen of the old school, when coursing was at its best; they adopt a modification of perfectly open coursing, not at all because they prefer it to open coursing, but because it is the next best thing, and the nearest possible approach they can attain. In spirit and practice this is not the form of coursing concerning which moralists may entertain apprehension.

There is, however, another mode, now being pushed to the front, which if successful will almost certainly be marked by the objectionable features that disgrace the "box coursing" meetings of Great Britain. This is the inclosed coursing, undertaken by a company in the West. In spirit, aim and practice it differs from the Long Island greyhound coursing. The plan is to run the course on an inclosed field or race track, where it may be witnessed by a large gathering of spectators; and the purpose is purely speculative; the end is to rake in gate money. However cunningly such an enterprise may be veiled under the guise of sport, there is nothing of the love of sport impelling its promoters; but on the contrary they are moved by a desire for gain.

A little consideration will show that if this mode of inclosed coursing is ever to fulfil the expectations of its originators and draw crowds to witness it, the crowds must be attracted, not by any such taste for sport as impels the devotee of open field coursing; but by the opportunities the races give for betting. No considerable attendance will ever support inclosed coursing simply to see dogs chase rabbits, without wagers on the results. If inclosed coursing shall succeed, the gambling elements of it will give it success. If we are to be cursed in this country with the moral plague of "box coursing" meets, the plague will be an outgrowth of inclosed coursing, not of the practices followed by the Eastern Coursing Club and others like it. In any intelligent discussion of the present and future of coursing in this country, care must be taken to distinguish between the opposite motives that are impelling the promoters of the two forms we have alluded to.

SHALL THE BOY HAVE A GUN?

YES and no. It depends on the boy, on how the gun is given to him, on his opportunities for a right use of it. If this question is of immediate interest and personal application to any of the readers of this journal, we commend them to take note of the letter printed to-day, from a mother, who relates her experience. If a boy's bent be toward guns and gunning, in the majority of cases the judicious course is to indulge his tastes; give him a gun and teach him how to use it. The pretense that a boy cannot use a gun just as safely as a man can is not entirely well founded. Caution in the handling of deadly weapons must be taught, whether the novice be young or old. There is no quality inherent in mere youth that precludes care in using arms, nor is there any quality in mere age that insures that caution. Care in handling of guns, when once acquired, becomes a thing of habit, a second nature; it is just as much a matter of course to carry one's gun in a safe position and not menacing human life, as it is for one to walk erect instead of on all-fours. Habits are more easily acquired in youth than in later life. Every experienced sportsman knows that the dangerous comrade in the field is not the small boy with his first gun, but the "old boy" who has just taken to shooting and has recently learned to distinguish the breech from the muzzle. It is a characteristic of gunners who take up the sport late in life to have a higher disregard of the danger of firearms than is felt by those who in early youth are accustomed to the use of guns and rifles.

Give the boy a gun; and teach him how to use it. The gun will make a man of him. The effect in this way is often as surprising as it is gratifying. To be trusted with a gun, a manly weapon, is that which will bring out the traits of responsibility, self-reliance, self-respect, caution, dignity. To handle a gun is to do away with toys.

The best possible training a boy can have in the sportsman's art is that given him by his father; such experience in the field is often the beginning of that new relation which holds between a boy and a man, when they pass from the relation of father and son to a higher companionship as friends.

Most men who are themselves fond of field sports, wish to see their sons blessed with the same tastes; and perfectly familiar with the hazards attending the use of firearms, they are yet confident of the ability of the young people to take perfect care of themselves when in the field. Those who cry out loudest against the danger of the use of guns by young people are they who have a terror of firearms, no matter by whom employed.

A favorite theme of the writers for a sportsmen's journal is the first gun they used; and it is a noteworthy fact that the guns about which cluster the tenderest memories of men in middle life or in old age were the arms they bore about the home fields and through the dear old woods in their youth. Many and many a man has blessed the forethought and wisdom of those who when he was a boy inducted him into the pleasures of field sports; and an unnumbered host are they who in those years provided for themselves recollections of happy days out of doors to cheer them all through the course of after life. They are the last to cry out against the use of guns and the pursuit of game by the boys; and nothing in the realm of sportsmanship is more beautiful than the cheerful and sympathetic commendation and encouragement these veterans bestow on the younger generations who are coming after them. Indulgence in outdoor sport with gun and rifle leaves no sting behind it; the boy, who shall receive at this holiday gift season his first gun, will receive with it an open sesame to treasures of pure delight.

PUT IT INTO PLAIN ENGLISH.

HOW shall it reasonably be required of a person to respect a law if he can neither make out for himself what the law is, nor learn from the officials whose duty is to explain and enforce it? For instance—and a capital example it is of the shiftless, careless, bungling, happy-go-lucky legislation of the times—take that portion of the New York game statutes which relates to the sale of venison.

The dealers were in doubt, the other day, as to when the selling season would close. They appealed to Commissioner Blackford to know whether the old date held good, or whether the statute extended the time. Commisssioner Blackford gave it as his opinion that the old law held. The dealers in compliance withdrew their stock from sale. Then the Attorney-General gave his decision, which was just the reverse of Mr. Blackford; and thereupon the game was again put on sale; and the dealers were not unnaturally wroth over the causeless interruption of their traffic.

Is it not preposterous that the law on such a subject, which to be effective must be known and understood, should be beyond the understanding of even the intelligent men who are charged with looking after its enforcement? The game laws should be first of all simple and intelligible, and easily comprehended without referring to Attorney Generals.

The present statute relating to deer and other game is a complicated patchwork, the product of successive years of tinkering at the original. Its several provisions have been amended and the amendments amended, and amendments of amendments amended, with exceptions and exceptions of exceptions, until now it takes a smart lawyer to hazard a guess at what some of the provisions mean, if they mean anything.

Last winter it was proposed to unravel this snarl by submitting the entire body of game and fish laws to a commission of three, who should codify the statutes, simplify them, harmonize the inconsistencies, and put the whole into plain, simple, grammatical, properly punctuated, intelligible English, to the end that a well-meaning man might not be obliged to pay his lawyer a fee to tell him what it means. There was so much ceiling scandal investigation and other pressure of business connected with corruption past or prospective, that the Legislature failed to pass the measure. We are advised that another effort will be made this winter to secure the creation of a codification commission. It is the most important thing likely to come up in relation to game and fish protection. Individuals and associations can do no greater service to the cause than by combining their efforts to secure this commission.

IT was a very pertinent suggestion Mr. A. C. Collins made the other day, that all persons who sincerely have at heart the success of his efforts to protect game and fish in Connecticut, should contribute some money toward it. His comparison of a game protective society to a nickel-slot machine is a very happy one.

The Sportsman Tourist.

THE BLACK TRACKERS OF AUSTRALIA.

IT is commonly stated that the natives of Australia are the lowest type of savages, but the assertion is far too sweeping to be accurate. There are many tribes of natives in Australia, differing widely from one another. Some of them, doubtless, are very degraded; but others display a great deal of intelligence and have institutions and customs, which seem to be the survival of a highly complicated order of society. Others, again, though savages, are very fine savages. That is to say, that assuming they are to live as wild men, they possess in a high degree the qualities that are required for making the best of their conditions. Palgrave, the celebrated oriental traveler, and the best narrator of travels, perhaps, that ever lived, declares that the lowest type of humanity he ever met or heard of, is to be found among some of the wandering tribes in the Arabian desert. These miserable wretches, he says, have not sense enough to get a sufficiency of food where it might be got, but eat the seeds of a kind of grass, and when that fails them, are reduced to starvation, which they suffer with contentment out of sheer stupidity. When he came among them with his servant and camels, in the course of his journey to Central Arabia, they showed no interest in him or his belongings, though he was well provided with all sorts of good things; and, as far as he could make out, they had no ideas on any subject, not even the instinct of a grazing animal, which leads it where the best pasture is to be found.

Now, the worst of the Australian aborigines are nothing like as bad as that. Even in the most barren parts of the continent, where it seems wonderful that any life can exist, the natives contrive to get on fairly well. They cannot afford to be fastidious. In fact, they eat everything that is eatable, including some things which to civilized folks would seem perfectly uneatable. For example, they devour ants and seem to enjoy them immensely. There are several kinds of ants in Australia, some of which are exceedingly venomous, while others are harmless. They make peculiar hills or mounds of earth, in which they swarm in innumerable multitudes. The natives break open these mounds, and filling both hands with ants, stuff their mouths with them, and go on grabbing and stuffing and chewing until there are none left. They even feast on some of the venomous varieties in this way, and do not appear to suffer any ill consequences. They also depend largely for their subsistence on reptiles, which can only be caught by the exercise of much ingenuity and by the employment of faculties more resembling those of animals than of mankind. They hunt them both by sight and smell, and there appears to be no doubt that those two senses have been developed in them to an almost incredible extent by the hereditary instinct for getting food in places where it could not otherwise be got.

It should be said here that the Australian desert, as it is invariably called by the people there, is not really desert in the sense of being void of all vegetation. It does not at all resemble the Zaaras of northern Africa, those low-lying plains of mere sand which literally produce no green thing except in scattered oases hundreds of miles apart. It is not nearly so inhospitable as the alkali deserts of western America. It always grows salt bush, or mallee, or some sort of stunted plants, often many varieties, and very beautiful and interesting ones, when viewed by the discerning eyes of a naturalist; and among these plants, though the earth is like the floor of a brick kiln, there are to be found live creatures, snakes, iguanas, lizards, "native cats," and sometimes kangaroo rats and other small marsupials. It must not be supposed that because an animal is called a native cat, it has anything feline about it. Not at all. The Australians have a habit of calling all sorts of queer beasts, birds and plants "the native this" or "the native that," without the slightest regard to resemblance, even in outward appearance.

The "native cat" is a marsupial animal, carnivorous and frugivorous, perhaps omnivorous, about a foot long, with a pointed nose and a long tail, and beautiful soft gray fur spotted with white. It is as great a scourge to the poultry yard as a fox, and it is also one of the most dreaded pests of the vineyard by its *penchant* for grapes. It is a nocturnal animal, and on moonlight nights in summer it does serious damage by climbing up the low-growing vines and eating or nibbling all the ripest grapes on each bunch. In the desert it lives on the "native currant," a berry which is no more like a currant than the "native cat" is like a cat. It also preys on kangaroo rats and mice, when it can get them. Kangaroo rats and mice are mere diminutive kangaroos, a few inches in height, pretty little creatures, somewhat akin to the jerboas of Egypt and Arabia, but, of course, marsupial. They are found in the most arid parts of Australia, and appear to subsist entirely without water. Iguanas, or, as the men in the brush invariably call them, "go annas," or "go Hannahs," are reptiles like enormous lizards, weird-looking brutes three or four feet long, with a peculiar dry skin hanging in folds upon them as if it had formerly belonged to a much larger animal and been bought second-hand by the iguana or appropriated when cast off by its first owner. The iguana has formidable teeth and bites like a dog. It is also very quick and cunning, and is altogether one of the queerest beasts in that queer country.

Here, then, are the chief constituents of the blackfellow's *cuisine*. It takes a black fellow, however, to find them; for an unsophisticated European might live in those parts for months and not be able to find them. It is very interesting, when a camp in the desert has got bare of food, when the mutton and damper have given out, and there is no prospect of getting any more for many days, to notice the air of importance of the blackfellow, who is generally to be found at every camp and at every sheep station. Hitherto he has been despised and treated with little more consideration than one of the dogs. The rest of the party have grudged him his share of the scanty stock of "tucker," and toward the end, indeed, he has got little but bones and scraps. Now all is changed. Everybody is very civil to him, and he shows by his looks and manner that he feels himself quite a personage, with weighty responsibilities devolving upon him. He is responsible for nothing less than the life of every man in the camp, for he is the only one among them who can get food. In those trackless wastes the oldest and most experienced European bushman is always in danger of being "bushed," that is, lost, if once he goes out of sight of the camp. The scrub is about the height of a man, a little higher, 6 or 7ft., and is so deceptive in its monotonous variety that the traveler loses himself in next to no time and becomes utterly bewildered the moment he tries to find his way back to where he started from. Hundreds of men have walked round in a circle in the scrub till they dropped and died of starvation or thirst without ever having gone a mile from their companions. Not so the natives. No blackfellow ever yet got bushed; and if one were bushed for weeks or months, he could always get a living.

So when the tucker question arises in the camp in its gravest form, the blackfellow ties round his waist a thing that looks not unlike a woolen comforter, but is in reality a netted bag, made of fibrous bark, three or four feet long and four or five inches wide; and thus lightly attired he bids farewell to society with much grinning and gesticulation and glides noiselessly into the scrub. The next day, or, perhaps, the day after, if he has had to go far afield, he returns. His netted bag is still tied tightly round his waist, but it is distended to its utmost capacity by "rats and mice and such small deer," while hanging to it by their heads and dangling from it to his heels are perhaps three or four snakes, a couple of "go Hannahs," and a varied assortment of lizards and native cats. Loud congratulations welcome the successful hunter, who is the most popular man in the camp for the time being. The embers of the fire are fanned into a flame with a cabbage tree hat, mallee roots as dry as tinder are piled on them, a cheerful blaze springs up, and before long there is a nice clear fire for broiling or frying or stewing. Then follows a royal feast, every man eating as much as he can, since meat won't keep in that hot climate, and there is no knowing when he may get any more. Although the animals are numerous and various indeed, there is but little meat on any of them, for they in their turn are half starved. The fleshiest of them all are the snakes and the iguana, which live on insects, and seem always in good condition. Their meat is very white and delicate, with a curious flavor of its own, something like chicken, but distinctly gamy. The meat of the marsupials is not to be distinguished from hare, only there is more on a ten-pound hare than there is on a score of kangaroo rats and native cats. Men living in the open air, who have fasted for two days, however, pick very clean, and there is no waste at a meal like that. If there are any parts which even the strong stomachs of the bushmen reject, the blackfellow is not proud. He eats them all, and is not very particular either as to whether they are cooked or raw.

Now, how did this untutored savage contrive to catch these wiliest and most agile of all wild animals on their own ground and amid surroundings the most favorable to their concealment? He caught them by simply exercising the faculties of a superior wild animal. With those wonderful great brown eyes of his he could see the faintest trail where a snake had zigzagged through the dry moss and leaves, or the lightest footmark where an iguana had fled from his approach to its refuge in a hollow tree. When daylight failed him and the dews of evening began to fall, his broad nostrils took up the chase, and stooping down among the bushes, with a tough forked stick in his hand to support him in his tiring attitude, he followed the track as unerringly as any bloodhound. When he ran a snake to earth, if he could not surprise it in the open and kill it by a sudden blow of his stick, he squatted over its hole, holding the forked end of his stick downward, and made a low hissing or whistling sound with his lips. Soon the snake put his head out of the hole and peered around. In an instant the forked stick descended and fixed it to the ground by the neck, and the blackfellow, seizing it firmly with his muscular hands just behind the head, so that it could not bite him, dragged it out of the hole and twisted its head off; or, if it were too strong for that, pounded it on the ground till its back was broken. So with the iguanas and all the other animals. The blackfellow never lost their trail when once he got upon it, and having followed them to their lair, he patiently waited until they came out or until he was able to get a hand in and pull them out.

The blackfellows declare, and I believe with truth, that not a single animal can escape them if they have time to hunt a piece of desert country thoroughly. When they want to return to camp, they can follow their own trail by sight with the greatest ease, but they say they cannot follow their own trail by scent at all. It has no scent for them, though another man's has a strong scent. This is one of the most curious facts connected with these strange people; but it is only in accord with well-known natural phenomena.

The governments of the several Australian colonies no sooner became aware of the blackfellows' faculty of hunting by sight and scent, than they discerned what valuable auxiliaries they would be to the police. The practice of employing black trackers to detect crime and fugitives from justice dates from the time when New South Wales and Van Diemen's Land were penal settlements, and when the convicts frequently made their escape from the stockades and took to the bush, from which they emerged to become the terror of the highways, and often to commit frightful outrages at the settlers' homes. There was nothing these miscreants were so much afraid of as the black trackers; and they had reason to be afraid of them, for more bushrangers were brought to the gibbet by their means than by any other. They have been employed ever since and still form a valuable adjunct to the detective force.

The horrors of the bad days in the colonies are not pleasant to recall. But I may briefly describe how a shocking crime was brought to light and the criminals were brought to justice by the aid of black trackers not many years ago.

A certain district in the interior of New South Wales had long been notorious for horse-stealing and robberies of various kinds, and several most mysterious crimes had been committed. The police were entirely baffled. It stood to reason that some desperate scoundrels must be at work. But the locality was very sparsely populated, every house was known, and the inhabitants were accounted for as respectable settlers, while those parts of the district where there were no houses were so rugged and inhospitable that it was not thought possible that the bushrangers could subsist there. Bushrangers as a rule are very self-indulgent gentry, like most criminals, and they seldom or never carry on their operations long in any part of the country where they cannot get snug quarters in the houses of relatives or sympathizers among the settlers. Here the authorities, after the most searching inquiries, could not discover a single dwelling in which a bad character would have a chance of shelter. The whole district was divided into large cattle farms, and though some of the homesteads were buried in the bush in very lonely situations, they were large and comfortable establishments, with a number of people about them, and belonged in every instance to men of wealth and standing—the very class who were most inimical to the bushrangers, the horse stealers, and all other descriptions of rapscallions. There was not a single shanty in the neighborhood, the large proprietors having bought out, or squeezed out, every "free selector," as the small settlers are called, a class who had never been numerous in that purely pastoral region. Yet the district was grievously infested by bushrangers. Scarcely a month passed without some audacious crime being committed, and more than once leading settlers were stopped on the roads by masked men, robbed of all they had about them, and cruelly maltreated. There are degrees of villainy even among bushrangers; and the gang who were at work in this district seemed to belong to that odious class of desperadoes who committed brutalities for their own sake.

One day two boundary riders, who had been going the rounds of the cattle station to which they belonged, reported a terrible discovery. In the bush, not far from a back road leading to the principal town in the district, they had found the remains of a man under circumstances so revolting to humanity that they might well be deemed incredible. The indications showed beyond a doubt that the unhappy wretch had been placed naked upon an ant hill, fastened by the hands and feet to trees, and left there to be devoured alive by the venomous insects. This was a mode of torture well known to have been inflicted in many instances by the very worst class of bushrangers upon travelers who had shot any of the gang or had refused to accede to their terms of ransom. In this case it was manifest that the atrocious crime had not been committed many days. The skeleton of the victim was white and dry—for the ants make quick work—but the joints still hung together by the ligaments, and some of the internal parts were not yet destroyed.

The news of this horrible discovery aroused an intense feeling of indignation throughout the district. A meeting of settlers was held and a sum of $10,000 was subscribed toward instituting a vigorous effort to detect the criminals. The authorities at Sydney were communicated with, and the police were allowed *carte blanche*. They at once resolved to secure the services of the most highly trained blacktrackers to be obtained for money. They came from Port Darwin, in the far north of Australia, where they had been in the service of the Government of the Northern Territory. No inkling of this was allowed to get abroad in the afflicted district, but all plans having been secretly laid, a couple of pleasant looking elderly gentlemen, dressed in the garb of new chums from England, rode up one evening to the homestead of the station where the body had been found, and early the next morning three black cattle drovers arrived at the same place with a mob of steers. The new chums were two of the smartest police officers in Australia and the colored cattle drovers were the black trackers from Port Darwin. The latter were little fellows with enormous heads, large, wistful, beautiful eyes, and straight noses with blunt points and wide open nostrils. They wore greasy cabbage tree hats, and the usual ragged breeches and boots costume of the bullock-punching fraternity; but it did not need much observation to see that this was only a disguise in which they were very uneasy.

On the night of their arrival they went bareheaded and barefooted, clothed only in a light serge jumper and trousers, and carrying a short stick in their hand, to the place where the ghastly skeleton of the murdered man still lay, with its wrists and ankles fastened to the trees. The police officers had a long consultation with them in their own language, and immediately afterward the three men began beating the bush just like setters beating a field for partridges. The attitude was most peculiar, the body being bent so low that the head was on a level with the hips, if not lower, the back being hollowed in a very singular manner, and the weight of the forepart supported by the stick held in the hand. Yet, in this cramped position, as it seemed, the blackfellows were able to run at a very rapid pace. They scoured every inch of ground for hundreds of yards in every direction, often going right down on their faces and pressing their noses to the earth for several minutes at a time. In about half an hour they reported that they had found a trail of two horses going in the direction of the hills, and being put on that, they trotted off at a rate of fully five miles an hour. After a run of nearly three hours they stopped short, and, closely examining the ground, decided that they had reached the first halting place of the criminals. They showed where the horses had been tethered and where their riders had rested, and they here made the startling assertion that there were three in the party, of whom one was a woman. The police disbelieved this, but nothing would shake the trackers' opinion. Following the trail on, they found another camping place about twenty miles further toward the hills, and here again they insisted that a woman had been there with two men. What was more, they declared that there had been a struggle, and that the track of the horse which had borne the heaviest burden before was lighter on leaving this spot. The police were incredulous, and were for pressing on, but the trackers were so positive they were allowed to have their own way. It was now broad daylight, and they were able to track both by sight and scent.

They followed a trail of men's feet and other indications in an adjoining thicket, and there found the remains of a woman's body, horribly mutilated and partially charred, an attempt having evidently been made to burn it.

The pursuit was at once resumed, and on the following day the trackers ran the trail into a stockyard at a homestead buried in the bush on one of the roughest cattle stations in the district. The police waited until a body of troopers who were following them arrived. They then surrounded the homestead and called on all the inmates to surrender. No answer being given and all the doors being found barred, the police prepared to set the building on fire. Upon that the owner of the station and two

or three of his hands rushed out and gave themselves up. The police made them fast and continued the burning. Presently three other men made a bolt out of the house, but were shot down and captured. These proved to be the three escaped convicts, who had been twice convicted of bushranging in other parts of the country. One of them died of his wounds. The other two were hanged, and the people who sheltered them were sentenced to a long term of imprisonment. It came out that the cattle station had been bought for the express purpose of affording shelter for bushrangers under the guise of respectability, and that the station owner, who, by the bye, was a justice of the peace and a churchwarden, was brother of one of the criminals. The "plant," as the police call it, was a very clever one, and it would probably never have been discovered had not the police brought the best black trackers on the continent to follow the trail by sight and scent. EDWARD WAKEFIELD.

NOTES FROM ALASKA.

SITKA, Alaska, Nov. 5, 1889.—More than a year ago, when it was announced that I was to come to Alaska, to discharge important official duties, I received letters from old friends in San Francisco, deploring the fact that I was about to exile myself "among the seals and icebergs" of this "inhospitable country." San Francisco has maintained quite a close commercial intercourse with southeastern Alaska for twenty years, and her papers have taken an interest in everything which has concerned the new territory, so that it is almost incomprehensible how intelligent persons there, my correspondents, could have formed such an inaccurate notion of the country, that it is simply a land of "seals and icebergs." This feeling, however, prevails among about two-thirds of both houses of Congress, and has hitherto resulted in the neglect which the Territory and its interests have suffered ever since the acquisition. A singular manifestation of this want of knowledge and indifference is apparent in the legislation of the last session of Congress. The most important developed industry of Alaska is the salmon fishery. Congress declared that all obstructions at the mouth of streams, against the ascending of the salmon for breeding purposes, should be removed, and none maintained. At the same time no appropriation was made for policing the waters of Alaska, in order to enforce this provision. I might enumerate other instances of neglect and indifference. The seal industry seems to engage all the attention of the authorities at Washington, while others, equally important to the country, are ignored.

The topography of the country, the ruggedness of the mountains, the fact that the narrow valleys of the mainland, and upon the thousand islands off the coast, are occupied almost entirely by glaciers, which feed the small short streams which reach the sea, will always prevent Alaska from becoming the paradise of the sportsman. The mountains are the steepest in the world, and are everywhere. The valleys are nowhere wider than the space occupied by the glacial streams which find their way to the countless bays and inlets. The mountain sides are clothed well up with fir, spruce, hemlock, yellow cedar, and a small species of birch, but the undergrowth is a perfect jungle everywhere. The timber, which has fallen, in some places for centuries, seldom decays. In a few years, on account of the intense humidity of the climate, the moss grows over this fallen timber and from it shoots a new growth, so that in thousands of instances great hemlock trees 5 or 6ft. in diameter, have with their roots straddled their fallen predecessors, while cutting into the bodies of the latter shows them to be as sound as when they first fell. Besides this destruction of fallen timber, the devil's club, the alder and the salmon berry bush create a dense thicket at all points. It is the labor of hours often to penetrate half a mile through this jungle. The devil's club is a kind of thorny cactus which grows 10 or 15ft. high in most places and throw out lateral branches, which interlace with the alder and salmon berry bush and present such an obstacle as is difficult to overcome. Besides that, it has a poisonous thorn whose sting creates a pain as enduring and acute as that of the hornet or the yellow jacket. Where the mountains reach a height of 3,000ft. the timber ceases at an elevation of about 2,000ft.

Before the timber extremity is reached, the wild cowslip begins, and this is the favorite food of the deer in summer, and extends beyond that nearly to the summit. The deer feed in great numbers on the islands in the summer during the day in these cowslip pastures, where there is no snow and no water. At night they find their way from the heights and pasturage grounds to the margins of the fresh-water streams to drink, and early in the morning again return to the pastures further up the sides of the mountains. The snow did not begin to fall as early on the tops of the mountains this fall as it did last, though the loftiest of them are now very white, and every day during this almost constant rain it is encroaching downward more and more. In another month, in the usual course, the snow will be four and five feet deep, not only above the timber line, but far down into the timber. This compels the deer to seek entirely new feeding grounds. In the daytime they will then travel far down into the timber to secluded and sheltered spots, where they remain until night. From December to April they seek the beach at night, and feed on the short kelp which abounds and is easily accessible at low tide.

Alaskan deer are very small. I have seen hundreds of them brought in by the Indians for sale, and very few of them will weigh more than 125lbs. when dressed. The flesh has a taste much more like that of mutton than of venison captured elsewhere. The bucks have no such magnificent antlers as the deer of the Alleghenies and the Blue Ridge range. I have never seen an antler where the main stem exceeded ten inches, but notwithstanding this, they are of great beauty and graceful proportions. There are no wolves of any kind on any of the islands off the coast from the British boundary to Sitka, nor have deer been found near the coast on the mainland. The wolves of the mainland seem to have driven the deer across the narrow straits to the islands, where they are unmolested by their enemy.

Deer stalking is utterly out of the question in southeastern Alaska. A small party of us, having confidence that it was possible, notwithstanding the jungle and the thickets, attempted it, but soon gave it up as wholly impracticable. In the summer and fall the Indians resort to places where the deer come to the fresh water for drink at night, and kill them. Few of the Indians have improved firearms of any kind. The sale of such is prohibited to them. Many of them have double-barreled muzzleloading fowling pieces and old-fashioned percussion rifles, and with these they kill the deer at short range while hiding in the thickets close by where the animals come to drink.

At intervals of a mile, and often three miles, small landslides have started well up toward the crests of the mountains, and extended in narrow strips to the base. These are never more than a few feet wide, but are worn to a considerable depth by the water from melting snows. Here there is no underbrush, but the courses are very steep, and in very few instances can they be trodden by human beings. The deer, as agile as the mountain goat, use them as pathways, and when frightened from their feeding grounds, among the kelp along the beach, disappear as quickly as thought up these narrow and steep gulches, and are soon out of sight and hearing. The coyote dog of the Indian will follow them when wounded, and feed on the dead carcasses. In the winter time the Indians kill the deer from their cedar canoes. They paddle close in shore with the stillness of death, keeping in the shelter of every jutting rock, aiming to round a point where deer are feeding on the beach. Frequently, after they are startled, deer will pause and gaze at the hunter in his canoe, and stand there until the fatal shot is fired.

At the present rate, the deer of southeastern Alaska will soon be exterminated. There is no local legislation in the Territory of any kind, and no legislative body. While Congress has made some abortive laws looking to the preservation of the salmon fisheries, and a great stir over the international question of the seal rookeries, not a single step has been taken to prevent the slaughter of deer out of season. There is no close time, and the consequence is that hundreds of pregnant does are killed, and their carcasses simply abandoned in order to secure the skins. The Indins who are more interested in protecting these animals at that season than any others, do not seem to have the slightest regard for consequences. When spoken to about it by white men who have given the matter some consideration, they simply grin at you in a style which they intend for an incredulous laugh, and that is the end of it.

The sea otter, by far the most valuable fur animal in Alaska, has been almost entirely exterminated in the southeastern portion of the country. Formerly it was the most abundant fur-bearing animal on this coast. During Russian occupation limits were placed upon the numbers taken, in order to insure a constant supply, but from the date of our acquisition, in 1867, nothing has been done to check extermination. Within the past few years the sea otter of the western coast of Alaska has been rapidly undergoing the fate of that animal in the southeastern part. Scores of American and other vessels go to the Asiatic coast opposite, with cargoes of firearms and alcohol, and thence a trade is illicitly carried on with the natives on the American side. With breechloading and magazine rifles and nets as substitutes for the old-fashioned spear shot from a long bow, natives and whites are both totally exterminating sea otters and all the other fur-bearing animals of that part of the coast. This evil is becoming so formidable that the period is not very far off when the Government will be called on to support the natives on this coast, when with proper foresight they might have remained self-supporting for an indefinite period. J. H. K.

THE HILL FARMS OF NEW HAMPSHIRE.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* Since writing you a few days ago on the "Woods and Waters of New Hampshire," my mind has often wandered back half a century to some of the happy days spent on those old hill farms, and I have thought of a few more things I would like to say on the subject of restoring the forests of these highlands, rather than to attempt to repopulate them by the introduction of immigrants, whose children after the first generation would probably become emigrants, and leave them for more fertile fields, as did the sons of the early settlers. Let me preface with a few words of geographical and geological description.

Here, where I write, is probably one of the most fertile sections of the State. The Connecticut Valley is about a mile wide, and through it the river takes its usual sinuous course, leaving a broad stretch of fertile meadow on either hand, now in New Hampshire and now in Vermont, from which the hills rise steeply on each side to a height of 300 or 400ft. above the river. Then comes a depression and then a higher rise, and so on till the height of land is reached, either in the Green Mountains or at the "backbone" of New Hampshire.

Many of these high ridges were the first points selected by the early settlers, perhaps for the sunny exposure, perhaps for the lookout, affording more safety from attacks from the French and Indians, who were in the habit of coming down the river on their raids in the "old French war," and it is to some of these farms, which I knew well when a boy, that my memory turns.

The underlying rock here in the valley is a coarse mica schist, which four miles east of the village forms a long ridge about 1,000ft. above the sea, or 700 above the river, with several peaks rising to 1,300 or 1,400ft. above sea level; then comes a deep valley, in which about east of the village head two brooks, one flowing north and one south; and then the land rises again to the village of Acworth, 1,400ft. above the sea, and the rock changes to the genuine New Hampshire granite.

Just four miles east of the village, on the Acworth road, stands the old "Prospect Hill Farm," from which went the two of my schoolmates, whom I spoke of in my last, as leading Western troops to victory in the war for the preseveration of the Union. The old house stands as it stood then, bare and bald by the roadside, with not a tree near it save a few scrubby lilac bushes, for these old pioneers hated a tree as the devil is said to hate holy water, and the grandfather of my friends, who settled this farm in 1780, cut down everything within reach except the "sugar bush," which used to stretch up a rocky swale toward the top of Prospect Hill, itself rising 200ft. higher just east of the house. This was as bare as my hand, and was used for a sheep pasture, and is as bare now, save that the summit is crowned with a cairn of stones and a flagstaff, which were used as a landmark in the topographical survey of the State made some thirty years since.

It is well called Prospect Hill, for from its bald summit the view is clear in every direction. The great granite dome of Ascutney lifts itself 3,000ft in air, clean from the river bank, unbroken by any foothills, about sixteen miles to the north; a little to the east of this is the range of the Croydon Mountains, with Moosilanke beyond them; nearly east is Sunapee Mountain, and in the opening between you get a distant view of Cardigan, and beyond that in a clear day of Mt. Washington itself. To the southeast is Monadnock; and the whole west is one great panorama of the Green Mountain peaks for eighty miles. Mt. Equinox, Mt. Tabor, Mt. Holley, Shrewsbury Mountain and Killington Peak, and in good weather the Camel's Hump, are sharply outlined against the sky.

From the front of the house the "mowing lot" sloped away down into "Rock Meadow," which then held a sparkling trout brook, fed by the waters from the heavy forest of oak, beech and maples, which then clothed the northeasterly slopes of Prospect Hill beyond my friend's domain. There was but little arable land near the house, enough to furnish the necessary supply of potatoes, rye, Indian corn and pumpkins for the family use, and that was all.

Many a happy day have I spent there, going out first in the spring to the "sugar making," then trout fishing in Rock Meadow later, and in the fall squirrel shooting, winding up in the evening with a coon hunt, or a tramp across lots to the "old red school house," set on a cross road as near the geographical center of "the district" as possible, to the meetings of the "Debating Club," for these old farms raised lots of boys then, and we used to discuss the same old questions which have vexed the minds of boys and opened their lips since the days of Cain and Abel. Not that we ever came to blows, but I have never doubted that that historic quarrel arose in some discussion on land tenure, or the single tax! I wish our friend, the author of "Uncle Lisha," would give us a description of one of these country debating societies; he could do it justice.

In the winter my friends came into the village to their grandmothers' to get some higher shooting than the outlying district afforded, for they had then made up their minds to "go West," stimulated by the example of some cousins who had gone from the village to Illinois about 1830, and they wanted to study land surveying and some other matters not quite in the reach of the ordinary country schoolmaster. After they and a still younger brother had gone, their father sold the old farm and moved into the village. Here he bought a bit of pasture land on the edge of the plateau on which the village stands, and down which sloped the road to the meadows, bordered by a beautiful row of old oaks and butternuts. These he at once cut down, and converted into firewood, leaving it as bare as he had left his hill pastures.

Those were pleasant days, though, for the boys at the old hill farm. The dining table was always set in one corner of the big kitchen, and amply stored with rye and Indian bread and butter, doughnuts and cheese, cold baked beans, apple and pumpkin pies, and a big pitcher of milk, and there was no delay nor trouble about meals, if we wanted to go for gray squirrels before daylight, or lingered late by the brook for the last big trout in the evening. I will not attempt to ring in the old device of comparing the provender to that of some noted restaurateur, but there was plenty of it, and we were always hungry.

The old house and the big barns still stand there, but the next house is utterly gone, save the cellar wall. The bare pasture ridge stretches away a mile to the south, and then on another road which crosses it to the valley of the "Great Brooks" stand two more deserted farms, the shells of the old houses and barns left, but windowless and forlorn. Then comes "Brier Hill," once well wooded, but now deserving of its name; then comes another road which sweeps round the base of the next peak, "Sam's Hill," so-called from an old Revolutionary colonel who owned it. This, although joining the ridge at its east end and overtopping it, is of a different formation; it is simply a great wedge of white quartz, thrust up from below, in some early geological convulsion, shaped for all the world like the front sight on an old-fashioned rifle; steep to the east and south, but sloping easily to the west, toward the village. This was too rough and steep for pasturage, and the old wood was left untouched until within the last twenty years, when it has been cleared for lumber and fuel; but not being burned over, the hill is just springing up to woodland again.

South of this hill comes a deep meadow, through which runs a once favorite trout brook, and in which stood a hay barn. The farmhouse to which it belonged stood in another meadow, an eighth of a mile to the west, with another pasture ridge between—but there is nothing left now but the old well.

The clearing of the forests dried up the brooks in the summer, and exterminated the trout, as at Rock Meadow. The alders grew up thick in the sluggish water, and then roots choked it back into the meadows, which have become tussocky swamps instead of good mowing.

Next, and last on my list, which is getting too long already, comes Page's Hill. Over this stretched the "Old Crown Point Trail," by which the Colonial troops from the seaboard marched to Ticonderoga. The old road stretched straight away to the southeast, uphill and down, and here on this hill are two more old vacant farms.

One of these I used to visit often, for the big pastures were full of old solitary chestnuts, left as a shelter for the sheep, and it was a great place for gray squirrels. I well remember the day when President Harrison's grandfather, "Old Tippecanoe," was elected, for two of my cronies came out here, and returned at night with thirteen gray squirrels and one black one. The old farmer died childless, his widow moved into "the street," and the farm passed into the hands of the next neighbor, whose family has run out entirely, but whose old house still stands tenantless on the western brow of the hill, commanding one of the most beautiful views in New England. Down through the valley of the little brook just mentioned, 1,000ft. below and four miles away, you get a glimpse of the waters of the Connecticut, sparkling in the sunshine, with the long ranges of the Green Mountains for a background.

But I have taken too much time in description, for my memory has run away with me.

Here are these miles of breezy, billowy pasture lands, once covered with thousands of sheep, now vacant and solitary; what shall be done with them? The sheep, I

remember, were known as "Saxony merinoes," a small-boned, fine-wooled race, which were too tender for our climate, and which I have seen die of the "foot rot" by the thousand. They have been sent to the West, where in Michigan and Iowa their frames have grown larger and their fleeces longer. And the sons of the farmers have followed the sheep.

I do not agree with the common statement that the farmers' sons have gone to the cities. It has been the sons of the village minister and lawyer, the doctor, the tavern keeper, and the country merchant, who have made the exodus to the large towns. The farmers' sons have stuck well by the soil, and have gone where it is less rocky and more fertile. I have often talked with my farmer friends about restoring the sheep husbandry by the introduction of the coarser-wooled and more hardy Cheviot sheep, which would furnish good mutton as well as wool, for the flesh of these grassy-wooled "Saxonies" was too rank to be agreeable and too small to be profitable; but they pronounce my notion impracticable, and say the pastures are worn out. As the lands lie now they would hardly give a comfortable living to a family of skunks, much less of Scandinavians!

Here and there are patches where long tongues of sapling pines or white birches are stretching out into them; but the greater part of them are given up to sweet fern, hardhack and thistles. The rocky ribs stick out in all directions through the thin soil, in which burning and grazing seem to have destroyed all the seeds and sprouts of the trees. The birches and maples spring up along the stone walls by the roadside, mingled with sumachs and blackberries, and here and there an oak, a butternut or an apple gives evidence of the droppings of some wandering squirrel or jay.

It seems to me that the great need, not only of New England, but of the whole of the Northern States to-day, is a knowledge of some system of judicious forestry. Coal is in some part taking the place of wood for fuel, but the old hardwoods are being constantly used up for railway ties, furniture, baskets, bobbins, etc., etc., and are now being largely drawn upon for wainscoting and floors, to take the place of the pine, which is practically gone. I trust I have not wearied your readers, but as I look from my window on the range of hills once covered with old forest, now bare and rocky, or slowly starting into a fresh growth, which I shall never live to see developed, I cannot help being somewhat prolix on the question, and hope that I may find some to sympathize with me.

Although, as I have said, never intended by nature for an agricultural region, New Hampshire is becoming year by year more and more the great sanitarium for the northeastern seaboard States.

Thousands of visitors from Boston, New York and Philadelphia fill her hillsides and valleys every summer in search of health and recreation; and the number steadily increases. Restore her forests and you restore her fisheries, and the $3,000, which is the extreme that the State has ever spent in any year for her Fish Commission, is repaid an hundred fold annually by the anglers who visit her waters. If New Hampshire cannot produce beef and wheat to compete with the prairies of the West, she can devote her energies to raising strong and healthy men and women, and the State which has furnished Lewis Cass to Michigan, John A. Dix to New York, Jeremiah Mason and John Sullivan to Massachusetts, and Daniel Webster to the Union, need not be ashamed of her products. VON W.

Natural History.

THE WHITE GOAT IN CAPTIVITY.

BY JOHN FANNIN AND GEO. BIRD GRINNELL.

THE fact that *Mazama montana* produces a wool which may be valuable lends an added interest to the question of its possible domestication. The following paragraphs include all the cases known to the writers in which individuals of this species have been held in captivity. We should be gratified to learn of other instances of this kind, and will gladly receive communications on this subject, which should be addressed to the office of the FOREST AND STREAM.

Some time about the 15th of May, 1881, an Indian came to my house, at Burrard Inlet, with the request that I would accompany him to his canoe and look at a *tenass mowitch* (small animal) which he wanted to sell me. I followed the old fellow down to the water, and stood by while he drew the thing out from the folds of an old blanket and stood it on the beach. A little bullet-shaped head surmounted by a pair of tiny, sharp-pointed ears, a mere handful of a body propped up on four long and clumsy-looking legs, it was certainly the most ungainly animal I had ever seen. Its coat was of pure white wool, very short and slightly curly, and with very little appearance of hair except in the beard, which just showed itself beneath the lower jaw. There was no sign of horns, although slight protuberances could be felt beneath the skin where these would come. It was a male and probably not over a week old, and the Indian had run it down on the side of a mountain after shooting its mother. I gave the Indian his price, $2, and, picking the little waif up in my arms, carried it to the house.

For two weeks I fed it on cow's milk weakened with water, feeding it about every hour and allowing it only a very little milk at a time. Then for a day or two I added a little oatmeal to the milk, and before long almost anything of a vegetable nature was eagerly gobbled up by it. It appeared to be always hungry, but strange to say it would allow no one to feed it but myself. It soon became a little troublesome, though, for, no matter where I went, the goat followed at my heels like a dog. At meal times it would accompany me to the hotel, and repose at my feet under the table. It would follow me into the woods, on my short trips after grouse, and the report of my gun had little or no effect on it. If I climbed up on a stump and sat down for a smoke, the goat would climb up too and sit down on its haunches by my side, and with its nose straight out in front gazing solemnly into the gloom of the deep forest, so long as I kept quiet it would remain motionless. The chirrup of a squirrel or twitter of a bird failed to attract its attention in the slightest degree, but if I made the least motion to get down, it was up at once and ready for a spring.

It had a great passion for high places, which I imagine is born with the animal. When I first got it, I made a bed in one corner of the shed by filling a low box with clean, soft hay, the goat standing by watching the operation. When it was finished I picked him up and put him on the hay, pulling his legs from under him and making him lie down; in fact giving him to understand that that was to be his bed. But as soon as I took my hands off him he jumped out of the box. At the further end of the shed, which was about fifteen feet long, stood a pile of fir bark, six feet high, corded up in the usual way of cording firewood. When he jumped out of the box he walked over to this pile and stood for a moment looking up at the top of it. Then he backed away from it till within a few feet of where I stood, and taking a run climbed up that bark like a cat, and lying down on the top looked at me as much as to say, "This is the way we do in the mountains." From then till the day he died his bed was always on the top of that bark.

He was an early riser, and long before my usual time of getting up he would rout me out by butting against the door. There were two domestic animals it could not bear the sight of—a cow and a dog. But while it would almost break its neck in its endeavors to get away from the former, the appearance of the latter aroused all the combativeness of its nature. One day a gentleman came into my shop accompanied by a setter dog, when the goat immediately assumed a belligerent attitude, walking around the room stiff-legged, his little hoofs coming down on the floor with a loud tap at every step. Finally he halted at a respectful distance from the dog, and with his head lowered, bracing himself for a last effort, he seemed to be awaiting, or about to begin, an attack. The dog surveyed the little creature for a moment, and then, probably thinking it scarcely worth bothering with, lay down on the floor and went to sleep. As the dog remained motionless, the goat relaxed its rigid attitude and moved cautiously nearer, until, by stretching its neck, it brought its nose within an inch of that of the dog. Just then a fly disturbed the dog's slumbers, and in bringing up its paw to brush away the insect, it hit the goat a sharp tap on the nose. Like the recoil of a steel spring, quick as a flash, the goat sprang into the air, and in coming down and trying to alight as far away from the dog as possible, he got tangled up in the legs of a wooden chair, which, in his hurry to get out of the house, he carried off with him. When he shook himself clear of the chair and looked round and found that the house had not fallen and that the dog was perfectly quiet, he put on a look of utter disgust and skulked off into a corner of the yard, where he lay down in a clump of weeds and remained out of sight till the dog was clear of the premises.

As a general rule he was quiet, in fact mopish; but when he did break out in a playful mood, some of his tricks were simply ludicrous. One day I was sitting with a friend in front of my house, when the goat, which had been cutting up pranks, evidently for our amusement, came and lay down at my feet. The cutting for the stage road, which ran past the house about 50ft. away, had left a steep bank about 5 or 6ft. high; that is, the road was so much lower than the plot on which we were sitting. Presently the goat got up, and walking over to the edge of this bank, stood looking down this miniature precipice to the road. Suddenly he sprang into the air and pitched headforemost down the bank. I ran across, expecting to find the little brute with its neck broken, instead of which he was standing at the bottom shaking the sand out of his eyes and nostrils. When he got through he climbed up the bank, and turning round, performed the same act again, turning a complete summersault on the way down. He did this about half a dozen times, occasionally throwing himself on his side and rolling down, covering himself from head to tail with dirt and sand.

I allowed him the full liberty of the house, in fact I could not control him, and it was this unlimited freedom that cost him his life. He was always with me in my work shop, and would always jump up on my bench and stand sagely watching every movement I made. He had a great habit of picking up and chewing anything he came across, and one day he did this with one of my poisoned bird skins. He had taken the skin outside the house, and the first I knew about it was when the little fellow came running through the door toward me, and fell before he quite reached me. I suspected what was the matter, and lifting him up poured some sweet oil down his throat, but he died in about half an hour.

His horns at this time were about one inch long, and considering that the horns of some young males in September are from four to five inches long, it is more than probable that these appendages are of rapid growth the first year. J. F.

Unusual as is the white goat, and few as are the hunters who have killed it, there are yet known many instances of its having been captured and kept alive in a state of semi-domestication. The results of our investigations into this matter have somewhat surprised us, and show that with ordinary care there is no reason why this species, if captured young and permitted to remain in its native country, may not be reared in captivity and become as tame as any domestic animal.

It has been reported that a number of years ago—the dates vary from 1869 to 1876—several white goats were caught alive in the mountains somewhere near Deerlodge, Montana, and we have seen a *carte de visite* photograph of what appears to be a large male, which is said to have been of one of these animals. Of these individuals we have been able to obtain no detailed account. More recent, and more to the purpose, is the narrative of the capture in 1879, near what is now Phillipsburgh, Montana, of eight individuals of this species, the details of which were related to us by Mr. David Dobson, one of the three men who took part in the hunt. David Dobson, his brother Thomas and a man named Palmer made up the party, and the ground where they captured the goats was the nearly flat top of a rock-covered mountain about 20 miles from the head of the Bighole, near where Phillipsburgh now is. Above the general level of the mountaintop rose, here and there, isolated pinnacles of rock. This flat mountaintop was the home of a band of about thirty goats. They had been discovered by the men, who supposed that live specimens of *Mazama* could be sold for large sums of money. Having provided themselves with a number of dogs, one or two of which had been trained to this chase, they started out about June 10, 1879. Proceeding with their horses as far up the mountain as convenient, they camped, and the next morning ascended the rocks on foot, taking with them their dogs and ropes. The goats, conspicuous by their whiteness against the gray rocks, were soon discovered. They were quite unsuspicious, and permitted a near approach. When they began to move off, the men loosed the dogs, which soon drove a part of the band up on to a rocky pinnacle, where they stood at bay, defending themselves by fierce thrusts of their sharp horns at the dogs. They paid little heed to the men, who were able to advance so close to them as to throw the noose of a rope over the head of one of them. This having been done, the loop of a second rope was slipped over the first one and run up close to the animal, when it was dragged from its perch. Two men, one on either side of it, each holding a rope, could so far control the creature as to keep it from reaching either of them. In this way they caught in three trips up the mountain eight goats. At each visit, the goats were wilder than they had been the time before, and after they were chased the third time, they deserted the mountain, and were seen on it no more.

The animals when first caught resisted fiercely and made vigorous efforts to attack their captors. So violent were their struggles that several of them were seriously injured and afterward died from this cause. They were necessarily handled roughly, for they would not lead, and the men were obliged to throw them down, tie them and then carry them on a litter down the mountain to a point where a horse could come. Here they were transferred to a travois, and so transported to the camp, where they were picketed out. Of these animals four were young and four were adults; there were three males and five females. The young ones soon became tame, but the old were always savage and morose. All of the latter died within a few days, either from injuries received at the time of their capture or from hurting themselves by dashing about when picketed. One of the young ones died, probably from having been given some molasses to eat.

Mr. Dobson stated that of the three survivors one was given to the owners of the trained dogs, in return for the use of the latter; one was pledged for provisions, and one was left at a ranch to be cared for, and is supposed to have died. The subsequent history of these animals is not known, but it is possible that one or more of them may be identical with other captive goats to be mentioned later—those owned by Mr. Dickson.

Nearly ten years ago our friend, J. C. Hughes, told us of having seen, some years before, at Yale, B. C., two young goats which had been captured and brought into the town by some Indians. He stated to me as an example of the jumping and balancing powers of these animals, that if put in an empty barrel these little things would jump out of it, and balance themselves on the chine of the barrel.

Captain Chas. E. Bendire, about the year 1876, in Idaho, between the towns of Rocky Bar and Atalanta, in Alturas county, heard of three tame white goats. These belonged to a German citizen of the former place, were allowed full liberty, and were often seen on the stage road between these two points. We have tried to obtain some detailed information about these specimens, but so far without success.

Through the kindness of Mr. Howard Rogers, of Ferndale, Washington, we are able to give an account of a tame white goat received by him from the Rev. John A. Tennant, an early settler of Washington Territory, who writing to Mr. Rogers about this individual, says:

"I saw the goat on the Columbia River, at the mouth of the Wenatchie, in the winter of 1871-72, I think in December, 1871. It was caught by an Indian hunter in the Cascade Mountains, near the headwaters of the Wenatchie, where they are quite abundant. It was very small when taken, and was given to a trader living at Wenatchie, and raised by him. It was a male and less than a year old, but seemed nearly grown. It ran around the house and was a great nuisance, as it could not be kept out of the house, but would hide itself under beds or wherever it could, and would be found in the morning sleeping on the cook stove. It would go out and eat hay with the cattle, and was most pugnaciously inclined, and woe to the cow that dared provoke its wrath, as it would follow her for half a day, butting her at every opportunity. Like the true goat it was omnivorous, and this caused its death, as it found a pair of old buckskin pants and devoured the same, which was the cause of its untimely decease shortly after I saw it. From what I saw of it I think there would be no difficulty in domesticating the animal if taken young."

There is said to have been, about twelve or fifteen years ago, a white goat on exhibition at Woodward's Gardens, in San Francisco, Cal. We have been unable to learn any details of the history of this specimen, but through the kindness of Mr. F. Gruber we are given to understand that it reached the gardens in bad health and lived but a very short time. We have an impression that it came from British Columbia. Its mounted skin is at present on exhibition at the gardens.

In the year 1888 we heard from Mr. Joseph Kipp, Indian trader at the Blackfeet Agency in northern Montana, of some domesticated goats at one time owned by a resident of Silver Bow or Butte, Montana. His information about these animals came from Mr. James Ross. It was stated that they were perfectly tame and roamed at liberty over the country. Usually they were docile, playful and good-natured, but at times they would be seized with sudden fits of anger and would attack calves and dogs, inflicting severe and often fatal wounds with their sharp horns. So troublesome did they become in this way, and so expensive to their owner, that he had brass knobs put on their horns to protect the animals which they attacked.

Soon after hearing of these goats we wrote to Mr. Ross on the subject and received a reply stating that the owner of the goats referred to by Mr. Kipp was Frank Dickson, of Butte City. Mr. Ross says, further: "When I left Butte City, four years ago, he had three of these animals. Whether they bred or not I am not able to answer. He (Dickson) was living close to the timber and allowed the goats perfect freedom to go where they pleased. I myself have seen them in the timber, several miles away from home, but they were always sure to be at home by sunset. They were captured when about six weeks old, in the Cable Mountains, about eighteen miles from the present city of Anaconda, or about thirty-six miles from Butte." Mr. Ross further said that he would com-

municate with Mr. Dickson, and on receiving fuller particulars would let us hear from him again, but up to this time we have received nothing from him. It seems not improbable that these animals, or some of them, may have been those captured by Mr. Dobson's party in 1879. At all events they must have been taken in almost the same locality, though fuller information is needed to absolutely connect the individuals.

On May 24, 1889, a Cree half-breed named Burd captured on Red Eagle Mountain, overlooking Red Eagle Lake, in Montana, a young female goat whose mother he had killed. Of this animal Mr. J. W. Schultz, Burd's partner, wrote: "We feed the goat mare's milk, three pints a day, and she is doing finely. She seems to be much more hardy than a young sheep [*i. e.*, *Ovis canadensis*], and when she is not asleep she is jumping about and playing all sorts of antics. I notice that she uses her knees a good deal when climbing a steep place. Instead of bleating, the noise she makes is more like the mew of a cat." This little animal died June 11. The cause of its death is not known. In a letter received from Mr. Schultz in November, 1889, it is stated, on the authority of Burd, that a Blood Indian recently caught a goat alive on the McLeod road near Lee's Creek, and took it into the settlement, where he sold it to a rancher for $8. It soon died.

The history of the various individuals already mentioned seems to indicate that with proper care and feeding there is little difficulty in rearing and domesticating *Mazama montana*, if it is captured when quite young, and is not removed from the region to which it is native. These domesticated individuals become, like many others of our American herbivorous animals, so familiar as to be very troublesome. They are too affectionate. Their life in captivity is somewhat precarious, owing to the depraved appetite which seems to be common to them and to tame mountain sheep, antelope, deer and elk. All these animals pick up and chew or eat a variety of substances which are not food. They will devour paper, cloth, tobacco and even meat, and this extraordinary appetite often causes their death.

The adult white goat probably cannot be tamed. We have never heard of one that long survived captivity, and Mr. John Willis, who has had some experience with them, wrote us some time ago, "They are very easy to trap, but I do not think they would live out of the mountains. I had one kept in. [It did well] as long as I staid in camp, but when I brought it down out of the mountains it did not seem like the same animal. It just grieved itself to death." G. B. G.

A TAME SNIPE.

Editor Forest and Stream:

A domesticated surf snipe your readers may say is impossible, and yet it is an undisputed fact. Every shooter who goes to the sand dunes of the Great South Bay during the summer months, to sit for hours at the time in the broiling sun, lying in wait for the restless snipe, has probably seen the beautiful turnstone (*Strepsilas interpres*), commonly called the horse-foot snipe, coursing the sands alone or in company with one or two of its own species. One of these handsomely plumed birds fell a victim to my 12-bore, or rather was made a captive last July while crouching behind a few highly scented empty barrels 30yds. away from my stools, out on Rockaway Beach, better known as the "Point." The bird appeared to be stunned, and was but very slightly injured on the tip of the right wing.

I caught it after a brief chase, and being struck by its extraordinary beauty, resolved to take it home and try to keep it alive. My friends assured me that my experiment would prove a dismal failure, as the snipe would not feed in captivity, and furthermore, it would be very difficult to find out just what kind of food to offer it.

Our noble turnstone was very reluctant the first three or four days to partake of any of the tempting morsels put before it—boiled rice, the white of a boiled egg, mockingbird food and meal worms; all these remained untouched. Then I tried an oyster on the half shell. The bird fairly pounced upon the bivalve as soon as placed within his reach, and devoured it in short order.

Oysters, mockingbird food and an occasional meal worm form its regular bill of fare now. It seems to thrive on it, is growing fat and plump, and has become thoroughly tamed; it takes its food from my hand, and leaves and re-enters its cage whenever so inclined.

WM. SCHOTT.

BROOKLYN, N. Y.

THE SNOWY OWL.

Editor Forest and Stream:

My request for information as to the winter zone of the snowy owl (*Nyctea nyctea*), appearing in your issue of Nov. 28, 1889, has brought me such a considerable volume of information from many willing correspondents that I am encouraged in attempting to further ascertain all I possibly can concerning this bird. I shall be exceedingly obliged to any one who will send me facts about the snowy owl, telling particularly of early, late, or extreme southern appearances. I suggest the following heads as convenient for grouping the information to be sent, and as outlining the ground I wish to cover: 1. Where and when you have seen the snowy owl. 2. What you know of the observations of others in your vicinity. 3. If these birds occur in about the same numbers annually with you, and if they arrive and depart on uniform dates. 4. Of any local or common names for this bird, also of names in other languages than English. 5. Of the cry of the snowy owl. 6. Food of this owl; state if information is from examined stomachs. 7. Measurements and weights. 8. Plumage of adults, albinos, or melanistic specimens. 9. If its flesh is ever used as food by man, or by other animals, *i. e.*, its enemies. 10. If at any time they are gregarious. 11. Nest; eggs; plumage of young. 12. Newspaper clippings. 13. Thermometrical and barometrical records bearing on the movements of this species. 14. Of the life of the snowy owl in confinement.

L. S. FOSTER.

NEW YORK, Dec. 12.

Editor Forest and Stream:

About Dec. 1 a large snowy owl was killed eight miles east from this place, and since that time no less than ten have been reported to me. I have never seen or heard of one in this locality before, and old settlers say the same. We have had very mild weather all the fall; in fact, the ducks have not left us yet, and yesterday (Dec. 12) I killed three jack snipe, which would seem to indicate a continuance of pleasant days. Owls of all species are more abundant than I have ever before seen them, particularly the great horned owl. C. P. HUBBARD.

BROKEN BOW, Nebraska.

Editor Forest and Stream:

Within the last month five snowy owls have been shot near here; and two have been captured alive and are apparently doing well in confinement. Some of those killed were very large, measuring nearly 6ft. from tip to tip. The contents of the stomachs of some of those killed show them to have been feeding on birds. This is their first appearance here for some seven or eight years. H.

EDGAR, Nebraska, Dec. 12.

A LATE FAWN.—Thetis, Washington.—*Editor Forest and Stream:* On the farm of Mr. Robert Legerwood, near Thetis, Washington, was found on Nov. 10, 1889, a dead doe, which, at the time of her death, a few days previous, was carrying a fawn. Mr. Legerwood had fired at a large buck the day before, and observing his dog sneaking into the bushes in the direction where last he had seen the escaping buck, he went, accompanied by his neighbor Mr. R. B. Lane, to see if the dog had not found his deer dead. They found instead the dead doe. The day following (Nov. 12) I hastened to see for myself this strange sight. I found the dead deer, a large doe of the white-tail species (*Cervus virginianus*), and the fawn was a doe apparently perfectly developed and almost ready for birth. It was the opinion of all who saw the little wonder that had the mother been unhurt its birth would not have been later than Dec. 1. The mother doe had been shot with a small solid bullet, which struck her too far back, and the unlucky hunter had in consequence lost a really fine specimen. Another illustration, by the way, of the practice of carrying pop-guns in pursuit of large game. Four persons stand ready to testify to these facts, Mr. Legerwood, Mr. Lane, my son Bruce Belknap, and myself. So out of the usual order of nature is this strange fact, and so contrary to my own observation for thirty-five years, that I call upon my brother sportsmen and hunters to produce if possible a parallel instance.—ORIN BELKNAP.

WANTED—A DEVIL FISH.—There is not in the National Museum a good skin of the devil fish, sea devil or manta (*Manta birostris*), which is so effectually described in Elliotts's "Carolina Sports," published three decades ago. This immense ray, with a disk breadth of twenty feet, is said to be common enough still in the Gulf of Mexico, and we have seen many individuals off the coast of Yucatan. As the delight of many of our angling fraternity is in big game, we invite their special attention to this huge creature, which will furnish sport for a boat's crew. The museum will pay the cost of transportation, and in winter it will not be necessary to use ice for packing; the ray can be shipped in a box or cask, simply wrapped in gunny sacks, canvas or some other coarse material, and addressed to the Smithsonian Institution, Washington, D. C. This ray will be readily recognized by its great size and the long ear-like appendages on its head, commonly referred to as horns. A figure of the species is given in DeKay's "New York Fauna," Fishes, plate 67, fig. 219.

GREAT GRAY OWL IN NEW YORK.—An adult female specimen of the great gray owl (*Ulula cinerea*) was taken by John Wright, of Watson, Lewis county, N. Y., Dec. 17. The big bird flew into the yard where they were butchering and perched in a tree near them. Mr. Wright had been told by Mr. James H. Miller, of this place, to shoot any owls he might see and bring them to him. When Mr. Miller was shown the bird and was informed that it had been purchased for him, said, "I will take this as a Christmas present and ask for nothing else." When he told me where it had been shot and by whom, I could but heave a sigh, for only the day before I had been rabbit hunting in the very woods the bird flew out of when first seen, and my horse had been hitched in the very yard where the bird was shot. The measurements were: Length, 24in.; extent, 58in. The stomach was empty. This is the first authentic record of this species having been taken in Lewis county, so far as I am aware of.—O. STEWART BAMBER, M.D. (Lowville, N. Y.).

LOCKED ANTLERS.—Kankakee, Mich., Dec. 14.—Messrs. Harrison Loring and F. S. Campbell have just returned from a hunt in the Upper Peninsula. They report game very scarce and wild, and hunting bad on account of being dry and very noisy in the timber; nevertheless the party killed eight deer. Mr. Campbell killed two very large bucks caught fighting. When they were surprised their antlers were so firmly interlocked the bucks could not separate themselves, and thus fell an easy prey. The united efforts of Mr. Campbell and Mr. Loring with their naked hands could not separate the antlers, and they had to resort to levers. Mr. Loring and Mr. Campbell say that if any of their friends should go to Metropolitan, Mich., and desire a lively rig they recommend their friends to call on Case Anderson. They received many courtesies from Peter McCrimon, a foreman of the Ford River Lumber Company, near whose quarters they were camped.

ALBINO SQUIRREL.—Granby, Conn.—I have just had brought me to mount a pure white (albino) common ground squirrel (*Tamias striatus*). Man had kept it in a cage for over a year, but it got out and his cat killed it.—N. E.

PHOTOGRAPH OF GROUSE ON NEST.—The gentleman who left at this office recently a photograph of a grouse on her nest will greatly oblige by sending in his address.

THOSE ANTOINE BISSETTE LETTERS.—New York, Dec. 20, 1889.—*Editor Forest and Stream:* I can not help writing to thank Mr. Robinson through you, for those two Antoine Bissette letters. I have read and re-read them; finding more and more points in them each time, aside from the *patois*, which is inimitable in itself. They bring to mind "Uncle Lisha's Shop" and good "Sam Lovel's Camps," which with my pipe have been my solace on many a rainy evening at home. A Merry Christmas to "Hol' M'sieu Robyson." May his "heyesaght" last and may "he gat great many hole wan he'll come dead."—D. A. W.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.
COLT 10 and 12, Oct. 24.
FOLSOM 10 and 12, Sept. 26.
FRANCOTTE 12, Dec. 12.
GREENER 12, Aug. 1.
GREENER 10, Sept. 12, Sept. 19.
HOLLIS 10, Nov. 7.
PARKER 10, hammer, June 6.

THE SMALL BOY AND THE GUN.

FROM A MOTHER'S STANDPOINT.

Editor Forest and Stream:

Ten years ago, the question of allowing my son, a boy of eight years, to use a gun was a vexed one in my mind. One day it was decidedly settled—first in my own, and later in the minds of the boy's father and grandparents, and in this wise:

It was a beautiful sunny day in October; a day when young people, as well as their elders, felt it almost a sin to remain indoors, when my aforementioned son of eight years came rushing into my sitting room where the family were assembled, with a white scared face and trembling voice. "Oh, ma, Mrs. Perkins says Jimmy has been killed out in the woods. She wants you to go right over there!" This exclammation, although a trifle incoherent, was lucid enough for me to understand that some accident had happened; and I left the house, only to return some hours later saddened by the sight of the death of a promising lad of ten years, caused by the careless handling of a shotgun. "To think!" exclaimed the heart-broken mother, while she was surrounded by several sympathetic friends, "I have always had such a horror of firearms, and never allowed Jimmy to handle a gun. Where could he have gotten hold of this one?"

Poor child, and poor mother! My heart ached for her; but it did seem to me as if she had not cared for her boy in the right way, and that she was almost to blame for his death. Almost any boy will get hold of some sort of firearm and "go hunting." If he has to do it by stealth, so much the worse, but do it he will, and to the astonishment and wrath of Jack's grandmother, the horror of Jack's grandfather, but with the approval of Jack's father, Jack had a gun. It was a small light gun, but well made and entirely reliable; and the boy's delight and dignity were indescribable. Do you suppose he had it to play with or unconditionally? Not at all. It was in vain I tried to quiet the apprehensions of the mothers of the neighborhood by telling them my reasons for the gift. In time two or three came to argue with me, and their sons had the same privilege as mine, but it was a long time before I had any followers.

In the first place, as Jack's father was not much of a sportsman, I took the boy to a man who lived in the neighborhood, who often spent a day in the woods, and told him just what I wanted, viz., that Jack should learn the proper use of a gun—that he should know the dangers of firearms and also the pleasure of a day spent in the pursuit of game; and after applauding my ideas, Mr. Stearns readily agreed to take Jack as a pupil. After this, on Wednesday and Saturday, if the weather permitted, Mr. Stearns and Jack would "go a-hunting." Sometimes I went also; and when Jack was twelve years old Mr. Stearns's company was sometimes dispensed with and we went together. As Jack grew older, he saw more and more the necessity for care and caution, and now when he goes off with dog and gun I feel no uneasiness.

Why is it, I wonder, that mothers so often fail to understand the natural longings of their sons. Is it too much to ask that they put themselves occasionally in the boy's place, and feel that the gun, the bicycle, the new base ball bat or the camera will save the boy from the temptation of the cigarette, the saloon, the vicious literature or other evils of the day? Let some other mother be heard on the gun question. OLIVIA HOARD.

Editor Forest and Stream:

The excellent letter of "Picus," in the issue of Dec. 5, would be perfect if it spoke of the shotgun as it does of the rifle. With him I say not only that every boy, but every girl should learn to shoot. Why should our sex monopolize the most delightful of recreations? In these days of small-bores, light weights and powders of slight recoil, why should not the girls accompany us in the field, shoot, handle the dogs, and, while greatly increasing our enjoyment, themselves taste the pleasure of shooting over setters and pointers? It is true that, as a rule, they do not seem to care about it. But is not this merely because they do not know what they are declining? Indeed, many women go so far as to believe that our only object in going out is to kill, that we cannot enjoy a day in the field unless we return with a big bag! No wonder they think it a cruel sport and do not care to join us. But let them once see our dogs work, and understand wherein our enjoyment lies, and they will appreciate and share it. As for conventionalities, if it is proper for a young lady to take a walk, it is certainly quite as proper for her to carry a gun while she walks; and if a chaperone is necessary, let her come—she can carry the game and extra cartridges. SETTER.

ANNISTON, Alabama.

SMITH'S MILLS, Pa., Dec. 9.—Four of our hoary-headed hunters accompanied by Bruno (an all-around dog), sallied forth on the 30th ult. to the head of Moshannon, to show the young bloods what their sires could do. They were back inside of six hours with an immense specimen of a wildcat and excited tales of having seen two more. Bruno did the business in connection with their old-time muzzleloaders. Some of the lads bagged an oppossum in a neighboring swamp last week. I have never heard of one being captured before in this section. Small game of all kinds continues abundant. You should have seen the Doctor and the Professor from Houtzdale, with five dogs, scaring the life out of a poor little cottontail which had hid in a brush pile. But I must close; my pipe is out, also my fire, and the wind howling around the sanctum seems to foretell snow, and that means getting up at 3 o'clock to go to the happy hunting grounds. Did you ever hear of three deer at one shot? It has been done. I may some time tell you of it.—C. D.

THE NEW YORK ASSOCIATION FOR THE PROTECTION OF GAME.

ON Monday, May 20, 1844, a number of gentlemen met at the house of Mr. Wm. Senn, corner Forsyth and Broome street, New York city, for the purpose of forming a club to protect sporting dogs from the oppressive laws then in force.

Mr. B. J. Meserole was elected president, T. D. Howe vice-president, and Jas. McGay secretary. After a brief address the president offered the following resolution, which was adopted unanimously: Resolved, that the gentlemen here assembled form themselves into a sporting association, to be known by the name of the New York Sporting Association, the object of which will be to attend to the interests of game and sporting generally. The roll was then signed by the following named gentlemen present: B. J. Meserole, Thos. D. Howe, Jas. McGay, D. H. Carpenter, W. S. Thompson, D. L. Brown, John Rae, Jr., T. B. Smith, T. A. Fowler, Ed Voelkner, Robt. Sinclair, Wm. Senn. At the next meeting a constitution and by-laws were adopted, and the initiation fee fixed at $3 and dues $1 per year. Thus began the life of an association that was the parent of hundreds of similar associations throughout the country, an association that was the means of starting a movement toward procuring proper legislation for the protection of fish and game, the value of which cannot be estimated.

The reader should remember that at this time there were no State laws in force, only a few city ordinances, to which no one paid the slightest attention. There were no game protective societies in existence, and a sportsman was looked upon with suspicion. From that date up to the present time this association has, in the face of the greatest difficulties, in face of the opposition of influential poachers and unscrupulous dealers, carried on a steady warfare against violators of the game laws, and brought the laws to their present state of perfection. They also, by their good example and widespread influence, created a healthier sentiment in the community, so that the people no longer thought it good form to serve game on their table out of season.

In addition to this their constitution served as a model to hundreds of new clubs, and every year the secretary received numerous letters asking for copies of their constitution and game laws, and for advice about bringing suits and forming clubs.

People as a rule have little idea of the amount of time, labor and money spent by this association, or the obstacles they have had to contend with. Some suits have dragged for years through the courts and been carried up to the highest tribunals before they could be decided in favor of the club.

To illustrate some of the difficulties of such law suits we cite the following examples: One season while two of the members were at Albany urging important changes in the game laws, their attention was called to a man who was openly selling quail out of season. Suit was brought and the dealer acquitted by the jury; his defense being that they were not quail, but curlew! He had cut off the bills and feet, with the intention to deceive the public. This in the face of the evidence of two good witnesses to the contrary.

Another suit was brought against a restaurant keeper for serving venison out of season. It was down on the bill of fare as venison, and the witness who ate the venison pronounced it venison without doubt, but the offender escaped by swearing it was buffalo meat.

It is impossible in a short article to go into a detailed history of the club covering a period of forty-five years, so we can only mention a few interesting facts.

Among the early members we find the name of Henry W. Herbert (Frank Forester), who, whatever may have been his failings, did more than any other writer to teach people what true sportsmanship was. His old crony Thos. Ward (Tom Draw), of Warwick, was also at one time a member. Among many other prominent citizens and sportsmen who signed the rolls are Christian Schwartzwaelder, Jas. Harper, Orison Blunt, Genio C. Scott, Philo T Ruggles, Recorder Hackett, Chas. Banks, Chas. E. Whitehead and Royal Phelps.

The first suit brought by the Association was against one Daniel Young, of Fulton Market, on June 8, 1844. From that date to the present time there have always been more or less suits in the hands of the counsel. Mr. McMahon and Recorder Hackett were the first counsels for the club.

Royal Phelps, who for many years was president of the Association, was elected on May 24, 1858. He was one of the most energetic members the club ever had; and under his administration the Association was brought to its present efficient state. His name became a terror to all violators of the game laws. Mr. Phelps was instrumental in obtaining sufficient subscriptions among the members to purchase the magnificent collections of heads and antlers that Mr. J. W. Hays left, and which were presented to the American Museum of Natural History.

For a number of years the club had rooms at 754 Broadway. During Mr. Phelps's term of office the Association met at the houses of the different members where they were always handsomely entertained. At this time Mr. W. J. Hays, the artist, was secretary and Mr. Chas. E. Whitehead counsel.

In 1868 the Hon. Robt. B. Roosevelt made the first attempt to have a State Fish Commission appointed; and on Feb. 10 reported such an act, which was afterward passed, and which has been of the greatest benefit to the people of this State.

In 1870 the suit against Middleton & Bros. was commenced; their defense being that the game laws were unconstitutional, but the courts decided this vexed question in the club's favor.

In 1871 Mr. Phelps was able to congratulate the Association on the fact that, through their influence, good game laws had at last been passed, and had been signed by Gov. Hoffman after he had subjected them to the club for approval.

In 1873 a suit was brought against one Laird for selling trout out of season. The penalty was $1,000.

On March 10, of this year, the club voted to change the name "New York Sportsmen's Club" to the "New York Association for the Protection of Game." The club was incorporated under this name in 1883.

Jan. 18, 1875, the secretary, Mr. Thos. N. Cuthbert (who also acted as assistant counsel), reported that he had obtained a judgment against Middleton & Carman for $2,500 for having 100 speckled trout in possession contrary to law. At the February meeting Mr. Whitehead reported that the Court of Appeals had affirmed the judgment against Jos. H. Racy, of Centre Market, for the amount of $3,000. Mr. Racy had been sued for having 100 quail in possession in July. His defense was that the quail were purchased in the open season and kept in cold storage rooms; but the Court overruled this defense.

In 1880 and 1881 a number of dealers in game made a strong effort to have the game laws so changed as to practically allow them to sell at any season, but through the efforts of the Association this movement was defeated.

In 1877 Mr. Royal Phelps was obliged to resign his office on account of ill health; and Mr. Clinton Gilbert, President of the Greenwich Savings Bank, was elected to fill the position. Shortly after he also resigned for the same reason; and Hon. Robt. B. Roosevelt was elected President of the Association in his place. Mr. Roosevelt has filled this office ever since.

The Association has raised the initiation fee to $50 and the annual dues to $10. It meets, as it always has since 1844, on the second Monday of the month during the winter and spring. The meetings are generally held at Pinard's. Dinner is served at 6:30, and by 8:30 the club adjourns to the big parlor, where they devote the rest of the evening to business. The membership is limited to 100, and is nearly up to that limit.

The appointment of State wardens under the supervision of the Fish Commissioners has relieved the Association to a great extent of the work of bringing suits, but they still keep a sharp eye on poachers, and on the various game laws that are annually presented at Albany.

The thanks of the writer are due to Mr. Thos. N. Cuthbert, the Secretary of the Association, for his valuable assistance in preparing this article.

AIMING THE SHOTGUN.

I HAVE read with great pleasure the article in your valuable paper of Nov. 14, by "W.," entitled "Aiming Ahead," which coincides so exactly with the views expressed by me on the subject in FOREST AND STREAM some months ago. I noted the criticism of "Ancient" on my article, also the recent remarks of Dr. Morris, Louis Bagger, M. P. Peirce and others. I must confess I do not understand exactly what these gentlemen mean. They surely do not mean to deny that the shot can acquire a lateral motion by the swing of the gun while it is driven forward by the powder, to do so would be to deny a law of mechanics so well established that it is useless to argue on the subject. Neither "W." nor I claim to make these calculations at the time of shooting; when we shoot our aim is taken, I imagine, as "intuitively" as that of either of our critics, but that the shot from all our guns must take on just that lateral motion in cross shots is certain, unless we adopt the other style of making these shots, which is to hold ahead of the crossing game with the gun held still. You will recollect it was in trying to reconcile the facts that game is killed by both methods that my article was written.

The above-quoted gentlemen say we do the young sportsmen harm by our analysis of how cross shots are made. I think they do more harm by recommending what I may call the slap-dash style, without considering distance, the direction in which the game is moving, or anything else, but to fire the gun. I think what I will style cool, calculating quickness will make the best shot. You will remember that "W." and I did not claim that one was obliged to think out all the calculations we spoke of while in the act of firing, but only claimed that what we stated actually took place. About the necessity of aiming all shots, I think there is no question even in the thickest brush work; in this kind of shooting it is done instantaneously, and I believe it is done by those gentlemen who write about the baseball and hammer and nail idea, without their knowing it, which illustrations, while very pretty on paper, have nothing in common with the successful handling of guns. I should think the gentlemen who think the ball and bat idea applies to shooting would not be particular to have their guns stocked to suit them, as if they do not sight the bird along the barrel they might just as well shoot from the hip or hold their guns out pistol fashion.

On this subject I will quote A. H. Bogardus's remarks about sighting, versus the style recommended by Dr. Morris and his friends. I presume they will acknowledge that he in his prime was a fair shot; it is even possible that he might have been able to make as good a day's bag as any of the gentlemen above named. Bogardus says in "Field, Cover and Trap Shooting," page 14: "Some people pretend that there is no need to look along the rib at the bird in order to shoot well; they shoot well, and they say they do not do so. I believe they are mistaken. Taking aim does not mean dwelling on the aim and pottering about in an uncertain way with the gun at the shoulder. Even in snap-shooting there is a distinct aim taken, though when a good-fitting gun is brought to the shoulder the aim is instantaneous and the discharge follows at the next instant. At pigeons some men seem to shoot without sighting the bird. * * * This sort of thing is impracticable in the field, and there, if not anywhere else, the man who sights his bird along the rib of his gun makes the best bag. There are, of course, some situations in which you must practice snap-shooting; at woodcock in cover, or grouse or quail in corn, you can get but a glimpse of the bird, and you must aim just where intuition, as it may be called, tells you where the bird will be. In places where the bird can be plainly seen it should be distinctly aimed at. It is not a question of quickness. In the time matches where I must necessarily shoot very quick, and in the matches where I stand between two traps, which are pulled at the same time, I sight my bird before pulling the trigger. If I did not I could never accomplish the feats which have become easy to me." So much for what one of the best shots thinks about aiming.

That cross shots can be made in two different ways is well illustrated by the story of the seven mallards by Mr. Peirce; where his young friend killed his duck (the last) pointing at the head duck, and Mr. P. his two. By swinging his gun he did not have to shoot much ahead.

In conclusion I say to the beginner, do not try the baseball idea nor the hammer-and-nail idea, but sight your bird either with one or both eyes open. It can be done in the closest cover shooting. In making many shots in cover you will learn to kill even though you only catch a glimpse of the bird when he rises and do not see him at all when you shoot. I do not know how these shots are made by the sportsmen who do not think when they shoot. I find I have to think and calculate in these shots more than in any others, but it must be done quickly. In all cross shots swing the gun on to the bird from behind, and do not stop it until after you fire, and you will not have to shoot so far ahead of the most rapidly-flying game as by the method of holding your gun ahead in these shots and keeping it still while you pull.

SINKBOAT.

EASTON, Md.

PATTERN AND PENETRATION.

REMINGTON 10-GAUGE.

THE 10-gauge gun which came down from the Ilion factory, where Hartley & Graham turn out the late models of the old-time favorite Remington arm, was put to trial on the FOREST AND STREAM shooting stand at Claremont on Dec. 2. It was one of those pleasant winter days with which those who delight in open winters have been so far blessed. There was plenty of wind, and the gauges ran up to 10 miles of velocity at times, but otherwise it was a good trial day with moist atmosphere and no heat to cake the barrels with powder debris. The cartridges used were the black powder ones sent down from the factory with the gun and a set of wood powder and Schultze powder cartridges, loaded especially for comparative results. The directions to the loading firm here was to put in an ounce and a quarter of the same shot with which it was said the black powder shells were charged. The discrepancy in weight and count of pellets is large, but not more so than generally obtain in like circumstances. The trial was in the same order as with the other Remington gun, black powder first, then wood powder for 10 shots, and then Schultze, with the same order repeated at 60yds. A pair of shots were first fired as warmers, and to put the barrels in a dirty state, and after that there was no cleaning nor material wait for cooling. The arm handled well, and only once was it necessary to throw out a target, being at 40yds, with the Schultze charge, when a "pull off" on the part of Marksman Moss sent the charge too far up into the corner. In such a case, of course, the record is not taken. The barrels were both of them choked, and seemed to be a very even pair, though the slip from a crowded to a very sparse pattern came with too great frequency, and were noted both in the black and white powder charges. In order to secure a comparison with another arm in our series of tests, and to use up a few surplus cartridges, a series of a dozen shots were fired with the black and Schultze powder cartridges remaining over from the Hollis gun test of Oct. 30, and reported in FOREST AND STREAM of Nov. 7. The cartridges were used only at 40yds. in the Remington gun, and three of each sort were put in each barrel. The charge, the record of the Hollis and the record of the Remington gun stand as follows:

BLACK POWDER CHARGE.

U. M. C. Club Shell—4¼drs. Dead Shot powder, 1¼oz. No. 8 Le Roy Chilled shot. Average 133grs. of powder, 617 pellets of shot weighing 609grs.

287	86	17	312	343	20
295	311	16	308	330	17

It will be seen as a pattern maker the American arm was far in advance of the English weapon, whether tested with black American or white English powder.

Looking at the regular test of the day with the three powders after the percentage fashion of our correspondent "Nick," we find that the wood powder is well ahead with an average of 71 per cent., with black a close follower with 67 per cent., while the Schultze powder lags behind with 58 per cent., all this at 40yds. At 60yds. the two first named powders were running even with 30 per cent. of the charge accounted for on the selected circles, while the Schultze fell below 20 per cent. In penetration, however, the Schultze powder was a slight leader at each distance.

The formal record of the test stands:

CLAREMONT, N. J., Dec. 2, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Remington Hammer, latest model. Cost, $45. No. of gun, 31,924. Weight, 9¾lbs. Length of barrels, 32in. Gauge, 10. Right barrel, full choke. Left barrel, full choke.

CLAREMONT, N. J., Dec. 2, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Remington Hammer, latest model. Cost, $45. No. of gun, 31,924. Weight, 9¾lbs. Length of barrels, 32in. Gauge, 10. Right barrel, full choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 6 o'clock. Force of wind, 14 miles per hour. Thermometer, dry, 35°. Do., wet, 33°. Humidity, 71°. Barometer, 30.1in.
Charge, as given by holder of gun:

BOTH BARRELS.

Shell—U. S. Climax.
Powder, Brand—Schultze.
Powder, Quantity—3¾ drs.
Shot—*Make*—Tatham. *Quantity*—1¼ oz. *Size*—No. 8 Chilled.

REM. 10-G., 40YDS., RIGHT BARREL, SCHULTZE POWDER, 359 PELLETS.

CARTRIDGE ANALYSIS.

Three Cartridges Taken at Random.

BOTH BARRELS.

Loading.		*Powder.*	*Shot.*
Card over shot; felt, P. E. and card over powder.	1...	48 grs.	547 pellets.
	2...	53 grs.	559 pellets.

FLORIDA.—Weir Park, Fla., Dec. 15.—Weather fine, waterfowl becoming more plenty on Lake Weir, especially divers of all kinds. Very little hunting on lake, consequently game not shy.—W.

MR. WILLIAM LYMAN has just returned from a prolonged visit to the Continent, where he made a record as an amateur aeronant.

MAINE DEER.

LIGHT snows in Maine, followed by not very cold weather, have made excellent opportunity for deer hunting, and it has been improved to some extent. Still the reports of success are not just what might have been expected. Three hunters from Boston have been in the woods for a week or more, and yesterday a letter announced that one of the party had killed his first buck. The story is that the deer, though fairly plenty, are very wild and hard to approach. Still it is probable that a want of skill in hunting that very timid animal is what is generally lacking. B. F. Coburn, of South Moluncus, informs a friend here that he is in possession of the skin of a white deer. It was taken off from a deer killed in that section this fall, and Mr. Coburn says that it is very white; nothing in his experience ever having been seen like it. His friends desire to ask the FOREST AND STREAM if such an animal is on record in scientific works?

It seems that the shipping of deer from Maine to the Boston market in barrels has been stopped by some means or other. Only one has been seen of late, though there were a good many of them here a few weeks ago. It is evident that commissioners and wardens have taken the matter in hand, for one chap writes a commission house here that he would like to ship them several more deer, but that the game wardens have got on to him. The head of the house answered his letter discouraging the further shipment of such game. In this case only the fact of the letter can be obtained, and not the name of the illegal shipper of game. The shipments of deer to this market are heavy from Minnesota. The other day there came in one invoice, fifty-two whole deer and about half as many saddles. It is a shame that game must be slaughtered in such a wholesale way. Generally the best of marketmen are not pleased with it. They do not make very high profits, especially of late years, since public opinion has come to be against the traffic. I know of several gentlemen, very fond of venison, who will not buy a pound in the market, for the reason that they are lovers of field sports, and they do not like to see game in the market, and they will not encourage the trade by their patronage. A prominent dealer in venison tells me that the trade is not what it was formerly. Venison that has been rotted in the market with the skin on, is not received with the favor it was formerly, not even on the tables of fashion. SPECIAL.

DECEMBER 16.

CHICAGO AND THE WEST.

CHICAGO, Dec. 6.—Mr. W. W. Carney writes from Great Bend, Kan.: "I stole off last week and went on my annual quail hunt. I alone killed forty-seven; had I had company could have killed several more, as they got cunning and would all get up on the opposite side of the hedge. There has been fairly good duck shooting since October, but there was almost too much water to be pleasant."

Rabbits have been numerous about Vandalia, Ill., this season. Over 8,000 have been shipped from Vandalia alone. The crop extends over three counties, according to reports.

Messrs. A. M. Fuller, Chas. Morris and S. Dingee start this week for an extended quail shoot in southwestern Arkansas.

Large strings of quail are being brought into this city every day by countrymen from south of this city. It is very probable that extensive trapping of quail is going on in this State and in Indiana.

Comment has been made in earlier articles on the fact that the ducks of Western waters have changed their habits. Mr. Sellers, president of the Nee-pee-nauk Club, remarks that on Puckaway Marsh the mallards now sit down on the open water nearly all day and feed like deep-water ducks, even diving in 4 or 5ft. of water. Other shooters are beginning to notice these propensities in the mallards, and perhaps this is the reason the birds have been so hard to "work" this fall. They have learned that their only safety lies in the open water. Some shooters do not believe that the ducks have changed or will change in their habits. To them may be offered the following in regard to a bird called the *Didunculus*, a specimen of which is mentioned as being kept in the London Zoölogical Gardens: "This little pigeon is interesting for the ingenious way in which it has defeated the machinations of that enemy of the bird tribe, the cat. *Didunculus* lives in Samoa, where there were originally of course no cats. These were introduced and made short work with the "manumea," as the natives called the bird, killing not only the adult, but the chicks in the nest. Owing to its habit of nesting upon the ground, the bird nearly became extinct; suddenly, however, it took to building its nest upon the treetops, where it could bring up its young ones in peace, and since that time the bird has again become fairly plentiful."

I met Mr. Ward the other day, and he had a grieved look on his face. "Say," he began, "I used to think a good deal of you, till you wrote that story about my buying a cow for a retriever. Any one that will let a fellow like that man Cook, load him up with a lot of stuff about me that way, is no longer entitled to my confidence. Why, do you really think I'd buy a cow for a retriever, and lead her—it, I mean—forty miles down through the Indiana mud? It don't stand to reason! Now, I wouldn't tell a story like that about Cook for anything in the world. But say," and Mr. Ward's voice sank to a tone of infinite pity as he led me aside out of hearing of the lady stenographers, "do you know what that man did while he was down at the club house, that time he told you he got a 'nice string of mallards?' Well, he hunted twelve days and never killed a thing but three fish ducks, and his pusher says he killed them all at one shot! Sent up to town and got a hundred tin birds, and counted them all in the bag! I don't know whether he shot them in the box or not. Why say, he couldn't hit a duck, and he went to hunting muskrats out in the marsh! Staid down there two weeks, and then he sent home to his wife three fish ducks and a wooden decoy, with 'Killed by E. C. Cook, Nov. 20, 1889, on De Golyer Marsh. Great sport,' written on the bottom of the decoy. I tell you, that decoy is the only mallard that man Cook ever shot in his life. Next morning after he got home, Mrs. Cook told him it cost him just $100 or she'd give the decoy story away to every friend he had. He didn't put up the $100, and now every man that meets Cook on the street just laughs and says, 'Great times down on the marsh, hey?' Why, I'm sorry for Cook, I am actually, they guy him so."

"Oh now, see here, Mr. Ward," said I, "you don't mean to tell me Mr. Cook ever sent that old decoy up to his wife with any such inscription!"

"Oh, I don't, don't I?" Well, now, if you don't believe it, you go ask Mrs. Cook, and she'll say she got just such a decoy. Or—say, you go upstairs and ask Holt. Holt'll tell you the same thing."

I went upstairs and asked Mr. Holt, and Mr. Holt said he guessed it was so; at least he knew all the boys were saying "Great times down on the marsh, eh, Cook?" To be perfectly sure I was getting the facts straight, and not doing Mr. Cook any injustice, I asked Mr. Ward once more if he was positive as to his statement.

"Why, of course I am," he replied. "A man that would deliberately say I bought a cow for a retriever, and led it forty miles down to the marsh, wouldn't stop at anything, let alone sending a wooden mallard home to his family."

I don't know what will become of these two men. They never seem to agree about anything. E. HOUGH.

RIFLE AND PISTOL.

Editor Forest and Stream:

In your issue of the 12th inst., I notice a communication from Mr. C. H. Ames in regard to form of rifle bullets. I sincerely hope Mr. A. is not in the habit of placing the cartridges in the magazine of his gun after he has so sharpened them. If such has been his custom, and he finds life worth living, let him not delay in thanking a merciful providence that this mortal coil still encircles him, and that he also retains the frame of his rifle intact. I supposed that every gunner understood that the peculiar shape of the flat end bullet was simply to protect the primer of the following cartridge in the magazine from an accidental discharge by the preceding bullet, which would, of course, discharge the whole magazine in rotation and might lead to a surprise party of the first magnitude for the shooter.

Replying to Mr. A.'s other inquiry, I have always used the method of two-hand revolver shooting he mentions and found it very effective, especially in shooting game, a great deal of which I have killed with this weapon, including even the partridge or grouse. While I might be called a very indifferent shot on a target, I find it an entirely different matter shooting at game. As in archery, that instinct which wraps the undivided attention for the time being seems to guide the hand and eye until it is almost an impossibility to hit other than the object aimed at.

Let shooters try the following for the revolver: Place the extended fingers and thumb of the left hand on the right breast just below the arm, with the left elbow well elevated above the horizontal. Now grasp the pistol in the right hand in the usual manner and place the right forearm resting upon and parallel to the left (right hand should rest on left elbow) and you have a solid rest on a level with the eye, with which the pulsations of the heart and the action of breathing will not interfere.

ONEONTA, N. Y. AMERICUS.

[Our correspondent is quite right in drawing that disdinction which is so often found between target and game shooting, so it is that in testing shotguns, an afternoon of fifty shots at the paper screens is far more wearying than a double number of shots fired at game, and while target shooting admits of being taught by precept and drill, field shooting must come through individual practice. Our correspondent is somewhat wrong, however, in assuming that flat-pointed bullets are made so only for safety in magazines. This form of bullet helps much in securing steady flight.

THE ADIRONDACK DEER LAW.

Editor Forest and Stream:

Now that the season for legal deer hunting has closed, it is proper to look back and view the results obtained through a very limited channel. The present law, while a very good one in some respects, in the clause relating to transportation of carcasses of deer especially—in others is not strict enough, as we will try to show.

The open season, Aug. 15 to Nov. 1, is too long; but by far the greatest menace of deer is the hounding season, Sept. 1 to Oct. 20. From Sunday morning, Sept. 1, 1889, until Sunday evening, Oct. 20, wherever deer were to be found the deep baying of hounds could be heard relentlessly searching on the trail; beside every lake and pond men and boys with guns of all kinds kept the ranks full; and they came from far and near.

A young man from this place had to go as far as Indian Lake, Hamilton county, during the hounding season. This man in his own words said: "I'll bet you I saw over a thousand deer beside the road, in wagons and every way." Another young man, who worked in one of the hotels at Saranac Lake, told me that six Vermont farmers went into the woods, taking only one guide, and brought out twenty-one deer—all the law would allow—"and they were not out a cent only what they paid the guide, for they brought their grub with them." Another hunting crowd from Philadelphia brought in twelve dogs and violated the law so badly that they were fined. The hotel keeper with an eye to business paid the fine; and the hunters stayed long enough so that a balance resulted to his credit.

Eleven deer were killed ahead of two hounds at the State dam, foot of Ragged Lake, one Sunday. No exceptions being made in favor of does and young fawns, they suffer the fate of the antlered king. Can such slaughter continue without deer being a thing of the past, and that very soon, too?

Then there are the cruster and June jacker, who get in their silent work. There are those who know where to put salt in the spring of the year and in the warm evenings of June and July watch by the lick and bring them down. There are lazy wretches who will not work, but who will don snowshoes and tramp to the yards and slaughter at pleasure. All through the Adirondacks are such men; still the law is strong enough in regard to penalty, but it lacks one essential, and that is to pay the informer.

To me it seems that the legal season is too long. I would like to see the game law in relation to deer so amended that it would in substance be: "Open season, Sept. 1 to Nov. 1, hounding season, Oct. 10 to Oct. 20," with the exceptions in such counties as are now in force to remain so. A ten days season is long enough to hound, for there is the great danger of their extermination. Let there be a $25 reward to the informer, to be paid by the State upon presentation of certified copies of the court's sentence upon an offender against the deer law. I would strongly urge this reward to informers for this reason, that everybody's business is nobody's business, and no matter who he may be, the June jacker or cruster has his friends, who will try to shield him, and if a person will make nothing—only enemies—by informing, they escape trial oftener than they are brought to justice. Another reason why the State should be made responsible is that nine out of ten illegal hunters are not worth enough to pay the fine, and so if the informer is sure of his pay he will be sure to give the desired information.

Put a money value upon the proof of such illegal deer hunting and there will be some one who knows, and will for the money try and land the illegal hunter in the officers' hands. In my opinion the State will not be out much on account of payment to informers, for when the would-be lawbreaker knows there is a "price on his work," he will stay at home. Michigan has prohibited hounding, but in a recent article I observe that one of the State game wardens put out the dogs for a party of hunters. Would he have done so if some one could have got $25 for proving he did so? Our game warden is an energetic and faithful officer, but he is very often hampered instead of helped by the friends of illegal hunters. As a native of those grand old woods and a friend of those beautiful yet timid creatures, I am moved to lifting my pen against leaving the avenue open to their slaughter. Will any and all who are of my mind please send me name and address with such ideas as may suggest themselves, and perhaps by co-operation we may accomplish the desired end. WM. H. GORDON.

ELLENBURG CENTER, Clinton County, N. Y.

THE CHOICE OF RIFLES.

Editor Forest and Stream:

The extremists have had the most to say in this discussion, and though their views may not be accepted by a majority of your readers who are interested in rifle shooting, they are worthy of respect, being, to a certain extent, the results of experiments and practical tests. To this class we are indebted for many improvements, and from them we expect still more. Only create a demand, and Yankee ingenuity will supply the article. The perfection of the small calibers well illustrates this, as does also the development of the express principle.

There are other things, however, to be looked after in selecting a rifle than the most suitable caliber and the charge of powder and lead. Leaving the question of action aside, which is largely a matter of choice, and presuming that the rifling is properly done, attention is directed to the barrel. For a given charge, what should be its length and weight? It would appear that the lighter a gun is and the shorter its barrel within certain limits the more convenient it is for hunting; but it is likewise apparent that reducing the weight diminishes its accuracy and penetration and increases its recoil, while shortening the barrel to too great an extent would raise the trajectory and affect the accuracy also.

Now, the question is how far can this reduction of weight and length be carried without materially impairing the efficiency of the aim for hunting purposes.

A considerable variation in weight and length of barrel is noticeable in rifles using the same cartridge, even when made by the same company. For instance, guns ranging from 7 to 10 lbs., and from 24 to 32-inch barrel, use the same charge. If the lighter weight is sufficient, of what use is it to carry around 3lbs. extra; if 24 inches is long enough, why is it necessary to stick 8 inches more on the unhandy end of a gun?

We look first for accuracy, but if we can put down the weight and reduce the length of barrel without materially affecting this condition, we gain an important point, and one that is appreciated more at the close of a day's tramp than at its beginning. F. H. G.

ELIZABETH, N. J.

QUAIL IN NORTH CAROLINA.

Editor Forest and Stream:

I have just returned from a three weeks' trip to Littleton, N. C. The weather was simply perfect, not a drop of rain, with the thermometer averaging 60°. There are as many birds there now as at any time in the past, and they are large and fat. The lands are, some of them, posted, but only against the pot-hunter, which will insure good shooting for years to come. It is not an unusual thing for hunters to put up from four to eight coveys of quail each day; add to that the fine climate and high elevation of that part of the State, and the average man can be very happy and healthy there.

I was very fortunate in finding accommodations with a private family, who made my stay exceedingly pleasant. "Mine host," Mr. Garrett S. Bellis, is a native of New Jersey, and is glad see and entertain his former neighbors; parties or individuals from the North can have such cooking as they are used to at home, with good sleeping accommodations. The law allows the shooting of quail until April 1, and those contemplating a trip South could not do better than write to Mr. Bellis, Littleton, North Carolina, and then pack up and follow by next train. C. M. HATHAWAY.

NEW YORK.

STATEN ISLAND RABBITS.—A petition was recently presented by about sixty residents of Richmond county, requesting the board to prohibit the shooting or trapping of rabbits during the month of January, as the rabbits were liable to become extinct altogether. The season usually ends on February 1. The signatures were headed by Francis Endicott, the president of the Game and Fish Protection Society.

VIRGINIA QUAIL.—Buffalo Lithia Springs, Va., Dec. 10.—I am engaged in surveying a railroad here and am consequently out pretty much all the time. I never in all my life have seen such a quantity of quail. It is a a common thing to see three or four coveys of thirty or forty in an hour. Yet the people here do not seem to take any interest in shooting at all.—A. B. G.

CONNECTICUT GAME AND MARKETS.

Editor Forest and Stream:

Those who make public utterances subject the same to public criticism; but when I asked the encouragement through your valuable journal of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, in their laudable endeavors to enforce the game laws of that State against the violators of the same, I did not dream of subjecting myself to a personal attack in a public journal, nor of having my genealogy or residence advertised. We do not always in writing express clearly to others what we intended to say—and often what we do write appears quite differently to the eyes of others from what it does to our own. Although neither of the items sent you by me, Nov. 14, last year, nor the one last fall are at hand, I am quite sure I made no accusations against any one, but simply gave the information that came in my way, hoping it might be of service in the good cause of preserving the game and fish of old Connecticut; but the special pleading for the dealer in game whom I happened to meet, made by your correspondents of the 5th and 12th inst., leads me to think that market hunting and marketing game, if not worthy of a prize, are certainly very highly commended by some sportsmen. Shooting for market and selling the game when shot are undoubtedly legitimate occupations, and men of integrity can undoubtedly engage in them, but it is well known that these very occupations are annihilating all kinds of game throughout our entire country. Very few true sportsmen favor this, even though the letter of the law be not violated. It matters little to me whether the few game birds that happen to be in my neighborhood, when literally exterminated by market-hunters, have been sold to Hartford and New Haven or New York and San Francisco; the result to those who desire an occasional day's shooting is the same—their game has been wiped out, and they have a barren field over which to tramp and an empty bag to take into camp.

My suggestion that game might possibly be shipped out of the State from New Haven and Hartford was not based entirely on the fact that I saw one man taking game to one of these places; for it was quite certain to my mind that many others were engaged in the same business. One of your correspondents has proved by his prompt action that in some cases attempts have been made to ship game out of the State from Hartford; and I can assure him that the locality in his State where I have been wont to look for a few days' sport during the hunting season has been so thoroughly depicted of game by market-hunters, that one desiring sport has to depend on the tramp and the recollection of by-gone days for it. In the locality alluded to one market-hunter reported that he sold in Hartford this fall the proceeds of 16 days' shooting, for which he received $55, and there are two others in the same locality who have made a continuous business of market-hunting the entire season. This certainly does not tend to the preservation of game. A few years ago I made a slight effort to restock the locality with quail, putting out three dozen live birds, but I found that my feeble efforts only increased the bags of the market-hunters. The facetious remarks of one of your correspondents in regard to the "slot" and "dollar" business were quite pleasant to read, and perhaps as applied to me are quite pointed. I have several times thought of dropping my dollar as suggested, and may do so yet if the "slot" is not closed against me; one thing is quite certain, that as long as you see fit to give me space in your journal I shall occasionally give my views on market-hunting, notwithstanding the allusion to "baseball bats," "nerve food" and the "danger" from the "machine" when a few remarks are made unaccompanied by a dollar. A.

DECEMBER 16.

Editor Forest and Stream:

I am in sympathy with the St. Lawrence Anglers' Association, which has done so much for the St. Lawrence fishing waters, and the Connecticut Association of Farmers for the Protection of Game and Fish, which has done great good in this State. The sportsmen of Connecticut have reason for gratulation that they have so able a brother to champion their cause; the standard advocated by the president of the Connecticut Association is a noble one; and it is to be hoped that the members will seek to emulate it, and do all possible to forward the good work, and by their courtesy and good usage of the farmers enlist them as assistants and friends in the good cause. For the farmers have occasion for complaint. During the past four months each week I have been over quite a large part of Hartford and Tolland counties. I have seen only two lines of snares; and birds have been more plenty this season than for several years, but during these months I have found many fences which had been thrown down by hunters and fishermen, leaving openings for cattle to escape from the pastures and do damage to crops. I always put up such a fence, for I have owned a farm in this county, and am aware of the trouble caused in this way. It is true that some farmers (they are the exception and not the rule) entertain a feeling by leasing the streams which run through their land, and also their woodlands to men who put up notices forbidding hunting and fishing, and although most of the notice would not hold in law, still the feeling exists, and a few unprincipled men retaliate by destroying property.

But the crying evil is the hunters who hunt for market; the stopping of snaring has been a boon to them. I know of two hunters who have four dogs, and use two dogs on alternate days. I know of others at it all the time. It is safe to say of four hunters in this part of the country that they shoot game enough to supply two hundred sportsmen, and until we have a law limiting the amount to be taken by one hunter, we shall not increase the game to any appreciable extent, for what was taken by snares is now shot by the market-hunter.

Hunting and fishing are done here Sundays. Not a Sabbath during the fishing season that more or less fishermen have not been on the waters here, and after the hunting season came in the Sunday hunter was out. I do not think there is much hunting out of season, or any amount of game taken in snares, but fishing, except for trout, is done every month in the year. Rabbits are hunted with ferrets with impunity. I don't believe enough could be shot in a week to furnish a good meal. There seems to be no attention given to the law, and rabbits are nearly exterminated.

The most important question that now confronts us is, shall the amount of game to be taken by one person be regulated by law, and if so, what shall the limitation be? The pot-hunters will take all they can get. They have no conscience, the usufruct that the public have in hunting grounds and fishing waters, must have some determinate limit, and in this connection a word in relation to the article published in FOREST AND STREAM of Nov. 7 on the "Association of the St. Lawrence." In that article it is stated "that many tons of game fish were annually taken from the river by net fishers prove to the organization of the association." This, without doubt, is true, but here the question of limitation comes in. These fish were utilized for food by some persons, perhaps by those who could not have had them except for this method of obtaining them, and it becomes a question of right, between these people and some others. Now, I am opposed to net-fishing and pot-hunting, but a nice question confronts us here. What is honest and just, as between man and man? The article further says "that it is believed that in 1889 over one thousand boxes of fish were shipped by tourists to their friends, three times as many fish were eaten by tourists as were consumed six years ago, and that it is perfectly apparent that there were three times as many fish caught by the angler and tourist in 1889 as were caught in any one of the years immediately preceding the organization of the Anglers' Association." In other words, over thirty tons of fish were sent to friends, and probably enough consumed to make the amount taken forty tons or more. This would look something like "robbing Peter to pay Paul" the fish are taken in another manner and consumed, but by different parties, therefore it becomes difficult to draw the line, and the question arises, shall those to the manor born or the tourists and their friends consume the fish, or can some equitable and just plan be formulated that will do equal and exact justice to all? JONATHAN.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Camp-Fire Flickerings.

"That reminds me."

290.

SOME weeks ago while we were making our first day's hunt in the Rockies, one of our party came on a band of elk feeding in a small opening in the thick timber. Hiding himself behind some trees, he began shooting, and brought down two fine cows, when the band broke and ran. One large bull with fine antlers came directly toward our hero, who imagined that the elk was looking for him, and so, securely biding himself, he let the elk pass within a few steps of him without shooting. When relating the incident around the camp-fire that night he remarked, "It's no use, boys, I was just too badly scared to shoot." It is needless to add that we were nearly all tenderfeet. H.

EDGAR, Nebraska.

291.

When the little party of U. S. Fish Commission explorers, on their return from Karluk Lake, were resting their tired limbs in the genial company of Capt. Larsen in Uyak Bay, they found themselves temporarily stormbound behind a little island which makes a good lee for the salmon fleet in westerly winds. The steamers Haytien Republic, Bertha and Aleut, and the bark Coryphene were anchored in this snug harbor when Capt. Larsen's Ella Rohlfss dropped anchor in their company. Our natives speedily paddled themselves away to the barabaras of their friends, and we joined a sociable gathering in the cabin of Capt. Brown, of the Haytien Republic. Here Capt. Anderson, commanding the Bertha, related one of his celebrated bear stories in language somewhat as follows:

An exceptionally brave man of Kadiak was noted for his intimate acquaintance with all the appliances for killing big game, and particularly bear. There was apparently nothing about the pattern and caliber of rifles, size, shape and proper combination of parts in shells that this man did not know to the tips of his fingers. The vulnerable points of a bear were open as day to this mighty man of the gun.

A short time ago this bear slayer went forth heavily armed to search for his favorite quarry. He stepped briskly and confidently into a densely wooded glen, through which a salmon stream tumbled and sparkled on its way to the sea. A sudden noise startled him and, looking for the cause, he was astonished, grieved and finally terrified in beholding a bear which looked totally different from the one he was gunning for. The bear was not in the least disconcerted by the unexpected meeting; he welcomed the intruder and acted altogether unlike the conventional bear of our hunter's experience. What did the hero do then? I blush to say it, but he promptly and unmistakably ran toward a convenient tree, and the shameless brute came lumbering after. It was a tremendous dilemma, with a bare chance of escape from both horns, if the odds in climbing turned in favor of the man. The precious rifle fell from the nervous grasp of the climber, whose sole activity (both soles in fact), was concentrated in the effort to get up higher. The bear had not seen a gun of that pattern before and he sat down to look it over, while the hero barked his shins in agony overhead. Bruin felt comfortable with his new toy, and, not being in a hurry, lay down to wait for its agile owner. Time passed and it was growing late and the hunter was becoming cold, hungry and very red in the face. Presently a small boy appeared in the distance, and the prisoner was horrified to see him coming in the direction of the bear. He shouted at the top of his voice, "Boy, run for your life! Danger! Bear!" Apparently the boy did not realize the dreadful state of affairs, for he came straight on. "Boy! Danger! Go away! Run for your life!" again shrieked the frantic hunter. But the boy heeded him not. Right into the jaws of death he marched. He deliberately walked up to the bear, took him by the ear and said, "What are you doin' here, you young scamp. Come home and let the gent come down outen that tree." T. H. B.

292.

I have heard the following story, which, I believe, has never appeared in print. A gentleman who was visiting a certain part of Newfoundland where, a few years before, a giant squid had been captured, was much impressed with the rugged, broken character of the region. He thought this was possibly due to some seismic disturbance, and asked a fisherman if there had ever been an earthquake there. The native had never heard of an earthquake before, but feeling that it must be something very remarkable, and knowing of no other incident which had created so much local interest as the capture of the big devil fish, he exclaimed, "Yas, sar, skipper Garge catched one on 'em up to der bottom of de bay, sar, in his net." J. W. C.

293.

The following story is told at the expense of one of the Maine Fish Commissioners, who has been very active and efficient in bringing to justice fishermen who have tried to evade the law by catching and selling "short" lobsters. On one occasion the gentleman was driving with a friend along the country road, near the coast, when he met one of those peculiar characters—half-farmer, half-fisherman—so frequently seen in that region. The latter was driving two young cows. The State Fish Commissioner accosted him with, "Halloa! where are you going with those cows?" The fisherman had probably been a sufferer from the vigilance of the official, and having this in mind he replied in a peculiar nasal drawl which gave special effect to his words: "Oh, I was jest going ter take 'em up an' hev yer measure 'em ter see ef the'r long enough!"

Sea and River Fishing.

AQUARIA NOTES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

A VERY minute microscopic parasite, which infests the goldfish in enormous numbers when confined in aquaria, I have never been able to have it positively identified. Dr. Joseph Leidy once told me that it is one of the commoner rotifers. Some of our younger biologists, who sometimes complain that "everything is worked up and there is nothing left to do," might make an interesting study of this creature and its parasitic habits. The material will be found in abundence on the diseased goldfish in aquarium stores. Its presence upon fish is made manifest by a generally depressed appearance. The fins will be folded close to the body, frequently being actively flapped, as though the fish were suffering from itching or other irritation. The lobes of the fins will become narrow and sharply pointed. The fish will frequently dart about, spasmodically rubbing its sides on the sand or rocks. There will also soon be, when not speedily relieved, a raw or bloody appearance at the bases of the fins and the edges of the scales. This is due to the irritation caused by the blood-sucking propensities of this leech-like parasite. The fish will refuse food when in this condition and if not relieved will speedily die. Rub the finger gently over the skin of a fish in this condition, scrape the adhering mucus into a drop of water in the glass slide of a microscope, and a microscopic examination (a very ordinary microscope will do) will reveal numbers of what appear, by their movements, like small leeches, a movement similar to that of the measuring worm. They are soon destroyed by giving the fish salt water baths at least twice a day. Without a salinometer it is difficult to judge of the strength of salt water and care must be taken not to leave the fish in the bath too long. If it should turn over on its side or back it should be taken out at once. Unless the fish is far gone, repeated baths will restore it.

Upon opening a box of algæ recently, shipped by express from Wood's Holl, Mass., to Washington, and which had been forty-eight hours on the road, I was much surprised to find at the bottom a living fish (*Fundulus heteroclitus*) about two inches long. It was as lively as could be, and showed no signs of having been affected by the journey. On being placed in water it swam away, as if delighted to return to its natural element. It should be stated that the algæ were simply packed in a box in a damp or moist condition, but not wet, so that during the forty-eight hours the fish must have breathed air alone.

There are some species of blenny and goby which live in the empty shells of mollusks. A Washington oyster dealer, who takes considerable interest in the Aquaria, frequently brings specimens which he finds in empty oyster shells. How long they may have been out of the water it is difficult to learn generally. In some cases it has been found to be two days, but in others it has probably been four or five days. These beautiful and interesting little fish are thus a long time out of water without apparent inconvenience, for they are as lively as crickets when placed in the water again.

The are no fishes more beautiful and interesting than our common sunfishes, of which there are a large number of species. Reference is made here particularly to the genera *Enneacanthus* and *lepomis*. Some of them, notably the common pumpkin seed, are gorgeously colored, and if they hailed from some remote part of the globe would no doubt be recognized and appreciated. They are generally voracious and pugnacious, and are interesting inhabitants of the aquarium. Of course, it does not do to keep them with gold fish or others of that nature, as they will harass them, biting their fins, and may possibly kill them. But kept by themselves they are much more interesting than the more peace-loving vegetarians among fishes. They are carnivorous in habit and will only eat vegetable food (bread, cracker, etc.) when very hungry. They soon become so tame that they will jump out of the water to take a bit of meat from one's finger. They generally choose a place in the aquarium, which is held courageously against all comers, and from which they sally out upon all intruders upon their claim. Squatter sovereignty is fully recognized among them, unless the squatter happens to be the weaker, in which respect, however, they do not differ so much from ourselves.

Throw an angle worm among some of them not big enough to swallow it. Two will seize it, one at each end, and will go gyrating around around like tops, the others making frantic efforts and rushes to snatch it away, tugging and jerking, pulling and hauling, this way and that, their fins erect and bristling, and their colors glowing with increased brilliancy. They have a habit of sidling up to one another with a waving, undulatory motion which may be sexual manifestations, or the angry defiance of males, but I think this has not been carefully observed. They have also (at times) a curious backward and forward movement which appears akin to the restlessness displayed by all carnivorous animals in captivity.

WM. P. SEAL.

ABOUT HEATED BRASS.—*Editor Forest and Stream:* Thanks are due your correspondent "Kingfisher," both for affording me an opportunity to admit my error in misquoting him and at the same time enabling me to give him another shot. "Kingfisher," did not say in his communication of Sept. 19 that heating brass and then plunging it in cold water would harden it, but he did say, "The next time the worthy brother has occasion to burn out a ferule, let it cool off in the air and he will find it jest as stiff or a leetle might stiffer 'n it was before." Now I will not call your correspondent "obtuse," nor in any other way attempt to emulate his chastely beautiful phrasealogy, but simply inform him and his confreres that the most elementary works on metallurgy teach that brass when heated and then cooled, "in the air," or out of it, becomes much more pliable and softer than it was before so treated. Will you kindly examine the two samples (inclosed herewith) of nickel plated brass, cut from the same piece, one heated red hot and cooled in the air, the other not heated at all, then editorially state the result? If "Kingfisher" finds that he has made a hasty statement not supported by fact he should admit it precisely as does your correspondent.—THOMAS CHAPHAM. [The heated is the softer.]

SPOON-HOOK IN BIG KLAMATH LAKE.

"YOU feel better now, doncher!" This was Ephe's way of felicitating me as at about sundown on a certain day of the past summer I finished weighing four trout at our camping place, whither we had made our way for the night a few moments earlier. Our tent was pitched in a notably out-of-the-way nook of Uncle Sam's dominion, its site being on the margin of Pelican Bay, an arm of Big Klamath Lake, Oregon. We were newly arrived here, scarcely two hours having elapsed since our camping arrangements were completed. As will be understood, our errand was of a piscatory nature. At a friend's ranch, situated on the shore of the lake, some twenty-five miles distant, where we were guests, the fishing in this particular bay was so greatly vaunted that we had been moved to test the matter by actual trial. The conveyance to which we had recourse in the emergency was the readiest that turned up—a bulky sail-boat. Besides the ordinary run of stores, camp equipage and sporting paraphernalia of sundry sorts, needful for such an enterprise as the one we were embarked upon, our cargo included—Sophronia, our hostess, pressing the matter upon us so vigorously that we could not say her nay, and as it proved giving in to her greatly to a good purpose—an empty barrel and a sack of rock salt.

Our passage had been made quite leisurely. As it was the midsummer season and therefore the period when all through the region hereabouts the wind, save at intervals, is absolutely a dead letter, we were, of course, mostly forced to rely upon our oars for our propelling power. Although humanity will rarely own up to the fact, it is still true that there is no bore much more grievous to it than this same delectation of rowing. Furthermore, the scenery of the shore of the lake being novel and odd to a marked degree—want of space forbids particularizing—frequently arrested our gaze as we passed along. Such were some of the influences that held us back. At the close of our first day out, happening to sight a scow at anchor ahead of us, we made our way to this craft with the view of examining into its capacity for affording us acceptable sleeping accommodations for the night. As it turned out, the sole navigator in charge of the vessel was an acquaintance of Ephe's, and therefore the hospitality of his homely argosy was extended us with not a little *entrain*. Sharing a snack with our host, and listening for a while to his speculations as to the future prices of hay and rails, in which sorts of merchandise he was a dealer, we at last spread our blankets on the portion of the scow floor offering the most inviting inducements for the purpose and turned in. In the morning with the dispatch of breakfast, and a parting gift of a spoon-hook to the scow owner, for which we were later remembered by him by a sort of retort in kind of almost priceless value to us, we re-embarked in our own boat and began plying our oars again. A stretch of some twelve or fifteen miles was yet to be covered by us, and we determined, if possible, that the task should be completed by noon. But as we managed to lose ourselves for quite an interval in a labyrinthine ditch that we vainly took to be a cut-off, it was fully three o'clock before we reached the point marked on our chart as our goal. An hour and a half later, or thereabouts, saw us through with the establishment of our camping quarters, as well as our efforts to fill our inner bodily void. And now, as if intending to extend us a thoughtfully pat greeting, Æolus let loose from his cave (if this is the right way to put it) a pattern angling breeze, and under the influence of which the bay was soon in a state of brisk commotion. Needing no prompting relative to the fleeting quality wont to characterize favors of this sort in these latitudes, we hurried to our boat with such fishing tackle as was nearest to be come at, and put off.

Our fishing ground had been described to us as comprising a deep, lengthy channel, following the outline of the shore, and with one opening within a mile of the site of our camp. Having at last succeeded in locating this watery defile, while Ephe took the oars and kept the boat under easy headway, the writer paid out overboard a hundred feet or thereabouts of line with one of the larger sized Skinner spoon-hooks made fast to the end of it. The day was now rapidly waning. The close of another hour would witness the sunset. If good luck was to be our portion on this occasion, that it needed to be forthcoming with little delay was plain. It had been decreed, however, that narrow as the opportunity was, it was to prove a golden one to us, as a few turns—the work of not over fifteen minutes at the longest—made by our boat back and forth on our fishing ground resulted in the victimization and landing of four trout, each of which was a double hand's grip in girth, and fully as long as one's forearm. With the nightfall so close at hand and sundry evening camp chores—one of which was the cooking of our supper—imperatively claiming our attention, we now agreed to end our fishing bout on existing terms and withdrew shoreward. Ere long on consulting the balance as to the weight of our prizes the aggregate score was found to be somewhat in excess of 24lbs. Of course, as Ephe's salutatory exclamation put it, I felt decidedly better at the juncture, both by reason of the luck vouchsafed to us, as well as the prospective outlook held out to us therefor; and this, too, if the entire truth is set forth, our catch just effected was not altogether clean cut work, its instrument having been simply the hand line; the full outfit of gear that piscatorial virtuosity holds duly meet, having been, through our over-eagerness to get after the fish, neglected to be brought together. As is needless to remark, we saw the expediency right away of bringing our empty barrel and bag of salt into requisition—the validity of Sophronia's argument that these things were indispensable to us already beginng to be made manifest—and when our prizes were duly dressed, pickled and given lodgment in the repository named, we disposed of our supper, and, later in proper order, disposed of ourselves *à bas*, submissive subjects of the drowsy god.

That the Oregon waters are notably fertile in fish everybody is aware. This is particularly the case with Big Klamath Lake, where the conditions favor the prosperity of fish life as in but few places. After a not uncommon piscine predilection, the trout incident to the locality are signally prone to roving. During the colder months they mostly confine themselves to the main body of the lake. As summer sets in, however, they leave the lake proper almost *en masse* and take up their quarters in the bays, where inflowing mountain streams at once vivify the water as well as keep it comfortably cool. The bay, on the shore of which we were encamped, received the influx of two mountain streams, each of larger volume by considerable than the average mountain stream hereabouts. This being the case, it followed naturally that the place was in great vogue with the trout as a summer resort; no other similar part of the lake, in fact, as the story ran, being at all equal to it in this particular. Such were the main facts by which we had been led to undertake our venture, and which, as we naturally felt, abundantly warranted it. Wanting at the time in the actual experience in the fishing, and wherein Sophronia had the better of us, we really took no stock in her recommendations touching the barrel and bag of salt, being quite convinced that her true design in the matter was to play off a huge joke on us. But as we had full reason ere long to know, her pressing of these things on us was an act of entire seriousness and good faith, and as a way of sizing up the scope of the sport nothing could well have been more to the point.

On the morning following our arrival we were naturally impatient to have another go at the fish, and after breakfast, being equipped with gear in which the rod and reel bore their rightful parts, we took to our boat and started again for the fishing grounds. We had scorned to bother ourselves with the question of the wind this time, and, in fact, there was almost an entire dearth of it. Under these circumstances, as is obvious, a good deal of management was requisite in the handling of the tackle, and accordingly the lure was weighted sufficiently to keep it well down in the water while making its rounds, and the length of line paid out was preëminently generous, in order that any feeling of disturbance experienced by the fish as they chanced to see the passing boat might be done away with when the bait caught their eye. Proceeding in this manner we bagged some twelve or fifteen fish in perhaps an hour's time. In weight, however, not one of these captures would overgo a couple of pounds or thereabouts. With the memory of the take of the previous evening still firing our minds, we were not the men to stomach the catching of mere two-pound fish with unhurt pride, and consequently with the achievement of such results as have been noted, we gave over fishing and turned the head of our boat to our landing place. The water being still and wonderfully clear withal, we noted as directing our attention that way, very many fish in the glassy depths as we passed along. These mostly consisted of trout. But a few enormous suckers were also included in the multitude, as well as a liberal admixture of chubs; the last of which were doubtless privileged in the providence of nature to contribute in goodly store to the epigastric ease of the first named preëminently kind feeding species with whom they were apparently so amicably associated.

The most impressive sight, however, to which we were treated at this time was altogether of another stamp, although the water was its scene. It was Ephe who first described it, announcing his discovery in the following graphic utterance: "G-r-e-a-t Scott! Look astern there! There's a deer a-putting it across the bay." And such indeed was the fact; as on looking sternward the head of a full-antlered buck met the eye about two gunshots off, and which faced a promontory on the bay shore at right angles with our course, and whither the creature, as was seen at once, was bound. Under what circumstances it had reached the point where it first became visible to us was a mystery. But here it was, and plainly in the best of fettle, and prosecuting its journey totally unconcerned as to our presence in its neighborhood. We were without weapons of any sort, and besides to attempt the pursuit of the animal in such a boat as ours was not to be thought of, and hence its safety from harm on our part was beyond question. All that was left us, therefore, was the natural human mode of procedure under the circumstances, which was to assume the sour grape attitude toward it, and so marked its final emergence from the water and disappearance in a distant sea of sedge grass, magnanimously deciding that venison was to be religiously kept out of ours anyway.

That subsequent to our above turn with the fish we were unalterably committed to the doctrine that the summons of the breeze should alone be recognized by us as the true call to take after them will be understood. Our attitude now for a good deal of the time was therefore a waiting one. But an entire day never passed without an interval when the surface of the bay was well ruffled, if it was a brief one. These periods, I need not say, ever found us ready for action, and so far as in us lay we made the most of them. Our efforts in this direction were greatly aided by an almost incalculably advantageous favor rendered us by our friend, the scow-owner. This was the loan of his scow-tender, made us while his larger craft was tied up for an interval in our neighborhood waiting a charter. When I say that this new navicular appliance thus furnished us was a regular two-oared skiff, and duly light and swift, the reader will readily understand that the work of getting about on the fishing ground was greatly lessened by its agency, and therefore we accomplished more within a given time, a matter of vital importance with us. Our captures now as we had hoped were made up almost exclusively of fish of the more cunning and hence riper stamp. Occasionally a juvenile light-weight was included among them, but virtually these representatives of the breed were strangers to us at this period. The weight of the great run of our prizes would average from 6 to 8lbs., and a trip was voted a failure which did not yield us at least half a dozen such fish. The extreme limit of bigness reached by any one of our trophies was 11½lbs. It was the writer's good fortune to bring this lusty fellow to gaff. Two 9-pounders followed next in the class of our bulkier takes, both of which succumbed to Ephe's prowess during one run over the fishing ground as his turn came to take a hand in the fun.

The fortunes of our barrel, as will readily be supposed, throve apace right along. Yet at the same time a liberal portion of our spoils were disposed of otherwheres; we ourselves getting outside of them very freely almost every day at dinner, while the scow-owner, as well as sundry ranchmen living adjacent to us, whose habit it was to visit us now and then, were ever well-laden at their departure with our finny remembrances. With the lapse of a week or a little thereafter, however, the barrel proved to have fulfilled its office, being even full to the chine. The way was prepared for us now to put up our rods to be coveted above all others; sport galore could be our boast, and yet the overstepping the line into the field of murder was not chargeable against us. Packing up therefore bag and baggage, we handed the scow-tender over to its rightful proprietor, inwardly blessed the scene all about us—being all the more ready to do so as the region was absolutely mosquitoless, and left.

As doubtless few of my readers are unaware, the common trout of Oregon of which our bag consisted, is distinguished by the authorities as the black spotted trout; and according to Prof. Goode, the species is not a trout in a strict sense, but a salmon trout. In the water fished by us, as we found, the larger representatives of the breed—truly salmon shaped as they were and clothed in rich changeable purple—were pronounced beauties; and when it is added that their destructiveness of tackle was measured by a goodly little sum of dollars during our experience with them, their success as furnishers of sport is affirmed as emphatically as need be.

W. L. TIFFANY.

THE NEVERSINK.

THE famous Neversink waters, in Sullivan county, New York, formerly controlled by the Neversink Club, are now in the hands of private parties. Mr. Clarence M. Roof, formerly a member of the club, bought four miles of the west branch of the Neversink; and Mr. R. M. Cook, of this city, purchased that part of the stream above Mr. Roof's waters, which belonged to Mr. Satterly. The west branch of the Neversink was at one time famous for its trout fishing, but the people who used to visit it fished it in the most ruthless manner. It was a common occurrence for parties of two to four to take away four or five hundred trout, the result of a couple of days' fishing. To put a stop to this, a few gentlemen leased from Parker and others, four miles of the best part of the stream, restocked it, and did their utmost to protect it. The members were not allowed to kill more than twenty-five fish a day, and the fish had to be at least seven inches long. The fishing soon began to improve, and even the free waters above and below felt the benefit of these wise measures.

Of course, many people objected to being deprived of their fishing, and at first the club had great difficulty in preserving their stream. The natives particularly felt very sore at being ordered off, though they did not object to taking the club's money, which in some instances saved them from bankruptcy. Several serious encounters took place on the stream, and some arrests were made, resulting in suits which were ended in favor of the club; but at last the owners were left in comparatively peaceful possession. While the Neversink Club was in existence, Mr. Alfred Roe, of this city, was its president and managed its affairs for a number of years with great skill.

ANGLING NOTES.

THE number of lady anglers in this country is constantly increasing, and a large proportion of them can handle a fly-rod with great skill. There is one young lady in this city who deserves to rank high among the angling fraternity. Last year she visited a number of the Western States in searching for black bass and muskallonge fishing, ending with a trip up the Nipegon, where she enjoyed the best of trout fishing. This year she made an extended trip into Alaska. In the harbor of Sitka she caught a great many fish resembling our sea bass, and during her visit she killed a great many trout (*Salmo purpuratus*) on the fly, although every one assured her that they would not take flies. The march-brown, brownstone and grouse were the most killing. Two days out from Port Townsend the steamer Anchon (Alaska line) was wrecked and Miss Taylor passed five days on an island in the company of 200 passengers before they could be taken off. Among her numerous exploits was the hooking of an immense king salmon on a Brandreth fly, while a small rainbow salmon took the pearl bait at the end. Unfortunately the rainbow gave the salmon a purchase, and after leaping two or three times in the air, slinging the rainbow after him, he tore out and escaped. Miss Taylor is of slight physique and quite delicate looking. Most of the time she made these trips alone, with only letters of introduction to the different missionary posts. She brings back numerous specimens, sketches and photographs, and will probably put them into shape to publish before long.

A resident of Rockaway beach informs us that flounders are still taken in the bay.

ALBINO CATFISH.

AT the central station of the U. S. Fish Commission in Washington may be seen two very handsome catfish which have recently been obtained from the Potomac river in the vicinity of Fort Washington. They belong to the common species known to every small boy in the East as "bullhead," "hornpout," or "cattie," and are described in the books under the name of *Ameiurus nebulosus*. The coloration of these two fishes is remarkable. One of them has the top of the head and the back as far as the dorsal fin velvety black. The body is faintly tinged with yellow on a silvery ground. The eye is colored like the body. The barbels on the nose are black at the base. This example is about seven inches long. The second specimen is about six inches long. In this the head and lips are yellow. The top of the eye, the nape and the upper half of the body as far back as the tail are very dark olive. The sides are slightly mottled with yellow and olive. The lower parts are a little paler than the body. The first dorsal fin, the soft fin and the caudal are pale yellow. The pectoral, ventral and anal fins have some dark patches. The barbels are pale yellow.

Specimens showing similar freaks of color have been caught in the lower Susquehanna near Havre de Grace, and the National Museum has a couple of beautiful casts made from these.

An effort will be made to propagate this beautiful albino for the aquarium. The fish is much handsomer than a goldfish and ought to prove hardy. The golden colors are believed to be due to incipient albinism; complete absence of pigment cells seems to be unknown in the catfish family.

ACTION OF LIGHT ON FISH.

WE have been requested by Mr. Starbuck to answer, in FOREST AND STREAM, this letter: "PETOSKEY, Mich., Dec. 9.—*Alex Starbuck, Esq.:* We have a problem that has provoked much discussion among fishermen and other 'philosophers,' which we would refer to you for an opinion. It is this: When spearing fish does the light used simply blind the fish and they remain stationary, or does the light attract them and the fish move toward it? Also, if an electric light were put in thirty fathoms of water and remained there all night, what would be the effect on lake whitefish and trout? And, thirdly, if such a light were inclosed in the center of an immense glass jar filled with minnows and dropped in the water among lake trout (mackinaw trout) would it prove a successful decoy?—R. CONNABLE & SONS."

The experience of persons who have frequently speared fish by the aid of a bow light is that the fish scarcely move at all one way or the other, but generally remain stationary, so that the spear can be advanced to within a few inches of their bodies before striking. When any motion has been observed it was directed away from the light. Electric lights have been freely used of late years at sea, both at the surface and at varying depths, with the invariable result of attracting many kinds of fish, which have repeatedly been captured by a sudden sweep of a scoop-net. If an electric light were submerged in one of the great lakes it would doubtless attract the Mackinaw trout, either with or without the minnow decoy, but we cannot recommend such a method of capture.

PENNSYLVANIA WALL-EYED PIKE.—Pennsylvania Fish Commissioners H. C. Demuth and W. L. Powell tell us that fishing for wall-eyed pike in the Susquehanna continued good even up to the middle of December. During the week ended Dec. 14 Charles Franciscus caught forty-three at Mud Island, near Columbia, the largest of which weighed 10½lbs. John Keech, at the same place, took five ranging from 5lbs. to 7lbs. The Harrisburg anglers, according to Mr. Powell, have suffered greatly on account of muddy water, but they had one good day in the week above mentioned, and caught thirteen running from 2lbs. to 9lbs. These were taken at Cove Fort, fourteen miles above the city. The killing bait in both localities was lamprey on a spoon. In the lower Susquehanna the bait is kept near the bottom in deep eddies, near the heavy swirls caused by the current parting around rocks; such places are common at Fite's Eddy. Near Harrisburg, however, the river is shallow and otherwise different in character, and the method of still-fishing gives place to trolling. Mr. Powell finds it necessary to locate the wall-eyed pike before proceeding to actual fishing.

Fisheulture.

YOUNG SALMONIDÆ FED ON LARVÆ OF FLIES

AT the Craig's Brook station of the U. S. Fish Commission excellent results have been obtained by the use of the larvæ of certain flies as food for young salmon and trout.

Mr. Chas. G. Atkins, superintendent of the Maine stations of the U. S. Fish Commission, under date of Dec. 4, 1889, writes Col. M. McDonald, U. S. Commissioner of Fish and Fisheries, as follows:

"We have been feeding young *Salmonidæ* at this station for three seasons—1886, 1888 and 1889—and have each season made considerable use of larvæ of several species of flesh flies. We expose the flesh of any animal, if possible while still untainted, to access of the flies, and as soon as it is well charged with their spawn, put it away in boxes and let it remain until the eggs have hatched and the larvæ grown to a sufficient size to feed to the fish, which is commonly within three or four days after the deposition of the eggs.

"In outline the process is very simple, but in our practice it has become somewhat complicated in consequence of many impediments and limitations that we have encountered. The offensive character of the odors exhaled from the flesh as soon as the larvæ had attacked it, compelled us, in the first place, to remove the scene of this work to a distance of 500ft. from the hatchery and quarters; and in the second place, to cover the flesh and larvæ with loam or pulverized clay. Under such conditions the odors seldom reach us.

"The presence of so much loam as we have used has compelled us to choose between throwing it in quantities with the larvæ into the fish troughs or separating it by some means from the maggots before throwing the latter to the fish. We have arranged a series of screens and sieves, so that both the coarser and finer rubbish can be removed.

"From 90 to 100 degrees F. appears to be a suitable temperature to these larvæ, and in it they grow apace, but it is quite common to find a temperature of 110 degrees F. in a box of them, while the air outside is below 80 degrees. The heat at times becomes unsupportable, and then a general stampede ensues, the larvæ surmount the sides of the box and ecape. To prevent their escape we sprinkle the sides of the boxes with dry dust or rub them with chalk, which prevents the larvæ from climbing. Covered boxes will not answer. Our favorite form is an open box 2ft. wide, 2ft. long and 8in. deep. Moisture in the loam helps to keep them cool, and to retard them very much we sometimes wet them down with cool water. In some cases we have found a very deep covering of loam to retard them for a long time. In cool weather when we wish to hasten their growth we cover the larvæ with paper or cloth, or apply a board cover to the box.

"It is sometimes desirable to use partly grown larvæ as food for very small fish, and this we accomplish by covering the box up until the heat drives them from the meat. The best arrangement for this purpose is to use two boxes, an outer wooden one with a tight bottom, and an inner one with a wire cloth bottom standing on short legs. The wire cloth is covered with straw or other similar rubbish, and the meat and feeding larvæ placed upon the straw, with perhaps a little paper under them; a high degree of heat will drive the larvæ down into the outer box, from which they can be taken free from dirt and rubbish.

"To protect the larvæ from carrion beetles, which swarm to the feast by the thousands, we built a small house with screen doors. This was intended to be bug proof, but it did not prove to be so. The beetles effected an entrance, and in spite of much work on our part to rid the house of beetles they increased upon us so rapidly that at one time they threatened to put a stop to this method of feeding fish. One day we killed over 2,000 of them, including 1,857 by actual count of a single species. It was only after a systematic and persistent warfare of several weeks that we conquered them. Other enemies of the larvæ are mice and birds, which are fond of the young flies in both the larval and pupal stages.

It will readily be understood that if all the fly larvæ obtained are fed to the fish there will soon be a dearth of adults, and in any extended operations it would doubtless be necessary to rear the adult flies in a systematic way.

It is desirable and almost essential to have untainted raw flesh to attract flies and receive their spawn. Fresh fish is excellent, and we use it whenever we can get it at the proper season. Our principal dependence is butcher's refuse, such as the head and haslets of calves and lambs. A discovery of great promise made this season is that fresh fish may be pitted in the ground for many weeks and when taken out forms good food for the fly larvæ. We buried three boxes of fresh herring in July and the contents of one of them, exhumed after fifty-nine days, were greedily devoured by the larvæ and were not very offensive.

"The necessity of untainted food for fly-spawning is not absolute, for last winter we dried several barrels of flounders by impaling them on sticks and hanging them up under a roof where the frosty air had free access to them, and when summer came we were able, by soaking them in water until they were softened up, to use them to great advantage, both with the flies and with the larvæ, although their odor was villainous.

"By the method thus indicated we have been able to provide living food for many thousand young fish, graduating the size of the food to the size of the fish, feeding out from five to twenty quarts of the larvæ a day. I think that for several weeks in succession late in the summer we were feeding out nearly 200,000 daily of the little wrigglers, and beyond a doubt the fish so fed have made a better growth than those fed upon chopped meat. This food is also less likely to contaminate the water than chopped meat, and makes the cleaning of the ponds and troughs less imperative."

PENNSYLVANIA FISH COMMISSION.—The annual meeting of the Fish Commission of Pennsylvania was opened in Washington, D. C., on Dec. 17. Philadelphia has been the usual place of meeting, but as the Commissioners wished to confer with the U. S. Commissioners and examine into the fishcultural methods at the central station of the Government they decided to meet at the capital. There is a strong probability that the annual meetings will be regularly held in Washington hereafter. It is hoped by so doing to win the co-operation of the Maryland Commission in measures looking toward the protection of fishes in the lower Susquehanna. At present the protective legislation of one State is neutralized by the lack of similar legislation in the other, and particularly in the matter of fish traps. All of the Pennsylvania Commission were present at the meeting except one member. The Commissioners were delightfully entertained by Col. McDonald on Tuesday evening.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. —, 1890.—Meet of the Brunswick Fur Club, New Meadows, Me.

CENTRAL FIELD TRIALS.

THE ALL-AGED POINTER STAKE.

THE All-Aged Pointer Stake of the Central Field Trial Club began on Tuesday, Dec. 10. Of the 32 nominations there were 14 starters that were drawn to run as follows: Arthur and Duke of Hessen, Bannerman and Roger Williams, Rod's Gal and Tammany Boy, Sally Brass II. and Rip Rap, Ajax and Pontiac, Mealy and Lebanon, Duke of Vernon and Lalla Rookh. The first brace was put down at 11:40. Arthur did not show up in very good form. Duke of Hessen ran well, but not nearly with so much dash as when at High Point. He found the only bevy that was found during the heat. Bannerman and Roger Williams were put down after the finish of the Setter Stake at 3 o'clock. Both ran very well and some very pretty work was done, Bannerman showing up a capital dog among the singles, being snappy to point and with a good nose. Roger did much better than he did at High Point, and the heat was a very good one. Rod's Gal and Tammany Boy did nothing brilliant. Gal went better than she did at High Point, while Boy did not do nearly so well as he did there. This ended the work for the day.

On Wednesday it was clear and quite warm, birds were not moving and were hard to find. Sally Brass II. and Rip Rap were put down a half-mile west of town at 8:15 and worked over considerable ground where birds were known to be plentiful, but none were found until nearly the end of the heat, when a bevy flushed down wind just beyond Rap, and soon after another bevy flushed near him. Sally did not do anything worthy notice except to make a pretty point where the bevy had been flushed. She did not range nor stay out at work at all well, and showed but little bird sense. Rap ran somewhat stale, but worked out his ground in good style. Ajax and Pontiac were next put down and the heat was watched with interest, as Ajax was said to be a very killing dog, but he was heavily handicapped, as Aldrich, his handler, was unable to work him, and he was not acquainted with John Lewis, who could not show him to advantage. He was also apparently off his nose and his work was not very meritorious. Pontiac ran fairly well, and some of his work on birds was well done.

Mealy and Lebanon, both well known, were the next brace. Mealy was too fat for work, but she kept going through the heat at a moderate rate and searched for birds, but did not range very wide. Lebanon ran fairly well, but was not up to her best form.

Duke of Vernon, well known on the show bench, and Little Lalla Rookh, also well known both as a winner in the field and on the show bench, were put down at 11:37. Duke moved fairly well, but much too slow, and he did not work out his ground in very good form. Rookh went in her usual merry style and beat out her ground well, searching for birds and finding them, too. She carries her years well, and was going even better the last half of the heat than when first put down. They were taken up for lunch in the middle of the heat, and again put down at 1 o'clock, this heat ending the preliminary series.

Second Series.

The judges spotted out six, leaving in eight to run in the second series. They were drawn to run in the following order:

Duke of Hessen against Lalla Rookh.
Bannerman against Sally Brass II.
Lebanon against Rip Rap.
Pontiac against Roger Williams.

After waiting 20 minutes the first brace in the second series were put down at 1:48. Rookh had run in the last heat of the preliminary series, and no fault would have been found had the second brace in order been run first, but Col. Odell, her owner, stated that she was ready to go on and they were started. Duke went at about the same pace as he did in his previous heat, and hunted out his ground in a workmanlike manner, and showing better nose than we have ever seen him do, pointing a bevy and pinning his singles very nicely. Rookh ran as well as in her previous heat, and did some very pretty work, once or twice she was somewhat uncertain and did not properly locate her birds. When time was up the heat was awarded to Duke. He had much the best of it in pace and range, as well as some advantage in the work on birds.

Bannerman and Sally Brass II. were put down at 3:03. Bannerman had an easy win and did some very pretty work. One point that he made in the woods, was as good as anything we have seen for a long time. He was going at speed and as he caught scent of a single he partly wheeled round and jumped into a very gamy point. Nesbit went in front of him and beat about for some little time, but failing to flush he ordered the dog on, and he drew a few steps to a large log, and with his chin resting upon it, he again became rigid and the bird was flushed from under his nose on the opposite side of the log. Sally did not get out to hunt at all well and was clearly no match for her competitor.

Lebanon and Rip Rap were put down at 4:14, and after running fifty-five minutes they were taken up to go down again in the morning. Lebanon went fairly well, while Rap was a bit stale and did not go at his usual rate of speed, although he went a good pace and worked out his ground in good style. A bevy found by Lebanon was all the work done.

On Thursday the weather was delightful, it was clear and cool in the morning, but during the middle of the day it was too warm for comfort. The dogs were put down at 9:03 in an open country with large stubble and sedge fields, where they could be seen to advantage. Lebanon was somewhat inclined to loaf and did not range nor stay out at work for a short time, but soon went better and ran for a time fairly well. Rap started off in something like his usual good form, and went at a good rate of speed and worked out in good style, showing good judgment in going to the likely-looking places. After beating out considerable ground without a find Lebanon challenged a foot scent and roaded a short distance, but the bevy flushed before he located it, and the dogs were ordered in the direction in which they went. They were not found, but Lebanon struck the trail of another bevy in the thicket and roading too close he flushed them. We then crossed the railroad and Lebanon made a couple of points to which nothing was found. Rap made a cast into a thicket, was called back by his handler, and ran into a bevy which flushed. The dogs were then ordered back on a short turn, when Lebanon challenged and drew on and pointed an outlying bird of a bevy. As White went to him the bird flushed from under the dog's nose and the bevy went also and settled in a brier patch that was worked out by both dogs, but they failed to find them and were ordered on. After going a short distance Lebanon swung back to the briers and flushed a single. After working out a little more ground without finding them, the dogs were taken back across the railroad to a large stubble field, which was beat out, and as Rap came to the upper end he made a very wide cast through a cornfield to a thicket, when he took the edge of it and swung back down to a branch and then down the branch until he met the party. This was a very good piece of work, although no birds were found. Shortly after Rap cast into the cornfield Capt. McMurdo flushed a single bird in the sedge, but his dog was too far away to hear the whistle. We could not see whether Luke marked the bird or not, but he worked his dog in the direction it went and obtained a point to it. The dogs were then taken across the branch and worked on the hillside where birds were known to frequent. Both dogs had let down in speed, although Rap was still going much the best and ranging well, while Lebanon was going slow and not doing much hunting. Rap made a cast down wind through a piece of woods, and, turning at the upper side, ran along the edge with the wind blowing across him, and catching scent he made a very stylish point. Lebanon was 200 or 300yds. away, working out a strip of sedge, his handler and one of the judges being the only persons near. When Luke was called to bring up his dog to back, he claimed that he was making game, and the judge, not aware that Rap was on point, allowed him to work out the scent and then to cast his dog into a likely-looking corner and beat it out, and it was several minutes before Lebanon was brought up to back, which he did, and Capt. McMurdo was ordered to flush the birds, but they had run some 50yds. to one side and into the woods, and he failed to put them up and ordered on his dog. Rap had stayed there so long that the scent had become cold or was blown away, and he made a cast further along the edge of the woods, and before he came back Luke had thrown Lebanon on the bevy and he made the only really good point that he had made during the heat, and the birds were flushed and the dogs were ordered up and the heat was awarded to Lebanon. Just previous to the decision Col. Odell rode up near the judges and said that it was time that the heat was decided as they had run two hours and one dog had not made a point, while the other had pointed two bevies. We do not for a moment believe that this interference had anything to do in the way of influencing the judges in their decision, but some thought otherwise, and the least that can be said of the unfortunate occurrence is that the action of Col. Odell was as ill-advised as it was unprecedented in the history of field trials so far as our experience goes. We have attended nearly a score of field trial meetings and never before have we heard an officer of the club say one word that could be construed as an attempt to influence the judges in any manner, and for the welfare of field trials we sincerely hope that we shall never again have occasion to record anything of the kind. In managing the heat after Rap made his point a serious blunder was made, the rules were violated and we believe that great injustice was done one of the best dogs in the stake. Under the rules the judges are instructed as follows: "Judges shall avoid, as far as possible, holding a dog so long on a point, for the purpose of securing a back or otherwise, as to enable the birds to run; and if the pointing dog be held on a point, by order of the judges, for a competing dog to secure a back, the pointing dog shall not incur any penalty for results. Dogs shall be brought up to back only when the opportunity offers, without interfering with the pointing dog, and a dog drawing on or pointing game which he has found independently, shall be afforded ample opportunity to locate the game without competition, and the handler shall have ample time to flush the bird."

Rap had undoubtedly made his point to the hot scent of the bevy, and had his handler been allowed to go on as he should have done there is every probability that the dog would have been able to have drawn straight to his birds

along the fresh trail and completed his work by locating them. At all events this course should have been pursued and the behavior of the dog alone should have determined the merit or demerit of the performance. Even after he was ordered on, had he been treated as the rules demand in such cases, and given "ample opportunity to locate the game without competition," there is scarcely a doubt that he would have found the bevy and it would have been time enough to have penalized him had he failed to do his work in a proper manner. No one is more clamorous for ample time for his dog to work out his game without competition than Luke White, and very few handlers excel him in alertness in casting his dog in ahead of a pointing dog as soon as the latter moves. In this case there was no excuse for holding Rap on point, for the judges well knew that Lebanon backs promptly, and it was still more inexcusable for them to allow the latter to steal the point that by all the rules of fair play belonged to the dog that had by showing bird sense and doing a good bit of work, earned the right to better treatment.

Pontiac had no trouble in scoring a win against Roger Williams, showing the best pace, range and style, and the character of his work was also of better class. This ended the second series with the result as follows:

Duke of Hessen beat Lalla Rookh.
Bannerman beat Sally Brass II.
Lebanon beat Rip Rap.
Pontiac beat Roger Williams.

Third Series.

The first brace in the third series, Duke of Hessen and Bannerman, were put down at 1:05, and after running an hour and eleven minutes they were taken up with Duke the winner. He had much the best of it in pace and range, and showed the most bird sense in working out the ground. It was hot and dry and birds were hard to find. Bannerman found and pointed a bevy early in the heat, and no more birds were found until near the finish, when Duke made a wide cast, and as he came back he swung up to a likely-looking place and dropped to a large bevy, doing the work in a very creditable manner, and when sent on Duke made a point to a single, this being all the work on birds during the heat.

When the next brace, Pontiac and Lebanon, were called up to start, Col. Odell rode up, evidently greatly excited, and announced that he had graduated and had enough of field trials, and that he would have nothing more to do with them, and thereupon started toward town. As he was leaving the ground he met a gentleman who made some remark about the defeat of Bannerman, and the Colonel replied, "Not beaten, but robbed." Of course the judges knew nothing of this last remark, but as may well be imagined, the speech and actions of the Colonel in their presence was a profound surprise, and we were informed by one of them that only his sense of duty to those who had entered their dogs prevented him from at once resigning his position, and that under the circumstances he would continue to act until the stake was finished. Upon our arrival at the hotel in the evening Col. Odell stated to the judges and to others that his remarks in their presence had nothing to do with the decision in the Duke of Hessen—Bannerman heat, and that he intended no reflection upon the action of the judges, and that the cause for his behavior was that he and Mr. Coleman had disagreed in the matter of compelling Mr. Coleman's dog, Lebanon, to run three heats in one day. The judges accepted this explanation, but we did not learn that the Colonel explained to them just how he came to the conclusion that Lebanon would be called upon to run three heats, as at the time he had ran only one; in any case the matter was in the hands of the judges, and the management had nothing whatever to do with it. It is greatly to be regretted that the harmony of the meeting should be marred by such an occurrence, and we have no doubt that no one regrets the unfortunate affair more deeply than Col. Odell. The heat between Lebanon and Pontiac was decided in favor of Lebanon. To say the least, it was a close thing between them with the advantage slightly in favor of Pontiac, as we saw the work. This ended the third series, with the result as follows:

Duke of Hessen beat Bannerman.
Lebanon beat Pontiac.

It was nearly half-past 3, and as Lebanon was to run in the next heat, the running was postponed until the next morning. Mr. Coleman expressed a willingness to have his dog run if Mr. Hitchcock insisted upon it, but he generously consented to a postponement.

On Tuesday morning at 9:02 Duke of Hessen and Lebanon were put down to decide first money. It was a beautiful morning, clear and cool, with scarcely a breath of wind. There was some white frost and scent appeared to be poor. At the expiration of 1h. and 58m. the heat was awarded to Lebanon and he was declared the winner of first prize. The heat was a very unsatisfactory one, as no really good work was done on game. Lebanon clearly had the luck of the birds, and made two or three very indifferent points to birds and several others where nothing was found. He went fairly well at the start, but did not cover one-quarter the ground that Duke did, and at the end of the half-hour he was going slow and not working out his ground at all well, while Duke went from start to finish at a great pace and beat out his ground with great judgment. It is true that he did not find the birds, with the exception of one at the end of the heat, but it was in some short stubble, and although he caught scent enough to half-point, the bird flushed before he could locate it. Taking everything into consideration and comparing the character of the work of the different dogs in all their heats, Duke clearly showed up the best dog in the stake, and, although the heat had already been a long one, it would have been more satisfactory had a little more time been taken to give him an opportunity to demonstrate whether he could handle his birds in a proper manner or not.

Pontiac was selected by the judges as the best dog beaten by Lebanon to run with Duke of Hessen for second place. They were put down at 2:50, and at the end of an hour and thirteen minutes Duke was declared the winner. Duke clearly had the best of it at all points including the luck of the birds. He found and pointed the first bevy, but there was no particular merit in the find, as the birds were almost stumbled on after he had returned from a long cast, but he showed that his nose was all right and that he would point; he also pointed a single in first-class style, while Pontiac had the bad luck to flush one, but even had he pointed it, Duke was so far ahead in pace, range, style and bird sense that the result would not have been different.

The judges could not determine whether Pontiac or Bannerman best deserved third place, and on Saturday morning at 9:17 they were put down to decide the matter, and at 10:39 the heat was awarded to Pontiac, and he was declared winner of third prize. Bannerman had run two good heats, doing some brilliant work in each, and many were confident that he would easily defeat Pontiac, but the latter ran fully up to his form, while Bannerman did not do nearly so well as in his previous heats.

This finished the pointer division of the All-Aged Stake, and the winner, Lebanon, and King's Mark, the winning setter, were now to run to determine the absolute winner. The heat between the setter and pointer Derby winners was first decided, and at 2:27 the winners in the All-Aged Stake were put down, and at 3:36 they were ordered up and the heat was awarded to King's Mark and he was declared the absolute winner of the All-Aged Setter and Pointer Stake. Mark had much the best of it in pace and range, as well as in the work on birds, being positive in locating them, while Lebanon was at times uncertain in his work. Following is a complete summary of the stake:

SETTERS.

Preliminary Series.

Cora of Wetheral and Chance.
Princess Beatrice II. and Little Gift.
Count Howard and King Leo.
Cassio and Desmond II.
Rowdy Rod and Roger.
King's Mark and Whitie.
Blue Mark and Miss Monarch.
King's Dan and Dash.

Second Series.

Rowdy Rod beat King's Dan.
Roger beat Little Gift.
Chance beat Desmond II.
King's Mark beat Cassio.

Third Series.

Roger beat Rowdy Rod.
King's Mark beat Chance.

Final for First Place.

King's Mark beat Roger and won first prize.

Final for Second Place.

Chance beat Roger and won second prize. Roger placed third.

First, King's Mark, $250; second, Chance, $150; third, Roger, $100.

POINTERS.

Preliminary Series.

Arthur and Duke of Hessen.
Bannerman and Roger Williams.
Rod's Girl and Tammany Boy.
Sally Brass II. and Rip Rap.
Ajax and Pontiac.
Mealy and Lebanon.
Duke of Vernon and Lalla Rookh.

Second Series.

Duke of Hessen beat Lalla Rookh.
Bannerman beat Sally Brass II.
Lebanon beat Rip Rap.
Pontiac beat Roger Williams.

Third Series.

Duke of Hessen beat Bannerman.
Lebanon beat Pontiac.

Final for First Place.

Lebanon beat Duke of Hessen and won first prize.

Final for Second Place.

Duke of Hessen beat Pontiac and won second prize.

Final for Third Place.

Pontiac beat Bannerman and won third prize.

First, Lebanon, $250; second, Duke of Hessen, $150; third, Pontiac, $100.

Absolute Winner.

King's Mark beat Lebanon and was declared absolute winner of the Setter and Pointer All-Aged Stake.

THE DERBY.

The final heat of the Derby was run on Saturdey, Dec. 14, after the finish of the pointer division of the All-Aged Stake. Rowdy Rod, the winning setter, and Rip Rap, the winning pointer, were put down at 10:51 to compete for the title of absolute Derby winner. They were taken up for lunch at 12:35 and again put down at 1:35 and run until 2:08, when they were ordered up and the heat was awarded to Rip Rap, and he was declared absolute winner of the Derby. Both started off well at a great pace and in something like their form when at High Point. There was not much to chose between them in speed, range or style in their way of going. Rowdy did not work out his ground nearly so well as he had done in some of his heats, as he persistsd in beating the thickets instead of the open ground and was lost for several minutes at a time, twice during the heat, while Rap worked out his ground in capital form, and found two bevies by making a wide cast for each and pointing them in his best style. This was all the work on birds during the heat, as Rowdy did not succeed in scoring a find. Following is a complete summary:

SETTERS.

Preliminary Series.

Rod's Lady and Royal C.
Rowdy Rod and Nannie B.
Sam C. and Letty Lynn.
Harry C. and Marquis N.

Second Series.

Royal C. beat Nannie B.
Rowdy Rod beat Sam C.
Harry C. beat Letty Lynn.

Third Series.

Rowdy Rod beat Royal C.
Harry C., a bye.

Final for First Place.

Rowdy Rod beat Harry C , and won first prize.

Ties for Second Place.

Sam C. beat Royal C.

Final for Second Place.

Harry C. beat Sam C. and won second prize.
Sam C. placed third.

POINTERS.

Preliminary Series.

Joy, Jr., and Lou.
Carlgrove and Nye.
F. F. V. and Sally P.
Miss Mealy and Convex.
Tough Nut and Naso Peshall.
Lady Hessen and Mamie Bang (absent).
Flirt and Heiniken.
Rip Rap and Met.

Second Series.

Joy, Jr., beat Miss Mealy.
F. F. V. beat Convex.
Lady Hessen beat Met.
Rip Rap beat Flirt.

Third Series.

Joy, Jr., beat F. F. V.
Rip Rap beat Lady Hessen.

Final for First Place.

Rip Rap beat Joy, Jr., and won first prize.

Final for Second Place.

Joy, Jr., beat Flirt and won second prize. Miss Mealy placed third.

First, Rip Rap, $400; second, Joy, Jr., $200; third, Miss Mealy, $100.

Final.

Rip Rap beat Rowdy Rod and was declared absolute winner of the Derby.

THE CHICAGO SHOW.—Mascoutah Kennel Club, Chicago, Dec. 19.—Preparations for our second annual bench show are progressing with flattering results. The dates already claimed we find it necessary to change, and have selected March 4, 5, 6 and 7 in place of the previously published fixture. In addition to the armory used last season, we have secured the adjoining armory, affording more than double the area occupied during our first show. Premium lists will soon be ready, applications for which should be made to Frank C. Farwell, Esq., Chicago.—JOHN L. LINCOLN, JR., Secretary.

ANENT THE COURSING CLUBS.

Editor Forest and Stream:

I see by reports in your columns that "box coursing" of jacks or rabbits by greyhounds or fox-terriers is being introduced despite the efforts of the S. P. C. A. Now I'm an old courser. Many a time I have marked puss in her form among the rushes, slipped the dogs on even sight as she loped away, slung the leash around my wrist and marked the course by points. Many a good day's sport I have had on the side hills of Tipperary where the steep slopes bettered her long hindlegs over the undulant dogs that leaped behind her, or on the broad meadows of Fermanagh where she knew the vents and gaps and had a fair chance to escape from the sight of the gazehounds.

In those days we coursed for sport. Kills were infrequent and we had old friends mid furze and furrow that we could locate time after time almost to an inch. When we wanted game for the pot we knew where to get it, but there was no wholesale murder of creatures cramped by confinement done to death like so many rats in a pit.

Things have changed; coursing has become dog racing in England—a gamble where you have something like a fair show—for the dog (until he runs cunning) does his level best all the time. Take Waterloo, Mourne, Kempton Park, Scawa. It's the betting that makes them go. The sport is nowhere, it's the money that tells every time.

So it has come that I have been at a "box meeting," where one hundred live hares were turned down one by one, each before a pair of greyhounds, and when the sun set there were one hundred dead hares ranged along the side of the pen. Not one got away, they were there to die—for your gambling crowd enjoys a "kill of merit"—and there they lay, dead. Roundabout the field, some twenty acres ringed with noble trees, were some forty bookmakers, in strange fantastic costumes, yelling odds on each course; around them all the blackguards and thieves from all the country round. They gambled, cursed, drank and fought, wilder as the day grew older, and when the slaughter was over they broke in on the corpses and stole and slugged each other with the dead relics of their day's amusement.

That is what a "box meeting" comes to. It is bad enough with greyhounds, and infinitely worse with whippets and fox-terriers, because the first do cost money, while the latter come much cheaper.

There was a terrier meeting last fall near Belfast in the North of Ireland, where some of the scum of the city tried to ring in a whippet specially bred out of an Irish terrier and a rough greyhound. The beast was ruled out, and there followed the finest free fight that the county ever saw. There always is a row at these dog races, but this beat anything on the record, and the club went into retirement for six months.

I've been to Cedarhurst. We were very select, our knicker-breeches and butcher-boots very fit; the ladies in trim habits had a good time; the lunch at the club house quite enjoyable; the champagne beyond reproach. Some of the rabbits did get away, for the field was so large that you could see mighty little from the fence that served as a grand stand, after speed from the slips was scored. But I saw rabbits lying smothered and dead in the confined boxes in which they were carried to the field. I was told that they had to be brought there in that way, separately, because if they were put in crates or baskets they ripped each other up with their hindlegs. I saw rabbits squat in fear, motionless before the screaming terriers, and when one bunny ran round and round and I asked what was up, the answer was that he was blind of one eye and "they would not have used him only they were short—and it was a d—d shame anyhow."

This was at Cedarhurst, under distinguished mangement, with gentlemen and ladies in attendance and no wagering worthy the name, with such names as Belmont, Rutherfurd and Frothingham on the programme as patrons. What sort of a time would come off at Oak Point or Flushing with Harry Hill or some of the chanters from the Jersey race tracks in control. The Hempstead Coursing Club and the Eastern Coursing Club may run in some semblance of sport, but they are opening the gates for "box meetings" by scoundrels who will run to kill in confined spaces where every point can be seen by every spectator, and who will hail with delight this improved method of baiting rabbits to death for gambling purposes. That's what it will come to. It has got there in the old country. The sport is gone, but there is money in the murdering.

Right here—on my desk—as I write these lines sits my fox terrier. She is my steady comrade and company by day and night, by my side when the sun shines and at my feet when the gas goes out. She has gone over big sea with me three times, a cabin passenger every time and no objection. She has killed mice when she caught them round the house, rats when we were moving the stacks in the yard or hay in the loft, rabbits in the whins and bracken; she has trailed winged grouse in the heather and pheasants in the bramble. She quivers on view of a cat, though so far there has never been a cat-astrophe. She is game all in and out. Loving as herself when gentle, and wild as a fiend when stirred to passion. She has a rare turn of speed, and her turns are rare in their speed; quick, graceful, full of character, and a grand set of wicked white teeth. I've hunted her after game and vermin and hope to do so again, but I would as soon enter her for a "box coursing" stake as I would get a litter of kittens just old enough to be cunning and feed them to her and Jack—her prospective mate—one by one on an empty floor, and count points during the worriment and killing that would follow. GRAYDON JOHNSTON.

WHAT ABOUT THESE BEAGLES?

Editor Forest and Stream:

Year after year I return to my old hunting grounds, not so much for the game I can bag as for the pleasure of tramping through the well known woods and over the old marshes. I find less game; there are not so many partridges, the coveys of quail take to the thickest swamps, and now to complete my discontent, the marshes and beach, where I shot sea fowl and occasionally a brant or Canada goose, are posted, and we can shoot there only "under penalty of the law."

But there is one thing left—the rabbit. Last year I hunted him with one beagle and found the sport more enjoyable, but in the spring by an unfortunate accident my dog was killed. Poor old Jip! may he have a warm kennel and lots of sport in the "happy hunting grounds."

This fall I have been training two beagle pups, and though they are but seven months old I have had considerable sport with the little fellows. Now, will some admirer of the beagle kindly give me some advice and information? I hunt in woods where the underbrush is thick, and the numerous swamps are almost impenetrable with thickets of bull-briers and hornbeams. I wish to know how many beagles I can hunt together to advantage in such a country. I want to hunt as large a pack as will work well together. I don't care for the game; I want lots of music and fun. Can I get together a pack that I can depend on to catch the rabbit if he stays above ground? If some who have had experience will give the results in your columns, it will be of great interest to me and no doubt to other readers of FOREST AND STREAM.

AMERICAN KENNEL CLUB.

THE quarterly meeting of the Executive Committee of the American Kennel Club was held at 44 Broadway, New York, Dec. 19, Vice-President Terry in the chair. Present: Associates, Dr. J. F. Perry; Philadelphia Kennel Club, J. H. Winslow; Southern Field Trials Club, J. L. Anthony; Great Dane Club, G. Muss-Arnolt; Michigan Kennel Club, J. M. Taylor; Westminster Kennel Club, T. B. Terry; Collie Club of America, G. B. Cromwell; St. Paul Kennel Club, A. D. Lewis; Mascoutah Kennel Club, J. Mortimer; American Spaniel Club, J. Watson; New England Kennel Club, F. B. Fay; New Jersey Kennel Club, A. C. Wilmerding; Fox-Terrier Kennel Club, W. Rutherfurd; Beagle Club, H. F. Schellhass.

The Secretary's report was read as follows:

To the Delegates of the American Kennel Club: GENTLEMEN—Since my last report I have received an application from the Continental Kennel Club, of Denver, Col., for admission to this Association. This application was duly forwarded and received in accordance with the rule laid down in your constitution, and said applicant is eligible to membership, and is hereby recommended. As this club held its first bench show December 5th, and has complied with all the requirements of our rules, I would respectfully recommend the adoption of a resolution at this meeting, by which the awards made at said show shall be recognized by the American Kennel Club. At the last meeting of this club the application of the California Kennel Club was laid on the table until your secretary could correspond with the Pacific Kennel Club, on the expediency of admitting another member from San Francisco. Your secretary mailed communications to both the committee of the California Kennel Club and the secretary of the Pacific Kennel Club, to which he received in due course a reply from the latter, which will be laid before you at this meeting.

The Brooklyn Kennel Club was promptly notified of their rejection at our last meeting, and upon its order, the dues forwarded to me with the application were returned, and the receipt for the same is on file in this office. The Southern California Kennel Club was duly notified of its election to membership, and of the fact that the awards at its show held prior to its admission, would not be recognized to which no reply has been received from any of its officers, but under date of Dec. 6, President Belmont forwarded me a communication from Mr. J. B. Martin, of San Francisco, an exhibitor at said show, asking this club to reconsider its action, so far as the recognition of the awards is concerned, upon the ground that as the show was advertised to be held under A. K. C. rules many entries were made by exhibitors from a great distance, expecting that wins would count, and that the action of this club is a hardship to innocent parties; and further, such action on the part of the American Kennel Club would encourage and assist dog shows on the Pacific coast. This matter is now before you for further action if you deem it advisable.

The special committee on the "revision of the rules," appointed at last meeting, completed its labors, and published its report and recommendations in the November *Gazette*. In this connection I would advise you that Mr. Jas. L. Anthony was appointed on said committee in the place of Mr. F. R. Hitchcock, who resigned on account of absence from the city.

A communication from the German Mastiff or Great Dane Club of America, submits a copy of its rule No. 29 as follows: "This club adopts the standard of points and the scale of measurements as approved Sept. 4, 1889, as the correct standard and scale of points for judging in this country, and this club will not through its membership exhibit German mastiff, or great Dane dogs at bench shows, unless they are to be judged by standard points, and scale of value as adopted by this club." The German Mastiff or Great Dane Club requests the American Kennel Club to take action in this matter. The members feel that their standard is correct, and in order to make it effective in this country, would respectfully ask this club to adopt same for the judging of this breed of dogs, at all shows held by members of the American Kennel Club.

I have received from Dr. J. Frank Perry notice of proposed amendment to Article IV. of the constitution, and published same in the November issue of the *American Kennel Gazette*. It will be submitted for your action at this meeting.

Charges have been preferred by Mr. Lorenzo Daniels against Mr. William Graham, in the matter of the St. Bernard dog Visp II. Mr. Daniels claims that Mr. Graham misrepresented the dog, and owing to such misrepresentation, said Daniels was put to an expense that should in his opinion be paid by Graham. In a letter following said charges, Daniels states that he can produce witnesses to testify to the above mentioned misrepresentation. I also received a letter from Mr. Graham requesting the return of all papers deposited in this office as part of the testimony in a previous case between these gentlemen respecting the dog Visp II. This correspondence will be submitted to you at this meeting.

Under the provisions of Art. XVIII. of the Constitution, the annual dues of active members must be paid on or before Jan. 1 of each year, under penalty of forfeiture of all right to representation in this club; and such delinquents may be suspended or dropped from the roll. I would respectfully request this meeting to adopt a resolution delegating the power to the Advisory Committee to suspend or drop such clubs as may be in arrears on Jan. 2 next, if in the judgment of said committee it should be deemed proper.

Your Secretary would recommend and urge the adoption of a resolution at this meeting whereby the American Kennel Club shall donate at each show held by its members in the year 1890 a special prize, consisting of a complete set of the Stud Books, to be competed for members of the specialty clubs that are members in good standing of the American Kennel Club, and to be given to the best kennel of four owned by one exhibitor. The choice of club to which this special shall be first awarded to be determined by its date of membership in the American Kennel Club—that is, the oldest specialty member to compete at the first bench show of 1890, and as the shows progress the special to be designated according to seniority of membership.

As treasurer of this club, I would say that I could see no good reason why I should depart from my usual custom in presenting the Treasurer's report, and will submit the usual one showing the gross amounts received and disbursed and the balance on hand, but would ask the adoption of a resolution at this meeting directing the publication of a detailed financial statement of the club for the year ending Dec. 31, 1889, and to appear in the *Kennel Gazette* of January, 1890.

In conclusion I have to advise you that I am just in receipt of the resignation of the Fort Schuyler Kennel Club, of Utica, N.Y., which will be submitted to you for action. And by the same mail I received the application of the Duquesne Kennel Club, of Pittsburgh, Pa., for admission as an active member. The application inclosed the necessary papers and annual dues in proper form, and the club is eligible to membership. As this application did not reach me until 5 o'clock this day, that portion of the rule requiring it to be filed at this office at least ten days previous to election has not been complied with. I submit this application with the above remarks. Respectfully submitted,

A. P. VREDENBURGH, Sec'y.

This report was adopted and the treasurer's report was read and adopted: New York, Dec. 18, 1889.—The treasurer begs to report as follows:

Receipts from all sources from Jan. 11 to date	$7,649.41
Expenses for same period	6,482.30
Balance on hand	$1,167.11

Respectfully submitted, A. P. VREDENBURGH, Sec'y.

MR. ANTHONY—In connection with the recommendation made by the secretary, I would like to offer, if it is in order at the present time, before any other business is proceeded with, the resolution that he has embodied in his report, namely: That he be required to prepare and publish in the January *Gazette* a detailed statement of the financial condition of the club, and of every account upon his book, showing exactly the sources of revenue derived and the expenditures, on account not only of the club, but the Stud Book and all other accounts that the secretary and treasurer has charge of. I sincerely hope that the resolution will prevail, because we desire the public and every delegate here to know exactly what has been done this year. I am at liberty to say to you, because I have examined the accounts, that after the items have been charged to their proper account, there is shown a surplus, a thing that I do not believe has been accomplished before by any club under similar circumstances.

The report of the advisory committee was read and adopted, and is as follows: Meeting Advisory Committee, Dec. 19, 1889. Present: T. H. Terry in the chair; Dr. J. F. Perry, J. L. Anthony. Absent: A. Belmont, Jr., J. S. Wise. In the matter of American Pet Dog Club the secretary having advised us that at a meeting of said said club it was voted to abolish the entire list of dogs as now designated as pet dogs in their list, on motion said club was recommended for election.

In the matter of the non-payment of the prizes by the Albany Kennel Club, the secretary was ordered to suspend said club, and to notify the officers that if the several amounts now due exhibitors are not paid within thirty days, that the penalty under Rule 28 will be enforced.

In the matter of the charge made by Andrew Laidlaw against H. P. Rennie, the secretary was ordered to notify said Rennie that if proper explanation or defense be not made or the matter satisfactorily adjusted between the complainant and defendant within sixty days, the prayer of the petitioner will be granted.

The appeal of Jas. Watson against the action of the Rochester Kennel Club in not allowing the protest against the entry of the collie Metchley Surprise in the challenge class, was laid over until such time as Mr. Watson produces evidence to sustain his appeal.

In the matter of Mr. Huntington's resolution asking the A. K. C. to pay the traveling expenses of their associate delegates to and from meetings, it was resolved that said resolution be referred back to the full executive committee of the A. K. C. to be acted upon by them.

The following resolution was offered and adopted:

"*Whereas*, Evidence has been received from Mr. Wm. Graham informing this club that Mr. L. Daniels has failed to pay the amount due said Graham as per decision of this committee of June 10, 1889, amounting to $50.10.

"*Resolved*, That Mr. Lorenzo Daniels be and hereby is suspended. That he be given sixty days within which to pay the award as made by this committee to Mr. Graham; that if said payment is not furnished this committee on or before the expiration of said sixty days, said Daniels shall be disqualified. Signed, T. H. TERRY, J. FRANK PERRY, J. L. ANTHONY."

The report of the special committee on rules was made and the matter laid on the table for subsequent action.

Applications from the American Pet Dog Club and the Continental Kennel Club were read by the secretary, and on motion both clubs were admitted to membership in the American Kennel Club, and on motion the awards at the show held by the Continental Kennel Club on Dec. 5 were recognized.

The application of the California Kennel Club, which was laid over at the September meeting until advices were received from the Pacific Kennel Club if in their judgment it would be advisable to admit two clubs from the city, was submitted. The secretary read a communication on the subject, in which it was stated that there being a plan now on foot to consolidate the said California Kennel Club with the Pacific Kennel Club, in the opinion of the members of said Pacific Kennel Club it was deemed that it would be to the best interests of both the American Kennel Club and the dog matters on the Pacific coast to delay action on the application of the California Kennel Club until further notice. On motion said application was laid over for future action, pending advices from the Pacific Kennel Club.

President Belmont here arrived and took the chair.

A communication was read from an exhibitor, requesting a reconsideration of the action taken at the last meeting of not recognizing wins at the Southern California Kennel Club show. Major Taylor moved to reconsider such action. Motion.

The secretary then read a communition by Mr. Lorenzo Daniels preferring charges against Mr. Wm. Graham in regard to the St. Bernard dog Visp II., Mr. Daniels claiming that Mr. Graham misrepresented the dog, and owing to such misrepresentation he (Daniels) was put to considerable expense. On motion of Mr. Anthony the communication of Mr. Daniels was laid on the table.

The following resolution by Dr. Perry was adopted:

Resolved, That attestested copies be made of all documentary evidence furnished by William Graham in the case of Lorenzo Daniels, and the original be returned to him, as he has requested.

A communication was read from the Great Dane Club, the secretary stating that they had furnished a copy of standard and scale of points adopted by the club, and also a copy of their rules, and that they requested the American Kennel Club to recognize that standard at their show. Mr. Muss-Arnolt offered a resolution that only dogs which shall conform to the standard of the Great Dane Club shall be registered in the Stud Book, regardless of pedigree. Motion lost. The request of the Great Dane Club for the American Kennel Club to enforce their standard was refused.

The secretary called attention to the resolution offered at last meeting by Mr. Huntington in regard to the American Kennel Club paying the traveling expenses of the associate delegates, which resolution was referred to the advisory committee. The secretary stated that that committee had decided to refer the matter back to the executive committee, preferring that they should act upon the matter.

MR. ANTHONY—It seems to me it would be proper for the secretary to be instructed to make an appropriation of $100 per annum from money received from the associated members, which amount should be used to pay the expenses of the delegates coming here to attend any meeting on business, and I make a motion to that effect. Motion seconded and carried.

THE PRESIDENT—I should like to bring up a subject that seems to me of some importance. The *Kennel Gazette* is published under the auspices of the American Kennel Club, but its officers are responsible for it, and the form and the matter has been in a great measure left to their discretion, and they have acted as best they could. There has been some criticism made with respect to the editorials in the *Gazette*, and that criticism was of such a nature that I thought it best at the time to shoulder the blame personally, so as to put a stop to it, and then refer the matter to you, and ascertain whether, in your judgment, it was best to eliminate that feature from the *Gazette* entirely, or continue it. If you look at the editorials I think you will find that they have never referred to any subject which did not concern the American Kennel Club itself, and I personally have felt that the *Gazette* ought at to times speak for the American Kennel Club. The Advisory Committee, through its meetings, feels the pulse constantly of what is going on, and there are attacks made upon the club, or misinterpretations appear in the public print which the breeder and exhibitor desires to have cleared up. I do not know why it should be necessary for the secretary or the president, or for any officer of the Kennel Club, to go in print over his own signature in the way of sporting papers. If the subject is to be treated from a club point of view, I don't see why it should not be treated in the *Gazette*. If other official organs speak for their organizations, I do not see why the *Gazette* should not. It need not be personal. I don't think any case was personal, although it seems to have been taken so. No names were used. The principle only was treated of, and I should like to ask the delegates for action on the subject. It has not been brought up before the Advisory Committee at all. The subject was discussed by letter to a certain extent with the members of the Advisory Committee, and also talked over, and some were in favor of continuing the editorials and others were not; but it was never settled, and really it was not in the province of the Advisory Committee to settle that question. Inasmuch as the matter has been made the subject of discussion I should like to ask your action on the question, and if you will allow the matter to come up now so I can retire I will be obliged to you.

MAJ. TAYLOR—I move, in order to get the views of the delegates here, that the action in this respect in the past be approved, and continued in the same line. Motion carried.

At this point Mr. Terry took the chair on the departure of Mr. Belmont.

MR. ANTHONY—I move that the treasurer be requested to make an itemized statement to be published in the January *Gazette*, showing the receipts and disbursements from all sources, and also showing the amount of credit on each account, the sources from which the revenue is derived—in other words, a complete itemized account, so that anybody who is familiar with figures can take it and see how we stand.

Mr. Watson thought before being published, the account should be carefully examined and verified.

The secretary suggested that he should make out his statement for the year 1889 for publication, and that the chair appoint a committee who would indorse on the bottom of his account that they had examined his accounts and found them correct as stated.

MR. ANTHONY—In order to comply with the suggestions made by Mr. Watson and Mr. Vredenburgh, I will add to my motion that, before publication, an auditing committee consisting of Messrs. A. C. Wilmerding, Maj. Taylor and F. B. Fay, be appointed to audit the accounts. I name these gentlemen because they are *ex-officio*, and I ask that they be appointed to audit the accounts and to state whether they are correct, whether they have been correctly kept, etc. Motion carried.

A communication was read from the Fort Schuyler Kennel Club, tendering their resignation from the American Kennel Club. On motion the resignation was accepted.

The secretary called attention to the recommendation contained in his report in regard to the matter of special prizes to be competed for by members of specialty clubs, and on motion of Mr. Anthony his recommendation was adopted.

The bench show rules as published in the *Gazette* were then read and slightly amended, and on motion adopted.

The following amendment to the Constitution was adopted: That all articles of the Constitution and all rules and regulations affecting associate members or referring thereto be canceled and that Article IV. of the Constitution read as follows:

ARTICLE IV.

Section 1.—Any person vouched for in writing to the secretary of the American Kennel Club by not less than two members of any club a member of this Association, or by two associate members, shall upon payment of $5 annual dues, and the indorsement of his application by the president of the American Kennel Club and of the associate members, become an associate member and be announced as such in the next issue of the *Kennel Gazette*.

Sec. 2. An associate member shall be entitled to the *Kennel Gazette* and Stud Book for one year, and to two free registrations in the Stud Book.

Sec. 3. The annual dues of $5 shall be payable on the first of each year to the secretary of the American Kennel Club, and any person whose dues are not paid on or before Jan. 20, shall thereby forfeit his right to be included in the list of members eligible for election to office, and to vote for officers for the ensuing year; and if his dues shall remain unpaid at the next annual meeting of the associate members his name shall be stricken from the roll, provided however that upon remitting the $5 dues with an application of membership he shall be reinstated upon the indorsement of his application by the two presidents as herein before provided.

Sec. 4. The annual meeting of the associate members shall be held on the day preceding the annual meeting of the American Kennel Club, at which meeting the reports of the retiring officers shall be presented, which together with a copy of the official minutes of the meeting shall be filed with the secretary of the American Kennel Club.

Sec. 5. The officers of the associate members shall be a president, vice-president and secretary. The president shall be a member of the Advisory Committee. The associate members shall have the right to be represented by three delegates, to which position the officers may be elected. And for every 100 members over 300 they shall elect an additional delegate.

Sec. 6. No associate member shall be eligible to hold office or act as delegate who is a member of any club a member of this association other than a specialty club.

Sec. 7. That all elections shall be by mail vote, and the annual election of officers and delegates shall be conducted as follows: On Jan. 21 of each year the secretary of the American Kennel Club shall forward to each and every associate member in good standing a printed list of all members eligible to hold office, together with an addressed envelope for return, on which the word "Vote" is legibly printed or written. The member receiving such printed list shall mark thereon his choice for president, vice-president and secretary, and the delegates to which the club is entitled, in such manner as may be indicated, and return the same in the envelope provided.

Fifteen full days after the mailing of such slips to the associate members the secretary of the American Kennel Club shall in the presence of the presidents of the American Kennel Club and associate members, or such person as either of them may deputize to represent him, open all such mail votes, and the result of the election shall be certified to by the three officials present.

Immediately upon the signing of such certificate the secretary of the American Kennel Club shall notify each and every person of his election and also send notice thereof to the president of the associate members.

In the case of a tie vote for any office the tie shall be decided by a majority vote of members present at the annual meeting, and in the event of an officer elected declining to serve, the member receiving the next highest number of votes shall at the annual meeting be declared elected.

Votes for additional delegates as each quota of one hundred additional members is filled shall be conducted upon the same principle as the annual mail vote for officers and delegates, the vote being taken as soon as the one hundred additional members have qualified. The same rule shall also hold good in event of a vacancy in the ranks of officials or delegates.

A. P. VREDENBURGH, Secretary.

ENGLISH KENNEL NEWS.

THE notoriety obtained by your correspondent, who was wont to sign himself "Lillibulero," was very widespread both in this country and on the continent, and although the author's identity has not (so far as I am aware) ever yet been discovered, one frequently hears wishes expressed that instead of the drivel which some American doggy papers deem it judicious to publish, FOREST AND STREAM would once again induce "Lillibulero" to contribute some of his clever and smart work, so that the English doggy news might be more correctly represented in American newspapers, and also a little more literary skill thrown into the matter than now exists.

The principal doggy men here are much amused by the tone adopted by the "Kennel Club Member," who contributes English doggy notes to your contemporary the *Fanciers' Journal;* and although a good many of us think his method of explaining things just a little bit too severe or violent, yet all agree that he is very truthful in the majority of his remarks. The English *Fanciers' Gazette* has simply gone mad over the statements made in the *Journal* concerning Millais, who is one of the bosses of the *Gazette*, and characterizes the work as a "disgrace to journalism." Now, without being quite sure who the gentleman is whose work is thus stigmatized by an amateur journalist like Millais as disgraceful, I do think it impudence on the part of the English paper—which is about the most miserably-conducted, ungrammatically-written, and least-entertaining paper in England—to attempt to teach an American paper how to conduct its columns. It's akin to teaching one's grandmother to suck eggs!

Bulldogs seem to be one of the most prominent breeds in England at the present time, and certainly no other fancier gets so many opportunities of showing his dogs, and winning so many prizes as does the bulldog man. The club devoted to the breed holds an annual show during the summer time in London, and in the winter the brothers Jackson, *i. e.*, C. F. W. and E. A.—not A. C. the Kennel Club committeeman—hold an annual show at Bath, in Somersetshire, a district as will probably be well-known to my readers is frequented very much during this time of the year by the aristocracy of this and other countries on account of the salubrity of the climate, the loveliness of the surrounding hills, and the wonderful curative properties of the hot mineral springs which flow from the hills.

A bulldog show will take place there on the 15th and 16th of January next, at which all the celebrated specimens of the breed will turn up as usual. Twelve classes are provided and the special prizes which range in value from £10 to £1 are given at the rate of four in a class in addition to the prize money. W. H. Sprague, of the Law Courts, has consented to judge, and as Master William Henry is rather a determined individual who has the reputation of not caring a tinker's darn for anybody, and is moreover the holder of ideas on bulldogs which do not, I think, quite accord with some of the other so-called judges of this breed, I shall look forward to some "larks" at this charming and well got up show.

A little show took place this week at Beckton, near Woolwich, a town entirely populated by gas stokers and others engaged in the manufacture of gas. Even among the rough customers down there a dog is often the pet of the household; and one of the judges told me he had never seen dogs more kindly treated and carefully looked after than at Beckton.

Birmingham show used to be considered the boss show of the year, but it certainly isn't so now, both the summer and winter exhibitions of the Kennel Club knocking "Brum" into the proverbial cocked hat. Not only has the general good quality of the dogs fallen off, the prize money been reduced and the tone of the whole thing been lowered, but the very people who frequent the show seem to be more like town sportsmen, instead of the good old-fashioned country gentleman one used to meet there; and none of that real, good, genuine, rollicking fun goes on which used to when I was younger. The show which was held this week was undoubtedly a good one, eepecially as regards sporting dogs, but still not up to the old form, and so far as concerns what I term "fancy" dogs—*i. e.*, dogs who fuifil no part of a sportsman hobby, but are simply kept to look at and win cups, money and bring in stud fees—it was simply lamentable, for the lack of competition was noticeable indeed. The executive of this show are a very bumptious, stuck up lot of people, who seem to take the view that exhibitors should be obliged, and fall down and worship them for having provided a show at which dogs may be shown and small prizes won. This notion ought to be quite exploded nowa-

days; it was, perhaps, well enough when Birmingham was Birmingham, but since Birmingham show is nothing more than other provincial shows (and, in fact, does not come up to some), the committee ought to know that the proper way to treat an exhibitor is to regard him as one who has been graciously pleased to bestow his patronage upon the show.

As usual, bloodhounds came first in the catalogue, but only seven had been entered, and consequently not much interest was centered in them. The black coroneted bitch Koodoo beat Barnaby, a decision which seemed to please most people who knew anything about the breed, and a friend of Brough's told me, too, that B. approved the decision, but I doubt it, for Mr. B. is generally inclined to think all his geese are swans; and I know he thinks the world of Barnaby. Personally, I prefer Brough's hound, for Koodoo is not typical enough in head properties, nor is Barnaby, but still his head is longer and leaner, his eyes better set, and his flews deeper than the bitches; in body properties both are exceptionally good. Bono, the winner in the open dog class, is a new comer, and a very fair dog all over for a seventeen months' old pup; if he goes well he will make a hot one, but many of the best judges here seem doubtful about his improving. Dignity, second, is getting a bit coarse. Tantrums, the bitch winner, is another clinking good new one, who made her first bow to the public here. She was bred by F. B. Craven, and was sold by him when a puppy for £12 and is now worth a hundred. Glendyne is pretty and typical, but very small, while Barbara Allen, got by Burgho, is a brute, but in type and color, like her sire, whom she much resembles, showing a lot of the new Forest blood, which if bred into will be the curse and ruination of this lovely and—if properly trained for hunting purposes—hunting breed of hound.

Deerhounds were fairly good, in the challenge class Donavourd Ossian was beaten by Fingal II. I prefer the former, as he shows a great deal more of the true old type loved by Scottish noblemen and ladies of yore, but he was dead out of form, which made Fingal look the stronger of the two. Robin Hood, second, is much of the same type as the winner, but with a bit more substance about him all over. Oscar VI., the property of the Duchess of Wellington, is one of the old type which present judges don't seem to care for—rather a mistake I think—for the old type has that dignified appearance about it which seems to make a deerhound say, "I was not made to be the companion of common people." Cora II. won in bitches, she is just fair and on the small side. Six so-called Irish wolfhounds turned up, and to the unobservant eye would pass for bad deerhounds. It certainly seems to me to be the biggest piece of cheek imaginable, to cross a Scotch deerhound with a German great Dane and to then call the progeny Irish! It's positively funny and ridiculous to do so, and how on earth the Kennel Club can countenance such a state of affairs puzzles me beyond measure, but yet it is so. Smokie should certainly have won in greyhound champions over Charles Davis, the former is one of the best longtails on the benches, but the judge couldn't see it and eventually called in another man to help him decide. I agreed with the award which placed Conspirator first, a dog with immense propelling power about him.

The beagle judge—Parson Lovell—gave a lot of dissatisfaction when he placed the rough and commonplace Gamester over that universally admired old beagle Ringwood, and everybody round the ringside positively had a fit when he went for Dunmurry Melody in preference to the best beagle in the world—Lonely.

The smooth fox-terrier classes were fairly strong, and the awards made by C. E. Longmore were well received. Vesuvienne continues on her victorious career, but in the challenge class she had only Dane Baffler against her, whom she promptly and properly defeated. It was surely a bit presumptuous to lead the dog in against the bitch, for the difference between them is so very great that the veriest beginner could see that it was a million to one on the bitch. The open dog class had sixteen in it, and Vicary's Venio was after a long time declared the winner, a nice, stylish terrier all over, with plenty of dash and go about him, but whose ears are badly carried, a fault which will mar his progress when he gets into the challenge class. He subsequently won the cup for the best fox-terrier in the open classes. Redmond's Domino is a well known dog, but he was very fairly beaten by the winner, who is much better in head properties. Tinne's Eric II. (third) was preferred by many for second position, while a few thought that Rational (fourth) should have had that honor. I am inclined to agree with the judge, for in this class he certainly stuck to type, and taking Vesuvienne as his model, the dogs who nearest approached her were selected for honors. The remainder of the class, which included Ebor Spendthrift (reserve), Very Uneasy (vhc.), Priory Pepper (hc.) were of a very common order. Tinne, the Fox-Terrier Club's justly esteemed and hard-working secretary, had it somewhat easy in open bitches with Brockenhurst Lottery, a corkily built terrier with a good body but a bit inclined to run off coarse in skull. Ditto Charity got third, the pair being divided by Surety, a first-rate type all over but getting a bit wide in front. The dog puppy class did not produce a red-hot one for future reference, although the winner, Vicary's Valens, is full of promise. In front he is exceptionally good, his legs and feet being about perfect, but he is defective in terrier expression, has faulty ears and anything but a tail to please a fox-terrier man.

Busbey Broom won in the wire-haired challenge division from Derleton Nettle, both looking their very best. The dog is a little wonder, and unlike most of his breed, seems to keep up his good properties as he gets on in years. Harry Jones's Jack St. Leger, who is only a ten-months-old puppy, won in the open class and also the cup for best wire-hair in open classes. He is undoubtedly a nice terrier, with a head one dreams about, but seldom sees, and in ears he is about perfect. There is, however, something about him which takes away that cobby appearance which is a *sine qua non* in a terrier of the right stamp.

Pointers are always very strong at Birmingham, both in numbers and in quality, and this year the number was up to the usual standard, but there was admittedly a great falling off in quality. In the challenge class Naso of Upton met his son Saddleback and eventually defeated him, a decision which did not please the majority of the pointer men present—the oldest breeders strongly preferring Mr. Norrish's dog. The old pointer is getting thick in shoulders, but he still possesses that wonderful skull and body, which have helped him so often to victory. Saddleback is not quite so good in head as his sire, but his shoulders, legs and feet are a study for any one who knows what is required from a pointer in the field. Ilma was alone in the bitch class. Heavy weight dogs, open class, found Totnes Parody to the fore, a massive framed dog with a typical head and ears and good about the legs and feet. Sangford Bang, second, is only a puppy, but he has the makings of a very fine pointer about him, and with luck should develop into a very tough customer in the future, even for his kennel mate Saddleback to encounter. Gladys III. was the best big bitch, and a very nice one, too, Devonshire Fan, a bit out of sorts, coming second. Bulled, who by the way generally does well under Mr. Lort, won in small dogs with Devonshire Nero, and in small bitches Madge of Upton won, although the judges openly stated that had Devonshire Judy been in anything like condition she would have won with ease, instead of being behind both the actual winner and Lady.

I must reserve the remainder of my criticisms for next week, as I am anxious to catch the mail so that you may have this letter in good time. I may just add that a remarkable collie came out at Birmingham and succeeded in beating the whole lot in show. This was Morton Campbell's Stracathro Ralph, a lovely specimen of the breed, and admitted by all to be about the best collie seen for ages. His owner refused £250 for him, and since then I hear the offer has been increased to £400 and refused.

The curly-coated retriever has had a club formed to look after its interests, and a whole host of influential names are mentioned in connection with it, including the Dukes of Portland and Hamilton, Viscount Melville and Sir Robert Moncrieff. The breed is slightly neglected in England at present time, but with an influential club at its back I expect to see it knock the wavy-coated ones out of favor very soon, for the curly is equally as good in the field as the wavy and twice as handsome. A LIVELY LORD.

THE EASTERN COURSING CLUB'S MEETING

Editor Forest and Stream:

In writing a reply to your singular remarks regarding this meeting, I wish it to be distinctly understood that I do so not from feelings of wounded pride, for any one of your reporter's ignorance utterly destroys the force of his blows, but I do so in the interests of coursing and the Eastern Club, and do not intend to be drawn into a discussion.

Six go-byes in Harmony-Forest Queen heat is simply monstrous. Six go-byes, 14 turns and 4 wrenches in a course, which may be counted by seconds and by one dog only, is so utterly absurd that it requires no answer, but as "Carnaris" is not quite alone, I will just say that at no time during the course, except when going from the slips and when Harmony threw up her nose at a turn, was there an opportunity to score a go-bye without unfairness. All reports agree that the dogs kept well together throughout, and go-byes are not intended to discount good work, and calculated as "Carnaris" does, any green, speedy sapling could carry off a course against an experienced courser that makes every point for turns and other real work. Then Queen is credited with seven trips, when she did not make one. Does "Carnaris" know what a trip is?

Admitted that after consulting the steward, Mr. Watson, the judge declined to give a special report and count of points to every one on the course. No English judge would have done different; and as the judge still continued to show his notes to gentlemen of the press, your remarks are unjust, and the same applies to references to third and fourth prize winners, for the judge, not being aware of ownership, said, "What of third and fourth prizes?" and when told circumstances, he merely remarked, "All right."

The terms used with reference to the judge's inquiries for the names of the dogs slipped at the conclusion without distinguishing colors, are unparalleled. The truth is, that the judge asked aloud of the steward for names of dogs, so as to announce the winner.

As to soliciting the post of judge, those members of the club who consulted at Jamaica on the way to Hicksville, and there decided to ask me to oblige the club, may answer the charge if it is worthy of more than contempt. At best, judging is unpleasant work, and many are aware that I have always avoided being made a target of; and since I have been in America all know that I have never pushed myself forward, like other ill-bred, presumptuous fellows.

I notice "Carnaris" says there were six turns in the final heat. Now, I maintain that there was not one, and that the few curves taken were scarcely wrenches.

Then the slipper did not throw down the slips because of any fault of mine, but as he has just told me, because he knew the rabbit would be killed and he did not want his slips taken by the officer when he was arrested, but as they were demanded they were given up and the coursing continued without slips.

In conclusion I must thank "Carnaris" for unwittingly paying me the highest compliment he could pay a judge, in saying that the judge, although alone, rather than go with the outspoken feeling and decide in favor of Zoe, he said undecided; he was certain that the spectators mistook greenness for speed, and the cutting of corners and bounding all over the course for turns and wrenches of merit, or real work, coursing. The second trial between these dogs confirmed the judge in his opinion, and convinced the public and even "Carnaris" that he was right and knew what he was doing. EDWIN H. MORRIS.

NEW YORK, Dec. 22.

COURSING AND THE S. P. C. A.

Editor Forest and Stream:

May I be allowed most heartily to thank you for your editorial on this subject in your issue of Dec. 19? I do this as having been concerned in Societies for Prevention of Cruelty to Animals for very many years. You have taken exactly the right ground of condemning the perverted views of the Society and its officers, and avoiding damning it in heaps. Any one, who has had as much experience in such societies as I have had, knows how constantly sympathy, enthusiasm and over-softheartedness lead devotees into very much mistaken courses, and that the agents of the societies are really sometimes practicing cruelty instead of repressing it, but any thoughtful man ought to know that no great moral work was ever carried out without the aid of sentiment, enthusiasm, fanaticism, and all the antitheses of sober judgment of what is wisest and best; and the work lying before leveler heads is to restrain the exuberance of enthusiasm within reasonable bounds. The articles appearing in a certain quarter (in which I grieve to see my always friend "Porcupine" practically joining) simply lead to the statement that all societies for this purpose must be suppressed because they sometimes take mistaken views of the rights of "sportsmen." Suppose for argument's sake that the S. P. C. A. had gone to the length of arresting the whole Eastern Coursing Club, including my valued friends Huntington and Wixom, would even such a wrong as that obliterate all the great work the Society has done in repressing the beating, overworking and starving of horses? I trust in the future often to see FOREST AND STREAM condemning the mistakes that the S. P. C. A. will make, in the same tone employed in this editorial. No better service can be rendered the work of prevention of cruelty, than calmly, sensibly and kindly pointing out the mistakes made, and nothing can do more to exaggerate mistaken views of right and duty than vulgar sneers and ridicule; these only hurt the sober, thoughtful, temperate workers in the cause, and are like water on a duck's back to the fanatical, unreasoning division. Mr. Peshall and I have exchanged letters on this matter, and I have dissented in the strongest terms I can muster from the action of the S. P. C. A., but that in no way lessens my respect for the Society, its work and Mr. Peshall. I have not the excuse of being a sportsman in this; I detest "sport," and wouldn't walk a quarter of a mile to see all the field trials, coursings, etc, that ever were hatched; but because my tastes don't lead me in that direction, is no reason I should condemn those who are so led.

Do not forget that there was a distinction as wide as the Atlantic between the recent coursing and the "rabbit bedeviling" of the fox-terrier folks; the latter was simply murder of the innocents, where the game hadn't a ghost of a show; the coursing seems to have carefully provided against this, and certainly is as "legitimate" as any kind of game killing or hunting that I ever heard of. W. WADE.

HULTON, Pa., Dec. 20.

[The slipper of the Eastern Coursing Club, who was arrested by an officer of the S. P. C. A., at the second meet of the club at Hicksville, on his trial last Saturday was acquitted of the charge of cruelty preferred against him by the Society.]

BANG BANG, the well-known pointer, belonging to the Westminster Kennel Club of this city, died Dec. 19

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Zara. By Mrs. Al. G. Eberhart, Cincinnati, O., for fawn and white Italian greyhound bitch, whelped Nov. 22, 1889, by Duke (Volne—Blanche) out of Flossy (Rex—Pearl).

Monte Cristo and Otho. By Col. Geo. D. Alexander, Knox Point, La., for liver pointer dogs, whelped Oct. 25, 1889, by Davis's Trump out of Black Maud.

Rodo and Jeff Davis. By Col. Geo. D. Alexander, Knox Point, La., for black pointer dogs, whelped Oct. 25, 1889, by Davis's Trump out of Black Maud.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Woodstock Floss—Little Red Rover. W. B. Underill's (Syracuse, N. Y.) cocker spaniel bitch Woodstock Floss (Robin—Woodstock Nellie) to Theo. J. Hook's champion Little Red Rover (champion Obo II.—Woodstock Dinah), Dec. 19.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Zara. Fawn and white Italian greyhound bitch, whelped Nov. 22, 1889, by Duke out of Flossy, by Henry Eichler, Covington, Ky., to Mrs. Al. G. Eberhart, Cincinnati, O.

Pelham. Black and tan Gordon setter dog, whelped July 11, 1888, by Jack out of Becky Sharp, by J. L. Campbell, Simcoe, Ont., to C. M. Johnson, Port Richmond, N. Y.

Simcoe. Black and tan Gordon setter dog, whelped July 11, 1888, by Jack out of Becky Sharp, by J. L. Campbell, Simcoe, Ont., to Jos. Yorke, Toronto, Ont.

Donovan. Red Irish setter dog, whelped Nov. 2, 1889, by O'Donovan Rossa out of Lulu IV, by M. Flynn, Jr., Bristol, R. I., to Edward J. Watson, same place.

Jet. Black cocker spaniel bitch, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to John G. Burns, Buffalo, N. Y.

DEATHS.

Jack. Black and tan Gordon setter dog, whelped May 9, 1879, by champion Grouse out of Moll, owned by J. D. Campbell, Simcoe, Ont., on Nov. 2.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

F. C. S., Vicksburg, Mich.—I have a foxhound dog 18 months old, that acts well, eyes bright, nose cool, but keeps poor and has no appetite, not when he hunts hard all day even. Please let me know what to do to increase his appetite and take on flesh, and what do you think ails him. Ans. Give a 5 grain quinine pill night and morning. Look for worms. If you discover any, give full purge of castor oil, and follow this with 30 grains of areca nut, made into a large pill with lard.

Rifle and Tray Shooting.

RANGE AND GALLERY.

BOSTON, Dec. 21.—The regular weekly shoot at Walnut Hill was held to-day, with a good attendance of riflemen. Weather conditions were unfavorable, high wind and bad light. Christmas day will be celebrated by the riflemen with all the prize and practice matches open all day. On next Tuesday the trap-shooters will hold their last shoot for 1889, and the final competition in the gold coin and merchandise match and for the Standard Target Company's medal, and prizes will be awarded instead of on Wednesday, as before announced. Following are the scores made to-day:

Twenty-Shot Rest Match.

J B Munroe	104 105—209	P Thomas	94 93—187

Champion Medal Match.

C C Clarke	72	T P Pullman	69
		S J Sydney	65

All-Comers Off-Hand Match, 200yds.

W Charles	81	A S Hunt	74
		F W Chester	70
S F Hawley	79	C F Brooks	73
		O C Bridge	69
C H Eastman	77	A Sharp	72
		S Winn	68
S C Sydney	77	B C Farmer	72
		F D Hart	67
K E Johnson	76	W Gardner	71
		A A Newman	65

Military Match.

J A Frye	40	J J Colony	32

Rest Match, 200yds.

J B Munroe	106	S W Hart	100
		T Adams	80
F S Ham	103	Dr Ball	87
		B C Farmer	80
W P Thompson	101	P W Bowers	86

SAN FRANCISCO, Dec. 15.—The German Riflemen were out in full force at Harbor View to-day, and the merry crack of the rifles resounded across the range from early morning until the shadows of evening put an end to further operations. The weather, though cold, was clear and bracing and on an average the scores were the best ever made at the range. The California Schuetzen Club, Grutli Shooting Section, San Francisco Turners' Shooting Section, and the Germania Rifle Club held matches, a large number of members participating. The California Schuetzen Club shoot was a consolation shoot, and the last of the year. Those who were already winners of medals were barred, and the ownership of the diamond medal for the highest score of the year was decided. The prize winners were as follows: Champion class, A. Strecker, 452 rings, medal and $25; first class, George Helm, 424 rings, $25; second class, H. Kurlfinke, 399 rings, $25; third class, Wm. Glindemann, 388 rings, $25; fourth class, F. Attinger, 365 rings, $25. The shout which went up when it was announced that Adolph Strecker had made 452 rings could be heard a long distance, and the excited marksmen took him upon their shoulders and carried him about the pavilion in spite of his protests. The cause of all this demonstration was the fact that his score broke the coast record at the ring target, made by Fred Kuhnle, of Petaluma, by 6 rings. Though not definitely known, this is also supposed to be the world's record. The following was his wonderful string by shots: 19, 24, 24, 23, 25, 24, 24, 24, 18, 24, 24, 24, 24, 20, 21, 21, 17, 24, 24—452. G. M. Laugali came next with 443 rings. Mr. Kuhnle made his record of 446 rings in May last, and until to-day's shoot no one approached it. Mr. Strecker now becomes the permanent owner of the medal, which is very handsome and valued at $75. The champion class medal of the club is now permanently in the possession of A. Johnson, who has won it three successive times this year.

SAN FRANCISCO, Dec. 15.—Philo Jacoby, the famous rifle shot of San Francisco, in company with three or four members of the California Schutzen Club, will leave in May next for Germany. Mr. Jacoby and his team of cracks shots will participate in the great shooting fest val which will be held in Berlin in July next, and which will continue for three weeks. The California representative marksmen will also take part in the big shooting tournament to be held in Switzerland immediately after the Berlin shoot.

NEW YORK, Dec. 20.—The Barry Rifle Club held its annual meeting to-night and elected the following officers: Dr. F. W. O'Brien, President; E. Keller, Vice-President; J. A. Boyken, Secretary and Treasurer; C. Hutch, Sergeant-at-Arms, and Ch. Midnight Shooting Master. The headquarters of the club has been entirely rebuilt, and two 85-foot ranges put in, where we expect to have our practice shoots every Friday. A match with the Albig rifle team will be shot on Wednesday, Jan. 8.—J. A. BOYKEN, Secretary.

ILLINOIS ASSOCIATION PRIZE MATCHES.—Chicago, Dec. 10.—To the members of the Illinois State Sportsmen's Association—Gentlemen: In compliance with a request from Messrs. W. P. Mussey, John Watson, R. B. Organ, W. W. McFarland and Geo. Farmer, you are advised that the association trophies known as the *Herald* diamond medal and the Jenny & Graham Lefever gun, now held by Mr. Eich, will be contested for under the conditions stipulated, at Watson's Park, Grand Crossing, on the second Thursday of January, proximo, at 11 o'clock A. M.—F. C. DONALD, President.

LONG BRANCH, N. J.—There will be live-bird sweepstake shooting matches all day at the Central Gun Club grounds, directly opposite railroad depot, on Christmas Day, 10 A. M.

EASTERN TEAM.

H. McMURCHY. W. FRED QUIMBY. CHAS. W. BUDD. S. A. TUCKER.
WM. E. PERRY. W. H. WOLSTENCROFT. H. B. WHITNEY. W. S. PERRY. ROLLA O. HEIKES. JAS. R. STICE. JOHN A. RUBLE. C. E. CAHOON.

WESTERN TEAM.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

THE U. S. CARTRIDGE CO. TOUR.

THE great tour of the U. S. Cartridge Co.'s shooting teams may now be said to be inaugurated, for although the shooters' car does not start till the latter part of January, the advance agent is now loose; which the same is Tee Kay. Any trap-shooter, and almost any sportsman, of the country will know it is unnecessary to remark that Tee Kay is not a Japanese gentleman, but a straightout American from New Jersey, and a whole aggregation of talent in himself. To a few intimate friends it is known that his real name is Thos. Keller; but this fact is rapidly becoming obscured in the drift of time, and Tee Kay goes. The only misfortune that can happen to the boys in the Iolanthe is that they can't have Tee Kay with them, but must follow after, vainly trying to stop the hole he leaves in the air or ahead; and if any imputation dare be put upon the management, it is that of possible bad judgment in selecting an advance agent who may leave a doubt in a town as to whether he was the front man or the whole show himself.

Mr. Keller goes first to Dayton, O., where the first shoot of the tour will be given Jan. 27. After securing the grounds and billing the town properly, he departs for similar duties at Cincinnati, Louisville, St. Louis, Memphis, New Orleans, Houston, Dallas, Austin, San Antonio, El Paso, Los Angeles, Stockton, San Francisco, Sacramento, Portland, Seattle, Tacoma, Ogden, Salt Lake, Leadville, Denver, Kansas City, Omaha, Des Moines, St. Paul, Minneapolis, Milwaukee, Chicago, Detroit, Toledo, Cleveland, Pittsburgh, Buffalo, Syracuse, Albany, New York and Boston. This is the route to be followed on the grand tour, and a more magnificent trip could not be imagined. It would seem a large strip of country for one man to head down, but if any one man can do it it is the Tee Kay aforesaid. It is to be hoped that he will not dally too long in Kentucky, or pause unduly in the Creole city, or look too long upon the sea lions at the Golden Gate, or stop to play solitaire in the Mojave desert. No matter where he is he will not be lonesome. It is the boys behind him who will be lonesome. Success go with him, and with the intelligent and enterprising movement of which he is the preface.

The route of the party and the names of the shooters have been published in these columns before, and the country is now well acquainted with the enterprise in hand. It may not be amiss, however, to give once more the names of the final teams for convenience of reference in a matter of such importance. The Eastern team is composed of H. McMurchy, Syracuse, N. Y. (captain); H. B. Whitney, Phelps, N. Y.; W. H. Wolstencroft, Philadelphia, Pa.; W. E. Perry of Boston, and W. S. Perry, of Worcester, Mass. Mr. W. Fred Quimby goes as substitute. The Western team is composed of C. W. Budd, Des Moines, Ia. (captain); J. R. Stice, Jacksonville, Ill.; Rolla O. Heikes, Dayton, O.; J. A. Ruble, Beloit, Wis.; C. E. Cahoon, Freeport, Ill. Mr. S. A. Tucker, Davenport, Ia., goes as substitute.

There will be a large number of very interesting live bird races shot during the tour, of which the following are part: At Louisville, Mr. Heikes vs. Mr. Ruble, 25 birds a side; at St. Louis, Messrs. McMurchy and Whitney vs. Messrs. Budd and Stice, 50 birds a side; at New Orleans, the Eastern vs. Western team, 50 birds a side; at Los Angeles, Mr. Quimby vs. Mr. Tucker, 25 birds a side; at San Francisco, Mr. Budd vs. Mr. Stice, 35 birds a side, and also Mr. McMurchy vs. Mr. Heikes, 35 birds a side; at Denver, Mr. Ruble vs. Mr. Whitney, 25 birds a side; at Leadville, Mr. Budd vs. Mr. McMurchy, 25 birds a side; at Kansas City, the Eastern vs. the Western team, 100 birds a side; at Chicago, the Eastern vs. Western team, 100 birds a side. This will furnish diversion in the target programme, and still further complete the attractions of what is already accepted as the most unique and perfect trap-shooting undertaking on record. The tour will be a succession of admirably appointed tournaments, and sport at the trap will be set before the public as it has never been before.

Mr. Dimick, as manager of this trip, has not been satisfied to turn the first forward wheel of the Iolanthe until every arrangement for the comfort of his teams and for the success of the trip was perfect, nothing less; therefore the starting date is now put at Jan. 27, that being the date of the first shoot. Under many vexatious delays and disappointments Mr. Dimick has held to his purpose, and there is now fairly under way, as stated in our first paragraph, the first step in what is a thoroughly well-conceived, well-equipped, truly American enterprise. Therefore, joy go with the herald and his following friends.

ESSEX GUN CLUB.

MARION, N. J., Dec. 19.—This afternoon at the club grounds at Marion, N. J., the members of the Essex Gun Club held one of their regular quarterly shooting meetings. No less than twenty-two men put in an appearance. Sweepstakes were shot until 11:30 P.M., when an intermission was had for luncheon. Then the two teams were selected, and the event of the day was fought to a conclusion. This resulted as here given. The captains were R. H. Breintnall and Wm. Hayes. The match was begun promptly at 1 o'clock, and was shot out by 4 o'clock. The team led by Hayes won by 2 birds, killing 86 out of the 100 birds shot at, against 84 killed by the team led by Breintnall. The men shot alternately, first a member of one team, then a member of the other.

W. Hughes got 10 straight kills, A. B. Hedden, S. S. Hedden, B. Freeman and W. Babbidge each killed 9, E. Nichols, R. Heinisch, I. Keast, W. Hayes and B. Morris each got 7 birds to his credit, and Terrill got 5; total 86.

On the losing side C. M. Hedden and C. R. Hedden each scored 9 kills; G. Freche, L. Thomas, E. Tillon, R. H. Breintnall and Dr. Nicholas each got 8, L. O. Jones got 7, H. Leddy and I. Mix got 6 each; total 84.

The birds were a fair lot, somewhat uneven in character; many excellent, many fair, and a few poor. The day was a delightful one for the trap shooters. The sweepstakes were all of similar character, viz.: 4 birds, $2 entrance, 3 moneys, Essex Club rules to govern.

First event.—Breintnall, Freeman and Mix killed all their birds and divided first money. Second was won by Terrill, and third by Thomas.

Second event.—Breintnall was the only man who killed the four, and he took first money. Freeman, Mix, A. E. Hedden, White and L. O. Hedden scored three kills each and divided second. A. Freche took third with two kills.

Third event.—Breintnall and Thomas killed four straight and divided first money. Freeman was all alone for second. Third was divided between Mix, A. E. Hedden, White and L. O. Hedden.

Fourth event.—S. S. Hedden took first alone; Babbidge and Leddy got 3 killed each and divided second, while third was won by E. Tillon.

Fifth event.—Fifteen entries, Babbidge, C. M. Hedden and W. Hughes made clean scores and divided first; A. B. Hedden, S. S. Hedden, H. Leddy, I. Mix, B. Freeman and J. Nichols got 3 each out of the 4 shot at, and divided second. Third money went to Breintnall, Freche, L. O. Hedden, D. D. Terrill and J. Tillon, share and share alike.

Sixth event.—Sixteen entries, four moneys. L. O. Hedden, W. Hayes, A. B Hedden, T. Keast and R. H. Breintnall made clean scores and tied for first. It was at once shot off, miss and out. L. O. Hedden and Keast missed their first bird and went to the rear. Hayes and A. B. Hedden followed suit on the second bird shot at, and R. H. Breintnall got the plunder by killing his bird. C. M. Hedden, Babbidge, B. Morris, G. Freche, W. Hughes, I. Nichols, B. Freeman and J. Tillon all tied for second, and also shot off the tie, as did the first men, miss and out. Babbidge, Freche, Hughes and Tillon slipped out quietly on their first shot. C. M. Hedden and J. Morris on their second shot came to grief. I. Nichols and Freeman killed and then divided the money. Third money was separated amicably by Jerry Monahan and S. S. Hedden. Dr. Nicholas won fourth, being the only one in the class.

Old South Paw (Al. Heritage) managed the accessories of the meeting in his usual capital fashion.

NEWARK, Dec. 18.—At Ero's Park to-day there was to have been shot the match between Frank Class of Pine Brook, and James Thompson of Yonkers. Both men put in an appearance, but each man was a physical wreck. Class was suffering from an attack of neuralgia, and Thompson was in no better shape, so the shoot was postponed to Thursday, Dec. 26. A large number of spectators were on hand, all interested in pigeon contests, so a number of sweepstakes were at once gotten up and shot to a finish. The sweepstakes were all shot under the following conditions: Four birds, $3 entrance, under 10 entries, 2 moneys, 60 and 40 per cent; over 10, 3 moneys, 50, 30 and 20 per cent., Hurlingham rules to govern.

First event (10 entries): C. M. Hedden, S. Castle, J. Thompson, Frank Class and C. Reinhardt killed all their birds and tied for first money. They shot off the tied in the next sweep, the best score to take the money. Erb, Wheaton and Collins tied for second and did the same, as did also Taylor and E. Thompson, who tied for third.

Second event: C. Reinhardt, E. Collins and J. Thompson killed 4 straight and tied for first. The money was div., and Thompson and Reinhardt div. first money carried over from the first event. C. M. Hedden, S. Castle, J. Wheaton, F. Class and E. Thompson killed 3 each and shot the tie off in the third event. Reinhardt missed 2 birds and captured third money by himself.

Third event: Hedden, Castle, Erb, Wheaton and J. Thompson got 4 straight kills and shot off the tie in the next sweep. Reinhardt got 3 kills out of the 4 shot at, and again captured the pot without a competitor in his class, this time second money. Third money was tied for by Class, Collins, Taylor and E. Thompson with a half and half score, two misses and two kills each. It was shot for in the next sweepstakes.

Fourth event: First money was tied for by Hedden, J. Thompson, Class, Collins, E. Thompson and Hugh Leddy. Each killed all his birds. They refused to div. and shot it off, miss and out. Here followed as hot a race as is seldom seen. Before it was settled the cost of the pigeons amounted to more than the money in the pot. J. Thompson slipped up on his fourth bird and was out. Hedden followed suit on his seventh, a clean miss, for the bird fooled him. E. Thompson dropped out on his ninth bird. Collins, not to be outdone, also missed his tenth. Class killed his and took the first money of this and the third money of the preceding by shooting out all others. Second money was amiably div. between Erb, Castle and Wheaton. Chris Reinhardt again raked in a pot all by himself.

GRAND GROSSING, Ill., Dec. 11.—The South Chicago Gun Club medal shoot, 10 live pigeons, 5 ground traps, 30yds. rise, 80yds. boundary, Illinois State rules. They also shot the blackbird medal the same day at 20 Peoria blackbirds:

Live Pigeons.

L Welland	7	F Willard	9
G Kleinman	8	E Reeves	9
A W Reeves	9	A Kleinman	9
C Amstein	6	E Marsh	9
Monroe	5	J Watson	8
F Templeton	6	Dr Larkin	10

Blackbirds.

E Marsh	12	F Willard	16
E Reeves	18	A Kleinman	12
G Kleinman	15	S Willard	19
C Amstein	15	A W Reeves	19

Messrs. Willard and Reeves shot their tie off at 5 birds each, killing 20 straight; of the last 5 Willard killed 4 and Reeves 3, giving Willard the medal.

Dec. 21.—Match at 50 live pigeons per man, 5 ground traps, 30yds. rise and 80yds. boundary, Illinois State rules; Organ and Payson vs. Ashley and Phillips:

| | | |

BROOKLYN, Dec. 20.—One of the oldest shooting organizations in the State, the Falcon Gun Club, held a regular competition shoot to-day at Louis Miller's Dexter Park, in the presence of a large number of interested spectators. The targets were live birds and clay-pigeons, and as the former were a strong lot of flying birds, the sport was very interesting to both the spectators and the wing shots who were facing the traps. Some excellent scores were made, J. Voght doing especially well, as he did not miss a bird, either clay or live, in the 23 targets he shot at, while he resorted to his second barrel but twice to score kills. It was an excellent bit of shooting, and drew forth deserved applause from the spectators and competitors present. The first event was for the regular gold medal of the club, at 10 birds per man, 25yds. rise. The three prize winners were J. Voght 10, F. Moller 9, H. Miller 7. Voght thus won first money and the club medal, and Moller the second prize and Miller the third. A sweepstakes shoot at 5 live birds followed. Miller and Voght divided the first money, Moller got third, all three shooting from the 25yds. line. The score: H. Moller 4, J. Voght 5, F. Miller 5. An extra sweepstakes shoot at clay bluerocks came next, the score sheet showing Voght the winner of first money, with Moller and H. Krebel, Jr., dividing second. The score showing as follows: J. Voght 5, H. Krebel, Jr., 4; F. Moller 4. The second extra sweep at 3 birds per man, 25yds. rise, resulted as follows: J. Voght 3, H. Krebel, Jr. 3, F. Moller 2. By reason of darkness, the two first contestants divided the money, and one of the best day's shoots of the season came to an end.

WELLINGTON, Mass., Dec. 21.—Several of the crack shots of the Wellington Club attended the regular weekly shoot to-day, and several good scores were made, notwithstanding the strong wind, which greatly increased the flight of the birds. In the silver pitcher match at 7 bluerocks and 8 clay-pigeons Dill won with a score of 13. The other scores in this match were: Chase and Perry 12, Schaefer, Bacon, Wheeler and Lee 11, Bradstreet, Porter, Roxton, Webster and Warren 10, Comee, Bond and Ward 9, Short and Stone 8, Scott 7, Pushee 6. The winners in the sweepstakes follow: Ten bluerocks, Wheeler; 5 clay-pigeons, Roxton; 6 bluerocks, Comee and Payson; 10 bluerocks, Keystone match, Comee and Wheeler; 5 clay-pigeons, Wheeler; 10 bluerocks, Comee; 6 bluerocks, Dill and Wheeler; 6 tin birds, Webster, Wheeler, Comee and Schaefer; 5 bluerocks, Roxton, Porter and Chase; 6 tin birds, Bacon, Short and Warren; 7 bluerocks, Chase, Schaefer and Perry; 8 clay-pigeons, Dill; 10 bluerocks, Keystone match, Wheeler; 5 pairs bluerocks, Roxton and Warren; 5 clay-pigeons, Wheeler and Dill; 5 bluerocks Wheeler; 5 bluerocks, Webster.

RED BANK, N. J., Dec. 20.—The regular monthly live-bird shoot of the Riverside Gun Club took place this afternoon, with the following results: First event, 7 birds, $1 entrance—A. Ivins, E. Cooper and J. Cooper 7, Dr. E. Field 6, Wm. T. Conover, J. B. Berger and F. Beale 5, Chas. Littlefield, Jr., A. Whymer and M. Cornwell 4, E. Bussell 3, D. Belshaw 2. Ivins won in the shoot-off for first money, and third money was divided. Second event, 3 birds, $1 entrance—E. Cooper, Cornwell, Ivins, Conover, Littlefield and Field 3, Beale and Bergen 2, E. Throckmorton 0; moneys divided. Third event, 6 Keystones, $1 entrance—Bergen, E. Cooper and Throckmorton 4, Randolph, Cornwell and E. Crater 3, Bussell and Whymer 2, Dr. W. Whitmore and Belshaw 1. Throckmorton won in shoot-off for first, Cornwell won second and Whymer third. On Christmas Day the club will shoot at both live and clay birds. The shooting will begin at 10 o'clock and last all day.

TORONTO, Dec. 20.—At Newcastle to-day Riggs, of this city, defeated Wilmot, of that place, in two matches. The first match was for $100 a side, at 50 live pigeons, 26yds. rise; and the second for $50 a side, at 25 birds, same rise. Riggs got 38 in the first match and Wilmot 34. In the second Riggs got 24 and Wilmot 19. The shooters used both barrels, and the scores are not therefore very good.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

A FIFTEEN HUNDRED MILE CRUISE.

With the new year we will begin the publication of the log of a solitary cruise of 1,500 miles, made in a 14-foot Adirondack boat, on the Erie Canal, Lake Ontario, the St. Lawrence River, and other waters. The cruise began at Albany, finishing nearly two months later at Philadelphia, and the narrative includes exciting and dangerous episodes. The chapters will run through several issues. Cruisers should not miss this serial.

THE ADIRONDACKS WITHOUT A GUIDE.

"THAT must be fun," remarked my friend, Harry Vail, as, seated in a room of a New York club, he indicated in the paper that he handed me the item which had drawn his attention. The paragraph was about canoeing. As I perused it I agreed with Vail, and it suddenly occurred to me that here might be a pleasant and profitable way to spend the short time which I should be able to take from business during the approaching summer.

Vail was a gentleman of means and leisure; and, though an ardent lover of sport, had always followed it luxuriously, paying subordinates liberally to remove all elements of roughness. I was a common, every-day work horse, who thought a canter out of harness would do him good.

"What do you say to a week spent that way?" I asked.

"I'll go with you!" he exclaimed, jumping up and grabbing my hand. "The open air life and exercise would benefit both of us—you because you have worked too hard, and me because I have not worked enough. No guides or helpers of any kind. We want to do it all ourselves and be as nearly like two jolly savages as possible."

So it happened that on a beautiful morning in August, 1887, we found ourselves at Blue Mountain Lake, the southeastern entrance to the heart of the Adirondacks. A 16ft. cedar Canadian built open canoe, flanked with duffle sufficient for a two weeks' cruise, lay snugly packed in a wagon at our side.

We were bound for Rock Lake, the headwaters of one of the principal sources of the Hudson, down which latter river we intended to float as far as suited our convenience. A seven-mile trip by road and no driver reined up at a place where the woods showed no signs of being less dense.

"Gents, if you want to get to Rock Lake this is the best I kin do for you. I can't get my wagon through that path nohow, 'specially as my hoss is so fond of climbing trees that we dasen't trust him too near them. The panthers in there a bit is m ghty fond of dudes. Aint you afraid?"

We had paid this fellow in advance, or he would not have tried to thus harrow our feelings. Vail gave him a stony, head-waiter kind of a glare, but never having been snubbed by that autocratic hotel functionary, the backwoodsman survived and helped to put our duds beside the dusty road.

When he had driven off and we were left to our own resources without knowing what was demanded of them, we began to feel somewhat feeble about the knees. The afternoon was on the wane, no one might come that way for we knew not how long, the nearest house was further than we cared to walk even without encumbrance, and the path to our proposed starting point was as uncertain as a country parson's salary. What were we to do?

"Here is the poetry of wilderness life," said Vail, emphasizing the remark with a resounding slap at a deer-fly that was absorbing nectar from his ear. "Don't let us forget our sink-or-swim compact. I have a good imagination and can pretend I know where that trail is or should be." Then lifting one end of the boat, he continued: "I am a pretty careless fellow and guess I had better trust you to carry this. Besides, they say it weighs only 70lbs., and, as I am not good at calculating weights, I would very much like your unbiased opinion after walking a mile or so with it on your shoulder."

I could not resist such delicate flattery. Placing the neck-yoke, specially prepared for the purpose, in position, I got under the apparently unwieldy structure to find that it balanced excellently. The bow was slightly elevated in the position in which I held the boat, allowing me to see to a limited degree what lay directly in front.

Vail went ahead with one of the meal sacks containing part of the duffle, while I took up our boat and walked in the rear, stumbling and shuffling along. What fun it was! The scarcely distinguishable trail twisted and curved. In trying to avoid a tree in front, the stem of the canoe would swing around and whack one on the opposite side of the path. This would confuse me, and, letting the bow rise up to see where I was getting to anyway, the tail end would see-saw so low as to drag along the ground. Resuming the march, after walking carefully up hill and down for a few hundred yards, out from their leafy bowers would swagger several thousand assorted gnats and mosquitoes, with a few deer flies and black flies to keep them company, and, sauntering under the capsized navy, immediately come to the conclusion that it was a man trap for their special benefit. Acting upon this understanding, they would proceed to sample my blood by a liberal application of corkscrews on various exposed parts of my anatomy, not forgetting to get on the under side of my glasses and buzz around in my optics. Unable to take my hands off of the canoe, and annoyed past endurance by their intimacy with my eyeballs, I would wink my eyes rapidly, partially closing them for some seconds, to be suddenly remiuded of their use by finding my feet sinking into a rich, alluvial, apparently bottomless quagmire in the path. Rocks and roots under foot would offer unexampled inducements for sitting down rapidly, and occasionally a fallen tree lying breast high would bar the way.

Many halts were made to rest, moan, wail, rub barked shins, and try to induce the other fellow to do all the hard work. Time passed rapidly with these kid-gloved diversions. The golden sunshine became copper-colored, thrusting only an occasional bar through the recesses of the still forest. Suddenly a silvery gleam mingled with the brighter ray, and pressing forward a short distance, we found ourselves near the borders of the longed for lake. Before us for a quarter of a mile lay an oozy meadow of tall rushes extending to the water's margin. All round the pond the forest rose dense, black, appalling—a mighty fence of millions of unsawed boards interposed between us and civilization. Taking this in at a glance, we also saw what then interested us more, a small log lumber shanty close at hand. This had in front one opening, filling the office of door, and another small aperture high up at the side answered the place of window. The ground was strewn with hemlock boughs, and here we determined to pass the night.

We sat down to rest. We reflected silently. While engaged in chewing our mental cuds, a clashing was heard down the path a short distance. We held our collective and several breaths, politely wishing to avoid wafting our visitor on onion-laden zephyrs, when a shaggy brown coat disclosed itself through the foliage, we held our breath some more and made a bee line for the shore. The bear crashed and we splashed. When we had waded up to our knees in the lake and discovered that the beast was making still more rapid time in the opposite direction, we recollected that we both had revolvers and that bear skins made fine parlor rugs.

Filled with an unquenchable thirst for blood, we pretended to try to beat each other to as near as we dare go to the spot where we last saw bruin.

"I think it went in there," I said, in a subdued whisper, excitedly pointing a finger toward the woods and unconciously directing with the other hand my cocked weapon as Vail's devoted person.

"Well, I don't care to go in there," he remonstrated, indicating the ground, "unless you really wished to kill me, in which case I should feel perfectly safe. I would rather take my chances with several bears, than with you when you are trying to hunt one with that young pocket canon you have got in your hand. The law against carrying concealed weapons will never touch you, the statute does not discriminate against Gatling guns."

We then banged a few times to let the menagerie know we were on deck. Wending our way in the gloaming back to camp, we stacked wood into a pile, and lighting it, put things in shape for the night.

Perhaps you never camped in the pine woods, nor located near low ground. You do not know what midges are? The theory is, that they are very small gnats, but we claim that they are animated grains of cayenne pepper, having the power to get under the cuticle and lay next to the raw flesh. At any rate they are almost invisible, swarming in millions, smarting, humming and finding a way under any covering.

With these and other insects we held sweet converse until morning. We had heard that they were averse to smoke; and, building a fire directly in the front opening of the cabin, we made a grand smudge, which floated back into our shelter in great style, compelling us to lie flat and gasp for breath. Only when the fumigation became so bad that our death from suffocation seemed imminent, did the pest show any signs that it appreciated our attentions. It was only a question of endurance between us and the mosquitoes. Vail, who would joke at a funeral, said that the difference between a youthful tobacco user and ourselves was, that one would smoke if he could and the other was smoked in the wood. This blow coming so unexpectedly from my only available friend, produced a partial insensibility that he was heartless enough to call sleep.

After a hearty breakfast of the simple but well-relished viands which were within our ability to prepare, we set down to discuss our Stoddard's map of the Adirondacks, a very trustworthy and accurate guide, without which we would not have been able to travel. We saw that in carrying out our proposed plan, before we reached a house or a settlement we would be obliged to make a trip of between 75 and 100 miles through the uncombed wilderness. Taking the previous night's experience as a sample of life in wayback, it was decided by acclamation to wrestle with our outfit back to the road, and there wait for some wagon to come along to take us 20 miles southeast to a point where the Hudson, considerably enlarged at that point, flowed in by the highway.

The catch-as-you-can ninety-falls-in-half-a-mile tussle of the foregoing afternoon was repeated with variations. After doubling on our carry several times we at last arrived with all belongings at the road. Here we lounged in meditative ease for several hours. Short naps, tobacco, and the concoction of lies to tell our friends made the time pass away very pleasantly.

"Ha! what have we here? A solitary mounted traveler in charge of a treasure train approaches. Prepare the ambush for you unfortunate," tragically exclaimed Vail, as rising from a position where he had been alternately looking up the road and gazing at his feet, elevated at a dizzy altitude far above him, he flourished a 7in. hunting knife.

The wagon was indeed a treasure wagon, for it was empty, and finally we got our outfit safely stored and climbed aboard.

Our friend in need, an employee of a Blue Mountain Lake hotel, was going to push afternoon and night right through to the railr. ad terminus, North Creek. He was a typical mountain character, huge of frame and limb, rough in form and speech, but not without originality and sturdy independence. He had a flood of information to give us concerning all that we passed. At this point a deer was killed, here a terrific fight with a bear, or, years ago, near still another place, lived a band of renegade Indians, or resided a family of lawless whites. We somewhat suspect that he tried to place his own mental panorama before us as actual pictures. However, his lies, if so they were, proved very entertaining. As we topped a large hill he pointed out a remote forest and mountain, and one up to it close to the shore, paddled along side and jumped right out and caught hold of the critter's neck, tryin' to drown it. Well, Sam be a big feller, but the deer was hefty too. Jus then it got its feet on the bottom, and then they be a peart scrimmage to see who be the master. Once or twice Sam was downed and stepped on by the sharp hoofs, but he never left go his holt on the critter's neck, and waitin' for the best time he tripped it up, and gettin' its head under, hel' it thar until they be no life in the animal."

The wagon had no springs. Just as the sylvan annal was concluded, Vail, who was sitting on the side to give the canoe room, and who had been listening intently, received an electric shock, imparted by the wheels going suddenly and rapidly over a stone in the road, tumbling him neatly off from his perch into the dust.

The wagon bounced and jumped. We exchanged seats frequently and often stood up. The twilight deepened round us. Still and black the shadows climbed the mountains at our back. As we slowly wheeled up the steep ascents and rattled down into the hollows beyond, the stars were one by one thrown into the sky by an invisible hand; and the endless line of forest on both sides seemed to come close together in front, growing toward one another, like silent, magically constructed walls, to bar our progress.

Stories, songs, and even poetry were copiously administered to drive off the attack of oppression and weariness. No use, tired nature would assert herself. The road began to wave and flaunt itself like a flag in a gale; deer jumped from bough to bough; forests became a dense blanket, lifting up from the earth to enfold and smother us; the horses would then make a mighty effort to break out of the shafts and travel right up toward the stars; and with a lurch we would suddenly start up to find all the same as before we stirred up the real with the creations of dreamland. The driver was toughened to this, to us novel experience. After watching us for several hours in our semi-comatose, somnambulistic condition, he remarked not unkindly: "I believe if you fellows had a rope tied onter yer legs and wuz dragged along in the road behind ye would go on sleepin' jus the same. But if ye are tryin' to get to somewhare you had better wake up quick—here be North River."

A tavern built close to the road, the Hudson bawling loudly across the way, and a man with a lantern standing beside the wagon, made us suddenly realize that all creations existing in the night are not exclusively the product of sleep-steeped brains. Sending our driver on his way rejoicing we turned toward the house, full of rich anticipations of mattresses and spring beds. What, then, was our consternation at being informed that every room in the hotel was occupied!

"What's the matter with the hay mow?" asked the undaunted Vail.

"I guess we can stand it if the horses can," I replied, glancing at our woefully dust-begrimed clothes. "When the boy comes around in the morning to care for the horses I am going to ask him to curry us the first thing he does."

Our blankets stood us in good stead. With a reckless abandon, disregarding grasshoppers and crickets, we were soon steeped in sleep and hayseed. We now felt tough enough to decimate a chicken roost or rob a train of cars; and next morning, after a thorough wash in the hotel office, we slouched into the dining-room and the presence of civilized tourists, each of us with flannel shirt and belt, ornamented with weapons, joyfully oblivious of those conventionalities of dress and appearance which under ordinary conditions neither of us would for a minute have thought of disregarding.

Breakfast concluded, it was soon understood by every one in the hamlet that we intended to descend the river in the incomprehensible little canoe, which none of them could tire of examining and handling. The Hudson here was no insignificant stream; broad and deep it introduced itself to us in a swift half-mile rapid, which all evidently expected us to run. Alas for publicity! We would have very much liked to become initiated by launching in the still water below. The people became impatient—no one likes to be cheated out of a free show—and so as the easiest way out of the difficulty, putting the diminutive bark in the water at the head of the rapid, after packing in all our outfit and assuming the conventional positions, Vail in the bow and I in the stern, we grasped the paddles, with whose use we were hardly more than theoretically acquainted, and with many misgivings, pushed off.

"You can run it all right," shouted after us a facetious old lumberman. "After you once get started it is just as easy as falling out of a fourth story window." This comparison we found only too faithfully described the situation. We headed for the middle of the stream. Suddenly the banks began to climb past us with the rapidity of the shifting of stage scenery when the flies depicting a quiet pastoral landscape are quickly drawn aside to disclose the heavy villain on the point of raising some one's scalp. With a rush and a hiss, a bound and a plunge, we were tossing about in a breath-taking style. What a revelation to our unaccustomed senses! We were going neither faster nor slower than the water on which we floated; and, consequently, the stationary waves, the rocks and even the banks seemed on a mad, wild rush up hill. Our experience was very much that of the raw recruit for the first time under fire. To heighten the illustration, all the projecting stones in the river appeared to be singling us out, coming for us like spent cannon balls. To our good genius must be ascribed the credit of getting us safely through. Certain it is that we were almost paralyzed by conflicting emotions. By the time we took a stroke the necessity for the movement had entirely gone by. About all we did was to keep the boat from drifting broadside, which on this occasion, on account of the depth of the channel, was fortunately all that was necessary.

It was all over in a minute. We could no more tell where we had been than a man who had just experienced being tossed in a blanket. We had a faint recollection of waves, paddles, arms and feet, but that was all. We were now in clover, or its equivalent to canoeists—swift water of uniform depth and current. All our tribulations seemed to have ended. The landscape was perfection, the sun shone warm, the clear water without obstructions of any kind danced and sparkled. Holding the stern paddle to guide the canoe, invisible hands moved us along to the tinkle and gurgle of the water and the notes of birds. In this earthly flight, this exertionless progress, we continued until, all too quickly, we found ourselves drifting into the village of North River, where we were obliged to stop for mail.

It was now well along in the afternoon, and we could ill spare the time, but wieiders of the paddle, however rugged their mould, are always vulnerable to the wiles of the fairies, whose other name is woman, and certain it is that with regard to a blooming and vivac ous postmistress here we in this particular developed all the characteristics of veteran canoeists. She knew who we were and all about us, through the oft referred to intuition of the sex (or the instruction of postal cards awaiting our arrival); and opening a conversation which we were not cruel enough to ourselves to refuse to sustain; until we were suddenly brought to realize that we must choose between flirtation and North Creek for the night or the river and camp.

Though after five we had made the journey from our place of embarkation so quickly and easily, that we supposed that Riverside, some nine miles below, could be readily reached by nightfall. The highway now left the river. Once more we gazed where nature's green garments were unseamed by roads. The woods crowded the water in jealous, thick-growing, impenetrable barriers of evergreens. The stream which, earlier in the day, had sported with us in kittenish gambols, now showed canine traits. Rapids, in the midst of which were numerous rocks strewn with drifted timber, became frequent. We were now obliged to continue until we found a camping ground.

We had grown reckless. Like the habitual opium eater, whose system will not respond to a less dose than the quantity sufficient to kill several average men, so as rapid after rapid was passed in safety, our wheated appetite for excitement was given expression in my shouting, "Let us paddle as hard as we can down the next one. We have learned how to select the proper channel and there is no use in losing time on accout of ruffled water."

A deep sustained roar, well calculated to cause more experienced voyagers to investigate carefully before proceeding, now smote our ears, growing louder as we advanced. With the temerity of boys throwing stones at dynamite we continued, oblivious of danger. As round the bend we swung, a foam-crested, rock-studded declivity, boiling, eddying, animate with fury and passion, challenged a passage, which, now that we were on the first eager undulations of this resistless current, we must inevitably make. The first numbing fear was succeeded by a desperate nerving of our strength. Onward we dashed. What mattered it that the waves washed over the gunwales, wetting our goods and persons; what mattered that we slid by this rock or shoved past that so close as to feel the wind of our lightning progress; with muscles rigid and eyes bulging, we strove with clear brain and instant stroke to keep our course and avoid total shipwreck. When we had run four-fifths of this gauntlet of water and rock, as we looked below, the channel beyond a certain point ahead had a distant, far away appearance, an interruption evidently occurring, which we were not slow in comprehending was caused by a fall. We were in for it now—it was useless to attempt to escape. That our boat might have sufficient velocity to shoot over at as slight an angle as possible, we paddled straight for the most promising spot at as great a speed as we could command. The verge of the falls was shallow. The bow went over all right; but the stern, being weighted down, as the boat made the plunge, scraped against a flat rock a few inches below the surface. The effect was immediate, if not sooner. We were both thrown violently forward. I being in the stern, caught hold of the gunwales, but Vail, away forward, with nothing before him, lurched over, and, anticipating the descent of the canoe, took an independent plunge on his own account. The boat swung partly around by the shock and sudden lightning of its load, almost simultaneously with Vail's enterprising performance shot quarteringly over, sending its retarded bow well under water, but landing right side up close beside where Vail had disappeared.

Up bobbed Vail with the canoe in the lead. It was impossible for me to check my speed, and I was, therefore, much relieved to hear Harry sputteringly shout, "I am all right. I've got hold of a boulder. Go through and then come back and help me out."

A few more strong, well applied strokes found me in still water at the foot of the rapid. Hastily landing, picking up a long pole as I walked, I was soon opposite where Vail took his unannounced and informal swim. On the top of a high rock, with deep water rushing all around, he sat; presenting much the appearance, in his bedraggled state, of a Newfoundland dog that had just come ashore with his master's stick in its mouth. Stepping and jumping out on a succession of partly submerged rocks, I got near enough to reach my friend with the strong green sapling which I carried. He took hold of the other end of the impromptu life line, and, letting himself gently into the current, through our united efforts soon stood beside me.

"Harry," I remarked, "the next time you become dissatisfied

with my company, please give me a little notice that you intend to leave. As a friend you might at least afford me the satisfaction of saying good bye."

"Never mind, old fellow," he retorted, "you will get your dose some time. Every fox has to run from the dogs sooner or later, and I'll bet you will break for cover before long. But all joking aside, that's a fine little current there. It tore off every suspender button on my clothes. Why, while I was roosting on that beastly stone I saw about a hundred black bass dashed against it by the water and carried lifeless down stream. Fish brains flew through the air so for a while that I was completely smeared, and was glad of the opportunity you offered me to another bath."

I like a good liar, and I guess that is why I am so fond of Vail.

We proceeded to take our bearings. Our canoe was on a sandbar. Climbing a rather high bank, a house close at hand in the midst of several cultivated fields, and nearly a mile further another, suggested the probability that we were not far from Riverside. It was now dusk, and building a large fire of driftwood, we dried our clothes and partook of supper. The house, upon investigation by the light of the full moon, was found to be deserted. Carrying up our bedding and placing it upon the porch, we were soon lost in that healthy oblivion which follows a hard day's work in the open air.

A rough shake and a harsh voice saying, "What are ye doin' here? Get off from my house," was my rude awakening. Before I had a chance to open my eyes or collect my wandering senses a violent reminder with a stick on the spankable part of my anatomy, and another invitation to "Move out lively," caused me to sit up without more ado.

There was Vail standing over me with a club. "Ha! ha!" he laughed, "I told you you would have your time. I have been waiting to get even with you. I thought at first I would like to lift you gently and carefully roll you over the bank into the river. You are too heavy for that, though; and so I did the next best thing. You won't trifle with a gentleman's sensitiveness again, will you?"

"No, I won't trifle, I'll get down to business," I replied, reaching over in the path for a clod of earth, and sending it with well-directed aim where it would do the most good.

A truce agreed upon, after a breakfast we loaded the canoe and dropped down stream to Riverside, a railroad station with one house and two barns, or two barns and one house, we have forgotten which. We here learned on authority which we were disposed to accept that for the next 20 miles, all the way to where the Schroon swells the Hudson at Thurman, the river was absolutely impassable for any kind of craft. The Adirondack R. R. express for Saratoga and New York was due in a few hours. Putting things in shape we shoved our outfit into the baggage car, and by 12 o'clock were left at Thurman, beyond the canoe-pulverizing section of the river.

The next score of miles to Luzerne, the termination of our river trip, was perfection. The harmonious blending of the rugged and the refined features of nature were here manifest. Only when the art of the painter and the poet is expressed in one complex, combined outpouring, can this landscape be described to him who has seen it not. A chain of mountains; a succession of cultivated bottom lands, rich, but not rank, dotted with shapely trees and thrifty farmhouses; a bold rocky headland, here rising abruptly from the water, and again a beautiful forest-covered slope, green as a sprinkled lawn; and by it all and through it all a stream, which can only be likened to the celestial river, flowed clear, sparkling and melodious, always strong, occasionally swift, but never rough.

Truly, it was an ideal scene, a dream of harmony and peace materialized. And so we floated on and on, occasionally dropping a paddle into the limpid water to make sure we were in a world of substance. We drifted, time drifted, but we cared not. "Let anything happen that will, whatever it is it cannot be unpleasant," we said in our sumptuous ease and contentment. Like the frame to a beautiful picture, the Divine artist at length placed the night about his perfect day.

We were brought back to the world of our creature comforts. What should we eat? Where should we sleep? We passed a meadow, came to a steep bank running off from the river at right angles, and encountered a small creek which followed the low hill to empty into the river. Running into an eddy we paddled up the brook for a quarter of a mile. Landing, we prepared to carry our blankets and provisions up the bank to the vicinity of a house which we saw above. Just then we observed on the other side of the creek, walking across the meadows, a nattily dressed gentleman in high top boots, a rod over his shoulder, and a fishing basket hanging to his side. We supposed him to be a city sportsman. The mosquitoes were now hovering about the lowlands ready for business. We hailed the stranger and asked him to direct us to a suitable camping spot. He proved to be a farmer living half a mile away, and, learning who we were, cordially invited us to spend the night with him. Having unpacked the boat we did not care to take the trouble to cross over, and thanking him for his kindness, scaled the heights. The house we found to be a mass of dilapidated ruins. There was no place to camp. Determined then to follow the road to our friend's house we trudged along in the dark. By this way it was fully a mile.

Arrived at last we had a good supper set before us, and were made cordially welcome by Mr. Henry Cameron and his family. His house had most of those comforts usually lacking in country houses, even in the better class; and through the orchard, maple-planted door yard, and across the road was conducted in an open wooden trough from the mountain back of the dwelling a running stream of ice cold spring water sufficient to operate a small mill if we supply a village. Upon their offering to show us our rooms we requested, much to their astonishment, to be allowed to sleep in the barn.

The barn was full of new hay, and, opening wide the second story doorway close to our heads, we were soon sleeping the sleep of the elect. A curious impression of movement near by awoke me in the middle of the night. "Harry," I whispered, and thrust out my hand to where I had seen my chum make his berth. The place was empty. "Oh, Vail!" I now exclaimed in a louder key. My answer was the rustling of the hay in many places and a little body running across my prostrate form. I now understood that my partner had earlier in the night been annoyed as I then was by field mice; and I followed his example of going down stairs and lying in my blankets on the bare but clean floor of the carriage room. We were not again disturbed.

The next day was like its predecessor, full of pleasure and all too short. Luzerne we knew was a fashionable resort, and Cameron had told us that frequently parties came up from there on the cars with their boats to Thurman, for the enjoyment of returning by the river. He also indicated a place called the "boiler" where boats were frequently capsized. This spot we took pains to hunt out and paddle through. We had only a few miles to go and drifted lazily. I usually had the stern paddle and guided the canoe. Yielding to soporific influences I cuddled down in the bottom of the boat and went to sleep.

I was wakened from a comfortable nap by Vail's calling my name. "Confound it, why couldn't you have left me alone?" I exclaimed rather testily.

"Sleep if you want to," he said, "only if we go to smash in this rapid, I don't want to take the responsibility."

The thought of some more swift water brought me too like magic. It proved to be a disappointing little rush We were now in the outskirts of the town. Our trip was practically concluded. Indications of wealth and fashion, such as liveried turnouts rolling along the river road, reminded us that savage life to men in our station could be tasted not eaten.

We were certainly deplorable objects to tackle swell hotels. A week's growth of beard, battered hats, tattered and dusty clothes, marked us, when away from our canoe at least, as belonging to the mighty army of coal heavers and hammers. Our only recommendation was abundance of cash, but recollecting that that point is the strongest of them all, we took heart.

After a night of apprehension through the fear of recognition, we proceeded to Saratoga, where our civilized regalia was awaiting us. Going to a little hotel across the way from the railroad station we sent for our belongings. But even clothes were not a sufficient disguise, we must have had some of the artificial veneering of society worn off by our wild life. Appearing in our familiar New York haunts our friends would remark, "Hello! Been working in the harvest field at $1 per day, or have you been driving spikes on the railroad, Paddy? Confidentially, though, where have you been and what have you been doing?"

"There is no 'confidentially' about it," we would reply. "We've been canoeing in the backwoods; and don't fail to tell everybody that we have found more health, had more fun, and obtained more substantial benefit in one week's rough-and-tumble outing than we ever acquired in any way or at any time."

RALPH K. WING.

PHILADELPHIA. C. C.—The club house of the Philadelphia C. C., at Cooper's Point, Camden, and its contents, including the canoes and personal effects of the members, was entirely destroyed by fire shortly after midnight on Dec. 15. The fire started in an adjoining boat house, and in a short time it and the club house were entirely enveloped in flames; a negligence on the part of the watchman to immediately sound an alarm resulting in the total loss of both buildings, the majority of the canoes, however, being fully covered by insurance. Of the 23 boats comprising the fleet but one was saved and that, as is seldom the case, was fortunately one of whom her owner can justly be proud; as while being one of the most graceful in model, and general appearance, she is at the same time the fastest canoe now to be seen in our waters. As some of the members will learn through these columns for the first time of their terrible loss, and at the same time learn that the Muriel was saved, how their hearts will swell with thankfulness, and I am sure they will feel that all, all, is indeed not lost. But while this is cheering news, it will go but a short way toward lifting the weight of grief that hangs like a pall over our organization, at the loss of our cherished darling, our pet, our peerless flag ship, the "Nonnemoosha." How often in the past has the gleam of her snow-white sails far astern seemed as the foam upon the wave crest, through which she plowed her way, and for how many long years has she "followed" the fleet, and at night as the tired crews have been peacefully smoking a last pipe, canoes beached, supper over, tents up, everything coiled down, and the camp-fire burning low, has the soft stillness of the night been broken by the splash of the double blade and the well-known hail of her commodore, just getting in. Never more will the gentle fair ones (and their names were legion) be slowly, very slowly, wafted over summer seas by the brawny arm of the commodore, erstwile entranced by the sweet tones of his melodious voice. But right here, with the editor's permission, let me extend to any and all brethren of the sail and paddle as cordial an invitation as ever to our new club house, which will be designed, built, occupied, and ready for their entertainment, with the opening of the spring season. The second annual "Smoke" of the club will be held on Dec. 27.—1490.

A. C. A. MEMBERSHIP.—Atlantic Division: Elbert A. Bennett, Garden City, L. I.

Yachting.

THE FLOATING BEACONS OF NANTUCKET AND VINEYARD SHOALS.

HOW LIGHTBOATS ARE BUILT, MANNED AND MOORED OVER THE TREACHEROUS SAND.

THERE is a fatal spot on the coast of Massachusetts, but a few hours' sail from Boston, where many a brave heart and many a gallant ship lie buried in one common grave. The Shoals of Nantucket and Martha's Vineyard are known and dreaded by every navigator on the Atlantic seaboard, and among the great number of "missing" vessels recorded at the insurance offices there are doubtless many that have been swallowed up in these treacherous quicksands. It is the common practice of navigators, bound from Southern ports to Boston or other ports on the New England coast, to run into Vineyard Sound and between Gay Head and the island of Cuttyhunk and lie up at Vineyard Haven, Falmouth or Edgartown, rather than take the risk of a passage over the shoals, if there are indications of fog or heavy weather. Providence has, by a law of nature, placed a mark on these dangerous sand bars, which is eternally useful to the mariner. The rapidity of the tides, which sweep along the sides and over the uneven surface of these shoals causes what are termed tide rips, which are in effect breakers, running confusedly together and sometimes of such magnitude as to be dangerous to coasting craft. Nothing can be more terrific and grand in appearance than the pyramids of foam that are piled up on the south shoal of Nantucket after an easterly storm.

The group known as the Nantucket Shoals extend off to seaward from the island of that name, 6 to 20 miles. The group comprises about 50 shoal spots, single and in clusters. They are composed of sand, with depth of 16 to 18ft. at mean low water, and are scattered over an area of about 350 square miles. The direction of the current through the group is entirely around the compass at every successive flood and ebb. The velocity of the tide is about three miles an hour, with a rise and fall of nearly 3ft. In common with all parts of the Eastern coast the entire group is enveloped by fog for many days at a time. The course from Sandy Hook to the seaward face of Nantucket Shoals is about E. ¾ N., and thence due north or nearly to a right angle to the mouth of the Kennebec River.

The limited depth of water over the shoals, their number and small size, and the great velocity and ever-changing direction of the currents, in almost every instance running across the shoals, and the prevailing fogs, coupled with the prominent position of the group, will show at the same time the relation these shoals hold to the course of a large portion of the commerce of the country; the great danger to which it is exposed in passing them; the necessity of marking their seaward face, and the extraordinary difficulties which lie in accomplishing so desirable an object. Vessels engaged in the foreign trade approach this locality under reduced sails or steam. The coastwise trade, for the most part, passes between Nantucket and the mainland, and in these contracted waters are found sandbars, rips and currents, which are only second to the great south shoals because they are more accurately lighted and buoyed. Some thirteen light beacons are maintained in or on the coast of Vineyard and Nantucket sounds, besides a large number of important buoys which mark the ends of the lesser obstructions. One-half of these beacons are floating lights, which are indispensable to navigation. This thoroughfare is only rivaled by the English Channel in point of number of vessels that ply through its waters annually, and on no other coast in this country are so many lightboats in use as on the sound side of Cape Cod.

Of all the homeward bound commerce, to that from European ports is the making of Nantucket south shoals of the greatest importance: To fully understand why this is the case, it is only necessary to state that the usual course of this most valuable trade is to make Cape Race, the eastern point of Newfoundland, and then run down the coast inside the Gulf Stream, which, by the jutting out into the ocean of Nantucket and its shoals, here approaches nearest the land. The passing of the shoals is, therefore, a proceeding of great peril, causing a corresponding anxiety to all those engaged in the trade. Nor are the peril and anxiety confined to the navigators of sailing vessels; they are largely shared, notwithstanding the more perfect means of "dead reckoning" in the absence of the usual observations to determine a vessel's position, by those in charge of steamers.

New South (Davis) Shoal is the most seaward of the Nantucket group. It lies out of sight of land, S. by E.½E., broad off from the island of the same name, 20 miles distant. It is composed of fine white sand. The least depth of water on it at mean low tide is 8ft. The extent of the shoal within the two fathom curve is 1¼ miles. It falls off rapidly into deep water particularly on the seaward side. The nearest harbors to this shoal are, Nantucket 40 miles, Edgartown 42 miles, and Vineyard Haven 46½ miles.

No work of a solid character placed on a submerged sandbank, at so exposed a point as the South Shoal, were it possible to build one, could long withstand the power of the ocean. Instances are not wanting of beacons founded at positions exposed to the violence of the ocean, which have triumphantly defied its power, among which may be mentioned Eddystone and Minot's. Those structures were founded upon a rock, they are less distant from land and a harbor, and open to the sweep of the ocean through a smaller arc. Where it possible to erect a solid structure on these shoals, it might withstand the direct assaults of the sea, but it would be overthrown by the wasting of the sands, through the insidious working of the waves upon the mass. So the government had recourse to a floating light to warn mariners of the hidden dangers.

A lightboat, as these beacons are styled in sea parlance, is a boxy-looking craft devoid of gingerbreadwork and the graceful lines of a sailing vessel; she is constructed to withstand the ceaseless battering of heavy seas, the crunching of drift ice and the wear and tear of time. As these vessels, when at their stations, generally lie with their bows to the wind, it is impossible to air the hold sufficiently to prevent dry rot in the timbers, and about every five years they require repairs that cost nearly as much as new vessels. They range in size from 100 to 500 tons, the larger ones being placed on the most exposed stations. They vary in cost when ready for sea from $4,000 to $7,000. These lights, however, are never adopted for any situation in which a lighthouse can be built for any reasonable sum, for they are not only driven from their moorings, often when most needed, but in the frequent repairs and in the number of men kept aboard they are two or three times as expensive as lighthouses of the first class. This branch of the lighting service of our country has in times past been very defective, and until quite recently, properly modeled, equipped and moored floating lights were far between. Forty years ago most of the lightboats were kept by men (landsmen) who had farms within their vicinity, and who employed others at low wages to attend to their duties, or wholly neglected them.

Nautical men as a rule are now employed to superintend these matters that belong more exclusively to the profession. Floating lights are placed for the convenience and safety of seamen, and none but seafaring men are capable of appreciating the importance of a proper vigilance in the management of these indispensable guides. There are numerous contrivances and modes of communication known only to the seaman, by which the masters and pilots may be directed in times of anxiety and danger. The salaries of keepers range from $300 to $600 a year, and the crew and cook receive wages equivalent to those paid at the nearest maritime port. The rations are of the quality used in the navy.

The Nantucket South Shoal lightboat is one of the best on the coast, and the greatest precautions are necessary to keep it anchored over the sandbank it is intended to mark. Of the various instruments employed in anchoring the screw mooring is undoubtedly the surest and best. It is constructed on the principle of a screw, but differs in form; for while the spiral thread makes little more than one turn round its shaft it is extended to a very broad flange, and the hold which it takes on the ground is proportional to its breadth of disk. The method of laying down this mooring is briefly thus: A strong mooring chain is so attached to it as to allow the screw to turn freely without carrying the chain around with it; a powerful iron shaft is then fixed firmly to the upper part of the mooring, which is formed square for that purpose, fitting in the same manner as a key to a watch in winding it up; it is then lowered by the mooring chain, joint after joint being added to the shaft till the mooring has reached the ground. Levers are applied to the shaft after the manner of a capstan, and the operation of screwing the mooring into the ground commences. Two boats or barges having been anchored head and stern close alongside each other and the upright shaft rising between them and amidships, men place themselves at the bars and walk from one boat to the other, the two giving a convenient platform. When the screw is firmly imbedded a buoy is shackled to the mooring chain and the job is completed.

A lightboat must ride easily in a seaway or the heavy pitch and roll will seriously affect the quality of the lights. The severe shocks received in heavy weather are modified by a rope cable attached to the mooring chain, which "gives" instead of bringing the craft up all standing when riding over a running billow. The hawse pipes, through which the cables enter the hull, are cut just above the waterline, enabling the boat to ride more easily than an ordinary sailing craft when exposed to similar conditions.

The vessels are schooner-rigged, with short masts which give the lanterns an elevation of about 40ft. A deck house encircles each mast, and in the daytime the lantern is lowered into it for cleaning and filling. There is sufficient space to pass around it and for ventilation from below. At the mastheads are hoop iron balls which serve as day marks. On the forward deck house are the fog bell and whistle, which are used as signals in thick weather, the intervals between the blows or notes indicating the location of the shoal in the stormiest night or densest fog almost as plainly as the large letters upon her sides in clear weather.

A suit of sails is bent ready for use in case of disaster or when the boat gets adrift, as she frequently does. There are two crews to each vessel, one of which is always ashore ready to go aboard in case of emergency. For a number of months these men face the ocean in all its moods, and for weeks at a time they have no communication with the mainland except through the occasional visit of the buoy setter Verbena, with headquarters at Wood's Holl. The man who is brave enough to ship on a lightboat in the winter season is courageous indeed. At times the boat is encased in solid ice and the spray freezes as fast as it comes aboard. The stays and rigging become many times their original size, and it is with the greatest difficulty that the lantern windlass and weights are kept in order. For hours during extreme weather the crew pound ice, when the question must be decided whether the ice be thrown overboard or accumulate and sink the beacon.

Another danger is that of collision. The mooring chain is often paid out several hundred fathoms in times when big seas are running. Perhaps a vessel has been driven to leeward and fouls the chain. As the heavy hull of the drifting craft presses down upon the cable and drags broadside toward the forefoot the bow of the pitching lightboat, the latter gathers headway and the two come together with a crash that opens the planking of the helpless sailing vessel as if an iron steamer had crushed into her. Very likely the blow and strain will part the cable, and the lightboat, at the mercy of the gale, is borne away from the sinking vessel.

The monotony of this existence is something unknown to the man of cities and everyday-life, yet there are always many applications for a berth on the most exposed stations. The chief amusements are basket making, the building of toy boats and card playing, which become very monotonous in a few weeks, and then reading and even fancy work are indulged in.

Cross Rip lightboat, Vineyard Sound, is not only invaluable as a beacon, but of immense use as a buoy by day. This station was established in 1864. The floating light on Pollock Rip, off Chatham, was established in 1852, and is of great importance to vessels passing north of Cape Cod. Shovelfull Shoal lightboat was established in 1852 and marks a very dangerous bar in the path of coastwise commerce. The Handkerchief lightboat is stationed over the dreaded shoal of that name and was established in 1865. There are floating lights over Succannesit Shoal and at the western entrance to Vineyard Sound. A number of relief boats are tied up at the Government wharf in Little Harbor, Wood's Holl, and in case of repairs upon a boat one of these are substituted, so the light is rarely missing. At the Wood's Holl wharf is a large variety of buoys of various kinds under the superintendence of Captain Gibbs, of the Verbena.

WOBURN, Mass. GEO. S. HUDSON.

SULTANA.

A BIT of the old-time chorus that once made New York famous in all the ports of the world was heard on Wednesday of last week in the Erie Basin in South Brooklyn, where the merry ring of iron mauls on oak and teak wedges made an appropriate overture to the opening of a new ship yard in the port of New York. The big dry docks of the Erie Basin, with their machine shops and building plant, have hitherto been used for repairs only; but Messrs. Handren & Robbins have determined to go into building as well, their first contract being the auxiliary steam yacht Sultana, designed for Mr. Trenor L. Park by Mr. J. Beavor Webb, designer of the two Fredas, Genesta, Galatea, Tara, Medusa, and the steam yacht Carmen.

The new yacht is 187ft. 6in. over all, 155ft. l.w.l., 27ft. 6in. beam, 17ft. 6in. hold, and 14ft. 6in. draft. She is fitted with a triple expansion engine, 13, 24 and 33 by 24in., built by Henderson & Co., of Glasgow, and with a two-bladed Bevis feathering propeller, the pitch being variable from the inside of the vessel. As the model shows, she is designed for canvas as well as coal, and will carry about 11,000sq. ft. of canvas, being rigged as a three-masted topsail schooner. Her smokestack will telescope, and her screw will be feathered when sail alone is to be used for any length of time. The yacht has been planned and built with great care, and will receive the highest rating from the American and British Lloyds. The construction has been under the charge of Capt. W. B. Dickey, an old graduate of Harlan & Wolf's famous Belfast yard, and the result is in every way a credit to the new yard. The plating and seams are equal to the work of the best yards, and for a first attempt are specially creditable.

The hull is entirely of mild steel; the planksheer, bulwarks and rail, as well as all deck fittings, are of teak. The deck house is of steel, all galvanized, sheathed with teak. The deck is payed with teak, marine glue. The yacht will be steered by steam from the bridge, with an auxiliary steering gear aft that will be used when sailing. The fore end of the deck house contains a chart room, and the after end the galley; the middle portion forming a saloon and entrance way to the owner's quarters forward. The apartments of the owner and his wife are abaft the main saloon, with a study on the starboard side of the latter. Forward are extra staterooms and maids' rooms; then the collision bulkhead and forecastle. The after cabin contains more staterooms, abaft which are the officers' staterooms and mess room. The large fore hold is reached by a square shaft down which trunks or stores may be lowered. On either side of a long passage are store rooms, the forward one being for trunks and luggage, while one is specially fitted as a photographic dark room. The yacht will be fitted with ice machine, electric bells and lights, and other modern appliances, her owner intending to start on a cruise around the world as soon as she is completed.

The weather on Wednesday was as bad as it could be, a chilly drizzle with an east wind, and the shipyard was nearly as muddy as the sidewalks in New York; but a number of guests, including some venturesome ladies, were on hand before high water. The yacht was sent away at 4 P. M., Miss Bessie McCullough breaking the bottle. After a little delay when the lashings were cut, the handsome vessel, with the Corinthian Y. C. burgee at the fore, the New York at the main, and the American ensign at the mizzen, gathered way and slid rapidly into the water, making her bow as her forefoot left the ways, and running away at considerable speed. Work will be commenced at once on the same spot on two large barges of steel.

THE NEW RULE OF THE NEW YORK Y. C.—The Boston *Herald* falls into a curious blunder in regard to the action of the New York Y. C. in stating that no rule is yet adopted. The club adopted the Seawanhaka formula, but declined to accept a classification by corrected length. The *Herald* published a report of the action of the club, though in a very mixed form, in its issue of Dec. 14.

ST. LAWRENCE Y. C.—This lively little club is holding a series of monthly meetings, with practical talks on yachting topics.

THE NEW BRITISH RACING FLEET.

THE recent discussion of the measurement question has attracted considerable attention to the new 20 and 10-raters on the other side, most of which have been described in the FOREST AND STREAM. The following summary of their performances, from the *Field*, will be of interest in view of future international competitions, in which yachts of this type may be matched against the new American craft:

"The most striking, and at the same time most satisfactory, features during the yacht racing season of 1889 were, no doubt, the certain signs of a revival of racing in the classes of 20-rating downward, and the excellence of the racing in the handicap classes. The 20-raters of to-day are pretty much what the 20-tonners were sixteen years ago, when the Vanessa appeared on the scene and aroused emulation among yachtsmen of all sorts and ages—an enthusiasm, too, which lasted for quite a dozen years, and which might have lasted until now had it not been for the chilling effect of 'bad times.' The 20 tonner, as represented by Vanessa, we know developed into a vessel 5ft. longer, with about 1,000sq. ft. more canvas; nevertheless the 20-rater of the present day fairly represents Vanessa, which has a waterline length of 47ft. and a sail spread of 2,000sq. ft.; while Vreda, the first of the successful 20-raters, has a waterline length of 45.4ft., and a sail spread of 2,641sq. ft. The weight or displacement of the boats is about the same, the accommodation is about the same, and the cost is about the same. Vanessa cost £1,250, and that is about the cost of a fashionable 20-rater.

"We were just now speaking of the effect the success of Vanessa had on the minds of yachtsmen in 1873, and it can be fairly said that the prowess of Vreda since her *début* in 1888 has had a similar effect on yachtsmen of the present day. Thus in 1889 we had three new candidates for fame in the form of Windward, Dragon and Mimosa; beyond these accomplished facts there are at the present moment at least three new 20-raters building for next season. Vanessa, it will be remembered, held her own well for seven seasons, that is until Freda made her appearance in 1880; she had been able to do this because lead keels "developed" very slowly, and necessarily so did length and sail spread. However, in Freda Mr. Beavor Webb showed that what had been proved to be possible in the 10-tonners—the putting of the whole of the ballast on the keel—was also possible in the 20-tonners; and then came a marvelous extension of length and sail spread, coupled with a great increase of weight. We mention these circumstances mainly to show that the position of a 20-rater like Vreda is very much more secure than was that of Vanessa. So far as human foresight at present carries us, she cannot be outbuilt by mere expansion. If a 20-rater is given more length she must have less sail; and if she has more sail she must have less length. Of course we are not determining off-hand that Mr. Watson hit off the right proportion of sail to length at his first trial; but he must have been very near it, and it is unlikely that designers will show much variation from the proportion of Vreda. Thus a well-modeled vessel under the existing rating rule may have an unlimited career if she is kept up to the mark in the way of condition of hull and equipment. Vreda, of course, did not have such a good average record this past season as she had in 1888; and it will not be expected that she would have two such antagonists as Mr. Fife turned out in the form of Dragon and Windward to compete against.

"Vreda opened the season on the Thames, where, however, she had no yacht of her own rating to compete against. Nevertheless, she won some valuable prizes, and, after a bootless visit to Harwich, went on to Dover, where she won a prize from Vanessa. From here she went to Queenstown, and on the first day of the Royal Cork Yacht Club Regatta had practically a sail over. On the following day she entered the lists against Valkyrie, Yarana, and Irex for a Queen's cup, and after a toodious sail of 17½ hours, Vreda was declared the winner. It is, however, only just to say that all the honors of the day belonged to Valkyrie, as she had obtained a long lead when she sailed into a clock calm near home, while Vreda brought along a little breeze and passed her. On the Mersey, in the regatta of the Cheshire Yacht Club, Vreda met the new Mimosa, and in a nice breeze, beat her five minutes. In the Royal Mersey match the following day, in a lighter breeze, Mimosa was still further out of it, her smaller sail plan being much against her in the light airs. After this Mimosa came away south for some alterations, but Vreda went on to the Clyde to tackle Dragon and Windward. The former of these two had already made a name on the Clyde by her defeat of Windward, and her match with such a swell of the ocean as Vreda was consequently looked forward to with much interest by the members of the Royal Largs Yacht Club. The first encounter left victory with Dragon, but by a very narrow margin, and the critics were not yet all one way of thinking about the merits of the two boats, especially as the wind was light and variable. In the two encounters under the flag of the Royal Northern Yacht Club the wind was also light and variable, and the Dragon repeated her victories. These consecutive successes appeared to convince every one that Dragon at any rate was the better boat of the two in light winds, and no one could account for the repeated reverses of Windward, as Dragon is modeled much like her, but has five or six inches more beam, and perhaps as much more draft—at least so the gossips said. There was a continuation of the light, pleasant weather for the two days' Mudhook regatta with amateur helmsmen. On the first day Windward, with Mr. Wm. Fife, Jr., at the helm, scored a rather hollow victory over Vreda and Dragon; on the following day Vreda, with Mr. W. G. Jameson as helmsman, had an equally notable victory—in fact her first since the Mersey. In the Clyde Corinthian Yacht Club match, which followed, Dragon had her turn at winning, under the clever timoneering of an amateur helmsman.

"It was not until the regatta of the Royal Clyde Y. C. was reached that anything like a breeze tested the persevering 20-raters, and then Vreda appeared to be upsetting all preconceived opinions of her merits by roundly beating Dragon. But the trial came to an untimely end through Vreda losing her bowsprit, and Dragon obtained the prize. On the following day there was again breeze enough for second topsails, but Vreda, with a jury bowsprit, was easily defeated by Dragon—Windward not being among the competitors. From the Clyde, Dragon and Vreda crossed the North Channel to Belfast Lough, where the Royal Ulster Y. C. as usual had provided a two-day's regatta. The wind was light on both days, and it must be conceded that Vreda appeared to have a slight advantage to windward, and it was only the reaching speed of Dragon which enabled her to score on both days. From Belfast they went on to Dublin Bay, where, in the Royal Irish Y. C. regatta, in a moderate breeze, Dragon scored another double-barreled victory; but, as in Belfast Lough, Vreda appeared to be quite her equal to windward. From Kingston Vreda and Dragon crossed to St. George's Channel, and Vreda looked in at the west country regattas; but Dragon pushed on to the Solent. At Plymouth Vreda reckoned up Mimosa again, and Dragon did the same at Cowes in the match of the Royal London Y. C. In the second day's regatta at this club Dragon, Vreda and Mimosa appeared, and there was a stirring southeast breeze. This certainly was a fine opportunity for Vreda, but in turning out to the Warner Lightship Dragon worked out a long lead, weathering the ship about four minutes before Vreda, and eventually beating her more than double that time. Their next appearance was in the Royal Southern Y. C. regatta, and Dragon repeated her victories; and it was so on to the end of the chapter, although Vreda scored two first prizes—one through Dragon going the wrong course, and the other through the same craft carrying away the jackyard of her topsail in the Royal Albert Y. C. regatta. After this latter regatta Dragon went on the mud, and Vreda had no trouble in disposing of her competitors at Weymouth and Torquay.

"Probably, taken all round, Dragon is three or four minutes better than Vreda on a 25-miles course; but it was mainly at reaching that Dragon obtained the longest lead. However, the sailing of the two in the Royal London match at Cowes must not be overlooked, and certainly on that occasion, whatever the cause, Dragon had much the better of the encounter to windward.

"During the season of 1888 the 10-rater, Dis, made a great reputation on the Solent, and she was regarded as well nigh invincible, although she never suspected of being quite first-rate to windward; at all events, it was thought she might improved in that respect. However, when a boat wins twenty-five prizes for twenty-eight starts, as Dis did in 1888, it is not usual to consider whether or not she has defects. Dis, indeed, was considered so good that she quite gave a new start to the class both on the Clyde and on the Solent. In the South, Decima was built from a design by Mr. Arthur Payne, with a plumb stem, and about the same waterline length as Dis. She had more canvas in her mainsail than Dis, and more draft—two circumstances which made the judges think the new craft would be a masterpiece to windward, and so it proved; but Decima also excelled at reaching, the result being that she had practically a sail over every time they started. Nevertheless, Dis kept hammering away in the most plucky fashion, and was beaten by a sort of regulation interval of time in every match. Another craft named Drina shared in her fate. She was originally laid down as a sort of fast cruiser, of about 8-rating, and 33ft. on the waterline; but in the end she was canvassed up to the last inch for a 10-rater, having 1,800sq. ft. against 1,660sq. ft. of Dis and Decima. It was expected that she might win some prizes on very light days; but those days never came to pass, and Drina won no prizes in the company of her longer-bodied sisters. The fame of Decima excited the curiosity of the owners of the 10-raters on the Clyde, and the most successful two crossed St. George's Channel after the Royal Irish Yacht Club Regatta. These were Yvonne and Doris, the latter being the last and most successful of the old 5-tonners. As to whether she or Yvonne could claim to be the better boat was a moot question on the Clyde, but we think it was settled in favor of Yvonne on the Solent. Yvonne had an advantage in sail spread over Decima, but not to the extent Drina had; however, in light winds and to windward she proved a better boat than Decima. They met eight times, and out of these encounters Decima won five races and Yvonne three. Against Doris Decima started fourteen times and beat her eleven. An enthusiastic compiler of statistics informs us that in the three races in which Yvonne beat Decima they sailed 100 miles, and Yvonne beat Decima 5'91 seconds per mile. In the five races won by Decima they sailed 169 miles, and Decima beat Yvonne 0'68 seconds per mile. The inference, of course, is that in a summer like the past, distinguished by good whole-sail breezes, the extra length and smaller canvas pay; but we do not think that anything has yet transpired in the races between the 10-raters to warrant any one exceeding a waterline length of 35ft.

THE BABOON SAIL PLAN.

THE Boston *Globe* takes exception to our comments in a recent issue on the question of Baboon's sail plan, speaking as follows:

"To charge that the statements of a designer of Mr. Burgess's prominence in regard to such a simple matter as a comparison of sail plans are obviously incorrect is to charge that gentleman with a lack of good faith in his dealings with the committee. At Mr. Burgess's request I measured with him the Baboon's sail plan and a sail plan designed to measure the same as the Baboon's by the Seawanhaka formula. As a matter of fact the second plan measured 9ft. less than that of the Baboon.

"In the new plan the mast was 2ft. 9in. further forward than in the Baboon. The rig was 3ft. shorter on the bascline and 2¼ft. longer on the perpendicular. By actual measurement the proposed mainsail measured 49ft. more than Baboon's, the working topsail 48ft., and the jib 16¼ft. more than the Baboon's, the foresail measuring 18ft. less. This makes a net of 95ft. more sail in the new plan than in the Baboon's, yet the two plans measure the same by the Seawanhaka formula. So much for Mr. Burgess's statement being obviously incorrect. Mr. Burgess happened to have some rough figures which he showed to the committee to illustrate his point. He has the drawings in his office, and they will be shown to the committee at any time they desire to see them.

"To offset this gain of 95ft. of effective sail there is a loss of 51ft. in the spinaker, which can be well borne. This plan, it must be understood, was only a moderate departure from the old style, and it is easy to see how much more the measurement of the mainmast may be cheated as the mast is moved forward, and the 'cat rig' is approached."

The whole matter of Baboon's sail plan is a very trivial one, and not worth the time that has been wasted on it, but it has been forced into a fictitious importance from the fact that it is the only thing in the nature of an argument which Mr. Burgess has brought forward to oppose corrected length. Mr. Burgess is an expert, a close student of yachting, and with a large amount of valuable data relating to American and foreign yachts at his disposal. He has lately been very strongly opposed to the measures advocated by the two New York committees; but with every inducement to present a strong argument, backed by facts and figures, his opposition has only amounted to this: a statement that under the proposed rule he would build a long and narrow cutter, or a "canoe;" and the "little haphazard drawing" of Baboon's sail plan. The first point is more than covered by the actual figures which we have given of the boats built under such a rule, and also by the correspondence of the Lake Y. C. and A. committee with other designers, published in the FOREST AND STREAM of Nov. 21. The second point, of the possible evasion of the sail measurement, relates at best only to a detail of the rule, and not to the principle involved in a classification by corrected length; and as far as the figures given out are concerned, even the former point is not yet proven.

We are willing to admit that Mr. Burgess has made a sail plan measuring the same as Baboon's by Seawanhaka rule, and yet containing 95ft. more of actual area in the sails; but we are not willing to accept the conclusions which he would draw from these meagre figures. In the first place, it is not even stated which method of measurement was used, the old one, or the new one just adopted by the New York Y. C., and proposed for the S. C. Y. C.; the latter in most, if not all cases, measuring sail more accurately than the former. In the second place, it is not stated what the effect would be on the centers of lateral resistance and of effort in such a change of plan. Under the old method of measurement, it would have been possible to have put a cat rig on Baboon (on paper), which would have evaded the measurement entirely, or even a rig like Harbinger's, which was very imperfectly measured; but it does not follow that the yacht would be equally fast under such rigs, or that classification by corrected length is a mistake. Granted that Mr. Burgess is correct in his figures, we should wish to see the sail plan and know more about it than has yet been made known to the public, or to the New York committee before accepting it as conclusive.

What we said in regard to the matter was as follows, and we still believe it to be substantially correct.

"The statement in regard to Baboon's sail plan was made by Mr. Burgess to the committee of the New York Y. C. when on a visit to New York recently as a representative of the Eastern Y. C. Mr. Burgess did not even show the sail plan, and the figures which he gave were so obviously incorrect that they convinced none of the committee."

Mr. Burgess came to New York specially to oppose the new classification, and the "rough figures," which, according to the *Globe*, he "happened to have," formed the mainstay of his argument. These same figures did not check off correctly when shown to the committee and Mr. Burgess was asked to send the correct calculations and the sail plan itself to the committee; neither of which were ever received. It is needless to say that the committee has not yet gone to Boston to inspect the drawings in Mr. Burgess's office.

The *Globe* also publishes the following extracts from the correspondence of the Burlington gentlemen referred to:

"You can send me as soon as prepared the plans, specifications, design, etc., for a 30ft l.w.l.

"After consideration I wish to say that if you can give me as fast a boat with a centerboard I would prefer it, but if you think you can give me more speed with a keel or deep draft I will build the latter.

"I regret very much to have to write you that I will not be able to build this year, as the gentlemen interested with me decline to go to the extra cost of a keel boat. In addition to this there is a growing dissatisfaction in the H. Y. C. over the new classification, as the majority have centerboards, and it has begun to dawn on them that their boats will all be outbuilt in every class, and consequently useless. I would not, therefore be surprised to see a strong effort made to change the rule, in which case, if successful, I would try my chances with a centerboard of your design."

Unfortunately the *Globe* does not give the figures showing the entire cost of the keel boat, but accepting these extracts as complete and authentic, after some further investigation we can only conclude that the persons in question have availed themselves of a convenient excuse to break off negotiations with Mr. Burgess. If, as we are informed on reliable authority, Mr. Burgess counselled them to build a 33ft. waterline cutter for a 25ft. corrected length class, we are not surprised at their disinclination to order from him. Delvan and Shona, two extreme cutters, would just about fit the 25ft. class on the Lake, at 33ft. l.w.l. and 1,369sq. ft. of sail, while the Burgess Tom Boy under 30ft. waterline with about 1,700ft. of sail could fit the class. Very few yachtsmen would pick out the former as able to beat the latter under the Seawanhaka rule on nine days out of ten.

We can forgive the *Globe* the epithets it applies to us, we have heard them before and they have not proved fatal. The Lake yachtsmen need not take very deeply to heart the biting comment on their action; the *Globe* does not venture into the question of relative cost of various types and builds delivered on Lake Ontario, but the way it scolds at the Lake yachtsmen for adopting a classification by corrected length, it evidently considers that by this action they have spoiled a promising market for the Boston yards.

"YACHT PORTRAITS."—Mr. N. L. Stebbins, of Boston, has just issued a new and handsome volume entitled "Yacht Portraits," containing 75 pictures of the leading American yachts, nearly all the photos having been made this year. All the new yachts are included, the Burgess schooners Constellation, Merlin and Quickstep; Liris, Gorilla, Minerva and the rest of the forties; Kathleen and the 30ft. class, including the Cape cats Harbinger, Kiowa and Surprise, and the yawls Clara and Montecito. The pages are 9½×12in.

ROYAL CANADIAN Y. C.

THE sailing committee of the Royal Canadian Y. C. has arranged the following classes for the club fleet to race in next year. The range in length is quite large, owing to the many old yachts and the mixed character of the fleet, but the arrangement is as good a one as is possible, the limits of the skiff class, however, are drawn so as to exclude the small canoes that have raced this year with the 19ft. skiffs:

1. Cruising Class.—Yachts over 50ft., up to and including 50ft., corrected length.

2. Standing Keel Class.—Yachts 30ft. corrected length and under.

3. Twenty-five Foot Class.—Centerboard yachts over 21ft., up to and including 25ft., corrected length.

4. Twenty-one Foot Class.—Centerboard yachts 21ft. corrected length and under.

5. Skiff Class.—Boats not more than 19ft. l.w.l.; beam not to exceed 5ft. nor to be less than 3ft.; no ballast; centerboard not to weigh more than 100lbs., and crew limited to three. Under the above classification the club fleet at present would be distributed as follows:

NO. I.—CRUISING CLASS.

	L.W.L.	Cor. Length.		L.W.L.	Cor. Length.
Cygnet	43.42	48.12	Iolanthe	34.66	39.23

Irene	17.75	19.60			

NO. V.—SKIFF CLASS.

Uneasy.	Puritan.
Rob Roy.	Water Kelpie.
Ruby.	

NEW YACHTS.—Mr. Burgess has now two forties, one for the Adams Bros., and three thirties under way. The 45ft. yacht begun last spring for Mr. C. D. Owens, and lately sold to Mr. A. B. Turner, was launched on Dec. 21 at Lawley's. At the same yard the Sears 50ft. keel and the 45ft. yacht are nearly in frame, and the Foster 40 under way. A story is current that Gen. Paine is at the head of a syndicate that will build to beat Minerva, a yarn that needs much confirmation.

Answers to Correspondents.

☞No Notice Taken of Anonymous Correspondents.

B. C.—We should advise the hammerless and 12-gauge.

A. J. DE E.—The rifle is not too large for deer and is large enough for moose.

W. A. W., Washington.—We know nothing of the cheap gun named. Begin to train the puppy when he is six months old. Read Hammond's "Training vs. Breaking."

J. K. L., Pennsylvania.—I want to settle in Washington till spring: what gun would you advise me to get for the kind of game they have there? Ans. Select a 12-bore, double barrel.

A. C. J.—Dr. Perry's manual on "Dogs, Their Management and Treatment in Disease," is the best book for you; price $2, for sale at this office. The chapters will give you sufficient information on all needed points.

TEN-BORE.—It is impossible to name an age at which all spaniel puppies may begin their training, because some are more precocious than others. A puppy born in February should be old enough to do a youngster's work the next fall.

BOY NATURALIST.—When puppies have been weaned they should be fed on Indian meal or oatmeal well cooked and mixed with plenty of sour milk. Once in a while the mush may be made with meat broth, instead of pure water; and they may have an occasional meal of well cooked meat. When they are teething, large bones with little meat on them are the proper thing.

TRIOTE, New York.—Please inform me where I can obtain for practical purposes a thoroughly reliable map of the district embraced by the following route: From Bethel, Maine, on the Grand Trunk R. R., to Lake Parmachenee near the Canadian boundary, via Upton, Lake Umbagog and the Magalloway River, or in other words a detailed map of Oxford county, Me. Ans. Farrar's Guide to the Androscoggin Lakes has such a map; the book costs $1, and we can supply it.

G. G. H., Butte City, Montana.—Some time ago I read an article in some paper concerning a new powder which was noiseless and smokeless. Do you know anything of such powder and where it can be bought? Ans. The powder spoken of is only as yet to be found in the arsenals of European powers, where various attempts have been made and are making to adapt it to small-arm use. It has not as yet been adapted to sporting arms. The nearest approach to it are the various nitro-powders.

F. W., Delaware, Ont.—Kindly inform me whether German carp will take the fly readily, whether they will fight hard or not when hooked, and whether they spawn in the spring or fall after being put in the pond early in spring; also the best way to treat them after they are caught to make them fit for the table. Ans. In FOREST AND STREAM of Aug. 19, 1886, will be found a description of successful fishing for carp with a fluttering fly. Grasshoppers have been used with good results for surface fishing. The usual baits are corn bread, wheat bread or dough mixed with cotton. In Germany, according to Dr. Goode, the baits are the tail of angle worm, grains of barley or wheat, maggots, larvæ of the wasp and balls of dough. Small hooks suitable for black bass will answer for carp. The capture of carp by rod and line is regarded as difficult and uncertain. The best time for stocking ponds is in the early fall; if the fish are old enough and the conditions favorable, they will spawn the following spring. Carp require no special preparation for the table if taken from pure water. Sometimes they are skinned. We prefer carp from open waters, and consider broiling and baking the best methods of cooking.

J. O., Pleasantville, N. Y.—There are a number of streams in this vicinity inhabited by trout, but fished to death. There were a number of good catches made in them last May and June. Myself and friend on several different days caught from 18 to 26, the last named being the highest in one day's catch, ranging from 8in. to 13½ft. This season has been the best for trout fishing known here in years. We intend to start a club to stock these streams and protect them from illegal fishing, also for the protection of game, etc. Where can I procure printed instructions for organizing such a club? What amount of trout fry can a club procure from our State hatchery? Ans. For a copy of the constitution and by-laws of an incorporated society address Secretary, Anglers' Association of Eastern Pennsylvania, 1020 Arch street, Philadelphia, Pa. After your preliminary meeting, in which you will adopt similar articles, employ a lawyer to draw up the necessary application to the court of your county for a charter. We are informed by Mr. E. G. Blackford, President of the New York Fish Commission, that: "Any club or person who applies to the New York Fishery Commission for trout, will be furnished with a blank form which should be filled out, giving all of the details of the waters that the trout are to be placed in, and then, at our February meeting, we make the assignments of trout to the different applicants, giving those preference that have suitable waters, and that promise the best care and protection from them. We award from 1,000 to 10,000 fry, according to the volume of water to be stocked."

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest mprovements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
SAMPSON, LOW & CO., London, England.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: Forest and Stream Publishing Co., 318 Broadway.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 2, 1890.

VOL. XXXIII.—No. 24. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

A DECADE'S CLOSE.

THE 80s are numbered with the past and the 90s have been ushered in. The transition from the old decade to the new marks the rounding of a completed term of ten years, during which the FOREST AND STREAM has been under the editorial control of its present management.

The period has witnessed a number of notable changes in the development of special fields of interest to which the journal relates. The international long-range rifle matches, which ten years ago filled so large a measure of public attention, have become but a memory, and long-range work is to-day almost wholly relegated to the butts of the State and National soldiery. With trap-shooting the case is quite the reverse. The glass ball, once our only substitute for game, long since gave way to improved artificial targets, and trap-shooting has increased a thousand fold. Field trials and bench shows, then comparatively experimental in this country, have grown in number and importance beyond anticipation of the most sanguine; while the old National Kennel Club, then in control of the kennel affairs of the country, has passed away, and a new body has taken its place. So, too, the National Sportsmen's Association, which ten years ago, indeed, had already filled its complete measure of activity and influence, has been almost forgotten; and another association, whose lines were laid with the same ambitious scope, has had its brief day and passed away. If the decade has proved anything with respect to game problems, it has demonstrated the absolute futility of accomplishing anything substantial by convening in national assemblage and passing resolutions.

It was at the beginning of the decade just passed that the game protection enthusiasm of the time found culmination in the organization of State associations for the protection of fish and game. Of the numerous societies of this character then established few are now in existence; and of those few a small proportion only is dominated by the aims and enthusiasm of the founders; game protective features have given away to the trap-shooting activity, witness the New York State society There is, however, no reason to suppose that the interest in game and fish protection is any less sincere now than formerly; the truth is that in these ten years the cause has made substantial and notable advance. It is now on a sounder basis than ever. In several States the work of protecting game and fish has been taken up by the Legislatures, and State warden systems have been adopted. The machinery may not do all that it should, nor all that under better management it might, but this legislation is in itself a recognition of the fact that the State has at last come to appreciate the necessity of undertaking to conserve of its game and fish wealth, and that game protection has passed beyond the personal interest of a class and has taken its rightful place in public economy. When we recall the stupid apathy that reigned ten years ago we may find here the sure evidence of distinct progress and abundant reason for hopefulness.

Perhaps the most notable of the changes wrought in this period, has been the growth of the hunting and fishing club preserve system. The open territory accessible to the shooter and angler has been enormously contracted. Famous districts once free to all have been depleted of their game, ruined by the incursion of new railroads, or having fallen into the control of individuals and clubs have been posted and withdrawn from the public. The area of preserved territory is constantly growing. If the movement progresses at a like pace for another ten years, the game protection problem will have been solved in a way altogether unforeseen by the older generation of sportsmen.

For the FOREST AND STREAM the decade has been a period of substantial growth, of broadened influence, of more cordial recognition, warmer regard by its friends and patrons. The numerous and hearty indorsements it so often receives from new and old subscribers are subjects of unalloyed satisfaction. Whatever the paper has thus far attained has been in generous measure due to the co-operation and support of its friends. We have gathered about us a corps of correspondents whose interchange of experience, opinion and sentiment week by week contains in itself after all the secret of the FOREST AND STREAM'S success. Not content with the gains already made, but determined to seek still broader influence and popularity in the future, we must look to that same co-operation.

YELLOWSTONE PARK AFFAIRS.

IN our issue of November 21 appeared a review of the past season in the Yellowstone National Park. Two paragraphs in this article contain certain statements which are in some degree misleading and which require explanation. The paragraphs referred to read as follows:

"The Yellowstone Park Association—the Syndicate, as it is locally called—has completed its new hotel at the Falls. It has also put up at the Lake, on a site which, we believe, has not been even submitted to the Secretary of the Interior; much less approved by him, a building which they call one of the wings of the hotel there, but which contains a hundred rooms. We do not clearly understand how they could have obtained permission to erect this before the locality for the hotel had been approved at Washington.

"Another matter in this connection needs looking after. We have reason to believe that although once put down, the liquor traffic in the Park is again assuming alarming proportions. This traffic is carried on at the hotels of the Association, and liquor is openly sold to mechanics, laborers, freighters, and even to the soldiers. We have heard of more than one drunken man in the Park during the past season, and it is reparted that the manager of one of the hotels boasted of the heavy receipts of his bar just after pay day. This is a serious matter, and will demand careful attention by the proper authorities next season."

The statement that the building erected by the Hotel Association at the Lake contains one hundred rooms is incorrect. As a matter of fact no partitions have been run up in this building; it is not, as yet, divided into rooms at all. It is called a wing of the hotel there, and is a large building of three stories, so constructed as ultimately to contain a large number of sleeping apartments. The manager of the Hotel Association was given permission by the Superintendent to put up the frame-work of the hotel wing and to inclose it so far as might be necessar for the protection of his workmen and of his kiln for drying lumber. As we stated, this structure was erected, before the site for the hotel had been approved by the Secretary of the Interior. The reason for giving this permission to build was that work on the Lake Hotel might be pushed forward so that it may be ready for visitors next summer.

There is reason to believe that in the paragraph referring to the sale of liquor an implied injustice has been done to Captain Boutelle, the Superintendent of the Park. It might be inferred from the quoted lines that this sale of liquor has gone on without his knowledge, and so without any effort on his part to stop it. This is not the case. Captain Boutelle has watched the sale of liquor, and has expelled at least one barkeeper from the Park for selling liquor to persons to whom he should not have sold.

FLORIDA GAME FISHES.

OUR next issue, Jan. 9, will have an illustrated supplement with portraits of more than twenty of the game fishes of Florida waters. The accompanying text will describe the several species and give directions for their capture. In addition there will be accounts of fishing in Florida, with other papers, all of which will make this number of special and permanent value. The supplement will be similar in preparation to the trout number of last April, which was so well received. It is our intention to publish from time to time illustrated supplements on other subjects, and thus in 1890 to make this journal more than ever a welcome visitor in the sportsman's home.

MOUNTAIN ADVENTURE IN THE WEST.

WE take pleasure in announcing that we have on hand a new series of papers descriptive of sport and adventure in the Rocky Mountains and the Cascade Range. The sketches are from the pens of "Yo" and "H. G. Dulog," two of our contributors whose pen names are ever welcomed. The first of the series, a poem, "The Sleeping Sentinel," is published to-day. The others are prose, and will be given early place, the second one, "A Bull Moose and Bear," in our issue of Jan. 23. Those to follow are: "Charity," "Meat in the Pot," "Batiste," "A Tale of Blood," "A Night in the Forest," "The Lost Sheep," A Story of the Old Frontier," "On a Glacier in Summer," "A Desert Home," "At Last."

SNAP SHOTS.

SOME fishing clubs offer special rewards to their members who capture the biggest fish, and occasionally journalistic enterprise exhibits itself in a like manner, rewards being held out to those subscribers who shall land the heaviest bass, or trout, or tomcod. But we hold that when a man takes in a big one, angling, like virtue, is its own reward. We shall not mark the beginning of a new year by holding out any such tempting bait for angling readers in 1890. But it shall be our endeavor to make each number of FOREST AND STREAM so full of acceptable and entertaining and valued reading for anglers that he who catches the biggest fish may find in these columns something to add to his joy, and that he, too, from whom the biggest one shall have got away may find an assuagement of his chagrin.

We were not exact in our statement last week that the notice given to dealers in venison in this city, that the season closed Nov. 15, was given by Commissioner E. G. Blackford, on his own interpretation of the law, for it appears that the decision to that effect was made by the Attorney-General on reading a part of the Statute only. But wherever the mistake was made, the incident affords a glaring example of the complexities and incongruities of the New York game law, and emphasizes the urgent need of codification and change from their botched text into clear intelligible English.

We commend to the attention of students of the ways of wild game, as a specimen of personal testimony valuable because simply and honestly given, the notes contributed by Mr. T. M. Aldrich, on the habits of the woodcock. Such records of the observations of a lifetime are exceedingly valuable. If it were possible to gather the experience of such men we might with some degree of accuracy and fullness write the life histories of our game birds.

The Sportsman Tourist.

SLIDE ROCK FROM MANY MOUNTAINS.

I.—THE SLEEPING SENTINEL.

On the Pacific's softest shore,
Where land and sky and ocean blend
In the blue distance, I look o'er
Fair scenes that change but never end:
The fog bank spreading on the sea
Far off its gray and fleecy wall:
Beyond in purple majesty
The island summits looming tall;
The ruffled channel, dark as wine,
Dotted with white where rollers foam,
Within the seaweed's sheltering line
The emerald shallows' quiet home.
Eternal summer dwells around
The Cyclades as poets sing.
We envy not their holy ground,
For here is everlasting spring;
And through the clear night sky there rolls
The chariot round the bright pole driven,
And star-lamps shine, hung by blessed souls
To light the mounting path of heaven.
And yet, and yet my restless blood
Wearies at times of joys so mild,
Yearns for the lands of storm and flood
And "antres vast and deserts wild,"
Where rock-torn rapids roar and flash
And waterfalls their rainbows fling
On swift smooth sweep and boiling dash
And swirling eddy's dizzying swing;
Above the dark woods' virgin zone,
In the great radiant silence spread
On cliff and cloud to breathe alone
The glory of the mountain's head.
Enough! Enough! The spirit wills.
Heed its high promptings. Hasten forth
And learn the secrets of the hills
That nurse the rivers of the north.

* * * * *

Swiftly awhile on ocean borne,
Then speeding on the steel-paved road
Past fields of vine and fruit and corn,
The panting steam transports its load.
Scanty the settlers. Seedlings these
That swell to fill their hastening fate,
Grow like Sequoia's mammoth trees,
And make a proud and splendid state.
Trite is the thought how few the years
Since Indians owned this empire vast,
Whose cruel joys and savage fears
Darken the vistas of the past.
Yet some were trained with pious care
And chastened by a gentle creed,
And the old mission's records fair
Tell of high thought and generous deed.
The engine trails its serpent smoke
In fading coils along the plain,
The heavens furl their murky cloak,
Through brightening sunshine leaps the train,
And timing to its rhythmic jar
My wayward fancy's dreamy flow,
From faint-heard sources dim and far
A legend comes of long ago:
An echo from the sunset land
That lies so lulled in rest profound,
Whose long sea line of sloping sand
Guards undisturbed her peaceful ground.
Only slow nature's gradual change
Tells that the seasons come and go,
Whitening the tall crests of the range,
Or dallying with the waves below.
Forever 'round the channel isles
The veering sea gulls hold their flight
Where, for one frown, a thousand smiles
Witness old ocean's fresh delight,
With now and then a silver flash
And now and then a golden gleam,
And fleece of froth where breakers dash
And lines of fog that landward stream.
Here when the western world was young
Men of the dusky native race,
Heard Christian lessons from a tongue
That preached to all the path of grace.
Happy the Father when he saw
On what rich ground the good seed fell!
How simple men revered the law
His pious life was given to tell.
And grateful hands brought humble gifts,
Rude vessels wrought with careful pains,
And iris-shells from sandy drifts,
And rough unburnished yellow grains.
Though fenced by virtue like a wall,
Most human hearts conceal within
Some secret vice betraying all,
If once you find the gate of sin.
So with the Father. When his eyes
Beheld the gold the Indians brought,
From his soul's depths began to rise
Greed, selfish wish and wicked thought.
He dreamed of all that wealth would bring,
The powers and dignities at home,
Cathedral choir, and bishop's ring,
And the brave gauds of pompous Rome.
To find where the great treasure lay
He questioned his submissive flock,
But never would they point the way,
Stolid and dumb as senseless rock.
Some relic of their pagan creed,
Some prophet thought of coming wrong
To follow from that evil seed,
Kept the dull converts silent long.
Till, threatened by the church's wrath,
The frightened peons so far yield
That they will bear him on the path,
Blindfolded to the golden field.
The litter comes. The livelong day
With bandaged eyes through deserts lone
He rides. They pull the cloth away
And show bare earth and barren stone.
This was the place! The Father sighed,
His thirst for wealth was all a-flame,
And fruitless now his darkened ride,
Unless he knew the way he came.
Slow marched the tired Indians back.
And, on the path the bearers trod,
He dropped his beads to mark the track;
Beads that should mark the road to God.
They reached their home again at morn
Nor counted the long, toilsome night.
As over fields of murmuring corn,
Peered the first sunbeams joyful light.
And from among the way-worn band,
Soon as the Father's litter stopped,
A kneeling man with open hand
Returned the beads the priest had dropped.
Rage filled the churchman's fevered breast,
Thus were his hopes again thrown down.
Lost were his dreams of bishop's vest
And scarlet hat or mitred crown.
He raised his arm to deal a curse—
When from the corn-stalks' rustling throng,
Sweeter than David's sacred verse
A thrush poured out its throbbing song.
"Voice of the Lord!" the Father cried,
Thou teachest me the way to bless;
Forgive my greed! Forgive my pride!
My sinful baseness I confess.
My children, rise! By me, to-day,
Is penance done. And while you live
For me, your fellow sinner, pray,
Rise with all blessings church can give."
The priest and all that gathered round
Lie covered by earth's kindred sod,
Forgotten even the burial ground
Whose dust was consecrate to God.
Still from the corn-stalk sings the thrush,
His mellow music full and clear
Thrills through the evening's purple hush,
Enchanting all with hearts to hear.

* * * * *

Thus musing as we onward whirl,
By smouldering forest fires we pass;
And through the vapor's filmy curl
We glimpse at times some towering mass.
Shasta and Rainier looming high,
Their bases hid by smoky haze,
Their snow-spread summits in the sky
Floating amid the sunset's rays.
And the white snow drifts tapering down
Seem giant fingers to portray,
As if upon each mighty crown
God's hand in benediction lay.
Then, after, sailing quiet bays,
Misty or sunlit, fir-fringed shores,
Tangled and curved in tortuous maze,
Where ruder ocean never roars.
The girding mountains wall with green
These sheltered seas for miles on miles,
Soft ripples break the even sheen,
And gurgle 'round a thousand isles.
If a tried friend but share the joys
Here spread by nature without price,
Angels might waver in their choice
Of Puget Sound or Paradise.
Beyond the Fraser's rushing green,
Across the range's low divide,
Till borne down crystal Smilkameen
The waters seek Columbia's tide;
Amid the cliffs and gorges deep,
Stretching far southward from the vale,
On grassy slope and talus steep
We wind along the rugged trail.
Bewildered by meandering tracks
We climb some toilsome height in vain.
Through tangled trees with swing of axe
We hew a pathway for our train,
Still mounting toward the summits bare,
Hardly by foot of man explored;
Realms bathed in waves of upper air,
Where the shy mountain ram is lord;
To hang his frontlet in our halls,
Twin spirals mightier than laid low,
With blast inspired, the heathen walls
When Joshua conquered Jericho.
Stormy the days. From the dark south
The clouds crowd on, the winds complain,
And from the cañon's sombre mouth
Gusts whirl across the great moraine.
And poor our efforts' first reward.
By scrambling stalk and breathless climb
We learned alone the lesson hard
That sure success needs skill and time.
But patience brings an end to ills,
The sullen skies begin to change,
And bright above the pine-dark hills
Glitter the snow-peaks of the range.
And night brings solace and repose,
With cheerful talk and freshened zeal.
The crackling camp-fire flames and glows,
The smoke spires dance in merrier reel;
The new moon's frail canoe's afloat
In a fair sea of starry blue.
The screech owl sounds its omened note,
The coyote howls his weird halloo;
We augur not from beasts that prowl,
Our oracle's the leaping flame.
Let screech of owl and wolfish howl
Bode evil to the threatened game.
So through our canvas door we creep,
Weary yet hopeful, and we lie
In dozing warmth or well-earned sleep
Till dawn's pearl luster tint the sky.
The sun has fired the mountain's head!
On saddles now! Be quick! Away!
Before the morning's glory spread
To the full blaze of Alpine day.
We climb betimes the dim-seen trail,
Our panting horses strain and bound
Across the wind-felled timber's pale,
Through oozy marshes' treacherous ground,
Up, up we mount, through forest dark,
That fringe the torrent's stony bed.
By willow glade and grassy park,
Past waterfalls by snowbanks fed,
We leave our steaming horses spent
Where the last slant its front uprears,
And breast on foot the sheer ascent
That tries the hearts of mountaineers.
Then, after rest, and incense burned
In the sweet pipe's enchanted bowl,
Our pulses' rhythm again returned,
Again we rose and sought our goal,
Where at the head of a rough rent,
In the high peaks the sheep loves best,
Solely for them by nature meant,
Some clambering flock might chance to rest.

* * * * *

The mountain ram had sought a band
Of mates that well deserved his care;
Bold at their head he took his stand,
No rival could his prowess dare.
He watched his ewes with jealous guard,
And, perched on rock or swelling hill,
As sentinel, kept faithful ward
To save them from all menaced ill.
To his fine ear the mountain air
Would waft a sound however faint,
And carry to his nostrils rare
The warning of a hostile taint.
But fierce the autumn's noonday heat
To this warm-coated son of snow,
And cool the cañon's dim retreat,
Sheltered from heaven's unclouded glow.
His wives lay near him in the shade;
What reason that a watch be kept?
What chance was there of midday raid?
He closed his careless eyes—and slept.
A scent floats 'round his dreaming head
Unknown, but full of vague-felt fear,
And clink of steel and booted tread
Rouse with alarm his drowsy ear.
He starts. He feels a mortal shock.
The high walls roar with echoing din,
As when down cliffs falls thundering rock,
And tongues of fire come flaming in.

* * * * *

Above my hearth the noble head
Rears its proud spirals. They will tell
How great the victim was who bled
When died the Sleeping Sentinel.

H. G. Dulog.

A WEEK IN BRIER LAND.

We wish to have it announced that what there is left of our former physical entireties has returned and resumed work at the old stand. The rest, with plenty of clothing to hide its nakedness, hangs high and wet on briers and bushes of Brier Land. But let me begin further back. In the first place, I am a very fortunate man, *i. e.*, for a patent attorney. I base this statement on the fact (which several fishermen hereabouts will swear to), that I am so good and so busy the tempter comes to me but once a year! And then it is always in the guise of a friend, who talks eloquently and most persuasively of the need of change and rest, besides throwing occasional sops to my vanity, in the form of references to a "great over-worked brain," impairment of my "extreme delicacy of mental perception," and so on. Once a year, too, I yield, and so it was a week ago.

Jesse M., the "lone fisherman" of this locality, and the all round sportsman of many others as well, played his part so deftly that, forsaking books, papers, levers and wheels, I joined him and our mutual friend Tom T., a well known crack shot, and accompanied by five dogs, a No. 20 and two 12-bores, with baggage, bags and blankets too numerous to mention, we three sailed away in the gorgeous Mattana, a side-wheeler so old that no man remembereth her origin, to Shamrock, forty-five miles down the ever-muddy Potomac, where our host-to-be, Peter Wolfe, met us with all the honors due to so distinguished a party, and escorted us on foot three miles to his log castle on the hill, in the very heart of the brier country, while an ox team, maneuvered by his eleven-year-old boy Addie, hauled our baggage over a more circuitous route. Three years before I had accompanied Jesse M. to this self same place, and over the *nom de plume* of "Novice," I ventured to tell the readers of Forest and Stream something about it, especially of the half dozen preserves which our hostess always placed on the table, morning and night, and how few were left to muster when we went away. Then, there was a little girl, K.; this time there met us at the door beside her mother a beautiful Miss K., with dark flashing eyes, red cheeks and lips, and last, but not least, a cheery, amiable smile that said "thrice welcome" to our young hearts and old heads. How she made our stay pleasant by her engaging manners, her chat and wise talk, and helped cook the pancakes we ate at every meal with an appreciation born of hunger and experience, all this and more I need not detail; suffice it to say, on the day of departure we knew not whether we loved K. less or pancakes more, so we loyally hurrahed for both!

But I fancy some one who has flattered me by reading thus far, interrupts by asking out of the depths of his pitiable ignorance, "What of this Brier Land and the hunt?" Unto him, from the supernal heights of our knowledge, we shall answer, we shall tell, it is a part of that county in Virginia which was once loyally named after King George, and is a most remarkable region. Go where you will, briers short and low, long and tall, thin, stout and medium shall be found under and around you, ready to trip, to catch, to hold, to tear you, while trying to bid them a tearful good-by. (No pun). I am now having an indictment made out against one particular giant brier who tried hard to cut my throat! An most remarkable anatomical knowledge he (or she?) possesses, for the cut, long and deep, extends across the left jugular (I'm glad it was left). It is time botanists examined this race of briers, and revised their text-books and theories as well, for when briers can act humanly and yet so inhumanly at the same time, there's ground for reflection spiced with painful regrets.

Day by day, when it didn't rain—and it rained every day but two out of the seven—we went, saw, and were conquered anew, and returned to pancakes and preserves sadder and wiser, torn and bleeding, but happy in the hope of a better to-morrow, that never came. It rained and briers reigned triumphant to the last, and we tore and swore the like had never been seen; indeed, it must be said we haven't done swearing yet—to that effect.

Now as to the hunt. Birds big and fat there were in plenty, but so cunning, wise and strong, far-flying ones doubtless never lived before. Probably this superiority is due to a process of natural selection, for a bird capable of dodging the briers must possess it. Most of the stupid, ignorant, weak birds must have been caught and hung up on the briers in the days of their youth; that is to say, all save those that didn't escape the numerous hawks which infest the locality. Between the briers and hawks a bird's life can hardly be "an 'appy one." No wonder the living are hard to kill, and harder to follow where they fly into woods, underbrush, swamps and fields, far beyond big brier patches or hedges, or wide, deep ditches that could not be forded.

How we balanced on logs and trees across the raging waters; how we often saved our lives by extraordinary presence of mind in balancing *à la* Blondin; this and more it were superfluous to tell. Suffice it to say, we bagged near a hundred birds, despite rain and other difficulties. Our biggest bird was a 10lbs. coon, which was found snoozing away the precious time up 65ft. in the branches of a huge chestnut, which, when cut down, was found to measure 4ft. in diameter. No. 10 shot waked him up, but No. 4 quickly put him to sleep again in the self-same crotch, where he hung fast. It is certain his second nap will be the longer, for his skin adorns my sanctum. One thing should be mentioned here, as a salve to the vanity of my two friends aforementioned, namely, that they killed more birds than I. In private conversation this fact is accounted for thus: Either the birds flew too fast for me, or a tree or bush was in the way, or I abstained from shooting ("just to give the others a chance, you know"), or contented myself mainly with cross fires (I was cross after I made them).

Secondly, I went rabbit hunting two days—"just to give 'em another chance, you know." In this sport two local hunters, Messrs. Askins and Newton, kindly lent their aid for a day, and their eight fine foxhounds made the welkin ring and Br'er Rabbit skip for dear life in a fashion quite new and entertaining. We bagged twelve in three and a half hours, and ran several into holes in the ground or into the hounds' stomachs (for while those particular hounds will respect a fox to his last hair, they consider a rabbit a hare to be eaten *eo instanter*). But, as a question in psychology, I am yet studying how the rabbits knew just where I stood and thus escaped instant death. But they did. Probably the aforementioned brier-hawk-natural-selection theory will account for it. For extreme truth's sake, it may be said that, putting theory aside, I covered myself with mud and mortification more than glory, on that memorable Sabbath day. Before closing I must refer to some other things seen and heard in that wonderful Brier Land. There was the wonderful cat, which climbed every morning up the back of our host's 13-year-old daughter A., and sitting calmly on her shoulder, rode to school over three miles away, returning with the team contented and happy. Was ever another cat like unto this one? Then there were the wonderful tame ducks and chickens that walked boldly into the kitchen and ate greedily out of the hand or dishes, besides even standing between our feet looking on while we greased our shoes and actually seizing the piece of tallow out of our hands. Did ever ducks and chickens help grease shoes like unto these?

Then, there was the wonderful blind ox, which would travel and be docile by day, but, strange to say, became utterly rebellious at night! For example, the boy A. was directed to go for a barrel of flour—(what appetites we had!). Instead of hitching up horses, he thought to save labor by simply yoking the blind ox and another to the two-wheeled cart. (Oxen are driven there by voice and whip as readily as horses by rein and bit.) The shades of night were falling fast, when it was discovered the boy, team, and flour were all absent. An hour later, ditto. Still another hour, no news. Then the anxious father mounted his horse, and, with lantern in hand, rode hurriedly away. About two miles away he was hailed by plaintive tones coming from a thicket! The lost was found. There were assembled the discouraged, tired, hungry boy, the oxen which were ditto, the stalled cart, the flour not eaten. Nobody hurt.

Ques. "What's the matter?"

Ans. (plaintive) "The oxen won't go."

Ques. "Why not?"

Ans. "I don't know. They went pretty well while it was light, but won't travel in the road now."

Our host, filled with wonder, rapidly surveyed the beasts, and the truth soon dawned on him. By mistake the boy had yoked two "off" oxen together, and one of them deemed it his duty to get in the other's place—*nolens volens*.

There was the dog that looked a Methusaleh, but was very young, and the other dog that loooked so young, but was the real Methusaleh. There was the mink, or his skin, which was caught with a chicken in jaws, and actually held on while Mr. M. pulled hard to get it away, and was killed for his pertinacity.

There were two flocks of sheep that would not feed together, but remained apart like two political factions. The explanation is that the sheep of one flock had long tails, while the other had none to speak of.

Last, but far from least, there was C., the old but young-looking colored help of our host, whose sayings, etc., amused us much. For example, when asked how old he was, he replied, "I'se dun forgot." "Are you 65?" "I'se a little older dan dat; I'se about 55." Again, "Do you pray, C., before you go to bed?" "Oh, yes, boss, I prays." "Do you say the Lord's prayer?" "Oh, yes." "Well, what is the first line?" "Deed, boss, I forgot that." One day he was told to count the sheep. When asked, "How many did you count?" he answered, "Seventy-five." "Why, C., there are but thirty in all." "Well, boss, I counted some!" When asked if he had counted the rails in a pile, he said, "Yes, but I dun slipped and fell down so much, I'se dun forgot how many there was."

When hurt, he said, "I'se painified." He has a fourth wife, who is good looking and buxom. When asked "if you were to marry again, and had had several women to choose from, which would you take?" He replied, "I'd dun take the handsomest one."

One day a calf ate his vest and C. said, "Mr. Wolfe, that calf's the meanest calf in the place. He's got the meanest condition inside of 'im I ebber knew!"

Last Christmas morning, C. came over from his snug log cabin, and bowing in his politest manner, said, "Mildred says she sent this bag over, and is wanting Kiss Kingle to put something intoo't for Kissmas." Mildred was his last addition, being then three months old!

Despite the briers and rain, we left reluctantly, and as we pressed the hand of our kindly host at parting on the shore, we half promised ourselves to come again. And now, though still nursing our wounds, we are not happy, for in our dreams by day and visions by night, we see and live over again our experiences in field and thicket, in bush and bramble, in kitchen and parlor. There is a confused picture of quail, woodcock, rabbits, coons and hawks set in a frame of briers and brambles of gigantic growth, and through them all we see outlined the family group around the fireside, and stronger yet the dark eyes whose flashes light up the dull routine of life that must occupy us till next time. A. W. H.

WASHINGTON, D. C.

Natural History.

THE WARRIGAL DINGO.

I READ Mr. Edward Wakefield's interesting article on dogs in your Christmas number, and thoroughly agree with him in his conclusion that the Australian dingo, or to give him his full name and title, the Warrigal dingo, is not the off-spring of European dogs set ashore by Capt. Cook or any other navigator. Mr. Wakefield's argument, based on the wide distribution of the animal, and his several distinctive characteristics are conclusive as to this point. But this has never been a point in dispute among naturalists. Wallace and others regard the dingo as an alien in the marsupial region, but they refer his origin to the islands of the Indian region, from which they suppose he came, or was brought over at some remote period; the only rational basis for this conclusion being the inference that a true mammal cannot be native to an otherwise purely marsupial region. I am not disposed to attribute any weight to this argument, and I find the conclusions based on it open to weighty objections.

The dingo, if an importation of foreign stock, must either have come unaided across land which once bridged the straits between northern Australia and the Indian region, or he must have been brought by the natives at their settlement of the country. It goes, of course, without saying that to whatever extent the argument may be applicable to the dingo, man cannot be aboriginal to a country whose fauna, fossil and existent, includes no connecting links between him and marsupial mammalia.

That the dingo came unaided is a theory that may be dismissed with but little argument. Dogs and other *Canidæ*, if they no longer exist wild in the islands of the Indian Ocean, are *ferœ naturæ* proper to the Indian region, which includes those islands with southeastern Asia, India and Africa; but close as is the present proximity of some of the islands to Australia, the argument that they have never been connected in any age by land passage is rendered conclusive by the fact that although numerous species of birds are common to both regions, there has never been any infiltration of the mammalia of one region into that of the other. The mammalia of the islands of the Indian Ocean are more widely separated from their representatives in Australia than are the mammalia of South America, and any connecting land which could have given passage to the dog would have afforded a means for the infiltration of the mammalia of each region into the other. The fact that there has been no such infiltration is conclusive argument against the theory that the dingo was thus introduced.

Nor is the argument for his introduction by the natives more satisfactory. In this case he would have come as a domestic dog, the property of a people who must have known and appreciated his usefulness, or they would not have brought him, and to suppose that a savage people who had once used dogs to aid them in the chase and quest of game, would wantonly dispossess themselves of them over a whole continent; or that even a single tribe, driven by hunger, would sacrifice its dogs, and make no subsequent effort to replace them from neighboring tribes or wild stock, is to deny to savage man his most distinctive characteristics. The natives, if they had brought the dingo to the country, might subsequently have rendered the race extinct by eating them, but it is too much to suppose that with their omnivorous habits they would have driven a once domesticated animal away from their camps to provide for himself in competition with them, if they had found no better use for him. Such a conclusion is inconsistent with the common instinct of self-interest. The Warrigal dingo is *ferœ naturæ*, and has been so as long as he has been known to the natives; and that they never discovered his capacity for domestication is evidenced by the fact that since the colonists introduced the domestic dog the natives have shown a very proper appreciation of his value, and have stocked their camps with them all over the country, producing a mongrel breed, which, subsisting solely on flesh, has reverted to a common type approaching that of the street dog of the East.

In the face of these insuperable objections to any theory of foreign derivation, I see no escape from the conclusion that the dingo is indigenous to the soil, and direct offspring of one of the primeval marsupial dogs of the region.

Mr. Wakefield committed a *lapsus plumæ* when he wrote that "the dingo is common to both Australia and Tasmania." There are no dingos in Tasmania; their place in that country is occupied by the marsupial dog, an animal similar in character and habits to the dingo, but of a more generalized type, bearing as strong a resemblance to the hyena and jackal as to the dog.

The marsupial dog was once common to Australia, but is extinct. He was not exterminated by the natives. They may possibly have exterminated many of the now extinct fauna of the country, but the motives which would have prompted to the extermination of the marsupial dog, would have been equally potent in respect to his placental congener. Nor is it a very plausible theory that the marsupial dog was driven to extinction over a wide continent by competition with an imported animal of kindred type and habits. The marsupial dog was the mould in which the Warrigal dingo was cast, and got broken in the process. It is a simple instance of evolution of a placental from a marsupial type, not merely in an isolated individual, but along the whole line. The dog was the first Australian mammal to bridge the gulf, which all placental animals in other regions have bridged, and which all existing marsupial types will bridge in due course, unless they be exterminated in the struggle for existence. Such at least appears to me to be the only tenable conclusion, and if any professed evolutionist contend that such a conclusion is *prima facie* inadmissible, without at the same time satisfactorily accounting for the dingo's possible derivation from a foreign stock, I can only attribute his *non possumus* to a want of living faith in the process of evolution as an actual working process of nature.

The dingo is a true dog, and if it be tentatively held that he is at the first stage of development from marsupial stock it would be interesting to fix precisely the period of his gestation, so as to determine whether the domestic dog is a first or second step in advance of his marsupial ancestors.

Mr. Wakefield's assertion that the cross between the dingo and the domestic dog is a hybrid, is new to me, and if well authenticated would indicate a difference in the period of derivation from marsupial stock.

The dingo, if taken young, is easily tamed, and is as affectionate and gentle as any domestic dog, but he cannot be taught to "ware chicken." I had one once in South Australia which showed strong attachment to me, but he appeared stupid. Perhaps it was because wherever he went every domestic dog thought it his duty to attack him. It was impossible to walk the streets with him; his one object in life appeared to be to get between my legs and keep there, and my efforts to get rid of him, combated by his efforts to recover his place, were disturbing, to say the least.

One fine day he ventured into a neighbor's chicken yard and rushed home with a dose of strychnine that had been laid for him, ran to me in agony, got my caress, then rushed under a chair, and was dead in two minutes.

The dingo does not bark, his note is a howl, and as far as my recollection serves me, it is impossible to distinguish between it and the howl of the domestic dog. Dogs in the Australian bush pick up the habit readily, and howl in concert with the dingos; and whatever may be the facts as to the bark being an acquired habit, the howl is certainly a call proper to the dog. No dog attempts to imitate the call of the jackal. C. F. AMERY.

WEIGHT OF GROUSE.

Editor Forest and Stream:

I note in the issues for Dec. 12 and Dec. 19 what two correspondents say in regard to the weight of ruffed grouse. I have probably weighed more grouse than any other man living, it having been my practice for years to weigh all the birds coming to my hand, and as I handled them largely for several years I must have weighed a good many thousands of them all told; and the result of my weighing is this. The average weight varies from year to year, according to circumstance—food, weather, etc. It also varies in different localities; for instance, birds shot in a territory covered with beech trees, in a year when beechnuts are plenty, are always heavy, while birds in an oak and chestnut territory always run smaller. Then again, a large crop of blackberries means an addition of at least 3oz. average over a year when there are no berries.

The smallest average I ever took was of 20oz. This was very unusual and happened eight or nine years ago. The birds were very poor and were evidently ill-fed. With the exception of this one season the average has been pretty regular at 23oz., which corresponds with Dr. Morris's opinion, until this year, when it was 24oz.

Now a word as to the big birds. Out of the tens of thousands that I have weighed the heaviest bird weighed 29oz., while the same year I killed two or three that weighed 28oz.; and altogether I have weighed probably five or six, not more than that number, weighing 28oz., probably twenty-five weighing 27oz., 100 or probably more weighing 26oz., and so on down. Now I have heard of these phenomenally large birds weighing 2½lbs., 2½lbs and 2¾lbs., "as large as a hen," "as large as a turkey," and even as large "as an old Tom turkey." I bunch these stories all together and simply "want to weigh the bird myself." At this moment there comes to me the recollection of a story told me of a bird killed in Litchfield, Conn. It ended something like this: "And what do you think that bird weighed? Well, sir, that partridge weighed just 2lbs. and ¾." Now the man was drunk when he told the story, he was probably in the same condition when he weighed the bird; and all that I believed was, that it was a lie pure and simple. I do not wish Mr. Ohl to think that I discredit his story of the 2 1-16lbs. grouse, nor Dr. Morris's account of half a dozen 2lbs. grouse, but I look at it this way: There is a chance that the scales might vary on that, possibly a mistake was made by the weigher. NOLTIKS.

CRABS FROM THE SKIES.—The winter rains have brought a variety of experiences to San Francisco, some good, others bad, and now we hear reports of one which is unclassified for lack of information from the Academy of Sciences, whither some representatives of the celestial visitor have found their way. We refer to the shower of crabs on Morgan street the other day. San Francisco is hard to satisfy. She already had an ample supply of crabs, big enough to provide a meal for a whole family. Doubtless Dana had this in mind when he named one of the species *Cancer magister*, which may be translated for our purpose the boss crab. Now, the master crab, the red crab, the rock crab, the kelp crab, and the curious red rock crab, which can outweigh and outclass at all points a male *Felis domesticus*, since it has hair, teeth and tubercles on its claws, no longer meet the cravings of the forty-niner. He must have rain crabs and forthwith down they come by the streetful, to soothe this spoiled child of fortune. We congratulate San Francisco on her new method of increasing the crab supply, and if the species prove to be undescribed we hasten to propose for it the name *Cancer descensus*.

A WILD PIGEON FLIGHT.—Harrisburg, Pa., Dec. 28.—*Editor Forest and Stream:* An unusual sight was witnessed here on Christmas morning; a flock of wild pigeons, estimated at three hundred, was seen flying northward along the Susquehanna River. We have had no wild pigeons here before in over ten years. This flock came up the river from the south.—KEOUK.

THE WAYS OF THE WOODCOCK.

PROGRESS, N. C., Nov. 4.—*Editor Forest and Stream:* For the past ten years I have noticed in the different sportsmen's journals articles on the habits of woodcock, how they make the whistle, or twitter, as some term it, their mode of feeding, etc. Not having read any of the works of Audubon or any other authority on woodcock, I am not able to quote from them, but will give from what has been learned from my own experience. I can remember very distinctly, in the years 1848 and 1849, when a boy, chasing them about the spring and springy sidehill orchard, their flight so short that I thought I could catch them. I can also remember quite plainly the first I ever saw shot, in the year 1850. There was a point of land covered with alders, which made out into the Valley Falls Pond, called the Intervale, where woodcock were very plentiful. (Since I have been large enough to shoot I have killed a good many there myself.) A party of six men, my father included, took stands on the mainland; my father would send his hound dog (old Hero) over and he would put up every cock on the Intervale; some would fly to an island, but those that came to the mainland would take a chance to be bagged. The next man I ever saw hunting them in the fall of the same year was the great Daniel Webster. He had two black and tan setters, the first I ever saw, and was hunting with a friend from Providence, R. I., I think of the name of Anthony. My father explained to me who the man was, and that the dogs were what they called setters. After that I can remember the late Crawford Allen, of Providence, quite often in summer and fall hunting a red dog in the towns of Cumberland and Smithfield. Woodcock were about all he cared about, and at that time twenty-five woodcock were not thought to be a very large bag. I think the Blackstone Valley produced as many woodcock as any place I have ever had the pleasure of hunting. These boyhood recollections I record to show that I have seen and known what a woodcock was for over forty years.

In the year 1856 I began to hunt on my own hook, and in that year I killed my first grouse, something I shall never live long enough to forget. I was hunting with what is called a fice, a little yellow and white dog with curly tail and pricked ears. He flushed the grouse and treed it; I shot, and to my surprise it still sat and looked at the dog; so with great excitement I loaded again, and this time was more fortunate. The game had hardly struck the ground before I had it and was on a full run for home with my grand prize.

From the year 1856 up to 1861 I was in the woods at every opportunity I got, and I tried hard to make it every day if possible. My great delight in those years was a hound dog, and I killed a great many rabbits, besides doing a good business in mink and muskrat. The years '61, '62 and '63 I put in carrying a gun for Uncle Sam.

In the year 1865 I bought the first bird dog I ever owned—a pointer. Since that time I have never been without one of some kind; and from that time up to 1878 I hunted as much as my business would allow me to. In that year I began breeding and breaking dogs for a living, and have done no particular business since. So all in all I think I can claim as extensive experience as the majority of those that are writing up the habits of the woodcock, and how he makes the whistle or twitter.

In looking over some of your back numbers I find in Aug. 1 and 22, 1889, articles from Mr. Wm. Brewster, which are so ably written and agree with my views so closely on the subject, that there is little need of my trying to explain them further. That the woodcock does make the whistle or jingling sound with his wings there is no doubt in my mind. Nothwithstanding your correspondent "C. H." in yours of Sept. 12, to the contrary. I don't know how to express the surprise I feel for a man who claims that he has shot them for forty years and that he has not in all that time by accident, or otherwise, learned that the sound was made by the wings, not by the bill in any form. He says, "If I am proved to be in the wrong, I had better go slow, keep dark and put the shot in first." I should think he had been going extremely slow and putting his shot in first all the time. Had he been a common bushwhacker like myself, I could have overlooked it, but a man holding as responsible a position as his friend "Canonicus" claims he does, should be able to tell the difference between the note from a bird's bill and a whistling or jingling sound caused by the wings. In answer to both "C. H." and "Canonicus" I will ask them how the dove when flushed from a stubble or a treetop makes the whistling sound? Very much like the woodcock except being stronger; the same is true of a number of our waterfowl, such as the whistler, the teal and the sprigtail. I should feel much more pleased at seeing a woodcock sitting up in a shady nook, manipulating that long bill of his in whistling, than I ever was at the old clown in a circus. The sound, however made, is something I have never heard imitated; and it seems to me if it was caused by the bill some Yankee would make a whistle that would sound like it.

Some of those who believe in the bill theory ask why the bird does not give the sound all the time, and they say that it only gives it at certain times of starting, and when on its flight it makes no noise at all, except when it is frightened on its flight; all of which goes to show that the force of the wing to start it is what gives the sound. Again, they claim it is frightened when it makes the sound. I claim it makes the sound any time it makes a sharp turn in any direction; and this is to me one of the surest guides I have to go by. When I start a woodcock in a thicket and fail to kill it, I listen to tell by the sound if it turns, and in which direction, so as to go where it is. I have a great many times started one, and had it make a complete circle of the swamp and alight within a few feet of me.

On these occasions any one wishing to study the habits of them can get a good chance by keeping still and watching them. After turning their head in all directions to see if anything is around, they will smooth their feathers, then take a few quick steps, then perhaps drop their wings and strut like a turkey cock, then quickly smooth their feathers and seem to listen. The time they are at this sport is, I suppose, that when your correspondent "Paul Pastnor" describes the bird as a little old wood witch. The best I ever saw of this sport with one was in July, 1877. I was hunting on the banks of the Blackstone River in Smithfield, R. I. The river was very low, and while going from one cover to another I took the railroad to make a short cut. On a point where the road had been built out into the river there was a small clump of alders not over 50ft. square, that was generally covered with water. The railroad company had dumped great quantities of rock down the bank here to protect the road from the river. I had passed it a great many times, never thinking of hunting so small a place. On this occasion my setter bitch, old Smut, well known to many of your readers, would not go past and was determined to go down over those rocks. I spoke sharp to her, but seeing her so anxious I told her to go on. It took her some time to get down, but before she had got under cover she made a staunch point. This pleased me, as I had full command of the ground if a woodcock should spring, being above it; and I well knew that if I killed it and it fell into the river she would bring it to me, so I got ready to shoot and told her to go on, which I could generally make her do on such occasions, but now she would not move. I gathered up some good sized stones and threw until I began to think something was wrong, but nothing flushed. Then, getting very angry, I tried to make her go on; but it was of no use. The best way out of it seemed to be to go down myself; so I put down the hammer of my gun and worked my way to her the best I could; and I have never been sorry I went. As I said above the river was low, and it had left a place about 20ft. square, which had dried enough so that a bird could not make a plain track and was perfectly smooth. There upon the mud was a woodcock having the finest time I ever saw one have. It didn't seem to notice me nor the dog; if it did it was trying to show us what it could do. It came so near to us at times that I could have touched it with my hand; then it would dart across to the far edge, then drop its wings and make about the same noise as a turkey gobbler when strutting, or more like a sneeze. It would then draw itself together, and after listening a while would make a dart for some insect on the mud. On this occasion it did not bore, but fed from the surface altogether. I watched it for a half hour or more, and it kept busy in this way all the time; and at last when the bird was near to me and I made a small stick snap in trying to change positions, it flushed and left me and the dog looking at one another as much as to say, "Wasn't that a great treat?" It flew across the river, where it would take about two miles to walk around to get it, and I was not sorry, for I did not feel like killing anything that had given me so much pleasure, although at that time the bird was worth seventy-five cents to me.

Some of your correspondents claim that the woodcock does not feed in daylight. I would be pleased to take them to some woodcock cover in Rhode Island the last of June or up to the middle of July, and let them see the bird feed at liberty. I never had the opportunity of seeing one in confinement, so I do not know how they feed, but I have watched them a great many times in the swamps of Rhode Island and Massachusetts; and I never saw them go through the wing business or dance, as some say they do, except as I explained above. In good feeding ground it takes them five or six thrusts to send their bill down to full length, and as a rule they put it so deep that they muddy the fine feathers around it for an eighth of an inch. I never could tell how they managed the worm, but supposed they sucked it down about the time they withdrew their bill from the ground, the bill having a small hook shape at the point to enable it to draw the worm up until it could get it to touch the tongue; then I think it sucked or swallowed the worm. I never saw one raise its head as if in the act of swallowing, but I have killed one and found the worm in its bill.

We will return once more to the sound. Some say it is a twitter, some a whistle. I think it sounds more like the jingle of a small bell. The nearest I ever heard it imitated was by my dog's collar when he would shake within twenty feet of me; the ring and buckle would strike together, and this has caused me to throw my gun in position many times. What I think some call the twitter is made by the cock bird; he makes a finer note than the female, and I can tell the difference without seeing them; his flight is much more irregular and causes more missing when shot at.

Everybody claims that during mating season the woodcock has a song or note which he produces with the bill. Mr. Brewster, in his article of Aug. 1, says that the woodcock possibly has a song. There is no doubt about this, for the fact has been recorded and more or less freely commented on by several observers.

About his having a note at this time of the year, I will not claim that he has not, nor claim he has. I have taken great pleasure in watching them in spring and summer at twilight, when they would raise themselves into the air and produce a very peculiar sound, but as they stood nearly still, and their wings were going so fast and in a different position from that in which they would be in flying, I always thought the wings produced as much of the sound on these occasions as any time.

After making his ascent, he almost always on alighting would make a noise something like a snipe, he would say *spate, spate,* three or four times and then after a rest of a few minutes, would begin another upward flight.

If any one wishes to watch woodcock in the spring time, they can do so in North Carolina. I think I have seen more of them here in February and March than in any place. Take any one of what they call old fields here, where small pines trees are scattered through it, and you can most any evening see them at their play; and when you do see one you will not have to go far before you can flush the female from under one of the small pines or a bush, near where the cock is making his spiral ascent. My observations are, that they produce the sound when rising; but when they come back, they drop as if shot, without any sound, until they reach the earth, then they make the cry or note, *spate,* as I have said.

I have seen the time within four years, on the same ground I am hunting every day now, when I could start from 25 to 50 woodcock a day in February and March, and some years they breed here quite plenty. In 1886, they came here very early; then there came a cold snap which drove them back; and when they came again their eggs had formed so that they laid and bred here; and I have got as many as a dozen points a day on sitting woodcock, while hunting quail. On these occasions you can find the cock bird near the nest under a pine or juniper, and I am very sorry to say, that about everybody who hunts in this section, kills all they can of them, and when they are dressed, the eggs ready to drop are taken from them, not only the people here, but men who call themselves sportsmen from the North, do this. Their excuse is to say, "Everybody does it and why not we?"

I remember a case of this kind. Two gentlemen came here and asked the pleasure of shooting a day with me and my dogs. I was pleased to give them a day's sport and started out. At about the first thicket one of my dogs pointed. Before we got to the dog I told them he was pointing a woodcock that was sitting there. They hurried up at that, and said that was just what they wanted. Said I, "Do you want to kill a woodcock sitting on her eggs?" One of them said, "Yes, everybody is killing them. we have killed a number the past week." Then said I, "You cannot kill any over my dogs or on my ground. If anybody else does it, I do not, and I want you and everybody to understand it." One of them said, "All right, we will not kill any then." "Now," said I, "I will show you that it is a woodcock, and will show you her nest." So after kicking the brush a few times she flushed; and to my surprise one of those gentlemen shot at her, the muzzle of his gun not more than a foot from my ear. Now I do not claim to be much of a church goer, and on that occasion I think I said a number of cuss words to that gentleman, and if I remember right, he went a double quick off my territory, at the muzzle of my gun. They thought I was a rough customer, and I did not care what they thought. Yet one man cannot stop it; and it is nothing strange to go into places where "sportsmen" are putting up, through this State, and see woodcock eggs lying around, taken from birds that they are killing every chance they get, through the months of February and March. If "Canonicus" thinks summer shooting is wrong, what can he think of this; their being killed with eggs in them, and while sitting?

While speaking of the woodcock in North Carolina, I wish to back up a statement made in FOREST AND STREAM of Sept. 5 by Mr. H. B. Soule, as to their gentleness while sitting. On this farm, Mr. John Aldridge's, not over 500yds. from where I am now writing this letter, in the month of May last, 1889, a woodcock laid three eggs and hatched them all. They were found by one of the family, and hardly a day passed that some of the family did not go and look at her; and as Mr. Soule says, one of the boys used to stroke her on the head, which she seemed to like. There was only one member of the family she ever flushed for—a young lady. They took one of the eggs to the house and back, and it hatched the same as the rest. Mr. Aldridge watched her until she hatched, and saw her in the act of carrying her young away. He went to see how she was getting along one day, and she flushed, and he thought she looked very large; the young ones had gone, and as she only went a short piece and stopped in an open meadow, he went to see what made her look so large, and found she had her young sticking on to her, but he could not tell how she managed it.

About carrying their young I never was sure, but I always thought the young bird laid his long bill over the butts of one of the old bird's wings, and hung on to her back. This I saw but once, and the young were nearly large enough to fly. I was working a pup on them, when the old bird would come, make a good deal of fuss, then get one on her back and fly away with it, until she had taken all of them from the litter.

As soon as the young birds can fly the old one takes them to good feeding grounds, and as they grow strong they seem to be on the travel all the time. Good feeding grounds will supply about so many every day through July, which goes to show they are wandering all the time.

"Canonicus" says that on the borders of a spring rill were found on the 30th of last August two woodcock setting on nests not 30yds. apart. He does not say what kinds of nests or who the observer was. I don't like to dispute any gentleman on this point, but as I never saw or heard of a woodcock laying or setting later than the month of May, I would like to have any one who ever saw one in July or August say so, or to know if any of the works on birds speak of them setting so late.

There is one thing I have never heard any one speak of in regard to the woodcock; that is his gaminess, only Mr. Brewster's letter, where he says the owl did not seem to frighten him. I have seen one not wounded badly bristle up and show a great lot of fight to a dog, enough so that a dog did not dare to pick it up; and I have heard one making a hissing noise like a drake, only not near as loud, when my dog brought it to me.

As I am not hunting woodcock this fall and am only working my dogs for the field trials, I do not expect to find as many as if I were looking for them. Up to the present, Nov. 28, I have killed fifty or more that I have picked up while hunting quail; and in killing that number I have wing-tipped two that I have brought to the house to show the people how they made the whistling sound. On one occasion there was a party here to hunt with me. Everbody who saw the birds held and allowed to raise their wings said right away: "The wing makes the sound." And I hope when any one writes about any such of our game birds they will tell the public the facts; if they don't know, then they should not write; for a great many are interested in all such things and want to learn. I have never talked with an old hunter yet about it who didn't say the sound was made by the wings.

Three times this fall my dogs have flushed birds that came and alighted within ten feet of me. On all occasions they have smoothed their feathers, then after looking around, spread themselves flat on the ground with bill straight out, which I took to be in the act of hiding; and on two occasions the ground was clear of any cover except leaves. All the birds I have killed up to within a week have been found upon what I term summer grounds, where it is wet and springy, in alders; but for a week I have found them on sidehills and in old fields. I began finding them on my arrival here, October 17, which I have never done before, and I think all I found up to a week ago were bred here. Although all I have found were on good feeding ground, I have never seen a boring place that I thought had been made by a woodcock in this or any other Southern State; and I have killed a good many of them from here to New Orleans. In spring time I find where snipe bore as thick as I ever saw woodcock bore. I have come to the conclusion that from October they do not bore in this part of the country, but feed on beetles and worms that they get by turning leaves over.

Once more I wish to say to your readers that the woodcock's bill is one of the most sensitive of all things I ever saw; and if I ever hit the bill of one with a No. 12 shot,

I was sure to get the bird, although I have hit them hard and seen them hit very hard in the body and fly a long way before they dropped. One small shot in the bill stops them immediately.

In conclusion, let me suggest that any one wishing to study the woodcock, wants first an A No. 1 woodcock dog, then let him begin early in the spring and go every day, and he will soon learn that they are one of the most peculiar of our birds. T. M. ALDRICH.

"EYES AND NO EYES."—Charlestown, N. H., Dec. 25.—*Editor Forest and Stream:* Your delightful correspondent, Miss Hardy, is in error in crediting "Eyes and No Eyes" to the author of Sandford and Merton. It will be found in "Evenings at Home," a little book written by Mrs. Barbauld and her brother, Dr. Aiken, and published in this country some sixty years ago. It was one of the delights of my childhood, and I think did much to give me a taste for natural history. The author of Sandford and Merton never wrote anything half so good. I remember that well, too, and used to get very tired of the prosings of Mr. Barlow and the "goody-goodiness" of Harry. I always thought that, in spite of his escapades, Tommy Merton would prove much the more useful member of society, if he did not get drowned or shot. I forget now what happened to him. Somebody, I think Burnand of *Punch*, wrote a very good burlesque on the story a few years since.—VON W.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.
COLT 10 and 12, Oct. 24.
FOLSOM 10 and 12, Sept. 26.
FRANCOTTE 12, Dec. 12.
GREENER 12, Aug. 1.
GREENER 10, Sept. 12, Sept. 19.
HOLLIS 10, Nov. 7.
PARKER 10, hammer, June 6.
PARKER 12, hammerless, June 6.
REMINGTON 16, May 30.
REMINGTON 12, Dec. 5.
SCOTT 10, Sept. 5.
L. C. SMITH 12, Oct. 10.
WINCHESTER 10 and 12, Oct. 3.

TRAMPS WITH A POCKET RIFLE.

IN the comfortable glow from the student lamp the hawk that guards the entrance to my "den" appears almost alive. The light is not strong enough to show up the deception of glass eyes and varnished bill and legs. Birds reign in undisputed sway in my "bunk," and at times, like this evening, when I am in a retrospective mood, as my eyes wander from one feathered form to another, there returns a glimpse of the places and circumstances under which each bird was procured, conjured up by memory's marvellous power. In one corner is the gun rack, presided over by the omen of misfortune—a specimen of a long-eared owl. One little gun, with its short barrel browned by the use it has seen, is nearly hidden by the shadow of its big brothers. Size does not always indicate the amount of pleasure to be extracted from a gun; and that little brown tube has given me more enjoyment, and accompanied me oftener on my tramps, than the guns standing alongside.

AN OCTOBER DAY.

"There is a beautiful spirit breathing now,
Its mellow richness o'er the clustered trees:
And, from a beaker full of richest dyes,
Pouring new glory on the autumn woods."
—*Longfellow.*

Aye, truly some unseen hand has passed over these trees. The autumn's breath has left its impress upon the glowing maples; and down in the valley, across the waving field of wheat, the vivid yellow of the hickories contrasts strongly with the dark background of forest interior. How glorious are the tranquil, peaceful days of October; how few, how very few of them are we permitted to enjoy. Over this mass of innumerable shades of color hung the soft, purple haze of light, stretching far away till blended into the blue distance. The sky of fathomless cerulean, the lazily-drifting clouds—but why attempt to describe these pictures to those familiar with them, and who can recall similar scenes with the aid of their own imaginations more vividly than pen of mine can ever hope to present? It is only when I essay a description of nature's moods that I realize fully the futility of conveying any of the thousand inexpressible, vague thoughts that even the recollection of such days revive within memory's wondrous pale.

Walking slowly along one of those blind trails, absorbed in contemplation of the beautiful combinations of color, I fell into a reverie of other days, and had actually forgotten that I carried my old companion in my hand. Stepping from the path into a small opening recalled my wandering senses. Sweeping the treetops with the swift gaze of an observer of nature, I caught sight, perched upon the top of a dead tree, whose gaunt, limbless trunk extended above its more fortunate brethren, of a motionless, erect form. Could I get within fair range of the wily robber? Making a short detour to the right, so that several large trees intervened, I crept cautiously from one trunk to another, and finally slid up behind one not 60ft. from the base of his unsuspicious hawkship's perch. Without losing any more time than necessary to regain complete composure (it takes steady nerves to hold these light rifles true), I laid the little tube carefully alongside the bark, exposed just enough of my face to run my eye through the peep sight, and as the black bead showed full I pressed the delicate trigger. A crack, a slight impatient recoil was the answer, and a full plumaged male red-shouldered hawk was numbered among my trophies. Stanching the blood with absorbent cotton, I wrap him up in a cornucopia of brown paper and stow him away carefully in the satchel.

There still remain scattered individuals of the enormous flocks of wild pigeons that years ago astonished the farmers with their prodigious multitudes. They have dispersed now over the country, and feed in pairs or shy flocks of four or five. Seven of them rose from a field of buckwheat, circled around to the left, coming back nearly over my head. Two lit in an oak on the other side of the field. The same old tactics were brought into play and resulted even more successfully than when used against the previous victim. This time I manœuvered until both the upright passengers were in line. A shot, and "speak it low," a clean miss. Seeing no enemy the stupids remain motionless, but when the smoke drifts off in little curls again both birds go to keep the hawk company.

Wandering aimlessly onward I crossed a clear space, covered with long, fine bladed grass that still retains its fresh, green hue. Throwing myself upon this inviting bed, I watch the few belated swallows as they hurry swiftly along the blue ceiling of the heavens. How slowly that *Buteo* sweeps the circumference of his long circles, without perceptible motion of those broad wings. Shall I waste a couple of shots? Why not? There is certainly no danger to him if no lead's flying, and some strange fatality may guide a bullet straight, if there is, so here goes. Beyond the last shot making him flutter his wings a trifle, the shots produced no effect.

On the borders of the woods in some spots the Wilson thrushes are very numerous, flitting along in front like pigmy gray ghosts. They are silent, as are also the wood thrushes and robins that are feeding upon the remnants of the wild cherries. Unconsciously I turn in the direction of a plaintive *cloe-e* that comes faintly to my ears. There he is, perched upon the top of an old fence rail uttering at frequent intervals the sweet call across the field of stacked corn. Approaching as near as I dared I lay still and watched the self-satisfied little fellow. Does he realize how soon these mellow days will fade away? Surely there is some instinct that warns him that these glorious days are too beautiful to endure for long, and influences the sad inflection of his simple notes, blending so perfectly with surrounding nature. I could not raise my little "shooting-iron" on that hazel body, if my life depended upon it. Ingratitude is the blackest of all sins, and were I capable of sacrificing the author of peaceful emotions I should consider myself little less than ungrateful.

May be I am unjustly prejudiced against the sable marauder, but be that as it may, I certainly entertain an unconquerable dislike of the crow; and he comes in for the full benefit of my vengeance whenever opportunity offers. Some distance ahead about a dozen were making things lively around a single pine tree with a very heavy growth of branches. Each individual of this clamorous group was exerting to its fullest extent the harsh voice nature has bestowed upon them. I suspected instantly that the object of these kind attentions was some member of the owl fraternity. So intently were the black ruffians engaged in blackguarding the indifferent representation of wisdom, that they did not notice another enemy until I had cut one of their number out. Big-eyes appeared considerably relieved when his tormentors departed, and I also relieved him of his grasp on the perch.

Not a bad day's sport's, but if a bird was expected for every cartridge fired it would be the reverse. It is one of the pleasantest features of a .22 rifle that you may blaze away at anything, alive or inanimate, without feeling you ought to have something to show for each shot, as is the case with a shotgun or heavy rifle.

The forest aisles are growing dimmer, the perfect stillness of the dropping autumn eve broods over all. It is seldom such absolute quiet reigns above wood and field as when the slanting rays of sunlight from out the golden west shoot athwart the tree-tops at the close of an October day. Once more the gentle monotone of the thousand soft-blending voices of nature arose from the woods and fields. A flock of bluejays disturb the tranquillity for a few moments; and far from the distance comes the plaintive call of a plover hurrying toward the shore.

Coming out from a narrow belt of pine woods I found myself on the edge of the line of hills which extend through Long Island. The view was so enchanting that for a few moments it held me fairly enthralled, so that I did not even attempt to shoot at a whisk of a white cottontail diving into the field of buckwheat.

Within the last hour clouds had been gradually increasing, and now the main mass lay along the western horizon in a dark, low breadth of steely gray. The sun just touched the top of this stratum, appearing as if it shone above the rim of a great indigo sea. It sunk slowly down, but in what a brilliant glow of colors! Almost to the zenith the bits of cumuli were tinted a soft crimson, and closer to the light played a grand combination of orange and gold. I lay and watched the picture until the dusk commenced to creep along, blotting with its soft shadows the detail of field and wood. By one of the hedges there rose into the air the tall, leafless branches of a dead sassafras, and perched upon one of its loftiest limbs, outlined against the clear light, was a chewink. With sweet, unvarying rhythm his clear notes fall upon the surrounding fields, so perfectly in accord with end of the day and fading nature that he seems to voice the spirit breathing above the woodlands.

I had two miles still to go before I get to the station, and while passing through a strip of trees I found myself among a perfect army of robins. They were everywhere, and except a short note when one flew, were silent. There was a feeling of uneasiness among them, and they were careful not to allow me to approach too close. This is but one small detachment of the vast army moving southward, but a collecting of individuals. This air of eagerness and uncertainty was plainly apparent, for they waited but the coming night to wing their way further along.

Before I arrived at the depot it was dark, and sometimes, from the space above, I would catch the faint whistle of those feathered wayfarers pursuing their journey toward sunshine and unending summer, guided by an unseen power, through the darkness and gloom of the October night.

A short whirl, with glimpses of ruddy lights from farm houses, and I am again amid the hurry of the great mass of beings who are traveling homeward. The brilliant sparkle of the electric lamps, the yellow glow from the long rows of shop windows, the crowded cars and endless stream of humanity, seem almost something novel after the quiet of the country. I am going down town and they are bound the other way—toward home—but I am going home, too. REX B.

ORANGE COUNTY, NEW YORK.—Middletown, Dec. 24.—The Board of Supervisors of Orange county has passed an act prohibiting entirely the killing of any quail within the county for a term of three years after its passage. The same act restricts the open season for hunting hares, rabbits, ruffed grouse or partridge, and woodcock to the months of October and November in each year. Another act was passed providing for the payment of $1 bounty from the County Treasury for any fox killed.

FLOATING FOR DUCKS ON THE FRENCH BROAD.

THE people of western North Carolina have a method of shooting ducks that is, I think, practiced nowhere else. As it is usually very successful there, probably only the want of the necessary geographical conditions prevents its more general employment. Numbers of ducks coming northward in the spring turn from the Ohio into the Tennessee, and so find their way into the French Broad. Soon seeing that continuing to follow the river is merely returning southward, yet unwilling at first to desert the water, they collect in great quantities in the neighborhood of Asheville before taking flight. Then is the gunner's chance. Seated in the bow of a boat, with a pilot in the stern, he drifts down the current, and is hardly ever out of sight of a duck while he keeps on the river.

I took a trip of this kind in the spring of '88. Ducks had been reported "thick as peas" for two weeks, when in a four-mule wagon, with three punts, as many country boys, my two companions Ed and Cliff, and of course a driver, I started from Asheville for the Long Shoals. After eight miles of shaking and bumping we arrived at Glenn's Ford, at the head of the shoals, and finding all our bones still in order proceeded to launch the boats and embark. We weighed anchor at 9:45 A. M. and formed in line of battle, Ed taking the left, Cliff the center and I the right. As the average width of the river is less than 100yds., no ducks in 50yds. of the water could pass without coming in good range. Hardly had we gone by the first bend when a bunch of bluewing teal shot out from the mouth of a small creek directly in front of me. Both barrels of my Davis rang out, and the teal—minus three—turned sharply to the left, flew right between Cliff and Ed, who dropped five with their four barrels, and sped away up stream. We had just collected our ducks, several of which had to be shot down, when like a bullet the flock flew past us again and settled in the water some two hundred yards below. Two barrels sent after them had failed to stop a single one.

We were now at the head of a shoal or rapid, from the lower end of which extended a long stretch of smooth water. As we shot down the shoal what was our excitement at beholding not merely our little bunch, but a vast flock of ducks in the smooth water below. Mallards, teal, black ducks and redheads—they were all there; but in another moment they weren't there, for with the noise of a freight train they had rushed away down stream. Loud were our lamentations as we glided through the deserted water and looked ruefully around and back at the place where they had been; but startled by the cry of "Yon' dey come" from one of our pilots, we looked around, to see the whole lot returning about twenty-five yards above the water. Now they were over us, and we "cut loose." Down came two mallards in answer to my shots, one so close to the boat that he was dispatched with the paddle, the other dead in the water some ten yards above. Cliff had two teal and a redhead, and Ed. another mallard. As we paddled down the stream, suddenly a succession of reports far astern told that we were not the only hunters on the river, and looking eagerly back we saw the flock coming toward us again, but away up out of range.

To my surprise Cliff, as they passed, put up his gun and fired both barrels, with the astounding result of bringing down a fine mallard drake. But instead of glorying in his success, he looked sorrowfully after the disappearing flock, and berated himself for missing with his second barrel! How he had killed with his first was more than I could understand, for the distance must have been upward of 80yds.; but he explained that he had used thread-wound cartridges which would kill even at ninety. Ed and I thereupon registered a vow never to go ducking without thread-wound cartridges again.

Half a dozen mallards flew out as we passed a creek on the left and curved down stream. Ed's first barrel brought one down, but his second had only the effect to make the rest turn and fly right over my head. I scored a clean miss with the first barrel, and thought I had succeeded no better with the second, when one of the ducks began to lag, and then, to my joy, dropped. A minute's swift paddling and we found him, floating on his back, with his feet gently kicking the air. Soon after I had regained my place in the line three redheads came toward us, but before coming in range they swung off to my right, over a cornfield, and then turned again toward the river. As they came opposite, my well-choked left barrel laid one low, but what was my grief to find no place where I could land. What would I not have given for a good retriever, small enough to lift to the top of the steep clay bank which extended on either side as far as I could see.

As we rounded the next bend a large flock appeared about 150yds. below. They rose, however, before we were in range, and flying about 100yds. further down, turned into the mouth of a large creek on the left. As they had evidently alighted at some distance from the river Ed and I landed on either side of the creek, leaving cliff stationed at the mouth. We came in sight of the ducks when we were about 150yds. from the river. They were in a small pond, on both sides of which grew thick bushes, tall enough to hide us. After creeping back out of sight I ran to a point opposite the pond, and quietly made my way through the bushes till I could see the game. Then, lying flat and holding my gun ready, I awaited the signal for action. Soon Bob White sounded his call from the opposite bank. I answered the call, and covering a pair of mallards who had swam into line with me, pulled trigger, then springing up, with the second barrel stopped a black duck on his way to the French Broad.

Though I had been too excited to hear Ed's shots, they had certainly been fired, as two black ducks and a green-wing teal testified. And two reports from the river told us that Cliff was not asleep, so gathering up our spoils (with the aid of cartridges) we returned to him. He showed us a nice brace of teal and reported that the rest had flown up stream. We left them for the men behind us and kept on down. Now we found the ducks more scattered. Instead of being in flocks they were spread in twos and threes over the whole course of the river. So numerous, were they, too, that till we reached the mouth of the Swannanoa, two miles above Asheville, our barrels were kept quite warm. At this point we landed about noon, with twenty-three, nineteen and twenty-six ducks respectively. SETTER.

CHICAGO AND THE WEST.

THE NEE-PEE NAUK CLUB, PERE MARQUETTE AND SIEUR DE LA SALLE.

ONE of our city papers here recently published a long article describing the discovery near Peoria, in this State, about Nov. 15, of the ruins of the old fort of Crève-Cœur built by the soldier and explorer Robert de La Salle, upon the banks of the Illinois River, and written of by Father Hennepin more than 200 years ago. The ruins were found in Fond du Lac township, Tazewell county, upon the summit of a lofty bluff overlooking the river for many miles each way. The location was admirably chosen from the simple military standpoint of the time, which was in the year 1680. As the writer of the interesting narrative points out, that was the time of Charles II., of Peter the Great, of Louis XIV., of Dryden, of Molière, of Sir Isaac Newton, of William Penn. La Salle and his devoted followers, pursued to the last moment by treachery and misfortune, had made their stand here by the Illinois, near where our hunters of to-day part the receded waves of the river-lake with their ducking boats. Craft of another sort then glided across those same waters, and hunters of a more savage sort lay in camp on the banks above the bluffs. Among these savage hunters enemies had spread dissension. Fear of surprise and treachery created dissatisfaction in La Salle's little party. Some of his followers deserted him. He knew not when he might expect an attack. So, fearless, determined, manly in his worst extremity, but suffering keenly of those near hurts which come from the faithlessness of friends, La Salle slowly and laboriously erected the simple fort which was to be his home for a time, and in his sadness called it Fort Crève-Cœur, or the fort of the Broken Heart. There are tears in the lines which tell of the discovery of these old embattlements, and record the proof which make their identification complete. The writer of the article alluded to is Mr. Charles T. Lambert, of Peoria.

The spirit of Robert de La Salle broods over all this great Western country, restless, discontented, misfortunate, but noble and determined. He was the very Achilles of our explorations. His was the battle, not his the victory. The very type of early destiny, he stands out clear on the dimming page which tells us of those days, bold, romantic, melancholy, grand, possessor of a life which we might envy in spite of its distress and grief. When we look at that life, when we read his fateful history and when we reflect that he time and again passed over the country that is now our pleasure grounds, the temptation is strong to take space to write about La Salle. That must be, however, only on the way toward writing of somebody else.

La Salle was the first white man to launch a boat on the Great Lakes. He sailed across Lake Erie and up the lake system to Mackinaw, and from there down Lake Michigan to Green Bay, the starting point of the great Indian water trail which led to the Mississippi Valley. He did not, however, go inland, but bought a cargo of furs, which, with his little vessel, was swallowed up by the waves of the inland sea. When he knew his ship was lost, La Salle gave up the route he had at first thought led to China and Japan. He coasted Lake Michigan till he struck the St. Joseph River, on the east shore. This stream he ascended with eight canoes, to a spot within six miles of the Kankakee—so says the narrative above mentioned—and then portaged over. Descending the winding and swamp-lined Kankakee, he struck the broader Illinois, and as stated above, erected the Fort of the Broken Heart.

About seven years before this time, however, white men had visited these same waters, and chief among those earlier voyagers was the gentle figure of the old priest Père Marquette. The latter, with Louis Joliet, a fur trader, left Quebec in the spring of 1673, we are told, and made the water journey all the way to Green Bay, Wisconsin. They paddled down the wide stream which drains the great Lake Winnebago, passed through that lake into what we now call the Northern Fox River, and ascended that stream to the spot of the old Indian portage, just where the modern city of Portage now stands. At this point the Northern Fox runs within two miles of the Wisconsin. Here our priestly-guided party—we can almost see the ghostly train—carried over and swam on down the Wisconsin, until they reached the Mississippi. Down the great river they sailed till they reached the Illinois—further than that, indeed, for they went to where Memphis now stands. They then ascended the Mississippi, went up the Illinois River, crossed to Lake Michigan and coasted to Green Bay, which they reached in September, after a canoe voyage of 2,500 miles. Then followed ill health and misery for the gentle priest-explorer. He lay sick all winter in camp just where the city of Chicago now stands. But he wanted to go back to the Illinois River country, to keep his promise of visiting again the Peoria Indians he met there. He did so, going by the St. Joseph and Kankakee, as La Salle did later. Then he knew he must die, and started back for Mackinaw. His lonely, but noble and devout death, at the altar in God's first temples, in the wailing pine woods of Southern Michigan, has become one of the most touching and best known bits of the early history of our country.

All this is preliminary, written because one cannot help writing it after he has read Mr. Lambert's story of the fort of the Broken Heart, and after he has begun some sort of an investigation of the modern sporting resources of the lakes and streams which lie about this point, and whose names, familiar as they are to all of this section, appear so often the above brief recountal.

These early adventurers passed through a country teeming with game of all sorts, and especially with wildfowl. Gentle Father Marquette must often have looked in wonder at the ranks of wildfowl as he passed Winnebago and ascended the winding Northern Fox. This stream often broadens out into marshes and lakes wherein the character of the river is lost. One of these lakes to-day is known as Puckaway Lake. Time out of mind it has been a wild celery lake, and time out of mind it has been a great resort for wildfowl. It is known all through this country as one of the canvasback lakes. There are a few canvasbacks that stop on Swan Lake, on the Illinois River; the next point above there is Fox Lake, of which so much is written; there is wild celery there also. To the north of that lies Lake Koshkonong, in Wisconsin, a great celery lake and a great canvasback point. Yet above this, and the most northern of any shooting lake taken into definite view by our Chicago sportsmen, lies Puckaway Lake. Father Marquette passed through this, and near here his dusky pupils must have lived and loved, warred and died in great numbers, for on the bluffs of the lake shores the curious hunter may even to-day find relics of their time, and large collections have been made in the neighborhood of axes, skinning knives, spear heads, arrow heads, and all the simple tools or weapons used by the savages of that day. They say there are ghosts of Indians in those woods, and that spirit canoes, led by a white Marquette, at times sweep silently along those storied streams.

It was at the end of Puckaway Lake, a nice little steamer ride from Princeton, that the men of the Nee-pee-nauk Club selected their site, erected their serviceable club house, and began the acquisition of the land, which resulted in their present domain of between 5,000 and 6,000 acres of land, which includes both the valuable marshes of that locality and secures, perhaps, the best natural canvasback grounds we have in this part of the country.

The methods of the Nee-pee-nauk Club, its organization, etc., are much similar to those of other Chicago clubs described earlier in these columns. Its members may be called wealthy and disposed to be *recherché*. Nearly all are middle-aged men, and there is, I believe, only one young man on the list, a son of one of the officers. Gen. Phil. Sheridan was one of the members of this club. The club is amply able to make such additions to its territory as it wishes. It owns one main club house with eight sleeping apartments, and several smaller buildings obtained with certain parcels of land. It owns the tidy little steamer that comes down to Princeton to meet the members, and it owns the further belongings that such an organization needs in such a spot.

After writing of so many different clubs it is a relief to the writer, and doubtless also to the reader, to find a club which may fairly be said to write up itself. I cannot do so well in attempting to convey an idea of the club and its environments as to quote literally from the report made in 1886 by the president of the club, Mr. A. H. Sellers:

"There are but few duck shooting places in northern Indiana, Illinois, or the southern 200 miles of Wisconsin that I have not visited, as well as many in Kansas, Iowa, Minnesota and on the Pacific Coast, and I unhesitatingly say that I know of no better grounds for a duck and snipe preserve than those now partly controlled by our club under long leases. To make a good duck-shooting place, there must be large open water where ducks can sit undisturbed. This constitutes the reservoir; contiguous to this must be marshes, one or more, with good feed. The ducks flying to and from these marshes and the reservoir afford the shooting. All these requirements are found at our club house at the head of Lake Puckaway. The lake, seven miles long by about two in width, is a shallow, open water lake, varying in depth from two to eight feet, with its bottom thickly grown with wild celery (*Vallisneria*) and other aquatic plants, with its accompanying life, such as leeches and fresh water mollusca, upon all of which, plants and animal life, the different kinds of ducks feed. The favorite food of the mallard, teal, and several other kinds is, however, principally to be found in the marshes. At the head of the lake, and in front of the club house, is the Puckaway Marsh, two miles wide and four miles long, through which winds the crooked channel of the old Fox River, and runs the swift current of the new Fox, made by the Fox River Valley Improvement Company. In this marsh are many holes, ponds and sloughs, with a fine growth of wild rice and the Indian potato, the best of duck food. Lying parallel to this marsh and the lake, and separated therefrom only by a low range of hills from three-fourths to one mile in width, is the Grand River Marsh, from one to two miles in width by five miles long, running east and west, and turning north at its western end and connecting with the southwestern portion of the Puckaway Marsh. This (Grand River) marsh is one of the finest duck marshes in the State of Wisconsin, growing a profusion of wild rice, and owing to its seclusion much frequented by ducks and easily protected.

"Thus it will be seen that in this lake and the two fine marshes we have one of the finest habitats for ducks to be found in the State of Wisconsin, and one in which, owing to its profusion and variety of food, ducks would be inclined to remain, when on their migrations, as long as the weather would permit. Our superintendent and myself have, from careful observation, become convinced that the length of the stay of each species (excepting, perhaps, the mallard) is each year growing shorter. The cause of this is clearly the multiplicity of guns. Last year the daily flight from the lake to the Puckaway Marsh was markedly less than it was the year previous, and this year there was almost none; in fact, the marsh was all but deserted by everything except hunters. Of course, the low water had much to do with this, but the main cause was the fact that when a bird had succeeded in passing the guns on the marsh lake front, he found a hunter at every slough and pond hole ready to receive him.

"The remedy for all this is clear; protect them, and allow them and their kindred species several days' weekly undisturbed access to the marsh.

"The east end of Puckaway Lake is owned and leased by the Caw Caw Club, of Milwaukee, who will protect their grounds; thus the two clubs working in unison would protect a tract of forty square miles, and forming one of the finest and grandest game preserves in the country. I am informed that the shares of stock in the Caw Caw Club have cost $500 each, with dues of $80 per year."

That will do to show what the Nee-pee-nauk Club possesses. As a matter of fact, however, forty-five canvasbacks is the largest bag I can learn of to a single gun in a day. Young Mr. Sellers, who shot on this marsh for about three weeks this falls, tells me he only averaged about ten birds a day. He said there were thousands and thousands of canvasbacks on the lake, and they had fairly filled the water with torn-up celery; but they kept to the open water and steered wide of the points in their flight. Had it been lawful to use a sneakbox beyond the line of the natural cover very large bags could have been made. Singularly enough, precisely the same reports came down from Koshkonong and Fox Lake. The law stopping the sneak-boxes seems to have been a good one. Under this head, also, Mr. A. H. Sellers's remarks as to the change in the habits of the ducks are particularly noteworthy and true.

It is necessary to make quite a long run from the club house to the shooting grounds at Nee-pee-nauk, but the boat in general use is well adapted to this. In the Nee-pee-nauk boat we have yet another distinct club model. The boat is a modeled bow, low-sitting, roundish-bottomed model, with no ribs visible except under the decking, fore and aft of the cockpit. It is a comfortable and easy paddling boat. It is not clinker built, but is more nearly that than anything else. It is built altogether of ¼in. strips, square, fastened one directly on top of another. The boat is built on a frame; when done, it is a shell perfectly smooth, within and without, yet very stiff. The shell is smoothed with sandpaper, in and out, the deck put on and the cockpit adjusted. A little canvas cockpit is so arranged that it can be thrown up to keep the navigator dry in a sea, for the boat sits quite low to the water. These boats are built by the club keeper, and probably every member has one. We have not found any similar boat in our travels among the various clubs.

Nee-pee-nauk is a delightful summer club. The bass fishing there is magnificent and very many, perhaps half, of the bass taken are the small-mouthed bass. Fly-fishing for these noble fish is very successfully practiced in the Northern Fox River. Following is the membership of Nee-pee-nauk club: President, Mr. Morris Sellers; Vice-President, Mr. Edward E. Flint; Secretary and Treasurer, Mr. James S. Carter; Board of Directors, Messrs. Morris Sellers, Edward E. Flint, Ira S. Younglove, C. T. Trego, A. H. Sellers. Members, Messrs. C. H. Allen, William Borden, J. C. Brooks, Geo. H. Christy, G. S. Chapin, Geo. W. Champlin, James S Carter, Estate of Geo. C. Campbell, H. P. Crane, John Cudahy, Geo. L. Dunlap, Geo. C. Eldredge, W. K. Fairbank, E. E. Flint, Robert Forsyth, R. H. Fleming, James J. Gore, Alpheus M. Hawes, Albert Hayden, Marvin Hughett, Jr., N. S. Jones, Samuel M. Jones, Clifford P. Johnston, Sidney A. Kent, J. C. Knickerbocker, Francis J. Kenneth, Wm. Kent, W. R. Linn, William H. Locke, C. F. Lawrence, W. G. McCormick, Charles D. Peacock, A. B. Pullman, John Parsons, Charles W. Rodman, Theodore Rogers, D. G. Reid, Norman B. Ream, Peter Schuttler, Morris Sellers, A. H. Sellers, Chas. J. Singer, Philip E. Stanley, W. R. Stirling, Chas. T. Trego, N. C. Turner, Geo. C. Walker, Francis T. Wheeler, Lewis D. Webster, Wirt D. Walker, Ira S. Younglove, Francis W. Goddard, F. O. Wyatt.

E. HOUGH.

INCIDENTS OF FORTY YEARS.

MY first deer was killed in the Adirondacks, when but a lad of ten or twelve years old. The great North Wood was but little traversed by white men then. Wild animals were plenty, and the Indian trail between Canada and the Mohawk Valley was still plain if not fresh.

A long heavy rifle rested on its wooden hooks in the kitchen of my father's house, and it was a subject of ambition with me to learn to shoot and kill some large game. Early one morning, I saw two deer in the meadow down by the river, and at once I climbed into a chair placed so as to reach the rifle, and got it out of the house without being seen. But, before I had gotten to the rail fence where I went to get a rest for the rifle, my mother and sisters discovered me with the gun, and, with much alarm, made all effort to have me returr. It was too late, for just then I fired and killed a large buck. The news of my exploit soon got out, and my playmates regarded me as a sort of hero, and I was for weeks one of the proudest boys in all the North Woods.

Wolves and panthers were troublesome in these days. I remember of seeing the carcass of one of my father's sheep in the crotch of a big birch tree, fully forty feet from the ground. Wolves and panthers, hunting together, had raided our farmyard the night before, nor did they cease their raids until all our little flock of sixty sheep had been destroyed.

It was my ambition when a boy to catch some does in winter when the snow was deep, and without injury to put them in a park and raise some fawns. One day, with my brother and a three-months-old pup, I went to the hills to catch a doe. From the top of the hill, where was a deer yard, we soon started a deer, but could not overtake it until it reached the river. The stream had been high from a recent thaw, and in that condition had frozen over with three inches of ice. It had suddenly fallen, leaving the middle free from ice, with a strip several yards wide adhering to the banks but a foot or more above the water. The deer was discovered lying on the bank and under the ice nicely hidden. I prepared to cross the river and break down the ice above the deer, by jumping upon it, and, as the ice fell, to catch the deer about the neck and hold her until my brother could fasten a birch withe about her neck.

This I did, but my doe was a full-grown buck, his horns had dropped off some time before. As I caught him about the neck he took me out into the middle of the stream. It was as full of rocks and boulders as could be, with plenty of water rushing between. During our short journey together the deer and I were in all possible positions, and what with the cold water, the bumps on the rocks, and the kicking received, I was never more bruised nor more angry in my life. But I held the buck; and my brother put on the withe. We then got the deer to a smooth place on the bank, and holding on to the withe let him up. The deer gave a jump high into the air, fell on his back, and putting his hindfeet into the loop about his neck did his best to break the loop. Not succeeding he got up, and we led him quietly toward home. Several times on the way he cropped buds from the bushes; but after a few days, in spite of the greatest care, he died, and, as we said, from homesickness. But if he bruised himself as badly as he did me, his death might well be attributed to another cause.

Our club was once having its usual fall hunt on the Au Sable River in Michigan. We drove deer with hounds into this swift-flowing river and shot at them as they came down the stream toward the hunter, who was lucky enough to be the first one placed where the deer took to water. Judge H., of Cleveland, was one of our party that season, and we were anxious to give him some shooting. The first morning he took station with me on the bank of the river. Soon we saw a buck with a fine head of horns coming down the river toward us and 200 or 300yds. away. I said to the Judge that, when the deer had come down to a place indicated, he should shoot, and I would fire later if the deer was likely to escape. This was quietly assented to, and we waited

with rifles cocked. Just a moment before the deer reached the place where the Judge was to fire, the foot of the deer touched bottom on a sand bar or rock and he rolled over on to his back, with legs high into the air, head and horns disappearing under water. We recovered arms and the affair was so ludicrous I could not refrain from a hearty laugh. The deer had been shot by one of our party up the river and legs and horns so tied that he could better float down to the camp and save our canoeman a mile or two of towing. It was in vain that I protested to being myself perfectly deceived. My generosity in the matter of firing was regarded as a suspicious circumstance. And I fear the Judge believed me guilty of intending a joke. But I still protest my innocence and believe the appearance of that floating buck would have deceived the very elect. G. H. W.

BOISE CITY, Idaho.

REMINDERS AND OLD MEMORIES.

I WAS much interested in "Aztec's" chat of Dec. 19, especially with his account of his experience with the "old musket, with the big nipple and mighty hammer."

It took me back at once to the long ago, when similar tribulations oftimes attended my early, not my earliest, efforts for fur or feather. I say not my earliest, for back of the "big nipple" was the flint lock, which by the way was the most graceful and pleasing form the gun ever took upon itself since gunpowder was invented. I am free to admit that for safety in using, beauty of workmanship and perfection of all its parts, there is nothing in the past history of the fowling piece that approaches the breechloader of to-day, but for beauty of style and graceful appearance it bears about the same relation to a Manton flint-lock fowling piece that a cropped-ear cur does to the English greyhound. I never pass a shop window where one is on exhibition as a relic but I feel like stopping and taking off my hat to it.

As to the present fashionable hammerless, I consider it an abortion or worse, and never see one but it reminds me of a black snake with neither ears nor mouth, therefore I avoid it.

How many active sportsmen among the many thousand readers of FOREST AND STREAM can relate of their personal experience with the old Queen Anne, or similar arms, before they were relegated to the garret or dark closet by the nipple and the cap?

Many a mile has the writer trudged over hills and through vales with the old family musket—some inches taller than himself—calling it sport, yes, and enjoying it, too; for he seldom came home with an empty bag. His first rabbit, partridge, woodchuck and muskrat fell victims to the same old musket. Game was then plenty, and there was no "close season." Wing-shooting was unknown, except as a chance snap shot.

But notwithstanding the many pleasant memories of those long past days, memories that will remain while consciousness continues; I have never regretted the change from the flint to the fulminate, nor from the muzzle to the breechloader of the present day. Safety is the most important characteristic in all guns. With this secured, we can afford to sacrifice the elements of grace and beauty, and accept the gun if it does look snaky, or like an ox without horns, or a dog without ears. J. H. D.

POUGHKEEPSIE.

AIMING THE SHOTGUN.

Editor Forest and Stream:

The method of aiming recommended by Mr. R. Morris, in FOREST AND STREAM of Nov. 21, is advocated by many of the finest shots, but one condition is necessary for its success, viz., that the gun so fit the shoulder that when raised quickly it will point straight to the object at which the sportsman is looking. If too much bent in the stock, or if top heavy, it will shoot under the game, or if too straight it is liable to shoot over, though the latter fault is far less common than the former.

The best method that I am aware of for ascertaining whether a gun fits properly is to fix both eyes on an object, and while holding the head erect, pitch the weapon quickly to the shoulder, then lower the right eye to the breech. If, after trying this a great number of times, it be found that the barrels almost invariably point level to the object, there is no doubt about the fit being good. When a man is not lucky enough to have a gun which fits him, his surest method of shooting well is to look along the barrels. He, of course, must not be as slow and careful as when aiming with a rifle, but the eyes should be lowered nearly to the breast and see that the muzzle is about at the proper level. In this way aim can be taken almost instantaneously, and, when thoroughly accustomed to the gun, accurate snap shots with the head erect can be taken if necessary.

In spite of all that is said in favor of the latter method, it must be admitted that plenty of first-class shots look along the barrels. There is indeed no other way of accounting for the fact that some men can shoot well with almost any gun, no matter what shape the stock may have, the first time it is put into their hands. No one will assert that Captain Bogardus is a bad or even a slow shot; yet in his book on "Field, Cover and Trap-Shooting" (published by the Forest and Stream Company) he expressly states that he sights his birds along the barrels, and adds that he believes those men do the same, unconsciously, who think that they never see their guns. I myself was never more than a second-rate performer with the shotgun, though always very fond of it. I had been in the habit of firing without looking along the barrels until I heard of and obtained a copy of Captain Bogardus's book, shortly after it was published. I tried his way of aiming and at once found my shooting much improved, especially at snipe.

I was once talking to an intimate friend, one of the best and quickest shots I ever knew, and remarked that I could not understand the use of a sight on the muzzle of shotguns, as I never saw it when firing. He replied, "I nearly always see it and find it a great guide to the eye."

A gentleman living in England, well known as one of the best judges of everything connected with guns, and also a first-class shot, stated some months ago in a letter to the London *Field*, that he keeps his head up, and, at point blank ranges, pulls the trigger the instant he sees 3 or 4in. of the muzzle just under the bird. Doubtless his guns are made to fit him so that the barrels are at the proper level when held in this way, and, of course, the muzzles must be swinging in the same direction as the bird flies, or they would shoot behind.

That the method of aiming without paying attention to the barrels is really less accurate than the other way is, I think, shown by the fact that very good snap shots nearly always shoot badly with the rifle at running game.

When living abroad I was in the habit for years of killing all kinds of animals on the run, from large deer and antelopes down to jackals and wildcats. I feel sure even when an animal in galloping hard through the thickest brush I almost invariably saw the foresight of the rifle and often the hindsight also. J. J. MEYRICK.

NORTH DEVON, England.

A TEXAS GAME COUNTRY.

BEEVILLE, Bee County, Tex., Dec. 17.—*Editor Forest and Stream:* There is a river which runs through this portion of the great Southwest, that is destined some day to be a great sportsman's retreat, it is known on the map as the Nuecus River and empties into the Gulf of Mexico. The country along its course is covered with a dense undergrowth, with now and then an open glade, and abounds in game of almost all kinds common to the South, except bear. Four of my friends have just returned from there, having brought down twenty fine deer in about five days of hunting. Another party of two brought in six; and still another party composed of inexperienced hunters killed five in four days.

The writer, in company with his family and two other gentlemen, struck camp for the night a short time ago in that vicinity, and the weather being threatening and rather disagreeable, the hunters of the party did not leave the camp before sundown; when to our surprise turkeys by the dozen, I may say by the hundreds, began flying up to roost all around the camp-fire. We killed fifteen, which was all we wanted, within 200yds. of camp, in some instances the ladies witnessing the killing from their tent doors. One of the party shot five from one large live oak tree.

Fire-hunting is a favorite sport among our professionals, and perhaps more deer are brought down in this manner than by any other method. The river above referred to is about 18 miles from Beeville, but the country adjacent to the town is well stocked with turkey and quail, and it is of frequent occurrence for parties to kill a brace of fine gobblers in an afternoon's hunt a few miles out.

Quail are so common that our local sportsmen think nothing of bagging a hundred in an afternoon with well trained dogs. The Beeville region is fast becoming famous as a hunter's paradise, and the mildness of the climate renders camping agreeable. T. J. SKAGGS.

MAINE DEER.

IT seems that other white deer have been killed in Maine this year besides the one mentioned in my letter to the FOREST AND STREAM of the other day. Mr. A. W. Robinson, of the Robinson Engraving Co., No. 32 Hawley street, Boston, has in his possession the legs of a white deer which he is having mounted for the supports of an ottoman. These legs Mr. Robinson secured when on a recent hunting trip into the Moosehead region. The deer was killed by an old hunter and guide named Ben Woodan. Mr. Robinson came across the deerskin at Woodan's camp, some twenty miles north of Moosehead, and he tried to secure the entire pelt, but Woodan would part with nothing but the legs. The pelt is declared to be almost milk white except the ears, which are black. It is the only white deer that Woodan has ever seen or heard of in that part of the country. Otherwise than being white, the deer was declared to have been like other deer of that section. The antlers were short, and with one or two prongs, indicating that the buck was a young one.

The Maine moose and deer season will close on the 31st of December, and it is hardly possible that as many deer have been killed this year as last, though they are evidently more plenty. But the hunters have not been as numerous, if reports are true. As for moose it is plain that very few have been killed, and indeed but few have been seen. Still they are by no means extinct. One has come out into the open fields in Kingfield. The men were at work not far from the house, when all at once a cow moose appeared in the opening. She ran directly toward the house and the men, clearing the fences and stone walls with as easy bounds as a cat would clear a pumpkin. She ran almost up to the cattle, which were feeding near at hand, scarcely appearing to notice them, then turned and disappeared into the woods, towards the mountain. Hunters followed her tracks the next day, but without success. But very few caribou are reported this year, and the theory is that they have migrated; whither no one knows. SPECIAL.

THE CHINESE PHEASANTS.

WHEATLAND, Oregon.—*Editor Forest and Stream:* The Chinese pheasants introduced into this State by Judge O. N. Denny in 1882, have multiplied very rapidly. Two years ago in this vicinity, forty or fifty miles from where they were liberated, one was seldom seen, while now they are numerous.

The males are very gaily colored, having many shades on the body, while the head is principally green with a red patch around each eye and a white ring around the neck.

The two longest tail feathers are about 18in. in length, and the whole bird from tip of beak to end of tail is near 3ft., and the weight of the male is about 2½ or 3lbs., while that of the female is about 2lbs. The females are of a very sober color compared with that of her mate.

The males have a cackling noise that they make sometimes which resembles that of a pileated woodpecker more than any other sound that I ever heard.

When they take wing they nearly always cackle at this season of the year, but there is a slight difference between the sound made while on the ground and that made when flying.

They are a very cunning bird and well able to take care of themselves. They frequent brier patches and low brush, coming out into the fields to feed, and can come as near hiding on bare ground as any bird of their size that I ever saw.

Their legs are rather long and naked below the knee. When alarmed while feeding in a field they put down their head and strike for cover at a 2.40 gait. When they fly they light running and are not easy to flush again.

They are accused of destroying quantities of wheat by flying along just over the tops of the ripe grain and beating out with their wings more than they can eat. They are said to be easily domesticated, but about this and their destruction of grain and fruit I have no personal knowledge, having been acquainted with them but three months. They are protected by law for about a year yet, but where they have become plentiful some of them "get into the soup" regardless of the law. J. F. L.

DAYS WITH THE ELK.—Berthoud, Col.—We returned Nov. 30 from a five weeks' hunting trip over the range on Snake River and its tributaries in both Colorado and Wyoming. We had a hard trip for man and beast on account of storms and deep snows, but had lots of fun. Saw hundreds of elk. Our party killed and brought home twelve elk and one deer, besides one big bull elk killed by myself that had the mange and was as poor as a crow and was left where he fell except his head, which I now have. You would be surprised to go into that country in September and October and see the terrible slaughter of elk that is going on there, especially in Wyoming, for heads, hides and hindquarters. A great deal of it is done by English parties, who have more money than brains. "Just for sport, you know," I saw four-horse loads of hindquarters pull out for Rawlins, Wyo., to sell on the market. None of the meat killed by my party was wasted, but all was brought out; I have enough to do my family for some time and it is very fat this year. Kept camp notes and will write my trip up for FOREST AND SEREAM later.—A. A. K.

CALIFORNIA NOTES.—This year, duck shooting, owing to the heavy rains and floods, which scatter the game, is poorer than usual. The Sonoma and Suisun marshes are tolerable, and daybreak shooting at Point Reyes is excellent. Canvasbacks and bluebills are numerous there. Snipe shooting is good in the Laguna of Santa Rosa, about forty miles from San Francisco. Many mallards are being shot at night in the Watsonville grain fields. In Colusa county, geese are more plenty than last year, and hunters are loading wagons with the game, and shipping to market. A hunter recently arrived in San Francisco with two large elk skins, and heads with fine antlers. They were shot on the head-waters of the Coquille River, near the California line, in one of the wildest mountain regions on the Pacific Coast. There are a few elk left there and in Del Norte county, but hardly anywhere else. In 1836 elk fed on the plains of the Santa Clara Valley, and as late as 1856 there were a great many in the San Joaquin.—CHARLES H. SHINN.

WYOMING NON-RESIDENT LAW.—In response to an inquiry we give this section of the Wyoming game law, which became a law March 9, 1888: "Section 1. Section 1251 of the Revised Statutes of Wyoming is hereby amended and re-enacted, so as to read as follows: 'Sec. 1251. It shall be unlawful to pursue, hunt or kill any deer, elk, moose, mountain sheep, mountain goat, antelope or buffalo, save from Sept. 1 to Jan. 1 in each year, and it shall be unlawful to capture by means of any pit, pitfall or trap, any of the above-named animals, at any time of the year. No non-resident of this Territory shall pursue, hunt or kill any of the above-named animals by any means whatever; provided, however, any actual and *bona fide* resident may at any time pursue, hunt or kill any of the said animals for the purpose only of supplying himself and his family with food; but it shall be unlawful to sell or offer the carcass of any such animal, or any part thereof, except as is provided in this chapter.'"

THE LONDON GAME MARKET.—London, Eng., Dec. 19.—This is now the height of the game season in Great Britain. Markets are full of grouse, pheasants, ducks, partridges, snipe, hares, rabbits, deer, etc. I am greatly surprised to notice the low prices prevailing here. For instance, pheasants, $1.00 and $1.25 per pair; partridges, 25 cents each; plover, 12 cents; widgeon, 25 cents; wild ducks, 35 cents; hares, 60 cents; capercailzie, the great Norwegian grouse, 85 cents each; ox-eye snipe, 15 cents each; golden plover, 17 cents each; larks, 30 cents a dozen. Referring to this latter "game bird" I was astonished to know that this sweetest of English song birds is sold for food. They are captured in vast numbers in the following manner. Two men carrying a long net a hundred feet in length, and about six feet in height, drag it over the ground. The larks flying up, are entangled in the meshes. It is darkly whispered, however, that many of the so-called larks are English sparrows.—GEO. SHEPARD PAGE.

THE TODD CASE.—Saint Stephens, Canada, Dec. 16.—*Editor Forest and Stream:* A statement has appeared in FOREST AND STREAM that Mr. F. Todd, the well known sportsman of New Brunswick, had been engaged in hounding deer in Maine. I have seen Mr. Todd and ascertained beyond a doubt, not only from him, but also from the evidence of others, that the charge made against him is false. Should FOREST AND STREAM require any further confirmation of the falsity of the charge, E. M. Stilwell, Esq., of Bangor, can be communicated with. From the standpoint of one well acquainted with the country I must say that it would have been extremely absurd for Mr. Todd to have gone fifty miles from home into a foreign country, where game laws are being vigorously enforced to secure game illegally, when he could easily have done the same thing within a few miles of his own residence in the Province of New Brunswick, where, I am sorry to say, the execution of such laws is almost totally neglected.—EDWARD JACK.

AFTER BREAKFAST.—You may take the most elegant and complete vestibule train ever constructed, leaving Chicago daily at 10:15 A. M., via the Chicago and Atlantic Railway. The magnificent trains offer unsurpassed accommodations for all classes of travel for New York, Boston and Eastern cities. Pullman dining cars are a feature of this new departure, and run through in either direction between Chicago and New York. Instead of exacting extra charges for fast time and the peerless accommodations proffered, the Chicago and Atlantic through its own agencies and those of connecting lines quotes fares to Eastern cities from $1.50 to $3.00 less than is charged by other routes. Consult your local ticket agent on this important item, or for maps, folders and time cards giving full information of the Chicago and Atlantic, New York and Chicago Vestibuled Limited carrying all classes of passengers. Address for prompt reply F. C. DONALD, General Passenger Agent, Chicago. Inclose two green stamps for an amusing, novel and paradoxically ingenious toy. A harmless, fireless, powderless, everlasting fire cracker.—*Adv.*

SUGGESTIONS FOR REFORM.—Easthampton, Mass.—*Editor Forest and Stream:* The idea suggested by your correspondent, "Cayuga," of shooting only three days in the week during the open season, I think is good, for it will reach just the ones who are killing off the game, that is the market-hunter, who plies his business every day in the week, and the man of leisure, who is not confined so closely but what he can go hunting every day if he wishes to do so. Govern these two parties, and there will be some chance for those who can only go out for a short afternoon once a week, or once in two weeks, to get a few birds. I would also suggest that September—at least the first half it—should be close in this State, and when the law closes the season on partridges it should close on quail at same time. As it is now, the excuse for hunting quail gives all so inclined a chance to shoot partridges, as these two birds are usually found in same cover in New England.—S. H.

W. L. COLVILLE ("Dick Swiveller"), now connected with the Baker Gun Co., wandered slowly into the office one day this week. Like nine-tenths of the inhabitants of New York city, he had been touched with the prevailing influenza and his customary brightness of eye and cheery manner were somewhat dimmed, but enough vitality yet remained for one of his old-time grips. He was loud in praise of a wonderful cure for colds, which consists of many ingredients confined in a glass receptacle of suitable shape to be carried in one's pocket. Dick has just started on his annual trip to the Coast, with his new-model Baker, and we presume, with the aid of this wonderful cure, that his cold was a thing of the past before he had left New York 100 miles behind.

TAXING GUNS IN NEW JERSEY.

Editor Forest and Stream:

Some time ago I saw a notice in some newspaper to the effect that some gentlemen connected with a New Jersey Fish and Game Protective Association had prepared a law taxing guns in New Jersey and would urge its passage at the next session of the Legislature. Since that time this project has been discussed in various newspapers, and a correspondent in your issue of the 19th argues in favor of it on the ground that game needs protection in New Jersey and that the game laws are not observed.

I am heartily in favor of anything that will protect hunting and fishing, but I fail to see how taxing guns is going to accomplish the object. The tax, of course, would have to be equal, despite the fact that one gun may do more mischief than a dozen others. I am not at all surprised to find that sportsmen are casting about for some remedy when they look at the present state of affairs and like drowning men grasping at straws are willing to do anything that will prolong their lives as sportsmen. Will taxing guns accomplish this? It is true that the present laws of the State relating to fish and game are frequently violated, but where is the guarantee that every gun will be taxed, even admitting that such a taxation will protect game? Would not the same spirit of indifference which permits violations of the present laws also conduce towards making a gun tax law a nullity? In my humble opinion it might be better to pass some laws providing for the enforcemeet of the present laws. Let us first try this remedy before casting about for others.

As the law stands at present in New Jersey there is no provision for the enforcement of the game laws. The governor appoints a State fishery commission, or does not appoint one, as there has been for several years a vacancy in the Commission. The Commissioners appoint fish wardens and these wardens are charged with the enforcement of the fishing laws. They have no authority whatever to enforce the laws concerning gunning with one exception; if the Board of Freeholders of any county instructs the wardens to enforce the game laws the wardens are authorized to do so on Sunday; during the rest of the week the game can take care of itself, and if the Board of Freeholders takes no action the poacher can have his own way about it for 52 days a year more. Might it not be well to provide some officer to enforce the game law? It might be argued that every person has a right to make a complaint. True enough, but aside from the fact that what is everybody's business is nobody's business, the laws certainly extend no encouragement to a person to look after the game laws. There are so many loop-holes in the law that the chances are always in favor of a person accused escaping, and the law provides that the prevailing party shall recover the costs.

If a man makes a complaint against another for violating the law he always runs the risk of being required to pay costs, amounting to from $5 to $50, and when there is a contest he is compelled to employ the services of a lawyer, even if he succeeds in obtaining a conviction, after spending his money and time, the fine is only $20 in most cases; of this the complainant gets one-half, with which to pay his lawyer and the risk he ran of being required to pay the costs. This is in addition to the probability that the convicted will take an appeal, which would necessitate further outlay for costs and lawyer's fees, with the chance that at the end the prosecutor may be compelled to pay $100 or more for costs. I speak from experience, for I could cite half a dozen cases in my experience within the past year in which I obtained convictions and found myself out of pocket. Such victories are not apt to encourage a person to enforce the game laws.

Although in the abstract I have the greatest respect for game laws, I cannot say that this respect extends to the jumble of acts constituting the fish and game laws of New Jersey. A law which provides that a person may take perch, for instance, out of the streams of the State at all times of the year and which sends a man to State prison for six months for taking a perch out of a lake does not call for particular admiration. The trout law provides that trout shall not be caught except after the 1st of April and before the 15th of July, but it is not contrary to law to have a trout in possession at all times of the year; the poacher may at all times dispose of his loot, and no one can prosecute unless he can prove that the poacher caught the trout in the State. The law sends a boy to prison for shirring a sucker; the law concerning weirs has been repealed, and it is well known that trout, bass, pickerel and all kinds of fish are continually being caught in weirs and openly sold, for there is no law mentioning weirs. Rabbits may be trapped under certain conditions for six weeks every year, but the dealer who procures prairie chickens from the West is punished if he sells them after the 1st January, although I have not heard of prairie chickens in Jew Jersey for many years. Might it not be well first to enact a code of laws which would be consistent and engender respect and then provide some means of enforcing these laws? CHARLES A. SHRINER,

Fish Warden of Passaic County.

Camp-Fire Flickerings.

"That reminds me."

294.

MR. E. HOUGH'S yarn of shooting a prairie chicken as it rose up between him and the full moon, reminds me of an experience of mine, many years ago, when spearing fish at night. It was in southern Michigan where clear lakes abound. We had a "jack," a frame made of iron cross bars, on which we burned finely split dry wood. This would make a great blaze, and by it we would spear the fish. One night at the period of full moon, our wood became used up at about midnight, and we started for our landing place. The moon was shining brightly nearly overhead, and on looking down in the water I saw the moon reflected from the dark bottom of the lake, and the next instant a large pickerel appeared between the reflection and myself. In an instant I had him on my spear and into the boat. IZAAK, JR.

ST. LOUIS, Dec. 26.

FOREST AND STREAM has illustrated circulars of Mr. G. O Shields' new book, "Cruisings in the Cascades," which will be sent to any address on application. The book is highly commended by T. S. Van Dyke, "P.," W. B. Leffingwell and other prominent sportsmen, as one of the best that has ever been written on big game hunting.—*Adv.*

Sea and River Fishing.

ANGLING NOTES.

ONE of the greatest charms of angling among the Thousand Islands is the custom of spending an hour or two at noon under the shade on some convenient island while the guides cook the fish you have just caught, which, with steaming potatoes and hot coffee, make a very excellent dinner, particularly with the addition of the good things furnished by the hotels. Often a number of boats will meet by appointment and make quite a dinner party, among which will be found as many ladies as men. The boatmen have of late years added many little conveniences to their outfit in the shape of folding tables, chairs, etc. So that instead of the old-time way of dining on the grass where the different varieties of the insect world could meander over the food at their own sweet will, and the angler had to almost break his back to reach his plate, one can now eat like a Christian in peace and comfort.

Mr. Wm. P. Esterbrook, formerly the efficient building inspector of this city and a well-known St. Lawrence River angler, has added another luxury to the outfit which he carries in his boat. His invention consists of a light sheet-iron stove, made only of three pieces and without any pipe. The directions for making it are as follows: Take a piece of stiff sheet iron, 22 inches wide at one end, 16 inches wide at the other end, and 30 inches long. Fold down an edge 2½ inches wide all the way around and finish the edge with stout wire; this stiffens it and prevents the sides from spreading apart when the stove is set up. The two sides, each 8 inches high, should be fastened to the top inside of the edges with hinges so arranged that they can fold inwards when not in use. A hole 7 inches in diameter must be cut near the small end of the top for the kettle to fit into, and this kettle should be made with a shoulder, so that it will sit down at least 2 inches below the level of the top in order to heat more quickly. Cut a few good-sized holes in the turned down edge at the small end so the fire can draw through. In setting up the stove, place it so the large open end will point toward the wind, and if the fire burns too fiercely, a stone or piece of wood can be put before the opening to shut off the draught. The coffee pot, cups, etc., can be carried inside the kettle, and a gridiron can be carried with the folded stove in a canvas bag. The angler will find this simple arrangement a great convenience, and can cook on it to perfection. The smoke will not bother him nor the ashes fly into his food; besides this, it will need but little fuel.

The fishing for speckled trout in the Chateaugay lakes was not up to the mark this season. They say that the miners are spoiling those far-famed waters by using set lines, giant powder, etc. The hotel keepers, who dare not complain for fear of having their property destroyed, will be the principal sufferers, as anglers will have to seek other fishing grounds if the poaching is not prevented. Deer were unusually plenty this fall, and too many were killed for the good of that region.

THE TROUT OF THE YELLOWSTONE.

Editor Forest and Stream:

Recalling my promise I will endeavor to give you the result of my observations on the trout of the Yellowstone region during the past summer.

Although a well-known fact, it will be perhaps well to recall to readers of FOREST AND STREAM that the trout of Yellowstone Lake, of the Yellowstone River and its tributaries, are not fish of the same species as our Eastern trout. They differ not only specifically, but even to a greater extent, and fall properly into the genus *Salmo*, having teeth upon the vomer, and distinct, well developed, though small scales. The difference in color is of course apparent at the first glance, but mere difference in coloring has very properly long since ceased to be a means of discriminating between any species of fish. The Yellowstone trout, in fact, are much more closely allied in structure to *Salmo fario*, the common trout of Europe, than to *Salvelinus fontinalis*, our Eastern trout. Perhaps I should apologize for offering those well known facts to your readers, but they constitute a necessary postulate to a most interesting question and to my discussion of it.

As is well known, both the fauna and flora of the western Rocky Mountain region is much more nearly allied to that of Europe and Asia than is that of our Eastern States—and this not only as to the species represented, but even the genera. The question then arises: Why do we find fish of a form belonging to the Pacific fauna in Atlantic waters? Why do we find a species of *Salmo* in headwaters of the Missouri and *Salvelinus* in headwaters of the Mississippi, when both these rivers belong to the same fluvial system? Why have these two forms never mingled? And again, why do we find these fish above the grand falls of the Yellowstone and also above the great falls on the Snake, while we do not find them above much lower falls on all of the tributaries of these streams, as, for example, the Gardiner, the Gibbon, Clark's Fork of the Yellowstone, in Shoshone Lake and many others that might be mentioned. The whole region of the National Park is full of such apparently curious anomalies. On Soda Butte Creek, for example, I saw large trout lying in a pool below a falls scarcely 10ft. high, while a magnificent stretch of natural trout waters lay utterly fishless above.

These are curious facts which must present themselves to every inquiring person who is so fortunate as to be able to visit those attractive regions. A careful study of the topography of the continental water-shed in the National Park and its geological history as worked out by the U. S. Geological Survey, to which I am indebted for these geological details, will furnish us, I think, with at least a partial solution of these problems.

The family *Salmonidæ* is one which we now know dates back as far as the Tertiary period. Analogy would indicate that they developed in the fresh waters of the Northern Hemisphere in obedience to the law of equal conditions; and some of them gradually acquired the habit of going to sea, and this, as in the case of the salmon, became permanent. In obedience to the law of evolution which requires each individual to pass through in his short cycle, the same changes that his various forms of ancestors have in the slow progress of ages, the young must be born and live for a time at least in fresh water, and hence we find our salmon coming into the rivers to deposit their spawn.

It is probable that at the opening of the glacial epoch the fresh waters of North America swarmed with various salmonoid fishes. If they existed in the streams flowing from the continental crest within the Park, they must have been destroyed by the time the point of highest severity of that epoch was reached. For this whole region was covered with enormous glaciers, whose slowly retreating ice may still be seen in spots, and the power of whose presence is plainly shown by the great morainal hills they left and the great valleys they plowed out. All streams were obliterated in the mass of ice, and their former beds were ground and gouged by the irresistible force of the vast and moving mass. At the close of this epoch all streams that had been subjected to their influence were fishless. On the Yellowstone these glaciers reached below the falls. How can we then explain the presence of fish in the Yellowstone Lake to-day. While in many ways it is possible to imagine the populating of a river with fish from above, downward over falls of almost any height, scarcely any conceivable and reasonable hypothesis can be advanced which would get them up over falls more than 300ft. high.

The presence then of this Pacific form of trout in the Yellowstone system must be explained otherwise, and the key to the problem lies in Two-Ocean Pass on the continental watershed. At this place lies a swamp flooded in the spring, and at one end its waters flow by Pacific Creek into the Snake River, and so westward into the Pacific, and at the other end eastward by Atlantic Creek into the Yellowstone.

During the glacial epoch the ice melted off to the westward above the great falls in the Snake. At its close when the lakes and streams were released from their icy fetters, the fish in the Snake above its falls ascended the river to its head. They also ascended its tributaries until stopped by falls, and so to-day we find them, in no lake or stream which has falls in it which they could not surmount, but up to its very foot. Crossing at some period of high water, they went through Two-Ocean Pass and descended into the Yellowstone Lake, and so on down the river, and in like manner ascended all of the tributaries of this system, unless stopped at some point as before. In those streams which have no falls, as for example the Stinking Water, I found them up to the very head.

This hypothesis explains the presence of this fish in Atlantic waters only not, but also I think all the facts brought forward as to their presence or absence in given waters of the Yellowstone system.

The problem of having the fish in the Snake River, originally above its falls, is the same one that confronts us in hundreds of instances all over the continent.

In this particular case it might be answered by saying, that either they developed above them or ascended from below, before the falls were cut. The general condition is one that must be left to the paleo-ichthyologists to solve.

There are some other points about the Yellowstone trout that may be of interest to readers of FOREST AND STREAM. In size they have been much over-estimated. While below the falls they attain good size, even running up to 8lbs. or so in rare cases, and are well-fed, well flavored and gamy, in the river above, in the lake and in tributary streams they very rarely attain a weight of over 2lbs. Of hundreds caught by our camp not one would reach that weight. I weighed a great number, the largest scaling 1lb. 12oz., and this was taken in the river. They almost uniformly average about 1lb. in the lake. They are not, generally speaking, so well fed as the trout of other regions. One of our ordinary Eastern trout the same length as a 1lb. Yellowstone trout would certainly average ¼ more in weight. The reason of this uniformity of size and lack of plumpness can be readily seen when we know that their only food (for all trout in the system above the Yellowstone falls) consists of insects and small crustaceans. The insect food, though abundant at times, lasts only a part of the year. A diet like this is most excellent for young trout, and these, of which one often sees considerable schools in the lake, are well fed and apparently in good condition. But it is not suited for carrying mature trout beyond a certain size, and in the lack of small fish of all kinds for food we can hardly be surprised at their present condition. It is earnestly to be hoped that the efforts of the Fish Commission in planting the whitefish above the falls will be successful, as they form a constant diet for the large trout below.

It used to be a mistaken impression which still prevails to some extent, that there were two species of trout in these waters. This came evidently from not distinguishing between the sexes, the female being generally paler and more silvery in lustre, while the male tends more to an orange coloration beneath, and has besides most gorgeous hues of scarlet near the gills, the colors growing more vivid toward the breeding season.

On an average I should say about one trout in four is infested with the parasite peculiar to these waters. I did not attempt to establish any ratio by count, but according to my recollection this holds good for the lake; in Pelican Creek the percentage must be larger, as nearly half of those I caught were so infested, and I recall one of our packers bringing in twenty, of which nine had to be thrown away. At Sylvan Lake, which empties into the Yellowstone Lake by Clear Creek, not one diseased trout was taken out of several hundred taken for food during our week's stay. E. Hofer informed me that to his knowledge no diseased trout has ever been taken below the falls on the Yellowstone, and to a limited extent this is confirmed by my own experience. Nor did I ever take such an one among great numbers caught in the tributaries to the river below the falls. For the benefit of anglers who may fish in these waters in the future I may say that trout infested with these parasites are almost universally marked by an excrescence or swelling of the skin, generally below the median line. On cutting into this a white worm about the size of a knitting needle will be found snugly coiled up, just beneath the skin, the head projecting through a hole in the abdominal wall into the body cavity.

Besides this form of parasite two others were noticed often infesting otherwise healthy fish. One was a white mass clinging to the body externally and just under the pectoral fins. Its point of juncture was accompanied by

a sore red spot. Whether this form had any relation to the former can at present be only conjectured.

The other form was a leech-like parasite, apparently chitinous in outward covering, about the length and diameter of a small pin, holding fast to the fish at any convenient point by a sucker-like disk.

These parasites seem to infest only mature fish, as no individual which retained in the slightest degree the parr marks, was ever taken with them upon it or in any way differing from a well-fed, healthy trout. It is to be earnestly hoped that so interesting a phase of trout life in these regions may be carefully worked out in the future under the auspices of the U. S. Fish Commission.

Perhaps in closing a few words for the benefit of anglers who may chance to fish these waters in the future may not be out of place.

The size and weight of tackle suitable for these lakes and streams has been overestimated, as has the size of the fish. An 8oz. fly-rod is heavy enough, with reel and line to match. The device first recommended I believe by Mr. Henry P. Wells, of a handle detachable from the butt of the rod, is particularly well suited for Rocky Mountain travel. The handle can then be stowed in any convenient place, and the butt and joints can be carried in a stout brass tube, where they will be protected from harm. I made one by obtaining a strong brass tube of suitable length, then soldered a cap over one end and closed the other by a screw-cap. The diameter of the tube was about 1¼in., inside measurement. In this, the rod can be packed upon a mule, rolled up in the bedding, or it can be tied by strings to the saddle and carried under the leg like a rifle.

In this manner I carried a rod all summer through hundreds of miles of mountain travel, caught great quantities of fish with it and brought it back in as good condition as that in which it started. For flies, those tied upon hooks of a size from 5-7 Sproat are sufficiently large for the rivers and lakes, while 8-10 is right for the small streams. For kinds, the brown-hackle is above all others best on these waters. The Alexander and black-prince are excellent in the swift streams. I tied the following combination a good deal and found it very useful on the lake: Wings and hackle lead-colored, body red, tail white and rather large and full. We caught great numbers with this, and in default of a name called it the Yellowstone. Any modest-colored flies will prove serviceable, however. PERCYVAL.

NOTES FROM WORCESTER.

WORCESTER, Mass., Dec. 13.—*Editor Forest and Stream:* The year 1889 has been an exceptional one for sportsmen, in Worcester county at least. Not for years has the trout fishing been as good as it was last spring. No especially large catches were made near here, but every one had better average success than has been known for a number of years. The season was a wet one, and particularly favorable for a good run of trout; and a better observance of the close season is undoubtedly having a good effect on the fishing. Some of the old trout streams which dried up entierly during the drought in '82–'83 are slowly beginning to restock themselves, and where trout have been unknown since that time, last season a few were taken. The question of restocking these streams is receiving considerable attention, and at the annual meeting of the Sportsmen's Club the matter will be agitated, and if the idea meets with favor, a committee, which will give its attention to the fish problem especially, will be proposed.

That such a committee, if composed of the right men, could do a vast amount of good there is no doubt, and that in taking hold of this work the sportsmen's club would greatly increase its membership and popularity is also true. But the work must be done intelligently and unselfishly to bring about the best results. The pernicious practice of leasing brooks cannot be too severely condemned, and although this practice has so far been confined to a very few, it has resulted in the posting of a number of brooks in this vicinity.

The idea of those interested in the proposed work of improvement is broader, and will undoubtedly meet with the hearty co operation of sportsmen and farmers alike. The proposition to be made to the landowners is not that they will be expected to watch the brooks and drive anyone, friends and neighbors included, off their land, but in return for the benefit which they and their friends would derive from having their now worthless brooks stocked with trout the only favor asked is that they will not post their lands, leaving them open to everyone.

The feasibility of stocking Lake Quinsigamond with trout and landlocked salmon is also talked of quite generally, especially by fishermen who make frequent trips to the Maine lakes, and the general opinion is that our lake has natural advantages equal if not superior to any of the Maine lakes. Deep, cold, with numerous spring holes, it offers a retreat for trout or landlockers where the pickerel could do them no harm, and the numerous brooks emptying into it would afford excellent spawning grounds. At present it is worthless as far as fishing goes, a few pickerel and pouts constituting its fish supply.

A little money judiciously expended yearly for a few years would give us as good fishing at our very doors as we now have to go hundreds of miles for. The cost of a two-weeks' trip to Maine or New Brunswick for a single persons would, if spent in stocking Lake Quinsigamond with yearling landlockers yearly for ten years, save Worcester anglers hundreds of dollars every season.

The past season has also been a remarkable one for birds. Good bags have been made from Sept. 1 up to the very last day of November, and while fox hunting since Dec. 1 I have put up enough partridges to insure a good number of breeders for next season.

Closing the bird season Dec. 1 has proved a wise move, as with an open month, such as we are having now, the hunters could kill more birds during December than in any other month. Woodcock have also been very plenty. Though some of the old covers held but few birds they were found on new grounds, and those familiar with the covers made good bags, both of native and flight birds.

Quail are more plenty than usual, but our winters are so severe that we can probably never expect very good quail shooting in this section.

If the shooting continues to hold its own we cannot complain of Worcester as a hunting ground, but we need a good many birds, as there are more shooters here than in any city in the East of its size. New ones are coming out every year, and there is not a better class of men in the city than the shooters. Doctors, lawyers, ministers, Congressmen, the most prosperous of our business men in every line, are numbered among the fortunate possessors of a love for the sports of woods and stream. HAL.

CHICAGO AND THE WEST.

CHICAGO, Dec. 24.—Mr. E. C. Burton, lately mentioned to me one of his possessions, for which he says he would not take a farm. He calls it a minnow trap. It is made entirely of glass, stout but transparent. The principle is that of the funnel trap or fyke net, there being a conical lead of glass running from the mouth into the middle of the big jar which the trap in the main resembles. The apex of this cone is cut off, leaving an opening through which the minnows may freely pass. In the body of the jar some cornmeal or similar food is placed, and the trap is baited and ready for work. It is placed on its side in clear water known to be inhabited by minnows. A school of minnows noticing the feed will work around the sides of the trap until they find the opening, and if two or three go in the rest crowd in after them, and are unable to find the way out. Charlie says he caught 300 in a half an hour one day in a Minnesota lake. This sounds a good deal like a fish story, but he says it true. The trap is said to have been the invention of a Tennessee man, and to have been in use in the South for a number of years. Not many have been seen in the North. I never saw one, but should think it would be interesting to watch the minnows till one up.

The mildness of the winter up to this date has doubtless saved many thousands of good game fish from being taken by legal or illegal ice-fishing on our Western lakes. Last winter was also a mild one, and the result of the two years should be favorable, if the ice will only keep off for a couple of months longer this season.

Speaking of ice-fishing reminds me of an account a friend gave me of the bullhead fishing on Lake Koshkonong in the winter time. "I went out on the ice to one of the holes," he said, "where they were catching and skinning the bullheads. The fish were all skinned alive, a pair of sharp steel pincers being used to jerk off the skin. As soon as a fish was skinned, it was thrown on the pile, without being killed, cleaned or having the head taken off. That great pile of live skinned bullheads was the most horrible sight I ever saw. It writhed and moved all through itself, from top to bottom, and the whole sight was such that it made me sick. I protested to the brutal fellows who were doing this work, and insisted they should kill the fish, but they said they 'didn't have time for that.' I think this is one of the most brutal things I ever saw or heard of. Doubtless it is the same up there now, and if so something ought to be done to stop it."

I have myself seen the bullhead skinning at the great fish port of Sandusky. The hands there use pincers similar to those mentioned above, but the fish is first beheaded. I wish Mr. G. E. Gordon, of Lake Koshkonong, would inquire about the case above mentioned. It is not probable that he would long endure its continuance if he knew of it.

A curious but very practical and very deadly device used by these same Koshkonong pot-fishermen has come under my notice. This is called the "Koshkonong reel," and is used by all those fellows who have discarded the old tip-ups. It consists merely of a crotch, the legs of which are about five or six inches long. To the top of this crotch—which is simply cut out of a stout forked twig, perhaps as thick as a lead pencil—the line is tied fast and attached to a stick, which goes across the hole in the ice. This part of the line is long enough so that the crotch or "reel" is suspended entirely below the surface of the water. The long part of the line is wrapped around the crotch, the spring of the wood holding it on tightly. One leg of the crotch is split slightly at the end, and into this split the line is passed, so that it is held tightly there after enough has been wound about the crotch. Below this split end the short line and the baited hook depend. When a fish bites he jerks the line free from the split that holds it, and goes off with the bait, the "reel" slowly unwinding the line as it whirls around in the water. When the line is all off the "reel" the fish is at the end of his rope, and by that time is gradually hooked fast. The actual object of the reel is to keep the line coiled without freezing. It does not freeze when kept quiet under the water. If coiled up on the ice it would freeze stiff, and so not run out well. The ways of the marketman are simple, but fatally direct to their purpose.

The market-fisher is a naïve sort of creature, truly childlike and bland. One of them sat in Blackhawk club house one night as we were talking about the progress in matters of fish protection on the lake. Some one spoke of the law prohibiting netting and spearing, and remarked that it would protect such fishes as the redhorse, which does not take bait.

"How vill ve ketch redhorse, den?" asked the market-fisher, whose mind was first of all filled up with the necessity of catching any and all fish. We tried to explain to him that it didn't make any great hole in the national safety even if he didn't ketch 'em. That is not an uncommon question among these gentry. "If you won't let us float for canvasbacks and won't let us shoot outside of natural cover, how will we kill canvasbacks?" They are firm believers in their divine right to kill. That anybody else has any right to the game is a fact they can't get through their heads. Any effort to hedge in their ancient right of butchery they meet with the old cry about the down-trodden farmer who wants a mess of fish for his suffering family.

They tell some rather grotesque stories on this head up in this country about which I have lately been writing so much. There was an old German who lived on the edge of a stream that ran into the lake, and who was repeatedly caught in the act of netting fish in the stream. He was remonstrated with, and even fined, but on trial set up the novel plea of self-defense. "Shudge," said he, "dose bickerels dey svim up and bite off de leaves off my dobacco blants vhat I haf down near de vater. Oont dey lays eggs all ofer de grass. So ven de cattles comes down to eat dey goes 'Bah! bah!' Great grashus! I must prodect my cattles fon dose dings, on spide of all you tam Rebublican dieves!" And yet, "on spite" of his argument, this gentleman later on got six months in jail. His ingenuity deserved better of justice.

Mr. G. W. Esterly, of Whitewater, Wis., comes forward with two bass stories. One day Mr. Esterly was fishing and hooked a bass which, on attempting to swing it into the boat, he knocked against the gunwale of the boat and disengaged from the hook. The bass started for tall corn, but Mr. Esterly made a grab for it, caught it by the back and landed it in the boat. At another time a bass carried away all of Mr. Esterly's line, and was playing horse with a lot of other bass, when Mr. Esterly fished the end of the line up out of the depths and landed his fish. These stories are vouched for by eye witnesses.

I am reminded by a friend that it is wise for an unsuccessful hunter returning from the chase and wishing to buy a few ducks to take home to his wife, never to buy an even number of birds, like six, or twelve, or a dozen and a half. That looks too much like "Three dollars a dozen, sir," or some other price established on the dozen basis. The truly wise hunter will buy some odd number, like seven, or eleven, or seventeen birds. Observation of this apparently simple little matter would have kept peace in many a family before now.

Dec. 27.—I see "Kingfisher" and Mr. Clapham are having a war about how to stiffen a rod ferrule. Now, I was the innocent cause of that war, for it was I who told of the time when I tried to mend a broken rod and found the ferrule soft after burning out the wood. "Kingfisher's" first kindly advice about cooling the ferrule in the air was given to me. I have never had time to try any experiments on the matter as Mr. Clapham has; but I know one thing, if either "Kingfisher" or Mr. Clapham had been right where I was, and had seen those big bass jumping near him all the time he was tinkering with his rod, he would have done just what I did, and have jabbed that ferrule into the lake as far as he could reach, in the effort to cool it quickly as possible. 'Twasn't a question of stiffness, it was a question of time. If I can ever get "Kingfisher" into just such a scrape as that I will bet him all he wants that he can't sit still and wave his hot ferrule in the air until it cools, any more than he can write without emitting wisdom. I think he would call it "onpossible." Will some other worthy brother tell us what to do in a case like that—something that can be done "to onct." E. HOUGH.

BLACK BASS IN ENGLAND.—London, Dec. 19.—*Editor Forest and Stream:* I had the pleasure of being present last evening at a meeting of the Piscatorial Society of London. By request of the chairman and others I gave them many particulars concerning our famous game fish, the black bass. A strong and growing feeling exists in Great Britain respecting their introduction into waters for which they may be well suited. The collection of game fish of Great Britain owned by the Piscatorial Society is the finest in the world. I wish especially to express my appreciation of the special courtesy extended to me by Mr. E. Sachs of the Piscatorial Society, one of the editors of *Land and Water*.—GEO. SHEPARD PAGE.

CALIFORNIA.—Sea fishing is excellent this year, along the rocks of the north side of San Francisco and San Pablo bays. Rock cod, perch, sea trout and smelt reward the hook and line fisherman within five miles of the city. The run of salmon to their spawning grounds will begin soon. The State Fish Commissioners have ordered their deputies to arrest all fisherman taking "trout or salmon trout, or the young of salmon at this season," and several arrests have been made.—CHARLES H. SHINN.

Fishculture.

FISHCULTURE AND PROTECTION IN INDIANA.

Editor Forest and Stream:

Indiana is waking up to the necessity of paying some attention to her fish. A state fish and game protective society has been formed at the State capital, with Fish Commissioner Dennis at its head, and Col. Lilly, Judge Davidson, Mr. Butler and Mr. J. P. Applegate as an executive committee, with a vice-president in each of the thirteen congressional districts of the State. The Commissioner, aided by persons interested in the preservation of our game fish, has secured the building of fishways over dams in rivers emptying into Lake Michigan in the northern part of the State, and will have ways put in around dams on streams emptying into the Ohio at once, to be followed by securing ways around or over all the dams in the State. The laws of the State are being enforced, numerous indictments have been found and there have been a number of convictions of violators.

I promised to inform you how the scheme of making road supervisors act as fish and game constables worked. It does as well as could be expected of an entirely new law, and in time will prove the means of preserving our fish and game from anihilation.

The work of stocking the streams is being intelligently and vigorously pushed. The Southern Indiana Fish and Game Protective Association is doing a grand work. There is also capital work being done in Shelby and Montgomery counties, and at other points. A stock company at Turkey Lake is very efficient in protecting the fish. We confidently expect in a few years to see our loved Indiana famous for the game fish in her streams, and for the sportsmanlike manner they are taken on the fly, and the hospitality with which her anglers will greet the rod and reel men of sister States. JAP.

WORK OF THE U. S. FISH COMMISSION.

ONE of the cars of the Commission has started out from Wytheville, Va., with about 60,000 yearling rainbow trout for distribution in public waters of Pennsylvania, Maryland, Virginia, West Virginia, North Carolina and Tennessee.

Another car is taking carp into the South, and at the same time some adult red-eye perch, European tench, carp and golden ide to the new Government station at Neosho, Missouri. This station will soon be furnished with 100,000 trout of several species for stocking the mountain streams of the Ozark region. The rainbow trout has taken a strong hold in those waters.

Cod are appearing all along the coast in waters stocked by the efforts of the Commission. Mr. Chas. H. Stevenson, writing from Stonington, Conn., reports that many small codfish, recognized by fishermen as the product of the hatcheries, are now being taken.

SAWDUST AND FISH.—Amherst, N. S., Dec. 21.—*Editor Forest and Stream:* If your "anti-sawdust correspondent had the manliness to put his name to what he writes, I might ask a little space to expose his fallacies and falsehoods; as it is, I have no time to waste over such game.—W. H. ROGERS.

FIXTURES.

DOG SHOWS.

Jan. 6 to 11, 1890.—Annual Dog Show of the Michigan State Poultry and Pet Stock Association, at Bay City, Mich. W. F. Brace, Secretary.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, American Institute Building, New York. James Mortimer Superintendent.

Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 15 to 18, 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Jan. 27, 1890.—All-Day Field Trials, at West Point, Miss. F. R. Hitchcock, 44 Broadway, New York, Secretary.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

Feb. —, 1890.—Meet of the Brunswick Fur Club, New Meadows, Me.

SOUTHERN TRIALS.

[*By a Special Reporter.*]

THE Southern Field Trials Club's second annual meet at Amory, Miss., commenced Dec. 16 with the Derby and ended with the Pointer Stake Saturday, Dec. 20. The judging was done by Col. James Gordon, Col. W. C. Sherrod and T. M. Brumby, and in the main we never saw judging done any better or more satisfactory. Only twice did we find any serious reason to differ from them. Their treatment of handlers was gentlemanly and polite, and in return the handlers, with one exception, obeyed cheerfully every order and request of judges. We never saw more quiet orderly handling; there was no blowing of whistles, nor loud boisterous commands to dogs, but every handler seemed to have his dog under good control: if he was not he would not let the fact be known by storming at him. The dogs were given thirty minutes in each heat; then if there was not enough work to decide they were run fifteen minutes longer, or in fifteen-minute heats until a decision could be made. The quality of the dogs as a whole was much higher than the average, and considering the weather, which was hot and dry all the week, the performance of most of the dogs was wonderful. There were plenty of birds and the grounds were good for testing a dog's range, speed and finding qualities. The land owners were kind and pleasant, and you found none of them snarling around, which is so common at other trials grounds, about sportsmen going on their places. The people of Amory were very kind and reasonable in their charges; they have not yet learned to look upon sportsmen as legitimate prey, nor to think each one has a bank account that they can draw on at will, as is common at so many other places where trials are held. The horses and vehicles were good and charges reasonable.

THE DERBY.

There were fourteen of the fifty-one nominations of the Southern Field Trials Club that filled. They were drawn to run in the following order:

TEMPEST (Graphic Kennels), liver and white pointer dog, April (Beppo III.—Lass of Bow),

against

CLOCHETTE (P. Lorillard, Jr.), black, white and tan English setter bitch, February (Roderigo—Lavalette).

GATH'S HOPE II. (Dudly & Fisher), lemon and white setter dog (Gath's Hope—Daisy F.),

against

TRANSIT (Thos. Blythe), liver and white pointer dog, April (Beppo III.—Lass of Bow).

BESSIE M. (G. Metzger), liver, white and tan English setter bitch, March (Count Noble—Fate Gladstone),

against

FRED GATES (Hamilton & Jackson), black and white English setter dog (Bob Gates—Lilly B.).

DAD WILSON'S BOY (J. Shelley Hudson), black, white and tan English setter dog, July (Dad Wilson—Dolly S.),

against

SIMONIDES (Rose & Madison), black, white and tan English setter dog, March (Gath's Hope—Gladys).

QUADROON (P. Lorillard, Jr.), liver, white and tan English setter bitch, February (Roderigo—Lavalette),

against

TRIBULATION (West Tennessee Kennels), liver and white pointer dog, April (Beppo III.—Lass of Bow).

DAD WILSON, JR. (J. Shelley Hudson), black, white and tan English setter dog, April (Dad Wilson—Lit),

against

HOPE'S RAY (D. E. Rose), black, white and tan English setter dog, January (Gath's Hope—Lady May).

NANON (West Tennessee Kennels), black, white and tan English setter bitch, January (Ben Hill—Mary),

against

FANNIE M. (Dr. J. N. Maclin), black white and tan English setter bitch, March (Gladstone's Boy—Flame).

First Series.

TEMPEST AND CLOCHETTE.

Graphic Kennels' white and liver pointer dog Tempest (Beppo III.—Lass of Bow), handled by Short, and P. Lorillard's black, white and tan setter bitch Clochette (Roderigo—Lavalette), handled by D. E. Rose, were cast off at 8:30, in open country, running around a pond. Tempest pointed standing in path. Clochette passed in beyond, caught scent, and pointed same bevy; both dogs steady to shot. Sent on Clochette pointed single in grass. Sent on Tempest pointed single; then Clochette pointed single in high grass; then Tempest pointed and Clochette backed. After drawing much country blank, ordered up at 9:25. In pace and range they were equal; in style on point Clochette was best.

GATH'S HOPE AND TRANSIT.

D. E. Rose's white and lemon setter dog Gath's Hope, handled by owner, and Thos. H. Blythe's liver, white and tan pointer dog Transit (Beppo III.—Lass of Bow), handled by Short, were cast off at 9:30, in open cornfield. Gath pointed bevy; as Rose called "point" birds flushed wild. Sent on Gath made game, but nothing was found. Then Gath flushed an outlying bird and bevy went. Sent on, Gath pointed a bevy in high grass. A point on singles for both dogs was not allowed, as time was called, 30m. Dogs were again sent on. Transit pointed bevy, Gath backed. both dogs pointed in sedge, nothing found. Sent on, Transit pointed single; sent on, Transit drew in on bevy and flushed. Up at the end of an hour, Gath won. In pace and range Gath was much the best.

BESSIE M. AND FRED GATES.

G. Metzger's liver, white and tan setter bitch Bessie M. Count Noble—Fate Gladston), and Hamilton & Jackson's black, white and tan setter dog Fred Gates (Bob Gates—Lillie B.), were cast off at 11:30. Fred, in thick grass, ran into bevy and pointed just as they rose. They were followed into pines. Fred pointed single, Bessie backed. Sent on Bessie picked up two single points in good style. Fred backed. Fred ran into another bevy in high grass and stopped about time birds rose. Sent on, Bessie scored two false points. Sent on, Fred pointed bevy in sedge. They followed, Bessie picked up two single points in good style, and won. This was a close heat, and if Fred had been steady to shot he would have won. In speed and range both were good. Down one hour. Tucker handled Bessie.

SIMONIDES AND DAD WILSON'S BOY

were cast off at 11:50. Soon after starting Dad flushed a bevy in sedge. Sent on in swamp. Simonides pointed on foot scent and bird flushed wild. Then each dog flushed a single in high dry grass. Taken up at 12:20 for lunch. At 1:45 they were cast off. Dad made game. Simonides went in and pointed bevy. Sent on in high grass, each got point on singles about the same time. Sent on, Simonides made two more points on singles and Dad one. At 2:00 dogs were ordered up and Simonides won. In speed and range they were equal; on birds Simonides was best. Both dogs were steady to wing and shot.

QUADROON AND TRIBULATION

were cast off at 2:05. Tribulation soon pointed a bevy; Quadroon backed; birds went to thicket, where Quadroon got two nice singles, and Tribulation one. Worked out in open, Tribulation making a cast ran into a bevy which flushed. Sent on in thick grass Quadroon pointed in high grass. Bird must have run from the point as nothing was found. Time up; down 30min. In speed and range both were good, with the odds in favor of Tribulation.

HOPE'S RAY AND DAD WILSON, JR.

were cast off at 2:40. Soon after starting, Ray made a point on foot scent. Sent on he ran about 30yds. and pointed bevy in good style. Birds were put up. Birds settled in high grass, when Ray got two points on singles, and Dad, Jr. one. Then dogs were sent in woods and a great deal of work was done on singles, Ray getting in several very stylish points and a false point. Dad, Jr. got one point and a false point. Taken out in open a great deal of country was drawn blank. Working down a fence row in a peapatch both dogs stopped to a point, Dad in front or nearest the birds. Birds were put up; both dogs steady to shot. Following birds to thicket no work was done, up at 4:15. After a long consultation, the judges gave the heat to Dad, Jr. This we thought an error for this reason. While both dogs had good speed and range, with the odds in favor of Dad in speed and style in motion, Hope's Ray found the first bevy and outworked him by far on birds, Ray stamping up to his game and pointing in good style, while Dan would point and wag, just as if he was looking for his handler.

NANON AND BESSIE M.

were cast off at 4:20. Nanon soon ran a rabbit through a bevy and flushed it. Fannie came on and pointed one of the birds that did not go with bevy. Sent into woods, Fannie picked up a couple of single points. She next pointed a bevy. Nanon backed. Sent on Fannie pointed single and Nanon pointed single. Fannie next pointed a bevy. Down 30min. Fannie M. outclassed as a bird dog and was better in in every respect. This ended the first series.

Second Series.

TEMPEST AND GATH'S HOPE II.

were put down Tuesday morning in open sedge. Hope over a hill pointed a bevy, Rose moved him up and birds flushed wild into thicket, where it was impossible to work. Sent on, Tempest flushed a bevy, which went to woods. Working on scattered birds in woods, Tempest made one point and a flush and was unsteady to wing. Ordered up at 8:15. Down 30m. Tempest won. In speed and range Hope was much the best; in style they were about equal. This brace might have been given a little more time on birds.

A change was here made in the order of running that Fannie M. might be run a side heat, as she had the bye in this series, and the next brace were put down.

TRIBULATION AND DAD WILSON, JR.,

were put down at 8:40 in nice open to show dogs' speed and range. Tribulation flushed a bevy, which went in pine woods. Both dogs pointed, drew in and bird flushed wild. Dad pointed, handler went in and bird went out of tree near by. On, Dad false pointed. Working out in open Dad pointed rabbit. Tribulation next pointed bevy on edge of briers. In cotton patch Stephenson shot, both dogs steady. Sent on Dad pointed a single, which flushed wild. Tribulation got a flush. Dogs ordered up at 9:15 and Dad Wilson, Jr., won. In speed and range they were equal, neither were very decided on birds. This was a very close heat and Dad Wilson, Jr., had little to spare.

SIMONIDES AND BESSIE M.

were cast off at 9:30. Soon after starting, going down wind at a fast gait, Simonides flushed four birds. Working in sedge Bessie pointed a single and Simonides backed. On, Simondies ranging off to the right, pointed a bevy in good style and Bessie backed, the birds were put up and dogs were steady to shot. In thicket, Simonides got three points and Bessie two. Working out in open, dogs were found on point by fence, Simonides nearer the birds. A fine bevy were put up to this point; both dogs behaved well to wing. On, Bessie pointed a single; about the same time Simonides pointed a single. Up at 10:00. Down 30m. This was a nice heat and a great deal of work done on game. Both dogs had good speed and style. Simonides won by his positive work on game.

Third Series.

FANNIE M. AND TEMPEST.

At 10:06 this brace were cast off. In pine woods Fannie pointed a bevy in good style. Sent on, Fannie drew to a point but abandoned it and went on and pointed a bevy. Tempest brought up to back, pointed an out-lying bird; both dogs behaved well to shot. Sent on, Fannie dropped to point as the bird flushed. Then Tempest false-pointed. Then Fannie scored another point on a single, then pointed a rabbit. Up at 10:36. In speed and range Fannie was much the best, out-classing Tempest in every way. She won.

SIMONIDES AND DAD WILSON, JR.

This brace were cast off at 10:45. Working in pines Simonides pointed bevy. Dad backed promptly. Rose shot and both dogs were steady to gun. Sent on both dogs scored a flush in high grass. After a long run in corn Dad flushed an outlying bird of a bevy, and as the handler went up the remainder went. Working around edge of thicket Simonides got three single points, and time, 30m., called. Simonides won. This was a good brace, both dogs having good speed and range with the odds in favor of Dad W., Jr., but his competitor outworked him on game.

Here a change was made in the order of running to decide which was the best pointer in the Derby. Mr. Anthony having offered a prize of $100 for the best pointer run in this stake, Transit and Tribulation were selected by the judges to compete for this prize. They were cast off at 11:36. In a cotton patch Tribulation pointed a bevy, left point and Transit went up and pointed. Short put up the birds, both dogs steady to wing. On, in thicket Transit got two points on singles. Working back in corn Tribulation pointed a bevy in good style. Sent on Transit soon pointed a single. Time called 12:06, and we went to lunch. In range and speed Tribulation was much the best and outclassed Transit. On singles Transit outworked him.

Fourth Series.

FANNIE M. AND SIMONIDES.

After lunch at 1:02 Fannie M. and Simonides were cast off to run for first money. As they went off Simonides went to the left and Fannie ran through an old fence row into grass not more than thirty yards from where they were put down and pointed bevy. Tucker put up the birds. Sent on Fannie poined a single and the point was honored by Simonides. On, Simonides nailed a single going at a rapid gait cross wind. About the same time Fannie caught scent coming up wind and pointed the same bird, both dogs dropped to wing; working by side of fence flushed a single. Sent on in thicket Fannie pointed a single in good style. Working down edge of thicket Fannie pointed a bevy and Simonides backed. Dogs were then worked in thicket where each dog scored a point on singles. Time was called. Down 30 minutes. Fannie was declared the winner of the beat and first money.

After consultation Tempest was called up as the best dog beaten by Fannie to ran against Simonides for second money, but as Simonides had ran three heats that day, and Tempest had only run two, the judges decided to postpone this race until the next morning, Wednesday opened up cloudy and a little more pleasant than the two previous days of the trials.

SIMONIDES AND TEMPEST

were put down to run for second money at 8:34. Soon after starting both dogs made game in bottom. Crossing over branch Simonides pointed a bevy in briers on branch. Rose put them up and Simonides dropped to shot. Birds were followed over hill but not found. Working back in same field—in thick grass—Simonides ran into and flushed a bevy, which was an excusable flush, as he was going down wind. Working dogs over branch Simonides pointed a single. Time was called 9:04, and Simonides declared the winner, with much to spare, as he outclassed Tempest in every way. The judges then divided third between Dad Wilson, Jr., and Tempest. Following is the summary:

First Series.

Tempest beat Clochette.
Gath's Hope beat Transit.
Bessie M. beat Fred Gates.
Simonides beat Dad Wilson's Boy.
Tribulation beat Quadroon.
Dad Wilson, Jr., beat Hope's Ray.
Fannie M. beat Nanon.

Second Series.

Tempest beat Gath's Hope.
Simonides beat Bessie M.
Dad Wilson, Jr., beat Tribulation.
Fannie M. a bye.

Third Series.

Fannie M. beat Tempest.
Simonides beat Dad Wilson, Jr.

Final for First Place.

Fannie M. beat Simonides and won first prize.

Final for Second Place.

Simonides beat Tempest and won second prize.

Third Place.

Dad Wilson, Jr., and Tempest placed equal third.

ALL-AGED SETTER STAKE.

On Wednesday, immediately after deciding first money in the Derby, this stake was started.

First Series.

As the first brace was not present, by consent of handlers the second brace was put down.

DUKE AND ROWEY B.

L. B. McFarland's black, white and tan setter dog Duke, handled by B. M. Stephenson, and H. S. Bevan's black, white and tan setter dog Rowey B. (Roderigo—Juno A.), handled by owner, were put down in a large stubble field at 11:55; both dogs went off at a good gait and ranged well. Working through this field Rowey pointed, Duke brought up to back did so well, handler failed to flush and dogs were sent on. Duke soon repeated this performance, and no bird was found to his point. Working over road into another large field, one of the judges flushed a bevy that both dogs went very near. Working dogs in the direction the birds went, Stephenson called point in briers but no bird was found. About this time Rowey false pointed in edge of briers. Crossing field and working in woods Duke made a good point on a bevy, Stephenson shot and both dogs were steady. Sent on in woods Duke false pointed. Working out in woods Duke made game, being cautioned by his handler, he pointed, which proved a false point; had the dog been let alone we don't think he would have got a false point, but as it was handler failed to flush. Sent on both dogs made game but failed to find. Time was called, and the judges sent the dogs on. Over a fence both dogs pointed a bevy with Duke nearest the birds. Stephenson shot and missed. On, in thicket Rowey pointed a single. Working out in cane Duke false pointed. Time called at 2:55. Duke won, but he had very little to spare, as it was a very poor heat.

LUFRA'S MARK AND FLORENCE GLADSTONE.

W. W. Titus's black, white and tan setter Lufra's Mark (Gath's Mark—Lufra) handled by owner, and W. Bedford's black, white and tan setter bitch Florence Gladstone (Gladstone—Florence) were cast off at 3:11. Working in open country to try their range and speed a bevy was flushed by spectators which Florence should have found, she having passed very near them. On in the sedge and briers Mark flushed a single, he then pointed another and retrieved well, but was a little unsteady to Titus's kill. Soon after this Mark was lost and while Titus was looking for him he walked into and flushed a bevy which went to woods. Going into woods Mark scored two good points on singles, and Florence pointed a single. As her handler went up she jumped in and flushed, which was a bad piece of work. She soon pointed another single which Short shot on the ground and the bitch made a fair retrieve. Time 3:55. In speed and range both were good, but their work on birds was indifferent.

BEN HUR AND DAD WILSON, JR.

F. F. Miles's black, white and tan setter dog Ben Hur (Paul Gladstone—Lady Rake) and J. Shelly Hudson's black, white and tan setter dog Dad Wilson, Jr. were put down at 4:25 and worked toward town. After running 10m. they were ordered up and all went in.

Wednesday morning this brace was put down at 8:04. Working around a swamp Dad pointed a bevy in high grass and was steady to gun and retrieved well. On in woods Dad flushed a single; on, Dad made point on single and bird flushed wild. Working out in corn Ben pointed and roaded on and failed to locate, as his handler worked him off the birds which were flushed by the crowd. Time 8:34. Dad won easily, outclassing and outworking Ben. Short handled Dad and McCargo Ben.

DIMPLE AND CINCINNATUS.

Fred F. Miles's black, white and tan bitch Dimple (Gordon—Blanch), handled by McCargo and J. E. Dager's black, white and tan setter dog Cincinnatus (Count Noble—Dido II.), handled by Chas. Tucker. This brace were put down in open country near where the last brace were taken up. They were both merry, good workers, but seemed to have very little bird sense. Working around a thicket Cincinnatus pointed a bevy, and to Tucker's kill he made a very nice retrieve. Sent on in pines he made game, pointed, but went on. Soon after Dimple pointed a single in good style. No more work was done on birds. Time was called at 9:48. Cincinnatus won on his range and speed.

DAN GLADSTONE AND MARK OF BRUNSWICK.

J. W. Renfroe's black, white and tan setter dog Dan Gladstone (Gladstone—Sue), handled by D. E. Rose, and W. J. Cannon's black, white and tan setter dog Mark of Brunswick (Oberon—Light of Hatchie), handled by Poindexter, were cast off at 9:55 in open; both went off at a clipping gait, ranging and hunting well. Going into cornfield Dan wheeled into point on a bevy. Mark coming up, backed well. Rose flushed; both dogs steady to shot. On in thicket Dan soon pointed a single, then over a fence Mark pointed a single. Working back in corn Dan located another bevy at upper end of field in sedge. To Rose's kill Dan made a good retrieve. Sent on, Dan pointed a single. Working through thicket Mark, out in weeds, got a good point on a bevy. Dan coming in down wind from a cast, flushed one of the birds and the bevy went. Poindexter shot and missed; both dogs behaved well to gun. Sent on in pines Mark flushed a single and was not very steady to wing. Time 30m. Dan won. In speed and range both were good. In style in motion they were equal. Style on point Dan was best.

TOLEDO BLADE AND STARTLE.

J. E. Dager's black, white and tan setter dog Toledo Blade (Roderigo—Lillian), handled by Chas. Tucker, and L. B. McFarland's black, white and tan setter dog Startle, Jr. (Startle—Light of Hatchie), handled by Stephenson, were put down where the last brace were taken up. Running around the edge of some pines, Blade pointed a bevy and retrieved well. Sent into pines on scattered birds Blade made a point evidently on foot scent, as there was no cover for birds to hide in. Sent on Startle false pointed, then Blade pointed a single. Time was called 11:07 and Blade won easy. Startle was no match for him on any part of the ground.

CHICKASAW AND TENNESSEE CHARLEY.

J. Shelly Hudson's black, white and tan setter dog Chickasaw (Gladstone—Sue), handled by Short, and West Tennessee Kennels' Tennessee Charley (Fred W.—Ida), handled by B. M. Stephenson, were the next brace. They were put down at 11:15. Working into edge of pines Chickasaw pointed, which proved to be false. Sent on over a good scope of country blank, Chickasaw pointed a bevy and Charley backed, both dogs steady to shot. In pines Chick pointed, moved on and flushed; then Charley false pointed. Chick then pointed a single. Sent on Chick pointed a single and retrieved. Then Charley secured a good point on a single, and made a good retrieve to Stephenson's kill. Both dogs pointed singles just as time was called. In speed Charley was best, range was equal, style on point Chick was the best. Chick won. Down 30 minutes.

CORSAIR AND DAISY'S HOPE.

West Tennessee Kennels' black, white and tan Corsair (Dan Gladstone—Haidee) handled by Stephenson and A. M. Young's orange and white setter bitch Daisy's Hope (Gath's Hope—Daisy F.) handled by Titus. After lunch at 1:05 this brace was put down they; went at a race horse gait and Hope stopped to point at the edge of thicket a quarter of a mile away. Corsair backed well, Titus flushed a big bevy and both dogs behaved well to wing. Then Hope got two points on singles and made a good retrieve. Working out in open Hope was lost and found on point, to which Titus flushed a fine bevy. Going into woods Corsair got two points and a flush and Hope one point. Moving back in field Hope soon pointed, bird was flushed, time called. Hope won with a good deal to spare. This finished the first series.

Second Series.

DUKE AND DAD WILSON, JR.

were put down at 1:48 in open sedge field. Soon after starting Duke made game. Dad was allowed to go in and trying to get the point flushed the bevy. Working into thicket on scattered birds Duke flushed a single and was steady to wing. Working back in the field, Duke pointed a single. On, Dad showing signs of game his handler cautioned him and called point, but failed to flush, making the dog score a false point, which he would not have done if let alone. Time was called and the judges sent the dogs on in high grass. Dad made a point on a bevy and made a fair retrieve. Working in woods on scattered birds Duke pointed a single. Time up and judges again sent dogs on. In woods Dad, going cross wind, flushed a single, then soon made false point which his handler was partly responsible for. Hunting out a piece of woods Dad made game and as he was drawing in the birds flushed wild. He then got two good points on singles, to Duke a false point and was declared winner of the heat. Down in all 1 hour. There was no very high class work done. Both had good range and speed with fair style. Duke showed he had been used too often as a shooting dog.

CINCINNATUS AND LUFRA'S MARK.

This brace was put down in a good field to test their range and speed; both went well, with speed rather in favor of Cincinnatus, but in this, as in nearly every heat he ran, he seemed to be just showing his speed, with no desire or inclination to find birds. After a long run they were taken up for water, as they both were showing signs of fatigue, the day being extremely warm for the time of year. Sent on Cincinnatus made game but abandoned it, and spectators coming up flushed birds. In sedge Cin. flushed a single, then false pointed. Then Mark pointed a single. Then Cincinnatus got a good point on a single; to order he retrieved well. Time was called 30m., and the judges sent them on. After this each dog scored several flushes on birds that they had good opportunities to point, which made the heat a very poor and uninteresting one. Ordered up at 4:20, down in all 1h. and 20m. Both dogs backed and behaved well to shot. Cincinnatus won.

DAN GLADSTONE AND TOLEDO BLADE.

At 4:24 this brace was cast off. Both dogs went at a clipping gait, working their ground well, showing they were hunting for game. Working over the railroad Dan made game and commenced drawing on an outlying bird of a bevy. Blade coming in from a cast ran between the bevy and Dan and pointed. Tucker shot and Dan's bird went when the bevy flushed. Sent on, Blade going at a rapid gait ran over and flushed a single. Dan working out to the right pointed a single. Then Blade in briers pointed several birds. Dan coming around caught scent and pointed the same birds. Tucker shot and both dogs were steady. Blade soon got another point on a single. Dogs then worked out in open to find another bevy. Before any more work was done time was called, and it being about dark everybody started for town.

Thursday morning was a little cloudy, but by 10 o'clock the clouds were gone and it was warm and sultry. We got an early start, and at 7:50 Dan Gladstone and Toledo Blade were put down to finish the undecided heat of the evening before. Both dogs went off with great speed, ranging fast and wide. In stubble Dan commenced drawing on a covey. Blade, coming in from a cast, ran into them and flushed. This was an excusable flush, as it was cross wind. Working dogs in pines after scattered birds Blade jumped into a point on a single, Dan backed, Tucker killed and Blade made a good retrieve. Right here Dan displayed his cool level head and resisted a temptation that very few bird dogs can resist. This bird dropped within 5ft. of his nose and lay fluttering in the leaves, but the dog never moved a step or changed his position in the least. Sent on Dan stopped to a point and the bird flushed wild. Soon after this, working up through pines, Dan was lost, and before he was found time was called, 8:05, and dogs ordered up. Rose soon found Dan on a point at the edge of thicket and put up the bird. Judges consulted some time and gave the heat to Tolado Blade. This was the best and most interesting heat that had been run in this stake, both dogs being fast, stylish and perfectly broken, and doing work that was of the highest order of merit.

CHICKASAW AND DAISY'S HOPE

were put down at 8:20 in open near where the last brace were taken up. After a long hunt with no good results, Hope pointed a bevy in edge of thicket. Birds were flushed and both dogs behaved well to wing. The thicket was too dense and birds were not followed. Working around the thicket Hope was lost, and after some time Titus found her on point in thicket and high grass; birds were flushed to the point. Working back out in open Chickasaw pointed in thin sedge. Nothing was found to the point. Time was called and dogs sent on. This we thought an error, for under the same opportunities the dog had done nothing but make one false point, and the bitch had found a bevy and made a point on scattered birds, and to run either of them longer, as hot as the day was, would seriously impair their chances in their future running. After a long run Hope was much the best. In style on point Chick. was decidedly the best.

Third Series.

DAD WILSON, JR., AND CINCINNATUS.

At 10:00 this brace was put down near where the last brace was taken up. This was a brace that abounded in much running around on the part of Cincinnatus and very little work. He was headstrong and refused to obey the whistle. They did but little work on game. Soon after starting Dad made game but failed to locate and after going on the bird was put up by spectators. Both dogs made several false points and Dad made some flushes, finally he made a good point on a single and to Short's kill made a decidedly good retrieve. They were given one hour's work and Dad won with plenty to spare.

TOLEDO BLADE AND DAISY'S HOPE.

This brace was put down in thicket where some scattered birds had been seen. Soon after starting Blade pointed a single and made a good cheerful retrieve. Working up by fence at the edge of briers he pointed and was well backed by Hope. Tucker could find nothing to the point, but as scattered birds went that way it is probable they had run off. Dogs taken up for water. After a few minutes the dogs were sent on and Hope working to the right soon pointed a bevy. To Titus's kill she made an ordinary retrieve. Sent on in cotton patch on scattered birds both dogs got several points. Blade doing some very brilliant work of the highest order of merit and won the heat. Up at 11:58. Hope was at least seven pounds too fat and it was so hot she showed signs of great fatigue before the race was over.

Fourth Series.

TOLEDO BLADE AND DAD WILSON, JR.

After lunch the judges decided to move about a mile and try some new territory, but it proved the wrong move, and they soon discovered their mistake and came back on the same farm they had been running on during the morning. On returning soon after the dogs were turned down, Blade pointed a bevy and Dan backed well. Working the dogs in pines and high grass, Blade got four good points to Dad's one, and time was called and he was declared winner of the heat, which decision carried with it first money and all the honors of winning the All-Aged Setter Stake.

Fifth Series.

Dan Gladstone being selected by the judges as the best dog beaten by winner of first, he was brought up to run with Dad Wilson, Jr. for second money. Dad's handler claimed his dog had ran three heats that day, and it would be unjust to make him run before the next morning, and the race was postponed until Friday morning, and the first brace in the pointer stake was called.

Friday morning the clouds were flying and it rained a little, but not enough to stop our work. By 10 o'clock it was clear and hot.

DAN GLADSTONE AND DAD WILSON, JR.

At 9:55 this brace was cast off to compete for second place. Both dogs went out fast and stayed out working their ground well. In sedge by fence Dan was lost and found by one of the judges on point. When handler tried to flush the birds nothing was found. From the movements of the dogs it was evident the birds had run from Dan's point while he was lost. Ordered on both dogs commenced circling for them and went over fence in pines and sedge. After a little circle in pines, the dogs working up fence, Dad in front and Dan following, Dan wheeled to a point down wind. Rose put up the birds, shot, and both dogs were steady to wing and gun. This was a good piece of work, the birds were only about 40yds. from where Dan first pointed them. Sent on in thicket Dan got two points on singles and a flush. Dad made a false point. Dogs were again worked back in open, from there into pines and sedge, dogs coming in and meeting made a mutual back. There was no more work on game. Pace and range were about equal, in style on point Dan was much the best. Dad has shown himself a good puppy, running through the Derby and All-Aged Stake, always showing good range and speed. In the last heat he stood no chance with Dan, as his experience and bird sense was too much for a puppy to contend against. Dan won the heat and second place. The judges then divided third between Dad Wilson, Jr., and Daisy's Hope. This ended the All-Aged Stake. Following is the summary:

First Series.

Dad Wilson, Jr., beat Ben Hur.
Duke beat Rowey B.
Cincinnatus beat Dimple.
Lufra's Mark beat Florence Gladstone.
Dan Gladstone beat Mark of Brunswick.
Toledo Blade beat Startle.
Chickasaw beat Tennessee Charley.
Daisy's Hope beat Corsair.

Second Series.

Dad Wilson, Jr., beat Duke.
Cincinnatus beat Lufra's Mark.
Toledo Blade beat Dan Gladstone.
Daisy's Hope beat Chickesaw.

Third Series.

Dad Wilson, Jr., beat Cincinnatus.
Toledo Blade beat Daisy's Hope.

Final for First Place.

Toledo Blade beat Dad Wilson, Jr., and won first prize.

Final for Second Place.

Dan Gladstone beat Dad Wilson, Jr., and won second prize.
Dad Wilson, Jr., and Daisy's Hope were placed equal third.

ALL-AGED POINTER STAKE.

The All-Aged Pointer Stake began on Thursday immediately after deciding first money in the All-Aged Setter Stake. There were seven starters, but before the running commenced the handler of Beppo III. asked permission to withdraw him, the dog being out of condition. The order of running was as follows:

Bounce against Bloomo II.
Tribulation against Galena.
Lady Zeal against Count Fauster.

First Series.

BOUNCE AND BLOOMO II.

G. W. Amory's liver and white pointer dog Bounce (Bob—Sal) and Graphic Kennels' liver and white pointer bitch Bloomo II. (Lad of Bow—Bloomo). At 3:31 this brace were cast off in open field. Working in pines Bounce pointed bevy in good style. Bloomo backed. The handler did not go out far enough to flush and the dogs were ordered on. Both dogs ran into the bevy and flushed, both dogs steady to order. Sent on in pines Bounce in crossing branch flushed a single; he then pointed a single which handler failed to find, and it was flushed by one of the judges. About this time Bloomo off to the left pointed and roaded a bird some 40yds. To Stevenson's kill Bloomo made a good retrieve. Seven more birds were flushed by the judges and reporters, and the dogs were ordered back in open. In sedge and pines Bloomo made game, but her handler got in too close and the birds flushed. Time was called and the dogs sent on. Bloomo soon pointed a single which was put up. Working out in corn Bounce pointed a bevy; before his handler got up he moved in and flushed. Both dogs were unsteady to wing. Before any of the singles could be found time was called and Bloomo won. In speed, range and style Bounce was much the best, and if he had been properly handled should have won, but under the work done the judges did right to give the bitch the heat. They were down in all 45 minutes.

TRIBULATION AND GALENA.

B. M. Stephenson's liver aad white pointer dog by Beppo III. out of Lass of Bow, and J. E. Gill's liver and white pointer bitch Galena, by Trinket's Bang out of Cremorne, both dogs handled by Stephenson, were cast off and worked toward town; both showed good range and speed. There was no work done on game and at 5:00 they were ordered up. Friday morning was cloudy and every sign of rain, but the clouds soon drifted away and it was clear and hot. Tribulation and Galena were put down at 8:05 to finish the heat commenced the evening before; both went off well. At edge of a thicket by a fence Tribulation pointed and Galena backed. A fine bevy was put up to the point, which went to thicket in a bottom, where Galena made two flushes in quick succession. There was too much water to work and the dogs were again ordered out in the open. Running into pines Galena flushed a bevy and Tribulation flushed a single. Time was called, dogs ordered up. Down in all, 1h. There was no good work done by this brace. Neither showed any bird sense, and seemed better satisfied running about than pointing a bird. Tribulation won.

LADY ZEAL AND COUNT FAUSTER.

John E. Gill's liver and white pointer bitch Lady Zeal (Croxteth—Amine), handled by B. M. Stephenson, and Dr. J. G. F. Holston's liver, white and tan dog Count Fauster (Mainspring—Dolly Fauster), handled by Chas. Tucker, were next cast off at 8:38. In open country, working around edge of cornfield Zeal made a stylish point on a bevy and was well backed by Count. Stephenson put them up and shot and both dogs were steady. Working on scattered birds Count soon pointed a single. Over fence in woods Count again pointed and made a good retrieve to Tucker's kill. When Count was sent to retrieve Zeal broke in and went off hunting. Handler finally got her back and claimed he sent her on. The judges didn't see it that way and cut her for unsteadiness. Working back in field Count made game in briers, Zeal coming up both dogs drew and Count pointed. Nothing was found to the point. Sent on, Count going very fast dropped to a point in corn. Zeal backed to order, nothing was found to the point. Time 9:08, Count won. There was some dissatisfaction at the decision in this heat, but we followed it very closely, saw all the work and saw no reason for it, as Count was better in range, better on game and stayed out at his work all the time, while the bitch was cutting in and out and seemed to be looking for orders.

Here Dan Gladstone and Dad Wilson, Jr., were put down to decide second place in All-Aged Stake.

Second Series.

COUNT FAUSTER AND BLOOMO II.

were cast off in open cover and sedge. After working some distance Count pointed a bevy in a cotton patch. Bloomo went up to back. To Tucker's kill Count made a good, cheerful retrieve. Sent on at sedge of thicket Bloomo made a point on a single, and to Stephenson's kill she made a nice retrieve. Time was called and judges sent them on. Bloomo soon made a stylish point on a bevy in thin grass, and was steady to wing. Crossing railroad Count pointed at edge of corn and sedge. The birds had moved out of corn down wind from the dog. Sent on Bloomo came on them first and stopped just in time to save a flush. In woods Count made two good points on singles. Time was called at 11:28. Count won. This was the best working brace that had been down; both dogs showed well on game, and backed and retrieved well. We then went to lunch.

Third Series.

TRIBULATION AND COUNT FAUSTER.

At 1:00 this brace was put down to decide first money. Both dogs went off well. After a long run both dogs made game and finally Tribulation located a bevy in briers. The birds were put up and went to thick heavy briers. The dogs were worked to find them with no success. By this time both dogs were showing very hot and tired. The sun was shining bright and the heat up in the eighties. No more work was done on game before time was called and the heat went to Tribulation. As Count had run three heats Mr. Tucker asked to wait over and run the heat for second place Saturday morning, which was a great deal to ask as the judges had made all their arrangements to get away that night, but to give the dog a fair chance they consented to stay. And the party went to town.

Saturday morning the weather indicated rain. An early start was made, and at 8:50 Count Fauster and Galena were put down to decide second place. After a run in open Count flushed a bevy, then made several false points. Galena made two points and a flush. They were ordered up at 9:30. Galena won. The judges then placed Count Fauster third.

Tribulation, the winner, proved to be a surprise. No one who saw him run in the Derby thought he stood any chance. While he had fine range, speed and good style in motion, he never showed well at any time on birds. He seemed to want experience; his owner explained this by saying that he had not been worked on birds more than two weeks. He is a trim-made dog, below the medium size, and built to be a good stayer. We congratulate Mr. Stephenson, his owner, on bringing a puppy in the stake that could run to the front. The summary is as under:

First Series.

Bloomo II. beat Bounce.
Tribulation beat Galena.
Count Fauster beat Lady Zeal.

Second Series.

Count Fauster beat Bloomo II.
Tribulation a bye.

Final for First Place.

Tribulation beat Count Fauster and won first prize.

Final for Second Place.

Galena beat Count Fauster and won second prize.
Count Fauster placed third.
First, Tribulation, $250; second, Galena, $150; third, Count Fauster, $100.

CENTRAL FIELD TRIALS.

FREE-FOR-ALL STAKE.

THERE were 14 entries for the Free-For-All Stake 6 of which filled. The stake was open to all setters and pointers for a purse of $1,000, with no second money, $50 forfeit and $50 to start, each heat to continue four hours. The same judges who had officiated in the other stakes also acted in this. The starters were drawn to run in the following order:

Nora against Rowdy Rod.
Roger Williams against Chance.
Lebanon against Roger.

The first brace, Nora and Rowdy Rod, were put down at 8:22 on Monday morning, Dec. 16. There was considerable white frost and it was quite foggy, making it impossible to see the dogs for any great distance, and the birds could not be marked as they were out of sight almost as soon as they were in the air; in addition to this everything was very wet, and within a few minutes after starting dogs and handlers were completely soaked. Both started off at a racing gait, Rowdy in his best form and Nora going very much better than she did at High Point; not quite so fast and snappy as she did there, but her range was much better and she staid out at her work and beat out her ground in capital style, showing by her excellent behavior throughout the race that Bradley had during the intervening time worked her to some purpose, and the condition in which she started and the manner in which she did her work reflects great credit upon her handler. During the first hour Rowdy had considerable advantage in pace and range; in the character of the work on game there was little difference between them, both pointed, backed and retrieved in capital style and both were steady to shot and wing. During a large part of the second hour Rowdy, evidently enamored with the beautiful Nora, followed her closely and did not show much disposition to hunt, while she kept steadily at work and more than recovered the advantage that he had over her. The last half of the heat Rowdy again let out and worked independently in capital style, having best of it in pace and range. Nora maintained a very uniform pace throughout the heat, and at the finish both were going at a good rate of speed and showing no distress nor indication of letting down. At the expiration of the allotted four hours the heat was decided in favor of Nora. Both ran a capital race and the heat was a very close one. Had Rowdy not fooled away the time the second hour in following Nora, the decision would probably have been reversed.

The next brace, Roger Williams and Chance, were put down at 1:24. Chance started in something like his best form, and for two and one-half hours he cut out the work in capital style and completely smothered Roger, but at the end of this period he let down completely, and although he kept going his pace was very slow, and he had evidently had enough of it. The tremendous exertion necessary to carry him at the rate of speed he had maintained was too much for him. Had he been prepared as he should have been for a long race, we have no donbt that he would have held out to the end, but his handler trusted that his well-known "grit" would carry him through all right, and but little preparatory work was given him, other than his regular work for ordinary heats. Roger did not go at anything approaching the rate of his competitor, and consequently he lasted the longest, but he also quit near the finish and both appeared to be about equally tired. We had thought that the object of the four-hour heat was to test the endurance of the dogs, and supposed that their behavior in this respect would have great weight in the final summing up, and we fully expected to see the flag go up for Roger, as he had lasted the longer, but the heat was awarded to Chance, and we were informed by the judges that the stake was to be judged the same as the other stakes, and that the performance of the dogs through the heats would be considered when making their decision. Under this ruling there could be no question that Chance was entitled to the heat.

On Tuesday it was cloudy and damp, with a slight breeze from the south; scent was good, the birds were moving and were found in abundance. Lebanon and Roger were put down at 8:28, and when time was up the heat was decided in favor of Roger, and so apparent was his victory, that Luke did not kick against the decision. Roger started at a good rate of speed, which he maintained until near the finish, when he let down somewhat, but kept on hunting and at the end was going fairly well. In pace, range and style in going, Roger was many points ahead, and he outfound and outworked his competitor as well. Aldrich was still unable to walk and John Lewis handled Roger in a very creditable manner. This ended the first series with the result as follows:

Nora beat Rowdy Rod.
Chance beat Roger Williams.
Roger beat Lebanon.

Second Series.

Nora and Chance were put down at 1:09 to run the first heat in the second series. Nora ran even better than in her heat with Rowdy, and during the first half of the heat she had the best of it at nearly all points, but Chance had gained wisdom from his previous heat and started at a pace that he could hold, and through the last half he let out a link and regained what he had lost and something more, and when time was called he was the winner of a very close heat, that was pronounced by every one who saw it to be one of the best contested heats ever run at a field trial. Both dogs ran well from start to finish and did their work in capital style. Birds were found in abundance, and each did some capital work both on bevies and singles. The bold, positive work of Chance on his birds probably carried him through. Nora at times being a bit uncertain or indifferent on her singles.

Roger having a bye in this series ran a side heat on Wednesday under judges Wallace and Tallman.

On Thursday Chance and Roger, the only dogs left in, were put down at 8:47 to decide which should have the honor of capturing the rich prize of $1,000 that awaited the winner. Roger came out in good form and ran the heat of his life; Lewis handling him in an excellent manner. He started off well and maintained a good pace for a few minutes over three and one-half hours. He was then given some whisky, but it had the opposite effect from that intended, and for the last twenty-seven minutes of the heat he was going at a very slow trot and not hunting at all. Previous to this he clearly had the advantage in pace, range and style of going, and a trifle the best of it in the work on birds. Chance started at a moderate pace, for him, but he gradually increased his speed and ran a good heat, but was not up to his usual form either in speed, range or in his work on birds; he kept going, however, and after Roger quit he gamely continued to the end at a good gait and worked out his ground in good style. When time was called the judges consulted for 28 minutes, and announced Roger the winner, and the meeting was ended. Following is the summary:

First Series.

Nora beat Rowdy Rod.
Chance beat Roger Williams.
Roger beat Lebanon.

Second Series.

Chance beat Nora.
Roger a bye.

Final.

Roger beat Chance and won.

The club is to be congratulated upon the success of its inaugural trials, the weather was all that could be desired, entries for the different stakes were numerous, many good dogs were present, and the work as a whole was of a high character. The grounds are excellent, except that there are too many briers, and birds are fairly plentiful. As is nearly always the case in new undertakings of this kind, mistakes were made; but we feel confident that they will not occur again, and we have no doubt that the next meeting of the club, which we are requested to state will be held at Lexington, Dec. 1, 1890, will be as well patronized and as successful as the one just held. The working of the rules was watched with interest by all. Some of them were untried, and, as is generally the case in such matters, it was found that improvements could be made. As we have before stated, we are in favor of the spotting system, and would like to see it adopted as a whole instead of in part, as was the case here, but in either case the rules should be changed. The rule requiring that each heat should be continued at least an hour is cumbersome in the extreme, and much valuable time was wasted in the preliminary heats in running to kill time long after the judges had determined whether or not the dogs possessed sufficient merit to warrant a further trial. The rule requiring that the dogs shall be drawn for the second series should be changed and the judges should have the power to mate the dogs as they think best. Perhaps the most senseless rule in the code is the one that prohibits any one from giving information as to the whereabouts of a dog that is out of sight of the judges and handlers. It was often the case during the trials when a dog was so lost that much time and much racing to and fro by the judges could have been saved by simply allowing the spectators to have given the necessary information, as is done at other trials. The judges performed their duties in a painstaking manner worthy of all praise, and while not agreeing with them in some of their awards, we know that their decisions were honestly given and that their integrity is unimpeachable. We are under great obligations to the officers of the club for the many courtesies shown, and to the judges for their uniform kindness in imparting desired information. We are also greatly indebted to Mr. H. B. Duryea, who kindly devoted an occasional day to taking notes in order that we might enjoy needed rest. We had a very pleasant time during our stay at Lexington, and shall look forward with pleasure to the meeting next year, when we hope to meet old friends and new, and with them again enjoy the beautiful days of the sunny South while beating out the brown stubble fields or rambling under the whispering pines.

THE EASTERN COURSING CLUB'S MEETING.

IN replying to Mr. Morris's exceptions to my report in your paper, I will only ask your indulgence for a moment in order to convince your readers as to his utter incapacity as claimed in my report, using his own words as verifications.

In his letter to you he says he declined after consultation with Mr. Watson to give "a special report and count of points to every one, but still continued to show my notes (Mr. Morris doesn't say score) to the gentlemen of the press." After the Zoe—Forest Queen "undecided," one of the field stewards asked for the score. He refused, yet he says he gave his notes to the press. Why should Mr. Morris refuse to give a score to one of the field officers of the club for which he was judging if he had one? The solid fact is Mr. Morris didn't have any score, and so could not give what he didn't have. Instead of sitting quietly on his horse as Dr. Cryer did and scoring promptly as points were being made, he was all over the place on his Rosinante after the jacks as vigorously as the dogs were, and as is graphically illustrated in one of this week's sporting papers.

Mr. Morris's whole letter is so cutely worded as to mislead the casual reader, and I must dissect some parts of it. He says, "The judge's inquiries for the names of the dogs slipped at the conclusion, etc." I claimed and still do claim that Mr. M. did go to the slipper while the dogs were in slips, not at "the conclusion," as he puts it.

As to whether he ever "pushed himself forward like other ill-bred presumptuous fellows" is a question for the public to decide. The fact still remains that he acted as judge when he must have known he was wholly incapable. This may perhaps not be termed "pushing himself forward like other ill-bred, presumptuous fellows," but it has this complexion. We are greatly surprised to hear that Mr. Black, whom Mr. Morris stated ought to make an efficient "slipper" should repudiate the expressions he used when he threw down the slips. The reports of the FOREST AND STREAM and other journals being alike in all essentials, a mere denial is not sufficient evidence to prove they are wrong, and Mr. Morris right. A judge who rides up to the stewards and asks if his decision is satisfactory, who in his reports talks if "cutting corners," calls a dog "a courser," and finally, who says, "and rather than go with the outspoken feeling and decide in favor of Zoe" (there was no expression of feeling till after the "decision" was rendered and marveled at), finally crowns all by publicly stating that he was the only one who could see the brilliant finale of the Glenboig—Andy McGregor tie, and reports that Glenboig "went over or through the fence," should present his case in a more convincing light if he wishes the intelligent public to accept both his statements and judging. If the judge was really present, how is it he doesn't know whether Glenboig went under or through the fence? I will not trespass further on your valuable space, but give the case to the jury. CARNARIS.

GORDON SETTER CLUB.

BALTIMORE, Md., Dec. 20.—*Editor Forest and Stream:* As some of the members of the American Gordon Setter Club have requested a report from the treasurer, Mr. F. T. Washington, I herewith inclose a copy of same which he sent me. It is a full statement up to Nov. 2, 1889.—H. MALCOLM, Pres. A. G. S. C.

F. T. WASHINGTON IN ACCOUNT WITH THE AMERICAN GORDON SETTER CLUB.

Dr.		*Cr.*	
To cash rec'd from members in payment of dues	$95 00	By cash paid the American Kennel Club, dues for 1888-1889	$20 00

NEW YORK DOG SHOW.

THE premium list of the fourteenth annual dog show of the Westminster Kennel Club is now ready for distribution. The show will be held Feb. 11 to 14 at the American Institute Fair Building, on Third avenue and 63d street. Following is a list of the judges: Mastiffs, Mr. Charles C. Marshall; St. Bernards and pugs, Miss A. H. Whitney; Great Danes, Newfoundlands, old English sheep dogs, all terriers except smooth fox and bull-terriers, toy spaniels, Italian greyhounds and Mexican hairless, Mr. R. F. Mayhew; blood hounds, deerhounds, greyhounds, fox-hounds, English and Irish setters, Mr. John Davidson; pointers, Mr. John S. Wise; Gordon setters, Dr. H. C. Glover; Irish water spaniels, Clumber, field and cocker spaniels, Mr. A. C. Wilmerding; Chesapeake Bay dogs and poodles, Mr. John G. Heckscher; collies, Mr. J. Shotwell; smooth fox-terriers, Mr. Fred. Hoey; bulldogs, bull-terriers basset hounds and dachshunde, Mr. E. S. Porter; beagles, Mr. H. F. Schellhass; miscellaneous, Messrs. Davidson and Mayhew. There are 171 classes provided for, with premiums amounting to over $3,600. The classification and principal prizes are much the same as they were last year, as are also the cash and cup specials. The principal changes are, all third and fourth prizes are cash instead of medal, the St. Bernard novice class is divided by sex, Newfoundlands have but one class, deerhounds and greyhounds have no puppy classes, English and American foxhounds compete together, there is no class for retrievers, Clumber spaniel open class is divided by sex, field spaniels (liver) have but one class; other than black or liver the same; the collie novice class is divided by sex, the limit of weight in bull-terriers is 30lbs. instead of 25, dachshunde have a challenge and puppy class, the fox-terrier novice class is divided by sex, Irish terriers have a challenge class, the Dandie Dinmonts have two classes, there are two classes each for prick-eared and drop-eared Skyes, black and tan terriers have a challenge and two open classes, there is a challenge class for toy spaniels and also a puppy class. The prizes in some of the principal challenge classes are $20 and $10, with $20, $10, $5 and $3 in open, and $10, $5 and $3 in puppy classes. In a few of the other challenge classes the prizes are $10 and $5, with $15, $10 and $5 in the open, and in the remaining challenge classes the prizes are $10 and $5, with $10, $5 and $3 in the open. In addition to the special prizes offered by the club the specialty clubs and individuals offer cash and valuable cups, and it is expected that a large addition to the published list will be made before the closing of the entries. The address of the Superintendent is Mr. James Mortimer, 44 Broadway, New York.

THE BETTYE S.—SALLY BRASS II. RACE.

THE match between Mr. H. B. Duryea's English setter bitch Bettye S. (Roderigo—Bo Peep) and Mr. Charles Heath's pointer bitch Sally Brass II. (Graphic—Meally) was run at Lexington, North Carolina, on Friday, Dec. 21. The match was for $250 each, one-half forfeit. Mr. Heath selected Mr. T. F. Taylor, of Richmond, Va., as judge, and Mr. Duryea selected Mr. F. R. Hitchcock. Mr. Taylor was not present, and Mr. John Davidson acted in his place. Mr. S. C. Bradley was the third judge. The race began at 1:38 on the grounds of the Central Field Trial Club, and at the end of the stipulated three hours the judges unanimously decided that Bettye S. was the winner. She had the advantage in speed, range and style when on game, and showed the better bird sense. Both pointed, backed and retrieved, and both were obedient to whistle. Sally showed up to much better advantage than during the trials, but she would not face the briers and did not stay out to her work so well as Bettye. Sally was handled by W. T. Mitchell and Bettye by J. M. Avent. The match was run in a sportsmanlike manner and the occasion was thoroughly enjoyed by all.

MASTIFF CLUB SPECIALS AT NEW YORK.

Editor Forest and Stream:

The American Mastiff Club offers the following prizes in mastiff classes at Westminster Kennel Club's show, to be held Feb. 11–14, 1890, New York city:

The Westminster Challenge Cup (value $300) for the best dog or bitch, under three years of age, owned by a member of the American Mastiff Club.

Taunton Gold Challenge Medal (value $50, breeder's prize) for the best American-bred mastiff, under two years of age.

The Club's Challenge Cup (value $150) for the best American-bred mastiff dog or bitch.

The Club's Silver Challenge Cup (value $100) for the best mastiff dog, the property of a member of the American Mastiff Club.

The Club's Silver Challenge Cup (value $100) for the best mastiff bitch, the property of a member of the American Mastiff Club.

A prize of $15 for the best mastiff bitch.

R. H. DERBY, Secretary,
9 WEST THIRTY-FIFTH street, New York.

REPORTER DOGS.—*Editor Forest and Stream:* I see in FOREST AND STREAM, for Dec. 19, a very interesting paper from "Marstrand," who asks, "Do we have reporting dogs in America?" I can answer him yes, although I think they are very scarce. I have seen but two, both setters. The first was a dog owned by Sage, of Great Barrington, Mass. He came to the edge of the brush and made a half-point, then went in out of sight. Sage seemed to understand him and followed, and after going perhaps 150yds. he came to a solid point on a woodcock, which he evidently had found and came back to report, as the wind was from dog to bird. Whether he was in the habit of doing so I cannot say, but from what I saw I thought it probable that he was. The other instance was of a dog owned by me a long time, Old Tommo. He has come back to me hundreds of times to report, and led me many a jolly tramp through briers and brush, to find at last a woodcock, the only bird I ever saw him report, in a springhole in the midst of a dense thicket. There must be others; let us hear from them.—NOTLIKS.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Zara. By Eberhart Pug Kennels, Cincinnati, O., for fawn and white Italian greyhound bitch, whelped Nov. 22, 1889, by Duke (Volna—Blanche) out of Flossy (Rex—Pearl II.).

Tim. By P. Despaignet, Brooklyn, N. Y., for white, black, tan and ticked English setter dog, whelped Oct. 18, 1889, by Bravo (Dash Dale—Dot B.) out of Clara (Roy Bell—Lucy).

Clyde. By Bradford S. Turpin, West Yarmouth, Mass., for white, black and tan beagle dog, whelped April 30, 1889, by Frank Forrest (Riot—Skip), out of Susie (Little Comeroe—Sue).

Spencer's Guy. By T. F. Spencer, Sandusky, O., for liver and white pointer dog, whelped Dec. 2, 1888, by Faust, Jr. (Faust—Gertrude), out of Marguerite (Spencer's Dan—Devonshire Flo).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dixie—Bradford Ruby II. S. C. Brink's (Chattanooga, Tenn.) pug bitch Dixie to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Dec. 21 and 22.

Grit—Portswood Tiger. John H. Matthews's (New York city) bull bitch Grit (Morgan's Crib—Kittie) to his Portswood Tiger (Paul Clifford—Hussey), Dec. 24 and 26.

Merry Duchess—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—Juno) to his Bradford Harry (Crawshaw's Bruce—Beal's Lady), Nov. 26.

Bijou—Penny. W. H. Murphy's (Ogdensburg, N. Y.) fox-terrier bitch Bijou (Sport—Shy) to Gilbert Averell's Penny, Aug. 10.

King's Girl—Tamarack. Spencer & Butler's (Sandusky, O.) pointer bitch King's Girl (King's Boy—Dudie L.) to Frank Billing's Tamarack (Tam o' Shanter—Croxteth's Rival Queen), Dec. 14.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Toody. Dr. Geo. W. Dixon's (Worcester, Mass.) Yorkshire terrier bitch Toody, Dec. 26, two (one dog), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

Bijou. W. H. Murphy's (Ogdensburg, N. Y.) fox-terrier bitch Bijou (Sport—Shy), Oct. 10, three bitches, by Gilbert Averell's Penny.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ben. White, black and white head fox-terrier dog, whelped May 8, 1888, by Bachanal out of Surry Clove, by Berkshire Kennels, Hinsdale, Mass., to Geo. M. Holbrook, Springfield, Mass.

Berkshire Caution—Nina whelps. Fawn mastiff bitches, whelped Aug. 20, 1888, by Berkshire Caution out of Nina, by Berkshire Kennels, Hinsdale, Mass., one to L. F. Harnuier, Harrisburg, Pa., and one to John G. Burns, Buffalo, N. Y.

Berkshire Caution—Berkshire Zulu whelps. Fawn mastiff pups, one dog and two bitches, whelped Jan. 25, 1888, by Berkshire Caution out of Berkshire Zulu, by Berkshire Kennels, Hinsdale, Mass., one dog to Daniel Upton, Adams, Mass., and two bitches to John G. Burns, Buffalo, N. Y.

Guy. Fawn mastiff dog, whelped Jan. 25, 1888, by Berkshire Caution out of Berkshire Zulu, by Berkshire Kennels, Hinsdale, Mass., to Albert E. Guy, Wolfsboro, N. H.

Pilot. Fawn mastiff dog, whelped Jan. 21, 1889, by Berkshire Caution out of Berkshire Zulu, by Berkshire Kennels, Hinsdale, Mass., to O. E. Maxwell, same place.

Don. Fawn mastiff dog, whelped Nov. 17, 1887, by Berkshire Caution out of Floss, by Berkshire Kennels, Hinsdale, Mass., to E. C. Watkins, Brooklyn, N. Y.

Samter. Fawn mastiff dog, whelped Sept. 9, 1889, by Berkshire Caution out of Berkshire Zulu, by Berkshire Kennels, Hinsdale, Mass., to L. W. Biscaisa, Charleston, N. C.

Berkshire Caution—Lady Belle whelps. Fawn mastiff pups, four dogs and one bitch, whelped March 26, 1889, by Berkshire Caution out of Lady Belle, by Berkshire Kennels, Hinsdale, Mass., one dog to John H. Boies, Hudson, Mich.; one dog to R. T. C. Crouch, Elkton, Md.; one dog to L. D. Stebbins, Milwaukee, Wis., and one dog and bitch to John G. Burns, Buffalo, N. Y.

Berkshire Caution—Lady Belle whelp. Fawn mastiff dog, whelped Oct. 5, 1888, by Berkshire Caution out of Lady Belle, by Berkshire Kennels, Hinsdale, Mass., to Hasson & Son, Indianapolis, Ind.

Berkshire Caution—Berkshire Zetta whelps. Fawn mastiff pups, four dogs, whelped Sept. 6, 1889, by Berkshire Caution out of Berkshire Zetta, by Berkshire Kennels, Hinsdale, Mass., one to F. B. Zimmer, Gloversville, N. Y.; one to Rev. Chas. H. Baldwin, Amsterdam, N. Y., one to Chas. H. Ensign, North Adams, Mass., and one to Wm. Appleyard, Sebee, Me.

Philip. Orange and white St. Bernard dog, whelped March 4, 1889, by Merchant Prince out of Snowdrift, by Berkshire Kennels, Hinsdale, Mass., to R. F. Winslow, Readville, Mass.

Berkshire Prince—Jewell whelp. Orange, white markings, St. Bernard dog, whelped November, 1888, by Berkshire Prince out of Jewell, by Berkshire Kennels, Hinsdale, Mass., to R. T. C. Crouch, Elkton, Md.

Jarl. Orange and white St. Bernard dog, date of birth not given, by Tell out of Vida, by Berkshire Kennels, Hinsdale, Mass., to G. W. Flint, Scio, N. Y.

Bismark. Orange tawny and white St. Bernard dog, whelped July 1, 1889, by Berkshire Prince out of Berkshire Juno, by Berkshire Kennels, Hinsdale, Mass., to E. D. Ballou, Becket, Mass.

Badajos. Bull bitch, date of birth and pedigree not given, by John H. Matthews, New York, to Lloyd Phoenix, same place.

Tippo. Black cocker spaniel dog, whelped Sept. 12, 1889, by Red Rover out of Spunkey, by Theo. J. Hook, Rome, N. Y., to John G. Burns, Buffalo, N. Y.

Cæsar. Bulldog, date of birth and pedigree not given, by John H. Matthews, New York, to Warham Whitney, Rochester, N. Y.

Clyde. White, black and tan beagle dog, whelped April 30, 1889, by Frank Forrest out of Susie, by A. Parry, Linden, Mass., to Bradford S. Turpin, West Yarmouth, Mass.

PRESENTATION.

Penny—Bijou whelps. White, with tan and black heads, fox-terrier pups, three bitches, whelped Oct. 10, 1889, by Penny out of Bijou, presented by W. H. Murphy, Ogdensburg, N. Y., one each to Wm. M. Keenan, Troy, N. Y., and Henry Sullivan and Hugh Curry, of Ogdensburg, N. Y.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Dec. 25.—The Massachusetts Rifle Association celebrated Christmas with a rifle shoot at the Walnut Hill range. Many shooters were on hand. The conditions were unfavorable for high scores on account of a strong S o'clock wind. Mr. Fellows won the champion medal, and Mr. Eames won the gold medal in the 20-shot rest match. Mr. Durward won the silver and Messrs. Nason and Brown each won the bronze military medal. Mr. McBean won the bronze victory medal. Next Saturday will be the last rifle shoot of 1889, and all matches will close that day. The scores of to-day: Twenty-shot rest match:

J N Ames....100, 104 T Warren.....90, 87 S P Williams...91, 81

Champion medal match:

J B Fellows.....80 W C Johnston, Jr.72 J K Edwards.....67
C H Eastman.....74 J C Winter.....68 A S Hunt.....65

Silver military medal, won on 10 scores of 42 or better:

J Durward..... ...44 43 42 42 42 42 43 42 43

Bronze military medal, won on 10 scores of 36 or better:

G H Nason..... ...39 36 37 38 40 38 40 42 36 36
W J Brown..... ...40 37 38 37 39 37 38 37 36 36

Bronze victory medal, won on 10 scores of 75 or better:

A McBean.....82 86 77 75 82 79 79 76 81 83

All-comers' off-hand match:

J E Kelly.....79 C H Eastman.....74 A S Hunt.....67
L Law.....78 J C Winter.....68 F D Martin.....66
A Lamb.....76 C B James.....67

Rest match:

J N Ames.....112 N E Simonds.....96 A G Homes.....91
F C Towne.....104 L Lamb.....76 S P Williams.....91
J W Soule.....98 F D Martin.....93 A Ballard.....85
A S Hunt.....97 S C Sydney.....93

Victory medal match:

A McBean.....83 S O Merville.....75 F D Martin.....66
O T Moore.....81 B J Corney.....74 C B James.....66
M Barney.....76 A S Hunt.....71

Military medal match:

J Durward.....43 F D Martin.....42 N E Simonds.....36
O B Cook.....43 W J Brown.....37 A S Field.....35
D C Thomas.....42 L Lamb.....36 C B James.....30

Military practice match:

P S Spofford.....44 C H Ridgwood.....41 D C Thomas.....36
C Everett.....43 A S Field.....39 O B Cook.....34
S Sampson.....43 H H Sweetser.....38 N E Simonds.....32
C B James.....42 L Lamb.....37

WORCESTER, Mass., Dec. 27.—A few of the members of the Worcester Rifle Association went out to Broad Meadow Range on Christmas Day. With a glaring light and a strong wind the score was not as large as on many previous occasions. Military as well as sporting rifles were used. They were allowed two points on the Creedmoor and five points on the standard targets. The work of each man follows:

	Creedmoor.	Standard.
M G Fuller	46 46—92	79 83—162—254
L G Thomas	40 46—92	75 83—158—250
S Clark	43 45—89	66 73—135—228
E R Shumaway	43 42—85	77 60—137—222
C L Macomber	45 43—88	70 64—134—222
James Logan	42 42—84	64 58—122—206
D Starr	41 41—82	50 58—108—190
J H Dupois	40 38—78	51 47— 98—176

ST. LOUIS, Mo., Dec. 21.—The eighth tourney of the St. Louis Pistol Club came to an end with the shoot held last Wednesday night at the Laclede Gallery, corner Broadway and Chestnut street. Alexander, who was in the lead with a very small margin at the close of the previous week's shoot, was beaten out by Mohrstadt after an exciting shoot. The latter's record of 95 is within one point of the record as made by F. E. Bennett, of Boston, Mass. Alexander shot strong, but fell short of a sufficient number of points to hold the prestige he had gained at the shoot previous. The medal is a very handsome bauble of gold, valued at $15, and Mohrstadt can well feel proud of the trophy, now that it has become his personal property. In the handicap department there were five prizes, and the winners are: Mr. C. Mackwitz first, E. C. Mohrstadt second, G. Alexander third, W. Hettel fourth, and W. Bauer fifth. A 20yds. Standard American target is used by the club for all practice. The scores:

E C Mohrstadt	10	10	9	8	9	9	10	10	10	—95
G Alexander	9	9	10	6	9	10	9	9	8	—87
Fred A Fodde	8	7	7	9	8	9	10	10	8	—84
W Hettel	7	10	8	7	5	7	8	8	10	9—79
W Bauer	10	10	6	6	8	5	7	9	9	9—79
O Wallace	0	9	7	7	8	10	9	10	9	9—78
M Billmeyer	6	10	8	7	5	5	6	6	8	7—78
A E Bengel	10	6	7	10	7	4	6	0	6	0—64

A meeting will be called in a few days to make arrngements for the holding of another tourney to begin after the holidays.—UNSER FRITZ.

MARTINI VS. MAGAZINE.—In a recent number of the FOREST AND STREAM mention was made of a trial of a new Magazine rifle against the old Martini-Henry. Two teams were made up of 8 expert men each. Every man fired with the two arms, 7 shots each at 200, 500 and 600yds. Wimbledon targets, positions and scoring. Two tests were made. The following are the aggregate scores of each side: First match (Nov. 11).—Maj. Harley's team: Martini-Henry rifle, 665 points; Magazine rifle, 671 points; total, 1,336 points. Lieut. Dutton-Hunt's team: Martini-Henry rifle, 690 points; Magazine rifle, 644 points; total, 1,336 points. Result of match, a tie, with 1,336 points for each side and 38 points in favor of Martini-Henry rifle.

	Martini-Henry.	Magazine.
Major Harley's side	665	671
Lieut. Dutton-Hunt's side	690—1,355	646—1,317

The second match was shot Nov. 14, and resulted as follows: Major Harley's team, with Martini-Henry rifle, 692 points; Magazine rifle, 687; total, 1,381 points. Lieut. Dutton-Hunt's team, Martini-Henry rifle, 724 points; Magazine rifle, 649 points; total, 1,373 points. Result of match, Major Harley's side won by 8 points, and 78 points in favor of the Martini-Henry rifle.

	Martini-Henry.	Magazine.
Major Harley's side	692	680
Lieut. Dutton-Hunt's side	729—1,416	649—1,338

BOSTON, Dec. 28.—To-day was the last rifle shoot of the Massachusetts Rifle Association for 1889, and all the matches are closed. It has been a year of much interest to riflemen, and the many matches have drawn out a large attendance at most of the shoots. J. B. Munroe is the final holder of the gold medal in the 20-shot rest match, having won it 31 times, J. Francis being the next highest, 27 times. H. L. Lee is the final holder of the gold champion medal, off-hand, having won it 28 times, H. Severance being the next highest, 23 times. The association opens the new year on Jan. 4, with the most extensive list of matches that it has ever offered. Among the prizes are 42 gold, silver and bronze medals. Following are the scores made to-day:

Champion Medal Match.

J B Fellows.....89	W Conney.....71	L Grippe.....69
P Fitz.....79	D Pedro.....79	J C Winter.....63
S O Merville.....71		

Twenty Shot Rest Match.

P Fitz.....89 93—182	J C Winter.....61 53—114	

Victory Medal Match.

S O Merville.....76	A S Hunt.....72	F T West.....70
B J Cook.....72	D W Martin.....71	

Military Medal Match.

F J Lounsbury.....44	A S Field.....42	

Off-Hand Match—200yds.

W Charles.....86	S Webster.....76	A Sharp.....71
S T Hawley.....84	F T West.....76	T C Brown.....70

S Wilder.....105	W S Green.....99	A S Hunt.....89
W P Thompson...104	P Williams.....98	T B Day.....88
T Warren.....103	A R Lang.....97	

SEVENTH REGIMENT RIFLE CLUB.—There is no range which is in more constant use than that under the armory of the 7th Regiment, and to this constant practice is due the proud position which the regiment holds as a shooting body. Thus far, the present season has been the most successful ever given by the club. The club recently elected the following officers to serve for the ensuing term: President, Col. Daniel Appleton; First Vice-President, Captain and Assistant Surgeon, W. A. Valentine; Second Vice-President, Sergt.-Maj. Wm. B. Coughtry; Secretary, Ordnance Sergeant J. W. Cochran; Treasurer, Corp. F. S. Kennedy; Executive Committee, Capt. W. H. Palmer; Inspector of Rifle Practice, ex-officio, Corp. Harry W. Jansen, Lieut. S. W. Merritt, Sergt. H. B. Thompson, Corp. F. W. Pohle, Lieut. W. S. Wilson, Corp. O. E. Dudley, Sergt. R. M. Dunn, Corp. G. L. Hoffman, Sergt. A. C. Clayton, and Pvt. H. E. Chapman.

CARVER'S BIG EFFORT.—In a few days at the Royal Aquarium, London, Dr. Carver will attempt to hit 100,000 wooden balls in ten days. His wonderful performances with both rifle and shotgun are well-known, but the task he has now set for himself requires almost superhuman strength and stamina in addition to skill. The Doctor has offered repeatedly a big prize to any one who succeeded in lifting one of his rifles to the shoulder as in the act of shooting for five consecutive minutes, and although many have attempted the feat none have accomplished it. The Doctor in his coming feat will try to break 10,000 per day, and to do this will have to lift a gun weighing 10lbs. that number of times to the shoulder. Allowing ten misses in every hundred, it can readily be seen how many extra pounds he has to raise. A year ago he accomplished the feat of hitting 60,000 balls in six days, so that he is aware of the nature of what he will soon attempt to do. When he performed last year's feat he missed only 650 balls.

NEWARK, N. J., Dec. 23.—At the semi-annual meeting of the Excelsior Rifle Club the following gentlemen were elected to office for the ensuing six months: President, Chas. Mager; Vice-President, M. Eisenburg; Secretary, H. Buob; Treasurer, Otto Krauss; Sergeant-at-Arms, A. Aurnhamer; Captain, John Bauer; Assistant Captain, Chas. Burger; Rifle Inspector, Wm. Watts; Club Judge, John Berger, and Association Judge, J. Bauer.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

CHRISTMAS DAY SHOOTS.

BOSTON, Dec. 25.—To-day the Jamaica Plain Gun Club held its Christmas turkey and sweepstakes shoots at its range, at Clarendon Hills, the shooting commencing at 9 o'clock and closing at 3 o'clock. The day was an excellent one for shooting and a large number of the members of the club participated in the sport. Following are the different events and winners: Six clays—Savage first, Newcomb second, Barrett and Melcher third. Ten bluerocks—Barrett first, Melcher and Boothby second, Needham third. Three pair blackbirds—Boothby and Newcomb first, Melcher second, Swan third. Ten clays—Cilley first, Melcher and Newcomb second, Johnson third. Miss and out, 35yds.—Won by Savage. Three pairs clays—Newcomb first, Johnson second, Savage, Cilley and Barrett third. Six blackbirds—Johnson first, Savage and Heffer second, Melcher third, Needham fourth. Six clays, 21yds., Hurlingham rules—Nichols first, Barrett second, Johnson and Brown third, Savage fourth. Six bluerocks—Savage first, Melcher, Nichols and Newcomb second; Cilley and Savage third, Needham fourth. Six clays—Barrett first, Newcomb second, Nichols third, Boothby fourth. Six straightaway blackbirds—Barrett first, Baker and Cilley second, Needham third, Six clays—Baker first, Nichols second, Melcher third. Three pairs blackbirds—Boothby first, Barrett and Savage second, Cilley third. Six bluerocks, walk up match—Cilley first, Baker, Melcher and Boothby second, Barrett and Savage third. Six clays—Cilley and Nichols first, Barrett second, Boothby third.

CHICAGO, Dec. 25.—The inaugural pigeon contest of the Washington Park Club took place to-day, and was productive of some excellent sport. The shoot was held on the club's grounds, a very handsome portable pavilion having been erected by the house committee on the infield directly in front of the judges' and timers' stands. A new contrivance for the trapping of birds, worked by electricity, was used for the first time, and proved a success. Many members of the club and their friends were present, and during the latter part of the afternoon the betting was very heavy. Fifteen contestants entered in a grand sweepstake of $10 each. Forty birds were allowed each man. They were of excellent quality, most of them being of the species known as bluerocks. The device used for trapping would not allow the shooter to ascertain in advance from which of the five traps the bird would rise. Some of the scores made are considered excellent when the conditions are understood. G. A. Schwartz carried off the honors with a score of 33 killed out of 40. The sport began at 10 o'clock and lasted until dark. Steward Westland provided a substantial lunch, which was served in the pavilion.

	Shot at.	Killed.		Shot at.	Killed.
G A Schwartz	40	33	H O Stone	20	12
Frank Floyd	40	28	George Linn	20	13

T Reid.....4		

Shoot No. 7:

C Charles.....4	Budd.....4	Rice.....3
F Emond.....4	Kemp.....3	Townsend.....3
James.....4	Reid.....3	

The shooting at Stark's grounds on Eastern avenue to-day for a prize presented by Mr. C. Ayer for the best average score at pigeons and sparrows was won by H. Page, who killed 11 out of 15 pigeons and 17 out of 20 sparrows, which was considered good shooting, as the birds were strong on the wing and only the use of one barrel was allowed.

NEWARK, Dec. 25.—Erb's Park on Christmas Day was the scene of one incessant roar. It was bang! bang! dead! lost! from dawn till dusk. The shooting was all sweepstakes contests at live birds.

First event: Four birds each man, $3 entrance, only one money, Hurlingham rules modified to govern all contests. Baite, C. M. Hedden, Erb and Chris. Reinhardt all got clean scores, and agreed to carry the money over to the next sweep, the best score to take the money.

Second event: Same conditions Reinhardt was the only one who got a clean score and he won in this and the tie money brought over from the previous one. All others out.

Third event: Castle and Hedden tied for first, and Erb and Reinhardt for second. The money was carried over to the next sweep.

Fourth event: Hedden, Erb, and C. M. Hedden got all their birds straight and captured the money of this and the preceding sweep.

Fifth event: Same as all others, but with two moneys instead of one. Jones, Castle, Hedden and Erb killed four each. The tie was shot out in the next sweep, the best score to take it. Benjamin and Reinhardt tied on 2 kills each, and divided rather than shoot out the tie.

Sixth event: Two moneys; all other conditions same. Castle, Hedden, Erb, and Jones tied for first with 3 kills each out of the 4 birds shot at. First money was again carried forward to the next sweep. Second divided between Reinhardt and Benjamin.

Seventh event: Same as preceding. Jones, Reinhardt, Erb, C. M. Hedden, and Castle again got all their birds, and the first money was once more carried forward. Benjamin took second, with three kills.

Eighth event: Same as others. Jones, Erb and Castle got each 4 straight kills. Erb got his with single barrel each time, and "gathered in the shekels" from the money brought forward, winning first money from the fourth, fifth, sixth and seventh sweepstakes. Second money went to Reinhardt.

Ninth event: Same as all others as to conditions. Jones, Hedden and Reinhardt got all their birds, 4 each. Again was first money carried forward, Erb capturing money brought forward from other event. Castle and Jones div. second.

Tenth event: A repetition as to conditions. Castle and Jones tied for first and agreed to shoot it off in the next sweep. Erb, Benjamin and Reinhardt won second, and that money was carried forward, as was first.

Eleventh event: Differing in no way from previous ones. Jones, Reinhardt and Castle got each all the 4 birds shot at, and once more first money went in advance of the shooters, Reinhard taking the second money brought over from the preceding sweepstakes.

Twelfth event: Wheaton, Castle and Reinhardt got straight scores, Castle thereby winning first brought from No. 10. Erb, Benjamin and Jones killed 3 each and agreed to shoot the tie off in the next event. Castle and Reinhardt div. first, brought over from No. 11. Benjamin and Erb div. second brought over from same sweep.

Thirteenth event: Same. Wheaton and Castle made clean scores and div. first money. Erb, Reinhardt, Jones, Wheaton and George got 3 kills each for second money and carried it forward. Benjamin captured second money brought from No. 12.

Fourteenth event: Same. Burrall, George, Hedden, Jones and Castle killed all their pigeons and shot the tie off miss and out. George scored a goose egg on his first shot. Burral and Jones each added another, and Castle and Hedden secured the cash by killing 3 straight and they div. Cannon, Hughes, Wheaton, Erb and Reinhardt got three kills each and carried the tie over to next event.

Fifteenth event: At 7 birds, entrance $5, 3 moneys, modified Hurlingham rules: Benjamin and Erb made clean scores, killing 7 each and div. George, Wheaton, Canon, Castle Hedden and

Reinhardt got 6 kills each to their credit and shot the tie off immediately, miss and out. Hedden and Wheaton did the bowling act and each got a big round O on the first shot. Castle and Reinhardt followed suit on their third shot. Cannon and George each killed their 3 birds, won and div. the cash. Hughes won third money alone, getting 5 out of 7 birds shot at.

The entries for the different sweeps ran from six to fifteen in each.

RED BANK, N. J., Dec. 25.—The Riverside Gun and Rifle Club held an all-day shoot to-day at both live and clay birds. An unusually large crowd was present, and the spectators were treated to some fine sport. The day was perfect and the live birds were swift and strong flyers. The events were governed by American Association rules. Oscar Hesse was the referee. Following is a summary of the events:

First event—Nine clays, 8 entries, entrance 35 cents.—John Cooper first, 9; Wm. T. Conover and E. M. Cooper second, 6; M. F. Cornwell third, 5.

Second event—Ten bluerocks, 9 entries, entrance 35 cents.—E. W. Throckmorton first, 10; John Cooper second, 9; E. M. Cooper third, 8.

Third event—Three pairs bats, 11 entries, entrance 35 cents—A. Ivins, first, 6; Throckmorton, E. Cooper and John B. Bergan second, 5; Cornwell, John Cooper and Ten. Davis third, 4.

Fourth event—Team shoot, 5 singles—E. Bussell 1, Ivins 4, John Cooper 4, Geo. Coley 3, Davis 0; total 12. Jas. Cooper 2, E. Cooper 3, Throckmorton 4, Conover 2, Field 2; total 13.

Fifth event—Five bluerocks, 7 entries, entrance 30 cents.—Jas. and John Cooper and Ivins 4, Conover, Field and Throckmorton 2, Jas. Cooper won first in shoot off and second divided.

Sixth event—Four live birds, 11 entries, entrance $2—H. R. Coleman and D. Carney first, 4; John and E. Cooper, Conover, Throckmorton and Ivins 3; Field third, 2. The Coopers won in shoot off for second money and divided.

Seventh event—Eight live birds, 18 entries, entrance $3.—John Cooper first, 8; D. Belshaw, E. Cooper and Ivins 7; R. Bates, B. S. Payne, Field, and Coleman 6; John Day, S. W. Hurley, Bussell and Throckmorton 5. Second and fourth divided. Colman won in shoot off for third.

Chas. Stillwell, of Shrewsbury, and Edward Cooper, of Middletown, have arranged a match at 20 birds, $50 a side, to take place in Middletown Township, on Saturday, Jan. 4.

LONG BRANCH, Dec. 25.—At Price and Daly's Central Club grounds, Long Branch, to-day, there was a succession of matches at live birds from early in the morning until darkness put an end to the sport. The day was a great one as to weather. Unseasonable, perhaps, in its warmth, but most grateful to shooters at the traps at this season of the year. Overcoats and wraps were discarded, and the contestants shot in shirt sleeves and cardigan jackets. A cool, but fresh westerly wind was blowing across the grounds. This wind did much to help the flight of the birds when the traps were pulled. It made the good ones rattlers and the medium ones good. As for the poor ones, nothing will help them. The majority of the pigeons trapped were of excellent quality, and many of them made even the best of the men "put up" a goose egg. The first event of the morning was a little match between Fred Beal and L. Loeb. There was to have been a private match between State Senator W. H. Campbell and Loeb. The former, however, was unable to put in an appearance on account of sickness in his family. The one between Beal and Loeb was a scratch race got up on the spot. The conditions were 25 birds each man for $50 a side and the cost of the birds, Hurlingham rules to govern. F. Loeb killed 19 to his opponent's 16, winning the match by 3 birds to the good. Then came the club match. It was the Central Gun Club's monthly match between members, 10 inanimate targets each man. American Association rules to govern. For the silver loving cup presented by John Hovey, Jr., and to be known as the Hollywood cup. Also for the gold badge given by Phil Daly and his partner, W. H. Price. Twelve members out of the twenty-eight belonging to the club put in an appearance to shoot for the two prizes. George Cubberly broke 10 straight; P. Daly, Jr., W. R. Price, C. Morris and E. W. Reid broke 8 pieces of pottery each; W. Barber and Fred Beal got 7 each; F. G. Loeb broke a half dozen out of the 10 shot at; S. Fitch got the same number; J. B. Morris 5 and Messrs. W. F. Campbell and J. White 4 each.

Second event, sweepstakes, open to all, 4 pigeons a man, $3 entrance, over 10 entries three moneys, under 10 but two, Hurlingham rules to govern: W. Armstrong killed 4 straight and took first money; F. Loeb and E. Tabor tied for second and divided. All the others had their fun and lost their money.

Third event, W. Armstrong and Milt F. Lindsley killed all their birds and divided first money. Leob, Van Dyke, E. Tabor and G. Cubberly divided second. The others were o t of it.

Fourth event, Milt F. Lindsley and G. Cubberly each secured 4 dead to their credit and divided first money. Beal, Armstrong, Daly, Jr., Vincent and Van Dyke tied for second. Vincent drew out his pro rata share, and the rest, as the money was too small for a "divide" among four, agreed to shoot out the tie in the next sweep, the best score to take the pot.

Fifth event, G. Cubberly, Loeb, Woolley and Van Dyke got clean scores and took first money and separated it without a fight, while Lindsley, Armstrong, Eddy and Daly, Jr., got 3 each and divided the second amount between them. Third money was won by F. Beal, he being the only one who had 2 kills out of the 4 birds shot at. Second money was carried over from the preceding sweep, all the others being shot out by him.

Sixth event, G. Cubberly, F. Loeb and A. Van Dyke killed all their birds and divided first money. Beal, Lindsley, Eddy and Woolley each got 3 kills and agreed to divide the second money.

The retrieving was done by Phil Daly, Jr.'s red Irish setter dog Dick, and, although the dog's first appearance before the public, he performed his part in fine fashion. With more practice he will hurry that great crack among canines at this work, Erb's black dog Lem.

BERGEN POINT, N. J., Dec. 25.—The gunning contingent of the New Jersey Athletic Club enjoyed several hours of fine sport at clay-pigeon shooting on the organization's ground at Bergen Point to-day. After concluding the programme of championship and other prize events the marksmen indulged in sweepstake matches, and many of them did not leave the traps until after dusk had fallen. The chief event's of the day were the fifth and last matches of the series for the Virden Club championship gold medal and for a valuable Marlin repeating rifle. In the shoot for the medal Bayard Taylor Kissam broke 18 of 20 targets and took first honors. The trophy was won, however, by C. A. Pope, of Roselle, who captured two of the five matches. Major J. M. Taylor scored his third victory in the series for the rifle by winning the final match with a score of 19 breaks and 1 miss. He in consequence carr ed off that trophy. Elmer E. Bigoney broke 16 of 20 bluero ks and won second prize. Bayard Taylor Kissam got third prize with a score of 14 breaks and 6 misses.

In a match at ten singles and ten in doubles, Richard Sundermann scored 10 successive breaks at the singles and shattered 5 of the doubles, winning first prize. Major J. M. Taylor captured second prize for breaking 9 of the ten singles and 5 of the doubles. Edward L. Vredenburgh won third prize with a score of 4 breaks in the singles and 3 in the doubles..

Elmer E. Bigoney captured first prize in a match at five singles and six in doubles, by smashing four single targets and five of the doubles. With a score of five straight at the singles and three br aks in the doubles, Bayard Taylor Kissam carried off second prize. G. A. Pope and Edward L. Vredenburgh divided third money, each breaking four in the doubles and three singles.

Col. Thomas D. Day, a New York lawyer, made the lowest score in the last of the sweepstake events, and was mulcted for the shooting expenses of all. Edward L. Vredenburgh came off with first honors in four of these matches, and Major J. M. Taylor won one. Each used a Le fevre rifle. They were the only marksmen to shoot at eighteen yards rise, the others having seventeen yards and under to ten.

BROOKLYN, Dec. 25.—The regular monthly shoot of the Glenmore Rod and Gun Club, held at Dexter Park, on Jamaica plank road, to-day, proved to be one of the best meetings ever held by this veteran club, as there was a big crowd of spectators and plenty of competitors on hand to enjoy the sport. The birds were a specially good lot, and were the best ever trapped at this popular shooting ground. They were from Dayton, O., and were the means of causing several splendid trap-shooters to lose their money, although they furnished excellent sport. The scores made were all good, as the contestants were a lot of well-known shooters, and the bright weather gave excellent light for the work. Three events were decided, the first being the class shoot at 7 live birds per man, handicap rises in classes A, B and C, for the club medal, at which the following scores were made:

A Reed	6	W Selover	6
E Helgans	5	W Levens	5
D Boehme	5	Dr Powell	5
J McLaughlin	5	H Schlichtner	2
P Sutter	2	H Bookman	2
O McGee	2		

Selover and Reed then shot off their tie for the medal at 3 birds, and Selover won, killing 3 to Reed's 1.

Two sweeps followed. First sweep at 3 live birds, 25yds. rise: Helgans, Powell and Bookman each killed 3 birds and divided first money. Boehme, Reed and Levens each fouling over 2 birds got second money to divide. Selover taking the third prize alone.

Second extra sweep, similar rules, won by Helgans, who again killed three birds, Bookman, Powell, Reed, Levens, Boehme, Sutter and McLaughlin taking the balance of the pot with 2 killed each. Referee and scorer, C. A. Dellar.

GLOUCESTER CITY, N. J., Dec. 25.—Five hundred persons were present at the Wild West show grounds to-day, and witnessed a shooting match between Capt. A. H. Bogardus and Frank Kleinz, of Philadelphia. Each shot at 25 sparrows, four traps, 35yds. rise, Kleinz winning by 2 birds. The score follows:

Bogardus.....0002210001010011011202012—13
Kleinz.....0002001121101211111020100—15

A match followed with 10 birds each, four traps, double birds. Mr. Kleinz won this match by one bird. The score:

Bogardus.....10 00 11 00 10—4 Kleinz.....10 10 10 11 00—5

CLAREMONT, N. J., Dec. 25.—Sweep No. 1, 10 bluerocks, 50 cents entry:

O'Connor	4	Barnard	3	Roberts	6

CATSKILL, N. Y.—The long-talked-of team shoot came off at Tolley's shooting park on Christmas Day. The opposing teams were made up of amateurs, mostly members of the Catskill Fish and Game Club, and a jolly time was had by all. The scores are small, as most of the shooters never had faced the traps before, although they are good shots in the brush. Beach's team has challenged for New Year's Day, when look out for better scores, as quite a rivalry has sprung up. The day was delightful and the shooters turned out in large numbers, indicating that trap-shooting is growing in popular favor. The shooters were loth to leave after the match, so sweepstake-shooting was arranged, with quite a number of entries. Following are the scores of team and sweepstakes:

Roberts's Team.		Beach's Team.	
Roberts	1111111011111111111—19	Beach	1111101110011011011—16
Olwell	1000001111010111011000—10	Benter	0011101011111111111—16

	98		90

First sweepstake, 10 kingbirds:

Roberts	8	Hand	6
Beach	7	Betts	9
Benter	7	Rosa	4
Jump	7	Better	3
Jimsen	8	Burgh	2

Second sweepstakes, 10 kingbirds:

Roberts	10	Jump	7
Beach	8	Betts	6
Benter	8		

Third sweepstakes, 10 kingbirds:

Roberts	9	Tolley	4
Clinton	5	Burgh	3

DE TOLL.

PHILADELPHIA, Dec. 25.—The North End Gun Club had a programme of matches to-day. First prize sweepstake shoot, at 15 single Keystone targets; National G. C. rules; for sundry prizes:

Jas Wolstencroft	12	S Richards	12
A L Lumb	14	Wm M Pack	9
Wm H Pack	10	Elmer Ridge	9
W H Wolstencroft	14	Henry Jacobs	7
Howard Ridge	7	Daniel Hartley	5
Jacob Kroeson	10		
J W Lumb	7		
Geo E Pack	15		
Nath'l Swope	10		

Second prize match, 5 shot under same rules and conditions:

Jas Wolstencroft	13	H Ridge	9
A L Lumb	11	Samuel Richards	11
Wm H Pack	14	Wm M Pack	10
W H Wolstencroft	13	Elmer Ridge	9
Henry Jacobs	9		
Geo E Pack	11		
Nath'l Swope	12		

The Franklin Gun Club had a club shoot for prizes on its grounds on Christmas Day. The conditions were: Twenty Keystone targets per man, American Gun Association rules governing. William Bourne, with 16, won first prize—a gunning coat—in the No. 1 team shoot. E. Betsom was second with 15, L. Clark third with 14, and T. T. Allen fourth with 13. Darkness prevented the No. 2 team from finishing, there being two ties to shoot off.

An interesting experience occurred at the hotel of Mr Rogers, when a proposed rifle match was to have taken place, (but failed to come off) on Christmas Day. While standing on the perch of the hotel, attention was called to a pigeon sitting on the ground some distance off. John Hunsinger and his charming daughter, Rachael, (little Hawkeye), of the Gaiety Rifle and Pistol Club being present. Some one suggested for John to try a shot at the pigeon. Quickly loading his daughter's "Special Wurfflein" rifle, with a .22 long cartridge, he took deliberate aim and fired; over flopped the bird, shot clean through the body.

When the distance was measured off it rolled out 125 yards; pretty good guessing for a shot at unknown distance.

NEWARK, Dec. 28.—At Erb's Park, to-day, on as fair a day as was ever vouchsafed to sportsmen in this latitude, Bogardus and Kleintz came together in a little match arranged for $100 a side at 50 pigeons and 50 sparrows. The race was somewhat of a disappointment, for it was impossible to obtain the smaller birds. There has been no snow, and, therefore, no trapping could be done. Quite a large number of persons witnessed the shooting with a good deal of pleasure. Among these were W. Williams of Newark, E. Bellman of Madison, W. Green of Kearney, C. K. Westbrook, Tom Morehouse, W. S. Canon, the great one-armed shot, and J. Morford, Jr., of Newton. After considerable talking on the part of the principals, it was agreed to shoot at 25 birds each man, as many present were anxious to shoot in sweepstakes. While the arguments pro and con were taking place the short races were shot out as follows:

First Event—Four birds each man, $3 entrance, two moneys, Hurlingham rules to govern. Frank Class, John Riggott, and M. F. Lindsay tied for first money with 4 kills each and divided. W. Siegler and John Erb, 3 kills each, followed the example of their superiors and did likewise.

Second Event—W. Seigler, M. F. Lindsay, and J. Erb led for first on straight scores and divided the cash. Frank Class and John Riggott, with three dead each out of the 4 shot at, captured and divided second.

Third Event—Four birds each; three moneys, 50, 30, and 20 per cent. respectively; otherwise same as preceding events. This had no less than 15 entries. Riggott, W. Seigler, J. Erb, F. Class, R. Irwin, C. Van Camp, S. Castle, F. Kleintz, E. Collins, and Gus Manitz killing each four straight and as there were so many in for the money they agreed to carry it forward and shoot off the tie in the next sweep. Lindsay (with a dead out of bounds), J. Wheaton, and Capt. Bogardus tied for second money, and did the same as the first men. C. M. Hedden and Zwerlein tied for third and divided.

Fourth Event—Same conditions as preceding event, but with 13 entries instead of 15, two of the contestants finding the pace too hot for them. W. Siegler, T. Class, R. Irwin, C. Van Camp, J. Wheaton, and Frank Kleintz again got all their birds and divided first money, J. Erb and S. Castle amicably divided second money with 3 kills each. C. M. Hedden, J. Riggott, Zwerlein and Bogardus captured third, and settled the matter by taking it share and share alike.

At 2:45 o'clock the main event was begun. Capt. Bogardus said his shells were loaded with small shot for the sparrow shooting, and as he had only a few left after the sweepstake shooting he would have to ask the match to be reduced to 25 birds each man, and the stakes to be $1 a bird. As all the men present were in for sweepstake shooting it was agreed to. The result was a tie. The birds were a fair average lot, somewhat uneven in quality, but with some of them good enough to tax the skill of the best of the shots present. Indeed it is a matter of doubt if 15 men have been brought together this year where skill in handling the breechloader could surpass that of the men present on this occasion. It comprised the very cream of the shooting men of this vicinity.

Capt. Bogardus.....2211012211111222111211101—23
Frank Kleintz.....2011102121111112111222222—23

After this event the Captain's son, Henry, gave an exhibition of rifle and pistol shooting. In the former he did well; in the latter he was off.

Fifth Event—Seven birds each man, $5 entrance, 3 moneys; usual rules to govern. C. M. Hedden, C. Van Camp, and C. Reinhardt killed all their birds and divided first money without a shootoff. W. Seigler, F. Class, R. Irwin, S. Castle, F. Kleintz, Capt. Bogardus, and W. S. Canon, tied for second, and they shot the money off in the next event a miss and out. John Erb, J. Wheaton and Zwerlein were in for third money, and did the same with it as the second money men did with theirs.

Sixth Event—Miss and out sweepstake, $2 entrance, moneys brought forward to follow the miss and out. This had thirteen entries. Reinhardt went to the rear on his first shot, a hard-hit bird that crossed the boundary. Zwerlein followed suit on his second shot. R. Irwin, and F. Kleintz fired and fell back on the fourth round. W. S. Canon did the same on his third shot. C. M. Hedden, J. Wheaton, and S. Castle each took a back seat on their fifth bird. Bogardus went out on the next round, the sixth. On the seventh Van Camp was out of it. This left Siegler, Erb, and Class in for the money, and they separated it amicably. Siegler, Class, Castle and Bogardus divided second money brought down from the previous sweep, after disposing of Irwin, Kleintz, Canon and Reinhardt. Third money of that sweep went to John Erb, he shooting out Wheaton and Zwerlein.

NEW YORK SUBURBAN GROUNDS.—Claremont, N. J., Dec. 21.—Sweeps at 10 bluerocks, 50 cents entry, 3 moneys, ties divided. No. 1:

Sigler	6	Simpson	10	Mack	7

Simpson	8	Jones	10
		Swiveller	8

NEW HAVEN, Conn., Dec. 21.—Scores made at the Elm City Gun Club shoot on their grounds, Friday afternoon, Dec. 20. The attendance was small, but the scores were very good considering the day which was very dark and foggy, especially those of Messrs. Bates and Gould, who each missed but two birds during the afternoon, which is considered good shooting for these parts.

No. 1, match at 6 tongueless bats, Keystone traps, 16 and 18yds. rise:

Gould	111111—6	Savage	111101—5
Bates	111111—6	Hill	110110—4
Whitney	011111—5	Beers	011110—4
Sackett	111011—5		

No. 2, 6 singles and 2 pair:

Gould	111111 11 11—10	Albert	111111 10 10— 8
Bates	111111 11 11—10	Sackett	011111 10 11— 8
Whitney	111111 11 11—10	Beers	111110 10 10— 7
Savage	111111 11 10— 9	Hill	111010 00 00— 4

No. 3, 12 birds, Hurlingham rules, both barrels:

Gould	111111111111—12	Albert	111111111111—12
Bates	111111111111—12	Beers	011111111111—11
Savage	111111111111—12	Sackett	111111111011—11
Whitney	111111111111—12	Hill	011011111111—10

No. 4, 8 straightaways, 21yds.:

Bates	11111111—8	Whitney	10111101—6
Gould	11011111—7	Sackett	01100111—5
Savage	01110111—6	Hill	11000111—5
Beers	11110101—6	Albert	01100110—4

No. 5, 5 pair:

Whitney	11 10 11 11 11—9	Beers	00 11 10 11 11—7
Gould	11 11 11 10 11—9	Albert	10 10 10 11 10—6
Bates	10 11 11 11 11—9	Sackett	10 01 01 10 10—5

Hill	111111101111111—14		

ELM CITY.

WHITE HOUSE, N. J., Dec. 21.—At last the day appointed for the team shoot between the clubs of North Branch and White House, N. J. was a fair one, exceedingly so barring the mud, and the teams met at White House for the fourth time to contest their supremacy at the trap. The visiting team was full of grit, and had the home team been fully awake to the situation they might have easily won the day; as it was, however, they only held their own and the scores resulted in a tie. Below are scores of team shoot:

North Branch.		White House.

BLOOMING GROVE PARK, Pa., Dec. 20.—The winter visit to the park to-day was for the purpose of shooting the return match at pigeons between the Orange Gun Club, of Orange, N. J., and the Blooming Grove Park Gun Club, of Pike county, Pa. At the first contest between the two clubs, some two months ago, the Orange team scored an easy victory. The prize contested for was a silver tankard or "loving cup" of hammered work. Among those present were three brothers Firth—John, Thomas and Harry—Hedden, Breintnall, J. L. Smith, Simmons, McKeever, Babson and Crommelin, all of Orange, N. J.; N. S. Smith, Davidson, Eils, Hughes, Engle and Youmans, of New York city; Chapman and Laurence, of Long Island. Early this morning preparations were made for the event of the day. The shooting commenced promptly at 10 o'clock, and was continued without intermission for three hours, when the victory of the Orange men was accomplished. Team contest for trophy, six men of the Orange Gun Club, of Orange, N. J., and six men of the Blooming Grove Park Gun Club, of Pike county, Pa., 25 birds each man, Hurlingham rules to govern.

o Dead out of bounds.

The visiting club won by nine birds to the good. The Orange men used their second barrels 78 times. The Pike county men 65 times. As soon as the main affair was brought to a settlement, sweepstakes were gotten up and shot out with varying results to the contestants until darkness put a stop to the shooting.

First Sweepstakes.—Three birds each man, $2 entrance, 3 moneys: Breintnall, Babson and J. Firth killed all their birds and divided the first money; Engle, Crommelin and Youmans did likewise with second, and Chapman and Hedden took third.

Second Sweepstakes.—Same conditions: Engle, Chapman, Lawrence, N. S. Smith and Breintnall got 3 straight each and settled the tie by agreeing to shoot it off in the next event. Crommelin, Youmans, Firth and Davidson did likewise with second. Hedden took third.

Third Sweepstakes.—$3 entrance, miss and out: Hedden, Crommelin, Youmans and Davidson each missed their first shot and stepped to the rear. J. L. Smith, Babson and Lawrence missed their second bird. N. S. Smith, Engle and Chapman got out on their fourth birds. Breintnall and J. Firth killed 4 each and divided the money. Breintnall captured the money of the first tie in this shoot-off and Firth took the second.

Fourth Sweepstakes.—Ten bluerocks each man, $2 entrance, 3 moneys, American Association rules to govern: Lawrence and Chapman broke each 8 and divided first; Breintnall took second unto himself, and third went to C. R. Hedden with a half dozen breaks. Engle, Eils, Youmans, N. S. Smith, T. Firth, H. Firth, Simmons and Davidson in the soup.

Fifth Sweepstakes.—Same as preceding in all respects: Breintnall first, breaking 8; Lawrence, Simmons and Chapman, with 7 each broken, tied for second; third went to Youmans, Hedden and N. S. Smith. Engle, Eils and H. Firth out of it.

Sixth Sweepstakes.—Same as foregoing: Breintnall and Hedden broke 8 each and divided first. Chapman secured second with 7 broken. Third went to Lawrence. Engle, Eils, Youmans, N. S. Smith, H. Firth and Simmons again were left.

Seventh Sweepstakes.—As all the previous ones: Lawrence broke the 10 straight. Hedden was good second with 9 breaks. Third went to Chapman with 7. Engle, Breintnall, Eils, Youmans, N. S. Smith, H. Firth and Simmons out.

SPRINGFIELD, N. J., Dec. 27.—The last meeting of the Union Gun Club for the current year took place to-day on the club's grounds at Springfield, N. J. One meeting of the club was postponed on account of the death of Dr. N. C. Jobs, who was one of the most energetic and enthusiastic of the members of the club. After the shooting a collation was served in the club house, which was thoroughly enjoyed by all present. Then came the distribution of the prize winnings for the closing season. One hundred dollars is usually the amount expended, and the division, or rather the winnings, by each man was as follows: Seventeenth prize, E. D. Miller, the gold Keystone trophy; second prize, A. Sickley, $10 gold eagle; third prize, W. Sopher, leather gun case; fourth prize, George Pudney, $7.50 in gold; fifth prize, L. Terry, leather shell case; sixth prize, M. Rull, $5 in gold; seventh prize, J. Briant, corduroy hunting coat; eighth prize, W. Nanes, $2.50 in gold; ninth prize, G. Eager, one keg gunpowder; tenth prize, Y. Sayre, one set loading tools. The prizes on best averages made throughout the year were: First prize, Erisch D. Miller, $10 in gold, average 98 per cent; C. H. Johnson, second prize, $5, average 96 per cent.; A. Sickley won third prize with an average of 89 per cent., and R. Williams got fourth with an average of 72 per cent. The prizes offered for the coming season of 1890 are numerous and valuable, aggregating some $200.

LONG BRANCH.—On Jan. 4, at the Central Gun Club grounds, a match for $100 a side and the cost of the birds, 50 pigeons, will be shot between G. Cubberly and Phil Daly, Jr.

CLASS VS. THOMPSON.—Newark, Dec. 26.—The postponed match between these two crack shots was fought to a conclusion at Erb's Park to-day. The day broke anything but pleasant in its weather. At dawn the rain was falling fast, and it continued until 10 o'clock, when a heavy shower passed over the shooting grounds. This shower was accompanied by heavy thunder and vivid lightning. At this season so unusual an occurrence occasioned a good deal of comment. After the shower the wind came out strong from the westward, blowing cold and in gusts. At one time during the afternoon it amounted to a gale. This, of course, helped the pigeons in their flight. As a whole, the birds were a lot of raspers. Out of the 200 shot at but 5 refused a flight when the traps were pulled. Class was shooting in magnificent form. The last few birds were shot by him left-handed—that is, with the gun from the left shoulder and trigger pulled with the left hand. In celerity Class was at least 15 seconds quicker than his antagonist in getting on his birds, this making a terrible handicap for a man to overcome, especially so when the birds happen to be of so good a quality. The match commenced promptly at 2 P. M. The men shot steadily until 3 o'clock, when a ten minutes' rest was had. Class got a lead on the start, and gradually increased that lead to the end.

Match for $250 a side, 100 birds each man, loser to pay for the pigeons, Hurlingham rules to govern:

Frank Class	222c012312112220201120l2—20	
	1221212122111020210101l—21	
	1212011121210111211l0111—22	
	2112111121111012121111220—23—	86
J Thompson	2021111211011202202200l—19	
	0111101211100111112222l2—21	
	0220121l1c1102110111120l2—19	
	1212101112110102120121110—23—	79

oDead out of bounds.

Each man had a no bird on a missfire, and shot at another with a blank shell in first barrel. Thompson's twenty-sixth was an awfully hard hit bird, but recovered and got out of bounds. His thirty-first was a right quartering rattler; he got on with both barrels, but carried it out. His forty-third was knocked down, but pulled himself together and went on his winning way. Class's twenty-eighth bird was as hard as nails. He was well stopped, fell, got up, fell again, rose and dropped once more and then was over the fence. His thirty-ninth was a repetition of that work. His sixty-fourth bird was hard hit. It flew to fence and fell dead on the top rail. An outsider put his hand over the top and gathered the bird in. The eighty-fifth bird of Class's was the best of the 200 shot at; he was a hummer of a right-quarterer. Quick as he was the shot was quicker. The bird fell 70yds. off with both wings broken.

First open sweep, 4 pigeons each man, $3 entrance, 2 moneys, Hurlingham rules to govern: Erb, Reinhardt and Castle 4 and divided first, Class and Thompson 3 and also divided.

Second event: Erb, Reinhardt and Class 4 and divided, Thompson got second with 3.

Third event, Castle, Class and Thompson each got 4 and shot the tie off. Castle dropped out on his fifth bird. Thompson and Class killed theirs and divided. Second money was captured by Collins and Reinhardt and divided.

Fourth event, miss and out, $1 entrance; Manitz, Geoffrey, Erb, Castle and Reinhardt slipped up and were out on their second shot, Collins on his fourth, and thus Bakew and Hedden divided the pot.

TORONTO, Dec. 21.—A number of West End gun enthusiasts gathered to-night at McCready's sporting store, Queen street west, for the purpose of reorganizing the old West End Gun Club. The meeting was well attended, and a rousing one it was. The new club will be known as the West Toronto Gun, Dogs, Sports, and Angling Club. The officers elected are a good set of men, of the pusher class, and are as follows: President, Ex-Ald. George Evans; Vice-President, Mr. D. Beatty; Secretary, Mr. R. A. McCready; Treasurer, Mr. F. Habart. The club prides itself on having secured the services of Mr. Evans as presidents, as no effort will be spared on his part to make it a big success. About 25 names are already on the list, which looks fair for the start.

BROOKLYN, Dec. 26.—The final shoot of the last half year was held by the Diana Sportsman's Club, at Bay View Park, South Brooklyn, to-day, the shoot having been postponed on account of the holidays from last Tuesday by order of the president. The members try their skill at glass balls as well as at bluerocks, and are divided into two classes, so that the less experienced shooters also have a chance of winning a prize. In the bluerock shooting the shooter winning the medal the greatest number of times during the six months is declared the winner, while in the contests at glass balls the member breaking the largest aggregate captures the prize. M. Winchester carried off the honor in the first class, and also winning the gold medal for bluerock shooting with three shoots, in August, November and December. In the second class, C. Medler won the silver medal with a total of 16 glass balls broken. The gold medal went to C. Ring, who won the bluerock shoots in July, October and November. Thursday's results were as follows: Shoot at 10 bluerocks:

H Brower	6	M Winchester	6
C Medler, Jr	5	A Batty	5
J Koch	4	J Scharff	5

Shoot at 5 glass balls:

P Adamki	3	M Winchester	4
C Medler, Jr	4	H Brower	3
J Koch	4	J Scharff	3
A Batty	2		

The two sweepstakes which followed were won by Batty, Brower, Scharff and Medler.

DAYTON, O., Dec. 24.—The Dayton Gun Club was in the field again to-day for a team live pigeon shoot, McDonald and Heikes captains of the rival team of five men, George W. Knecht referee, ten pigeons to each man, five traps, association rules.

McDonald	1111110110—8	Heikes	1011111111—9
Racon	1111101001—7	Buntain	0101100010—4

Tippy	0001011101—5—31	Colt	1111111011—9—40

CLEVELAND, O., Dec. 21.—The much-talked of and long-expected match shoot between Dayton and Cleveland shooters came off yesterday with Cleveland on the top of the heap. The Cuyahoga county shooters won the match, but by a majority of six birds only. The race was almost too close for comfort. The Cleveland shooters and Rolla Heikes, who represented the Dayton Club in the city, shot on the grounds of the East End Gun Club. The day was perfect for shooting and the traps worked perfectly. The scores though high are not so high as were made in former practice shoots. Two of the East End's best men did not arrive until after the shooting commenced and this fact cut down the majority for the Cleveland team. In Dayton, too, every condition was favorable for good scores but, for some reason, the Daytonites did not do as well as was expected. This can be accounted for by the fact that the Dayton club in its practice shoot has set its traps to throw a slow-flying, lazy bird, only one trap throwing the bird as far as prescribed in the association rules. The full scores of the Dayton and Cleveland shooters follow:

The Cleveland Scores.

*Shot in Dayton. †Shot in Cleveland.

BROOKLYN, Dec. 27.—The Crescent Glee Club held its regular monthly shoot at the Dexter Park to-day. Although the wind was at times quite strong and the birds good flyers, the scores made were fair, especially in the sweepstakes which followed the club shoot. Long Island rules, gun below the elbow and first barrel only, governed. L. Hopkins won the club shoot with five killed, Bolton was second with four, and W. Gilman third with three. In the first sweepstakes Smith and Hopkins tied for first prize, the other four for second. The prizes were pooled for a purse, which was increased by additional stakes of the four men who tied for second money, 50 per cent. to go to first, 30 to second, and 20 to third. Schultz won on three straight, Smith outshot Hopkins for second, and Gilman took third.

In the third sweepstakes Smith and Schultz were tied for first place, Smith ultimately winning with a clean score of seven.

KANSAS CITY, Mo., Dec. 28.—Jim Elliott, of this place, and J. A. Ruble, of Beliot, Wis., shot a match here to-day for $100 a side. The former conceded Ruble 25 dead birds. Each used a 12-gauge gun, at 28yds. A poor lot of birds and a strong wind across the traps made the birds very slow. This is the first match Ruble had shot, and some of the boys thought he showed a little lack of nerve. Mr. C. W. Budd, of Des Moines, Iowa, acted as referee. Under the rules of the A. S. A. the score stood:

J A R Elliott	1112101011221111211111—	24
	1101210111021112222211—23

	1111111111111111111111111—25—90	

UNSER FRITZ.

WELLINGTON, Mass., Dec. 28.—To-day's shoot was a remarkably good one, both in attendance and in the scores made. In the pitcher match, Perry shot a new gun for the first time, and captured the pitcher for the day with a clean score of 15. The other scores of 8 and over were: Webster, 14; Lee, 13; Schaefer and White, 12; Eager, Roxton and Bond, 11; Bacon, 10; Field and Edwards, 9; Short, Chase, Dill and Porter, 8 each. In the other events the first winners were: Five pigeons, Chase and Cowie; 6 bluerocks, Cowie; 5 bluerocks, Chase; 6 single bluerocks and 2 pair bluerocks, Eager; 10 bluerocks, Eager; 10 bluerocks, Chase; 10 bluerocks, Eager, Field, White and Bacon; 10 pigeons, Eager, Schaefer, West and Perry; 10 tin birds, Chase; 6 bluerocks, Lee, Eager and Perry; 8 pigeons, Webster, Roxton and Perry; 10 bluerocks, Schaefer, Edwards and Roxton; 5 pair bluerocks, Webster; 10 tin birds, Eager, Chase and Field; 10 bluerocks, Chase; 10 pigeons, Chase, Bond and Field; 10 bluerocks, Keystone, Roxton, Bond and Perry; 10 pigeons, Porter and Chase.

BALTIMORE, Dec. 17.—The death of Mr. Henry D. Harvey today removes a well-known Baltimore merchant. He was seventy-six years of age. He was a partner of the once famous firm of Hopkins & Brothers and which for many years conducted a large wholesale grocery business. The firm used to handle quantities of shot, and in this way he became interested in the Merchants' Shot Tower Company, which owns the mass of bricks, 234 feet high, at the corner of Front and Fayette streets. He was elected president of the company some years before his retirement from the grocery business, and continued to occupy the position for about thirty years. He became very well known to merchants in Maryland and the South, where most of the shot made at the tower was sold. In 1878 the old machinery inside the tower caught fire and transformed the structure into a huge blazing torch, which was watched by a great crowd of curious persons. The machinery was entirely burned out, and, under Mr. Harvey's superintendence, was replaced with that made after the latest and most improved models. The tower was built in 1828 by the old Phœnix Shot Company, whose name was afterward changed to the Merchants'. Its remarkable height and round shape, sloping slightly from the bottom, have made it one of the conspicuous objects familiar to all Baltimoreans. The first shot tower in the city was built five years before the Merchants', on North Gay street, above Fayette, under the direction of Colonel Joseph Jamison, but was taken down in 1845. It was 187 feet high. Another tower, on South Eutaw street, was removed in 1851, and the bricks were used in building five warehouses. The tower still standing is forty feet in diameter at the bottom and twenty feet at the top. The brick work, which commences at the surface, is four and a half feet thick from the ground up to a height of about fifty feet, when it diminishes four inches in each story. The parapet which crowns the summit is three feet high. The tower is used for dropping shot in the process of manufacture.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

HULL Y. C.

THE Hull Y. C. has at last resolved to build a club house suitable to its wants, and the money has been raised, the ground purhased, and the plans prepared for a very complete and elaborate house. The new site is on the Moody Merrill and Tower properties, lately purchased by the club, near the present house.

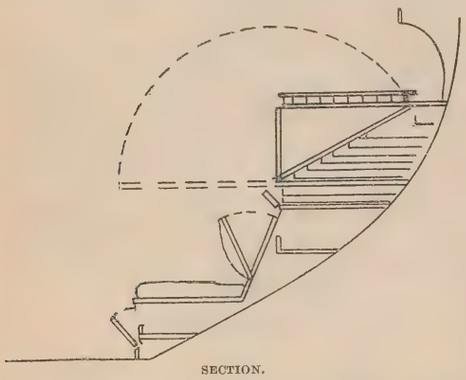
The club house proper will measure 50ft. on its front or water side, and 55ft. in depth. There will be a piazza on three sides of the two upper stories, and possibly the upper one will be continued on the land side. The house will be set in the midst of a platform having a frontage of 100ft. and depth of 81ft. The platform will be surrounded on three sides by a sea wall. The house will rest on foundations which are entirely separate from the sea wall, and will go down below the beach level. There will be a space of at least 15ft. between the wall and the piazzas, which will be used as a garden. The upper or hall floor will be reached from the street by a bridge, which will lead to the piazza and a lobby at the northeasterly corner of the house from which a door will lead into the hall, which is somewhat larger than the present hall in the house on the Hull pier, being 39×49ft. Ample doors will open upon the piazza, and will be so arranged that they can, upon the occasion of receptions and dances, be thrown up and out of the way, making the piazzas, which will be about 10ft. wide, practically a part of the hall. A retiring and toilet room for ladies leads off of the corner opposite the lobby. There is also a small room between the lobby and the stage connected with the ladies' retiring room by a passage behind the stage. The stage itself will be 24×10ft., and with the rooms and passage will give ample facilities for the production of entertainments. Leading from the lobby a flight of stairs will take one to a small hall on the next story, and continuing straight on one goes down still further to the platforms. From the hall on the left a member's door will lead into an inner hall 8ft. wide and about 35ft. long.

On the right side of this hall will be the billiard room, 40×23, accommodating three tables, having a toilet room leading from it in the corner. Beyond the billiard room and overlooking the bay is the card room, 10×15ft., and a smoking room, which is also a continuation of the hallway, about 12×16ft. This latter has an open fireplace and will be a most cheerful place. Next to this room and in the southeast corner of the house is the reading room, 15×17ft., which with the dining room, which comes next, has an open fireplace. The dining room is 17×20ft., having a butler's pantry off from it of 7×16ft. A cook room under the upper stairs 8×11ft., completes the arrangements of this floor. From the long hall stairs lead to what might properly be called the mezzanine floor, as while there are two floors below the lower piazza, the architecture so makes it that the house appears to be but three stories. The stairs bring one to a gallery, from which you look down on to the ground floor. Leading from this gallery are a kitchen and pantry immediately under the butler's pantry and coat room, a janitor's room and about 30 lockers from 3 to 4ft. wide and 7ft. deep. Two flights of steps lead from the gallery to the floor, and here are a storage room 6×14ft., a bath with shower and tub, a toilet room, a waiting room for crews and about 25 lockers similar to those on the gallery floor. On the west side, and taking the height of both locker floors, is the bowling alley. The alley is 72ft. long and has two alleys. Stairways will lead from the lower piazza to the platform.

The Merrill cottage, near by, will be fitted up with sleeping rooms for members, and if the experiment proves successful, permanent dormitories will be built next year.

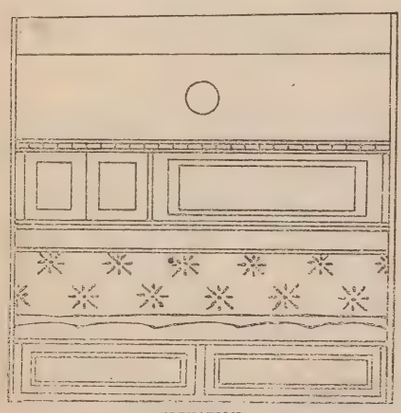
A NEW SINGLE-HANDER.—Messrs. Douglas & Co., of Waukegan, Ill., have lately added to their list a new single-hander, a combination of keel and centerboard. She is 21ft. over all, 15ft. l.w.l., 6ft. beam, 3ft. draft without board, 5ft. draft with board, least freeboard 15in., overhang at each end 3ft., displacement 3,500, keel 600lbs. if of iron, 900lbs. if of lead. The little yacht has the sheer plan of the 40ft. Tomahawk, while the board is long and narrow, being entirely out of the way. There is a cabin with two lockers for sleeping, and 3ft. headroom above each. The rig has a large mainsail only.

YACHT HARDWARE.—Yachtsmen and canoeists who are contemplating any changes or additions to their craft will find everything which they may require fully described in the catalogue of L. W. Ferdinand & Co., of Boston.



ATLANTIC Y. C.—This club proposes to build a new club house on its present bulkhead, and bonds to the amount of $20,000 will be issued to cover the cost.

SEA FOX.



THE accompanying drawings show the interior arrangement of the handsome schooner Sea Fox, whose lines were published in the FOREST AND STREAM of April 5, 1888, and sail plan on June 14th of the same year. Sea Fox was designed by her owner, Com. A. Cass Canfield, of the Seawanhaka Corinthian Y. C., for such mixed racing and cruising as the season affords in our waters; for both of which uses she has proved a complete success. Beside the reputation which she has made for speed in the past two seasons, she has been in commission throughout the whole of each season, cruising to Halifax in 1888 and to New Foundland this season. The size of the Sea Fox, nearly 90 ft. l. w. l. by 23 ft. 8 in. beam, together with her build, the hull being entirely of mild steel, gave a large amount of room compared with the ordinary centreboard vessel of wood; and by very careful planning this space has been thoroughly utilized, not only for the comfort and convenience of the owner, but of the officers and crew as well. While the owner's apartments are roomy and elegant, there has been no attempt to gain space there by crowding in other departments, but the interior has been laid out from a sailor's standpoint, giving ample space for the crew, the galley, and stores for cruising. The depth of the yacht, together with the absence of the bulky futtocks and keelson of a wooden vessel, give a large hold for the entire length, adding greatly to the stowage capacity.

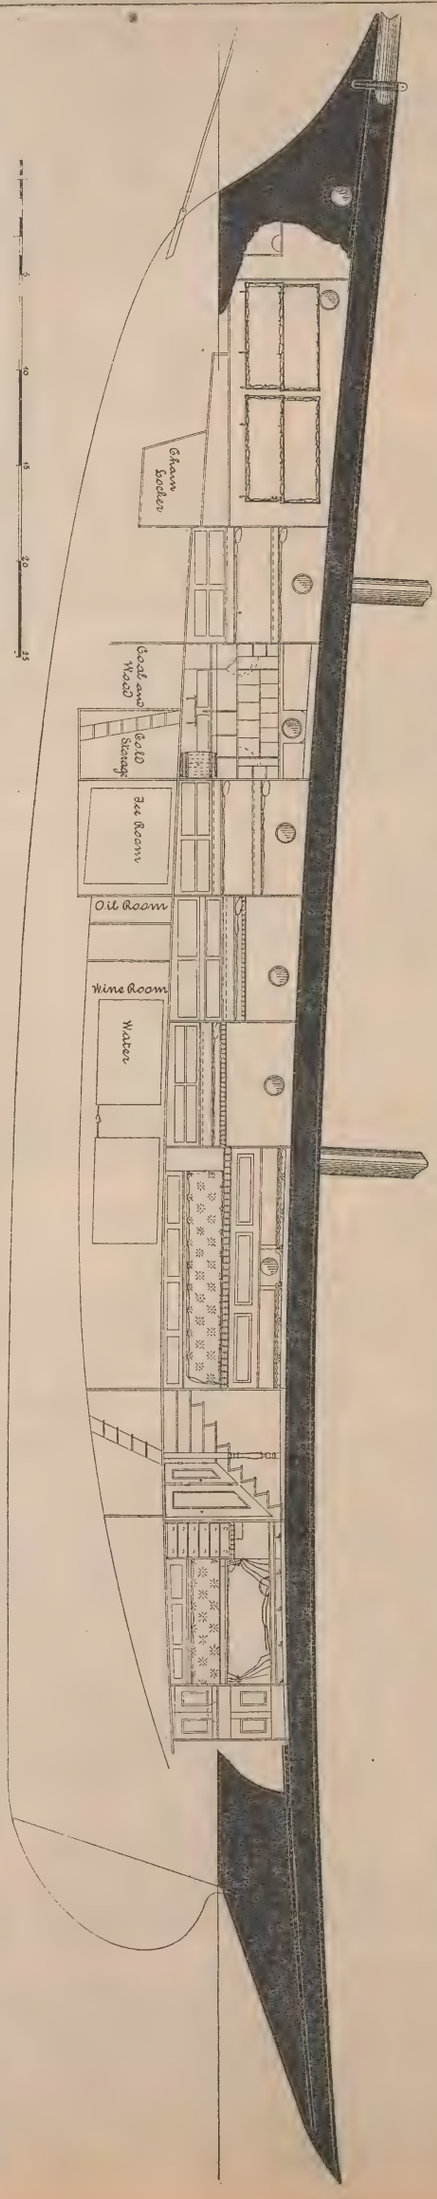
The entrance to the cabins is by way of a wide winding stairway, leading down from a handsome companionway of teak, and opening on a passage on the port side; the forward end of which leads to the main cabin. This is a room about 12ft. 6in. long and 22ft. wide, with nearly 7ft. headroom. The joiner and cabinet work is all in quartered oak, with trimmings of oxydized brass. On the port side is a long sofa, at the head of which is a buffet. The fireplace and mantel is on the after side, while the octagonal casing of the mainmast forms the center of the foreside. On the starboard side is a second large sofa, broken in two by a writing desk. This is shown in the plan only, the elevation representing the port side reversed. The center of the room is occupied by a large extension table, while in the forward corner on the starboard side is a small breakfast table. This latter is fitted with extension leaves, and also with a very ingenious arrangement of levers and weights, making an improvement on the ordinary swing table.

Opening aft from the main cabin on the starboard side is a stateroom 8ft. long, with washstand, bureau, a wardrobe under the stairway, and a shelf and lockers at the foot of the berth. On the opposite side of the stairway is the steerage and chart

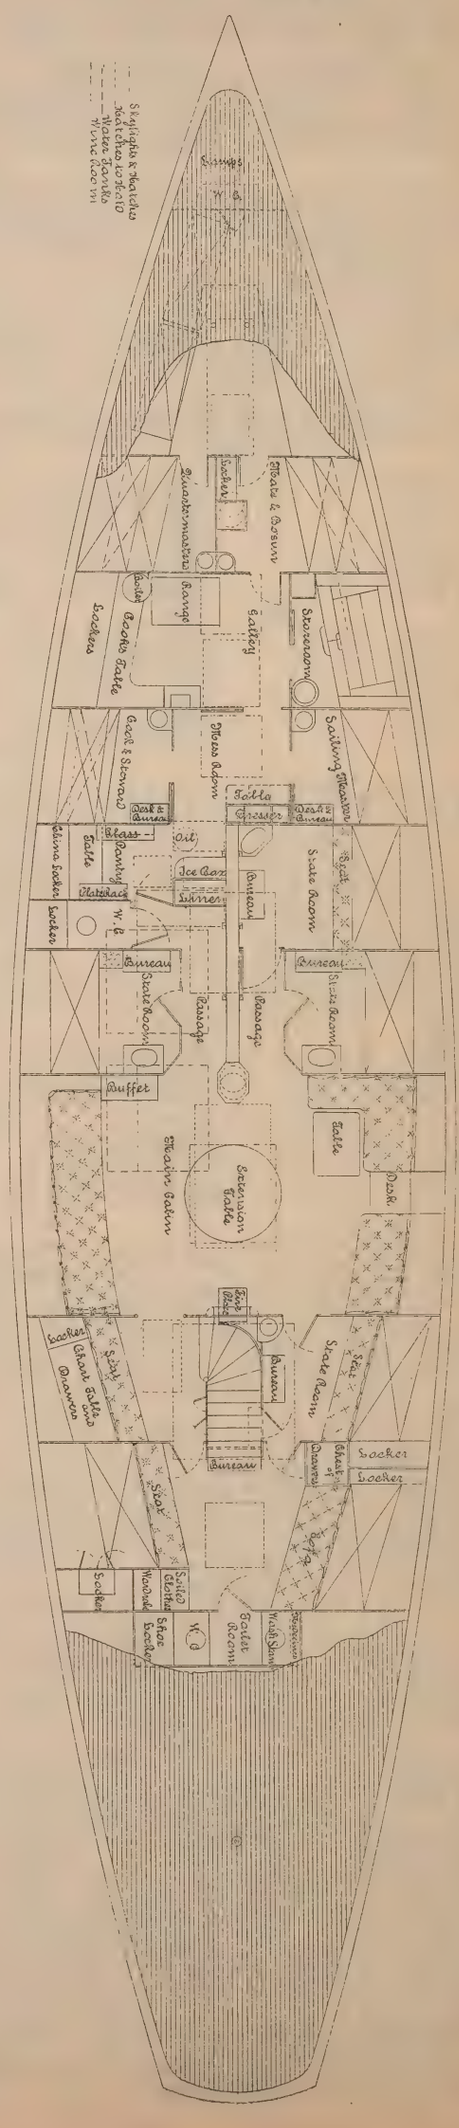
SECTION.

ELEVATION.

CHART CABINET.



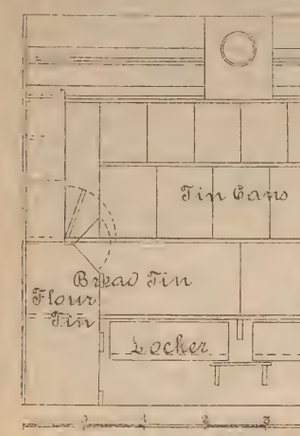
room. Beneath the stairs are two closets, one for deck lamps, and one for oilers and boots. Back of the sofa is a very complete chart cabinet, the details of which we give on a larger scale. Below the sofa is a long locker, the front opening, for rolled charts, etc. Immediately back of the sofa are two large drawers, 6ft. 6in. long and 2ft. wide. Above these is a sloping front, similar to that of a secretary, which opens and forms a wide table. Within is a series of five drawers and a shelf for charts, with a narrow shelf above for scales, rulers, etc. This portion of the cabinet is 4ft. long in the clear, leaving a locker 2ft. 6in. wide for nautical instruments. The top of the cabinet forms a large shelf, with a sidelight above it. The whole arrangement is most convenient, as the charts are easily accessible from the deck without risk of soiling carpets and cabins with wet clothing; and they can be kept flat and are readily opened; while the wide table allows a large chart to be used easily.



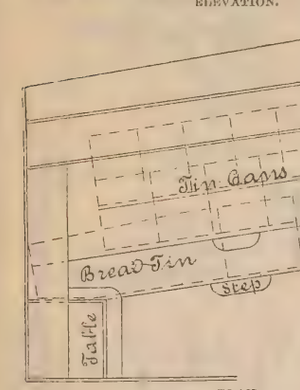
The after cabin was fitted up by the owner for his own use. The space between the doors is filled with a desk and bureau in one; and on the starboard side is a chest of drawers, on which is the chronometer case; at the head of the berth on the same side is a shelf and lockers. On the port side the lockers are at the after end of the berth; a large closet with doors, a hanging wardrobe, and a low locker for soiled clothing. In the center of the after bulkhead is a cheval glass, set in a door which opens into the toilet room. This is fitted with a w. c. on port side, behind which is a shoe locker, and with a washstand on starboard, with a medicine closet above. The steerage is finished in teak and the after cabin in black walnut.

The fore side of the main cabin is very cleverly arranged to give as much apparent room as possible, there being no doors but a passage way on each side of the centerboard trunk, making the cabin longer in appearance than it really is by about 9ft. The corner of each of the forward state rooms is cut away as shown to harmonize with the octagonal casing of the mast, the same oak panelling being continued in each passage way. On the starboard side are two large state rooms, the after one lighted by a window in the side of the passage. The forward one has an extension bed that may be made wider at will. The after state room is duplicated on the port side; forward of it being the toilet room and steward's pantry. The linen press forms the forward end of the passage, to the left being the door of the steward's pantry.

This room is fitted up with a table, china locker, plate rack, press for glass and silver and a small refrigerator with a folding table. The mess room is entered from the steward's pantry and is fitted with a dresser and folding table. On the starboard side is the sailing master's room with desk and bureau in one; and on the port side there is a room for the cook and the steward, similar to the other, but with two berths. This latter room is shown reversed in the elevation.



Forward of the mess room is a large and complete galley, with a store room on the starboard side. The range and boiler are placed against the fore bulkhead and the table and lockers are on the port side, the former extending around to the sink. High on



INTERIOR OF SCHOONER "SEA FOX," DESIGNED BY COM. A. CASS CANFIELD, SEAWANHAKA CORINTHIAN Y. C.

the bulkhead, above the sink, is a hopper with a pipe leading below the waterline, by which all slops may be emptied direct without being carried over the deck. The store room is very conveniently fitted, as shown in the larger sketches. Around the three sides are five tiers of shelves. On the first shelf is a large bread tin, with two large tins for beans and peas. In the forward corner is the flour tin, with a hinged shelf above; and in the after corner is the harness cask, with another hinged shelf, each forming a table. The three shelves along each bulkhead are fitted with cannisters and boxes for various dry groceries. The outer side of the room has two shelves fitted with large tins, the lower shelf holding five and the upper six tins. These are used for sugar, rice, oatmeal, etc. Beneath the lowest shelf are two lockers for canned goods, with extra space on the highest shelf, while the deck beams are provided with hooks for smoked meats, etc. Forward of the galley is a room for the mate and boatswain on the starboard side, and on the port side a room for the two quartermasters.

ELEVATION.

PLAN.

STORE ROOM.

The forecastle is large and airy, with hammock berths for six men, four on port and two on starboard; beside which are ample clothes lockers. The forepeak is fitted for a lamp room, and also contains the crew's water closet. The arrangement of the lower hold is as follows: Chain locker under forecastle, paint room and boatswain's storeroom under mate's room, quartermaster's stores under quartermaster's room, coal and wood under fore side of galley, the ice room is under the mess room, and only accessible from it, but beneath the after side of the galley is a cold storage room, entered from the galley by a hatch. This room is partly surrounded by the ice room, and is thus always kept cool, while the waste of the ice through the frequent opening of the door is avoided. Beneath the steward's pantry are the oil and wine rooms, and under the staterooms and main cabin are the water tanks, with extra stowage space for trunks, boxes and spare stores of all kinds, including sails and cordage. It is impossible to give any idea of the details of finish and furniture without elaborate drawings; but the finish of the yacht throughout, though rich and elegant, is of a substantial and serviceable character that is perfectly in harmony with the uses of a seagoing yacht.

GOOD RESOLUTIONS.

AS this is the season of the year when clubs, like individuals, may be presumed to lay in a stock of good resolutions, the opportunity seems fitting for some easily-made but important changes on the part of several clubs. The recent agitation of the measurement question has resulted in the adoption of the same rule of measurement by three of the principal clubs; a result which, apart from all question of the merit of the rule, is a substantial advance in the direction of a uniform system of measurement, classification and racing rules. The question of various changes has been agitated in several other large clubs, and nearly all the clubs now have committees appointed to consider all matters of measurement in connection with the committees of other clubs.

The necessity of uniform rule is now generally admitted, and at the same time the form of length and sail area rule now used by the New York, Seawanhaka and Eastern clubs has been proved by seven seasons' use to be at least a safe and moderate rule, with nothing dangerous or radical about it. The rule is one that can be easily and safely adopted by all clubs racing cabin yachts of any size; and if generally adopted the result must be uniformly beneficial, especially to those in charge of the racing.

There is no reason why a yacht which races in the New York, Eastern, Larchmont, Seawanhaka, Atlantic and Corinthian clubs to-day should have more than one official measurement, be in more than one class, be measured by more than one or one of two measurers, or sail under more than one set of sailing rules. The changes of the details of measurement have improved the rule. And with the calculation of the allowance table to tenths of a foot, as will be done with New York and Seawanhaka clubs, the whole application of the rule is very simple. The extension of the allowance table is a very important step, greatly lessening the work of computation; and with but one rule for the measurement of all the yachts of the Atlantic fleet, a great deal of the work of managing the racing will disappear.

It should be possible now, at a conference of the committees of all the large clubs, to agree on the rule, the method of measuring, the classes and the allowance table of the New York, Eastern and Seawanhaka clubs; to arrange a system of sailing rules that would be acceptable to all the clubs; and also to settle on some uniform system of starting signals and intervals; thus removing one great source of confusion. It is not necessary that any one method of starting shall be made compulsory in all races, some liberty may be left to the regatta committee; but if one uniform system were indorsed as the standard, (for instance, 10 minutes preparatory and 5 minutes to cross the line) it would be followed in all great races. At present the intervals may be 10 and 5 on one day and 15 and 10 on the next.

While there are many little differences in all details of racing regulations in the various clubs, there are very few important points of difference, and by a little united action at least the five largest clubs might agree on a uniform set of racing regulations; the same, in addition to appearing in each club book, being printed in a small pamphlet, which would give a man all the information he could require about racing rules. Such a book would at once become the recognized authority, and its rules would be generally followed by the smaller clubs. We are by no means satisfied that the measurement question will rest where it now is, with the Seawanhaka rule and a length classification; but neither the friends nor opponents of the latter can object to doing thoroughly and completely the work that has been undertaken. By a general adoption of the rule of the New York, Eastern and Seawanhaka clubs, its merits may be very thoroughly tested in a couple of seasons, and the clubs which have worked under it will be in a position to consider carefully any proposals for a change; and if any be adopted it will have the support of a number of clubs. In this way the danger of hasty and premature changes on the part of one or two clubs is greatly lessened, and the chances are greatly increased that when another change is made it will not only be a very good one, but will be adopted for a term of years which shall insure a thorough trial.

The question of classification by corrected length is one that yachtsmen have hardly become acquainted with in the brief crusade that has been made in its behalf this fall. It is by no means dead, and it is most important that something more should be learned of it from actual trial as soon as possible. The suggestion was made to us by Mr. J. Beavor Webb about a year ago that the 40ft. class should be made a trial class, with a limit of 48ft. corrected length in place of 40ft. waterline length. The idea is a good one, and though it could not be applied to the 40ft. class, it might to the 30ft., or if not, to a new 25ft. class or 30ft. corrected length.

If half a dozen of the clubs which race 30ft. yachts, the Seawanhaka, Eastern, Atlantic, Larchmont, Corinthian of Marblehead and some others, would establish a class of about 30ft. corrected length and guarantee a certain number of races during the season and good prizes, there would be a large experimental fleet built and raced, from which much might be learned. If the vested interests in the present 30ft. class were opposed to such a measure, the experiment might be tried on smaller scale, in New York and Boston separately, as such boats would hardly go around the Cape, by a new class 50ft. corrected length, which would include from 24 to 28ft. l.w.l. Such boats could be cheaply built, but a fleet of them, with plenty of racing would settle the question of the prevailing type under the proposed classification. The matter is important enough to be worthy of the attention of the largest clubs and the owners of the largest racing yachts, as all have a vital interest in the question.

FEARLESS.—The little craft Fearless, whose departure from Chicago on Nov. 4 was lately mentioned in our columns, reached New Orleans on Christmas Eve; her crew, Messrs. B. T. Ball and W. C. Brainard, being well. The *Times Democrat* describes the boat as follows: "The Fearless is a well-constructed boat, built on the lines of the best class of steamers' long boats and capable of carrying twenty persons safely. In her present rig more attention has been paid to comfort and safety than to an ideal yachting appearance. Extra oak frames have been added, and all precautions used to prevent injury from the dangerous salt water insects, which attack the submerged parts. A tough white cedar spar and booms combine stiffness and strength with lightness. The dimensions of the Fearless are, 23ft. long, 6½ft. beam, and about 2ft. draft. The area of canvas, including light sails, is about 150yds. The sails consist of a mainsail, jib, spinaker for light winds, and a storm trysail for heavy weather. Her speed under favorable circumstances will be about nine knots an hour. The cabin is 12ft. long, 4ft. high, and 6ft. wide. Running athwartships, at the forward end of the cabin, is the locker. It is a capacious compartment, and stored therein snugly, and everything in its place, are compasses, leadlines, charts, spare tiller, guns, revolvers, fishing tackle, flare lights, torches, marine glasses, speaking trumpets, fog horns, distress signals, medicine chests, and the like. The commodore and captain will spend ten days in New Orleans, as it will take that time to prepare the Fearless for rest. From Chicago the Fearless sailed through the Illinois and Michigan Canal on Nov. 4 at 1:30 P. M., thence down to Grafton, where the Illinois and Mississippi rivers meet, thence down the Mississippi. The gentlemen stopped at St. Louis, Cairo, Memphis, Vicksburg and Natchez, where they were most hospitably entertained. From here they will go to the Florida coast, and passing down the peninsula they will visit Cuba and thence go to Yucatan and to Central America." The expedition was fitted out by the Chicago *Inter-Ocean*.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: HENRY STANTON. } New York.
Secretary-Treasurer: F. L. DUNNELL. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..Geo. A. Warder....E. L. French.....F. F. Andrews, Exchange place, Rochester.
Eastern Div..Dr. J. A. Gage.....A. S. Putnam.....Ralph Brazer, Lowell, Mass.
N'thern Div..W. J. White.....W. J. Read.....C. M. Whitelaw, Montreal, Can.
Atlantic Div..M. V. Brokaw.....I. V. Dorland.....W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application on by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

1,500 MILES IN AN ADIRONDACK BOAT.

PART I.

THE cruise whose story is told in the following log is the longest of several made by the writer in the same boat, an ordinary "Adirondacker," 14ft. long, in 1883, '84 and '85. It occupied nearly two months of the fall of 1884, in which time a distance of about 1,500 miles was covered by oars alone, no sail being carried. In preparation for a previous cruise in 1883 I sent to Newcombe Settlement, in the New York wilderness, for a boat which my father had had built for me some five years before. As soon as all my plans were mapped out, I wrote to have the boat, the yoke, the detachable middle seat, two paddles and the oars, boxed up and shipped to me with all dispatch, and it arrived in good order shortly before my first trip. It is of the regular "Adirondack" model, sharp at both ends, light draft, and similar to a wide canoe, the length being 14ft., and beam about 3ft. It is rowed by pivot oars, from the bow when two or three persons are carried, and from amidships when one constitutes the crew. The boat is intended principally for paddling from the bow or stern, and the oarsman's seat is not in the proper position, and the speed when rowed is about equal to that when paddled by an experienced hand. It was specially designed for roughing it in the North Woods, where I have taken it over almost the whole region, killed deer from it, caught trout and traveled by day with its aid, frequently using it for shelter, and carried it miles through the forest. The planking is but $\frac{3}{16}$in. thick, smooth lapped, with neatly fitted joints secured by screws. The materials are cedar and pine, and the boat, though once painted anew, has never been repaired, notwithstanding it has gone through rougher experiences and more trying ones than perhaps any boat of its kind. The bottom is shod with strips of steel by way of protection in shoal water and in beaching. The floor is rounding, and the boat is somewhat crank, though steady when properly handled, while it will carry a very large load. I was careful, before starting on each of my cruises, to have the boat well soaked to tighten the seams. My attire was simple; blue shirt, stout cavalry knickerbockers, and serge jacket, both blue, high-laced watertight shoes and buckskin gloves for the protection of my hands. A trip of over 500 miles in 1883, over the rivers of Pennsylvania and Chesapeake Bay, had proved the qualities of my little craft; but in view of a longer voyage on more open waters, she was fitted with a complete deck of canvas, with a copper air tank in the bow, and on May 29, 1884, I started on a short preliminary cruise or trial trip to test the boat in rough water.

The start was made at 7:30 P. M. from the little boat house below the Falls Lane bridge on the Schuykill River, at Philadelphia. With a blanket or two, a poncho, rubber coat, air cushion and ample provisions for several days, I rowed down the quiet Schuylkill, the light rapidly waning as Fairmount Dam was reached. This 3½ miles passed, I was soon descending in the lock around the dam, and a minute later the canoe shot out into tide water. The 8-mile row from the lock to the Delaware River was without event being rather tedious withal. The only light I had was from the numerous illuminations on bridges, ships, and from house to house along the river through the city. Twice I ran aground, as the stream made some sharp turns, and it was difficult to distinguish the mudflats from the water. The river was reeking with escaped oil from the Standard Oil Company's burning works near Gray's Ferry Bridge, which was exceedingly disagreeable.

I reached the Delaware about 10:30 P. M., having gone half a mile out of my course, and being detained some little time in the lock and in running aground, etc. I made for a light not far off, but was refused permission to "tie on." Rowing half a mile further on another schooner appeared, but the watch informed me that they would leave at 2 or 3 A. M. Finally I found a vessel near the old fort at the mouth of the Schuylkill River, and tied to her rudder. A rain coming on I quickly slid under my cover, and pulling a roll of canvas over the well from the outside could hear the rain pelting down within two or three inches of my face, and trying vainly to effect an entrance, which afforded me much satisfaction. I spread my blankets and was soon fast asleep, lulled by the gentle motion of the boat on the water.

At 1 o'clock I was awakened by a light shining through my deck, and by subdued voices, evidently discussing me in awed whispers. Fearing a missile I popped my head out and reassured two men who were endeavoring to make me out. The disturbance was caused by the bumping of my boat against the other, as the tide had turned. This noise sounded so loud inside that I cast off and rowed an eighth of a mile away, running up into a lot of weeds, and so sleeping until morning.

Below Mouth of Schuylkill, May 30, Friday.—The crows and marsh hens woke me about 5 o'clock, when I pulled out from the swamp, starting up a wild duck or two on the way, and made my toilet from the boat. Shaking out my bedding and stowing all away, I rowed to the fort and had my coffee-pot filled with milk, breakfasting well on this with some mutton, etc., out in the river; then, after a few minutes rest, I started off about 7 A. M. down the Delaware. The morning was pleasant and cool, but the wind, which soon became heavy, was against me all the way to Chester. Considerable water from the choppy river slopped over, but not more than enough to keep my canvas deck moist. I passed the long islands midway to Chester, and about 12 M. made Claymont. Putting in here, I called on my aunt for a few minutes and then went on. I rowed steadily until opposite Wilmington, Del., when a steamer passed close to me and some young ladies on the upper deck waved their handkerchiefs to the lonely voyager, which was quite cheering. I ate some chocolate, and drank some milk to their healths, then went on. The waves were quite high and made the rowing tiresome. I passed all sorts of craft, and generally had a chat with the men aboard, keeping in the middle of the river below Wilmington to Newcastle, with a mile and a half of water on either side. In an hour or two more I was opposite Newcastle, and could just discern Fort Delaware on its island over an expanse of eight miles of water. The river widens so much here, and the distances are so great, that I mistook my direction, running two miles out of my course before being warned by some fishermen concerning the right direction. The tide, as well as the wind, set pretty strongly against me, and I had much difficulty to reach Delaware City before 2:30 P. M. It seemed at one time as though I should never get there, as the wind blew me away across the bay. Finally, after some hard pulling, I ran up into a small cove near the little hotel, and secured my boat, having rowed 44 miles since morning.

I was well tired out, not having exercised in this way since the previous fall, but I had a good shad dinner and a little practice on the piano, both of which are good remedies for exhaustion. Then, inquiring about the weather, distances, etc., I pulled down on the bay for Bombay Hook. Owing to the curvature of the shore line I was compelled to keep within a mile or two of the Delaware shore, making nearly five miles extra distance to be traversed. The country below Delaware City is flat, with fine beaches along the bay, and some pretty pieces of woodland. I saw a few flourishing farms, but the country was sparsely settled. Just below Reedy Island I passed Port Penn, a very beautiful little village with one church spire; and further down Augustine Pier. I rowed by several schooners engaged in sturgeon fishing south of Port Penn. The evening was beautiful, and I could see the sun, like a ball of red fire, descend clear to the horizon; the country being so flat and the air so clear. The reflection of the western after-glow on the bay was very fine; the wind had gone down entirely, but the rollers came in from the Atlantic in long undulations. I rowed within a mile of the winding shore until after sunset, but as evening came on I hugged it closer. No houses, nor the sign of any living thing, could be seen thereabouts; the shore consisting of sand dunes and hummocks of river grass, while in land were extensive marshes. I pulled along this shore until the moon rose, trying to make some inlet. Failing in this, and wishing to get ashore before night, I ran ashore near a United States signal, which was the only thing which broke the monotony of the landscape. Jumping out into the surf, the boat was run up above high water mark. From the top of the dune I discovered a clump of trees about a mile off, and what appeared to be a house. Taking my tea-pot therefore, I walked across the marshes and came out on a huge peach plantation, extending as far as one could see. The people were rough but hospitable, and having obtained some information about the country, crops, etc., I returned to the boat. I was told that Smyrna was the nearest town, and the railroad was twelve miles distant. Three will-o'-the-wisps accompanied me for quite a while, and the swamps were very dreary. I took a swim in the bay and then made a hearty supper, watching two or three coons which came out on the beach. As the tide went down the moonlight lit up the wet beach very prettily. The night was quite cool and I kept under cover, excepting head and shoulders, while eating supper. The land on the opposite side of the bay is from ten to fifteen miles off, while none is visible on the southeast horizon. About 10 P. M. I ducked under, and making all tight, fell asleep. This point is about fifteen miles from Delaware City, making in all fifty-nine miles row for the day, the longest consecutive run I ever made.

Delaware Beach, May 31—Saturday.—About 6 o'clock I was aroused by the waves breaking within a few feet of me, the tide coming in. I had breakfast, and about 7 o'clock launched my boat, which twice nearly capsized in the breakers, and rowed on against a brisk wind. The country looked very pretty indeed and quite luxuriant. There were a few bays and indentations on the shore, but I cut across several, keeping about one mile from the shore on the average. After an hour's hard rowing Bombay Hook was sighted, which drew near very slowly, as the wind and waves were against me. Arriving opposite a little hotel, the only building in sight, I ran alongside of a large vessel anchored off shore, engaged in sturgeon fisuing, and had quite a long chat with the hands on board, who took considerable interest in my boat and cruise. I had come 5 miles from the bivouac of last night and 76 miles from Philadelphia (home). Rowing ashore, I ran on the beach and took a swim out to the schooner again, where I lent a hand at hoisting the mainsail and anchor. As she came around into the wind I dove off and rejoined my boat.

After a light lunch I started on the return trip, attempting to make Reedy Island Light, 12 miles across the bay, this being a more direct route than when coming down, but the waves by this time had become so threatening that I had to keep nearer shore. The apron was fastened securely about my waist before venturing out and the deck "cleared for action." The waves were tremendous, and it was all that I could do to row in them and keep from capsizing. It was like being on the side of a steep hill at times, and I could not discern any object ashore when in the trough, the wind coming directly from the ocean and having a long sweep. The roaring of the water as the waves broke was very loud, and oftentimes I had a very narrow escape from them. Two huge rollers broke just before reaching the boat, drenching me completely. The decking worked like a charm and no water entered, though frequently it would dash clear over the boat. I had a great tossing around, and could scarcely keep my seat. After several hours of this I passed Reedy Island well played out, and reached Delaware City about 3 o'clock, where the people seemed to regard me with much astonishment. Several large ships were crossing the bay under full sail, and fine sights they were.

Another shad dinner here, and about 4 o'clock I rowed on, making for the western extremity of Fort Delaware Island. I had to row across the wind, an awkward matter; as one oar would shoot high in air on one side when the boat tossed on the crest of a wave, while the other would be buried up to the rowlock in water and become immovable. From the Fort to Newcastle is the worst place, as the river is several miles wide there, and the wind had unbroken sway. However, I passed a mile and a half out from Newcastle without mishap; and rowing within half a mile of the Jersey shore until past Wilmington, made a beeline for Claymont yet invisible, 5 miles distant, but I knew the course,

On the way I passed several fine vessels. As the wind died down toward evening, I began to overhaul the sailing vessels which had scudded by me in the afternoon under flying colors. Beginning to feel very weary in passing Wilmington, I strove to keep up my spirits by singing, the varied sentiments of the songs being heartily indorsed by the sailors whom I passed. I reached Claymont about 7:45, a little before dark after a long interval of steady pulling. My position had been fast growing unbearable for some time, as the water was so rough that I could not shift it or cease rowing. Tying my boat at the foot of Gen. Wister's large pier, I walked to the house. The land felt strangely under foot, it appearing to be rocking about incessantly. They kindly invited me to take tea, but being a little too rough for that I supped in my boat, though spending the evening with them afterward. It was hard work resisting their kind endeavors also to persuade me to sleep in the house, but I conquered my inclination and stuck to the boat, tied up at the end of the pier. From the previous night's camp to Bombay Hook and thence to Claymont, is a distance by my course of 51 miles.

Claymont, June 1, Sunday.—With a pot full of milk from the house, a nice breakfast was made in the boat. The morning was very still and I tarried at Claymount until about noon, when I started on, rowing against the tide up to Chester. The day was very warm, the sun beating down powerfully, and a head tide made the progress very slow indeed. Coming up with a fleet of North German ships at anchor in midstream, and running to the side of the largest, the sailors threw me rope, when I was soon on deck admiring the proportions of the vessel. I had a talk with the old captain in the cabin, spending an hour also in chatting with the sailors, two of whom could speak English, and climbing the rigging. Then, rowing on after leaving most of my eatables with the Jack Tars, I passed Tinicum Island, dining in midstream beyond.

The row thence to the Schuylkill was long and hot, and passed without incident. From the Delaware to Fairmount was tiresome also, and when I came into the city the smells were exceedingly disagreeable. Once there through the lock at the dam, and rowing up to the Falls I reached my destination about 8 P. M., having made from Claymont 30 miles. The log for the trip was: Portion of Thursday 12 miles, Friday 59 miles, Saturday 51 miles, portion of Sunday 30, rowed out of course 5; total 157 miles. Well satisfied with the trial of my boat, I was ready for a much longer and more dangerous cruise, and early in September I shipped her by barge from Philadelphia to Albany, while I followed by rail and steamer.

Albany, N. Y., Sept. 6—Saturday—Landing from steamer Drew at 6 A. M., I walked up the wharf to the Flanagan Line Co.'s dock, and boarding their barge, just arrived, found my boat snugly ensconced on a pile of freight, exactly as I had seen it depart from home three days before. Repairing to the Delevan House, I had breakfast; then unpacking my trunk I donned a flannel rowing suit. The change in my appearance caused some astonishment on the part of the hotel officials, as my costume, though well adapted for my work, was not cut in a fashionable way. Expressing my trunk to Buffalo, I secured a darkey to aid with my numerous traps, and was soon aboard the barge again, putting the boat in working order. I was much amused at the baggage clerk in the hotel; he evidently thought me a mild sort of lunatic upon my ordering him to express my piece through, and not check it, as I intended going by the "boat" instead of by train to Buffalo. Upon removing the canvas covering from the well of my boat, and taking out her varied cargo of bags and traps, more respect for the diminutive craft was evident on the captain's part, as he saw what a load she could contain. Several interested roustabouts aided me in launching, quite a difficult matter from a high-decked barge, and a hearty "good by and good luck" followed as I pulled the first stroke of my long journey at 9.20 A. M.

The tidal rise at Albany is about one foot, and the current was against me. There were so many boats at the Erie Canal lock, just above the New York Central and Hudson River Railroad bridge, a tow having just arrived from New York, that I rowed on up the Hudson to Troy. Immense lumber stacks covered a large area of ground at the entrance to the canal, and masses of freight of different kinds were piled all about the place. The scene along the river was quite pretty, and one could trace the valley of the Hudson for some distance, by the high ranges of hills that flanked the river on each side. I passed a huge tow, making slowly up, and made haste to reach the lock below Troy before it. Six miles from Albany brought me to the upper Erie Canal lock, known as the "junct.on," the Champlain Canal from the north coming in here. After some little difficulty in making the lock-keeper hear me, I entered a high lock which joined another of equal dimensions, the latter ushering me out of tide-water into the Erie Canal, my watery road to Buffalo. This entrance to the Canal is about one mile below Troy.

For two miles the canal ran between huge masses of lumber, seemingly interminable, the level ending in the suburbs of Cohoes, where the outlook was far from interesting. Small boys were too numerous for one's comfort, and their remarks anything but flattering. The next lock was one of a group of 16, the rise being considerable in each. Fortunately I was ahead of the morning tow, and not, therefore interupted. These locks are double, side by side, thus allowing boats to ascend and descend at once. All the Erie Canal locks are similar, excepting those at tide water. The masonry is of a high order, and the canal itself in an excellent condition. The weather was clear, but very sultry, and the rowing laborious, as I had not handled the oars for nearly a year, except in my trial trip in May. Though my pass from Mr. Sweet, the Chief Engineer of the State Canals, was frequently examined, I was not otherwise challenged. This canal is "free," but one would have serious trouble in getting through the locks if not armed with such a letter as the lock-tenders are merciless, and a hard-looking set of roughs. On emerging from one gate a big, burly keeper remarked significantly that he was "dry," whereupon I advised him to jump into the canal; this eliciting a long string of choice oaths. His jurisdiction, however, was passed, and I proceeded unmolested. In the next lock, the one after this, a boy had just been drowned, and as they were proceeding to run the water out to find his body, I had to obtain help to carry my boat around the two following locks. It was suggested by several in a crowd that lined the banks as I passed that I should try and dive for the body, but I declined with thanks.

At the third gate above some more roughs would persuade me that this level also had to be let out; their object being to get a quarter for carrying the boat. As the lockman naturally sided with them, matters did not look promising, but I stuck to my point, and was locked through. Some words with the discomfited took place as I was passing on, and, overhearing a remark to the effect that "That fellow won't get along much further," and observing at the same time several of them walking rapidly ahead, I laid my revolver quietly down by me on the seat. It was in a leather holster, but the shape was apparent, and this seemed to have a due effect, as I was unmolested. These levels were but 100 to 200yds. in length.

I stopped at one of the locks in Cohoes, where dinner was served at a miserable little hotel. Tarrying about one hour, I put off again, soon passing the great Harmony Mills. At the fifth lock from Cohoes I entered on a nine-mile level which commanded a good view of the Hudson Valley, and ushered me into the open country. Albany county ends at this point, and Saratoga county begins. Cohoes is eleven miles from Albany. There was considerable eel grass floating in the canal, which made hard rowing. Two or three miles from the lock the canal crosses the Mohawk on a fine granite bridge half a mile in length, the river below being shallow and full of riffs and small rapids. From this point the canal kept close by the Mohawk, and the view on all sides was beautiful. One could see for some distance up and down the valley, between the long curves on the river. The hills were lofty and rolling, I saw but few houses along the water, but here and there occasionally appeared a small hamlet, every one of which boasted of a mineral spring and each spring advertised as "The best and finest on the Erie Canal." At Crescent, a town fourteen miles from Albany, the canal took a westerly course, having thus far tended in a northerly direction. One mile beyond the lock at the end of this level, I stopped at a small village called Clifton Park, and had supper at an inn. It was a remarkably pretty place of about a dozen families. While sitting on the stoop of the inn, a fine-looking young farmer drove up, and seeing the name on the wagon I saluted him therewith, whereupon he gazed at me, much surprised, remarking, "Well! You've got me." Pointing to the name aforesaid, I showed him how his acquaintance had been made. This was conducive to good fellowship, and it was necessary to decline an invitation to drink.

Starting on again at dusk, I rowed three-quarters of a mile to a little lagoon where a stream entered the canal, and there tied to some trees hanging over the water in a pretty and secluded spot. The total run to-day was twenty-one and a half miles. Owing to the heat, the unusual wear of my unaccustomed occupation, and the great number of locks, the day's work was not very extensive. Wrapping up in my blankets, I made a luxurious seat on the floor of the boat, and read by lamp-light until bedtime. The splashing of a curious muskrat, distant cow bells, and the "noise of the captains and the shouting" from the canal below, were the only sounds which broke the still night air, excepting the roaring of the Mohawk River. As I had taken the canvas cover off the well on retiring, a poncho was adjusted instead, to keep off the dew.

Erie Canal, Sept. 7, Sunday.—I was up at 5:30 A. M., and rowing to the next lock, a mile and a half, got breakfast at a little store by the lock, where they gave me some nice bass, caught in the river. The canal kept close by the Mohawk on its north side, and I enjoyed continuously a far and wide prospect; it was cut on the hillside quite a distance above the river, which, for several miles, was hemmed in by precipitous rocky ledges and bluffs. This level was about four miles long, when I came to two locks close together, rising to a level about six miles in length; and three miles beyond these locks I passed through Schenectady, the "city of beautiful residences," 30 miles from Albany. About one half way over the preceding four mile level, the canal crossed the Mohawk again, on another magnificent aqueduct, the piers of which were of solid granite. Just beyond this a smaller bridge crossed a tributary stream. Hereafter the Erie Canal runs on the south side of the Mohawk, and about midway between the last aqueduct and the end of this level, passes into Schenectady county. At Schenectady the New York Central and Hudson River R. R., heretofore running on the south bank, crosses the valley and keeps on the opposite side. The canal throughout winds about considerably, and its route is much longer than that of the railroad. For instance, Schenectady is only 17 miles from Albany by rail, but it is 30 miles by canal. This city was founded as a settlement in 1661. The engine shops of the N. Y. C. & H. R. R. R. here are very extensive, and among the largest in the country. It is also a great market for "broom" corn, a staple product of the region.

Soon the surrounding hills became mountainous, those to the south being part of the Catskill range. The weather was intensely warm, cloudless skies and not a breath of wind. The eel grass grew very bad and was exceedingly troublesome, effectually preventing me from making any respectable rowing time. I had to wear gloves to keep my hands from chafing, as they were constantly wet with perspiration; but it was difficult to avoid being badly sunburned. The flowers along the route were varied and beautiful. The next level was about 2½ miles in length, then came one of about 2 miles. At the end of the latter I put up at a lock, and after a few failures to obtain dinner I found a hospitable Canadian-English family. Though living in a wretched little house they had seen better days, and still possessed a good piano, on which one of the two buxom daughters played very well. I stayed here an hour or two, partly on account of the scorching weather—partly on account of the pretty daughters, who were quite deeply interested to learn that I was going through Canada.

The next level was 6 miles long, on which I crossed two aqueducts, each having five arches over streams flowing into the river. Opposite the second, the large town of Amsterdam could be plainly seen across the valley. Next came a one-mile level, then one of about four miles, half way across which last was Port Jackson, 46 miles from Albany. Near this place was still another small aqueduct. The country became wilder and more mountainous, while the summits of the eminences were densely wooded. Some of the cliff formations along the shore were singular, showing the geological strata of the rock to advantage. The level was about 2 miles long, and on rising from this passed into one of the same length. It was now dusk, and a thunderstorm which had been threatening during the latter part of the afternoon came up. I rowed hard for a mile more, when a great wind rose, and not relishing a ducking, I ran the boat in and dragging her up on a grassy bank, threw my tent over the well, just being in time to get all under and to duck under when a tremendous pour ensued, with heavy thunder and lightning.

I was in a secluded spot, with woods and rocks on all sides, and listened for some time with anxiety to the great noise the rain made on my tent and deck, as they were heretofore untried; but not a drop entered my sanctum. After such fears subsided, I undressed by the light of my "Buckeye" lamp, slung inside, and went swimming in the canal. One canal boat captain was considerably startled to see me clamber over his tiller, as it was pitch dark and raining hard. After enjoying to the full the delicious water, I crept under my little tent into the boat again. While eating supper in these narrow quarters, the lightning struck a tree near by, splitting it, with the accompaniment of a dreadful clap of thunder. Supper consisted of crackers, jam, chocolate and fruit, of all of which I had a hearty generous store. My tent was about 6ft. long, making a good mattress in dry weather, or a tarpaulin in wet, and made of very thick canvas. A stout manilla rope serves as a ridge pole, running through the tent and extending at either end so as to fasten to the rings at bow and stern, elevated in front by the paddle and boat hook, it can be slung in ten minutes. The sides are fastened down by iron pins. A poncho covers the open end, and makes the occupant very warm and snug inside, where one can just manage to dress and undress. For sitting, lounging or sleeping there are many little conveniences. I read my Bible, as becomes a civilized man, and after writing a little, rolled up in the blankets and stretched out in the arms of Morpheus. Just 30½ miles of rowing to-day. East of Port Jackson I passed into Montgomery county. M. B.

PHILADELPHIA, Pa.

[TO BE CONTINUED.]

CHRISTMAS CANOEING.

CHRISTMAS, 1889, was a day to be remembered hereabouts, if only for the wonderful weather which Santa Claus brought to everybody. A gentle balmy breeze came out of the warm southwest, and tempering the otherwise too ardent sun, and tempting the owners of canoes and sailboats not yet laid up to try their white wings just once more ere hoary winter should congeal the bosom of their native element. (Copyright secured according to law.)

By noon the mercury had climbed to a prodigious height (Fahren-heit), and was peeping over the 80th degree to see what had become of the beautiful snow that ought to have been covering the emerald verdure in which the earth was clad. (This style $1.75 per yard. Usual trade discount.) That, however, was where the sunbeams had a chance to kiss it. Where it hadn't, it got tired at the 60th degree and rested there. All nature seemed thrilled with vernal ecstasy, and wreathed her face in smiles, like one whose enemy is writhing in the clutches of "La Grippe." Sneezy thing to catch it now, they say. (Send stamps for illustrated catalogue of sample jokes?

Gnats danced gaily in the sunshine, and so did children, while ever and anon a casual mosquito, doubtless wafted hitherward from Florida (we never have mosquitoes here) would fain investigate the contents of our Yuletide stockings. These are cold entomological facts. Here are some more facts, botanical, ornithological and agricultural, to wit: I plucked, aye, with my red right hand, I gathered seven nodding violets which grew nusteltered in the open air—"but dot was noddings!" The friend of a friend of mine found a pansy blooming out of doors, and Jedge Paterson, my neighbor, planted potatoes in a straw hat. He wore the hat.

And, as if to make assurance of the springtime doubly sure, three robins came to wish us a Merry Christmas and a Happy New Year, and having done so in their own quaint, sprightly fashion, disappeared in the blue ether, doubtless to glaaden other eyes and ears than ours. J. L. K.

PERTH AMBOY, N. J., Dec. 28.

Editor Forest and Stream:

The Nancy and Random of the New York Y. C. were out sailing on Christmas Day. Weather delightful, but wind off shore and very squally. RANDOM.

NEW YORK, Dec. 26.

MASSASOIT C. C.—A meeting of the Massasoit C. C. was held on Dec. 14 By-laws were adopted, and the following were elected the officers for the ensuing club year: Com., Byron G. Dudley; Vice-Com., Charles W. Morgan; Sec., James J. Brooks; Treas., Emil Johnson; Meas., John A. Langford; Directors: Com., Vice-Com., Sec., John J. Kelleher, Vincent B. Johnson and Joseph A. Frizzell. The club, although a new one, embraces in its *personnel* many old canoeists, two of whom, last season, in their canoes Willie A. and Elaine, made a successful and highly enjoyable trip from Boston Harbor to New York, completing the trip in 10 days. The club is really an offshoot from the South Boston C. C., and includes the latter club's founders in its roll of members. The totem of the club is a tomahawk, in red, not adopted as significant of the fact that we cleft from the South Bostons, but adopted as appropriate to the character of our illustrious namesake, the first, but not the last Massasoit. The burgee has the tomahawk in red, on a blue ground, with the letter M in white, crossing the tomahawk. One of the club's by-laws provides that each member of the club shall become a member of the A. C. A.

SAILING AND PADDLING.—The Toronto *Globe* of Dec. 26 publishes a page of special articles on various sports, including one on canoe paddling by Mr. W. A. Leys, and one on sailing by Mr. W. G. MacKendrick.

PHILADELPHIA C. C.

THE second annual smoke of the Philadelphia C. C., like everything else that goes, "has went," but has left behind it a pleasant remembrance, like a good cigar, a genuine Havana, with a steamboat on the box. At the invitation of one of our members, Mr. W. S. Runk, and through the courtesy of the Undine Barge Club, the "smoke" was held at Ringstetten Castle, which is the Barge Club's up-river house. It is a most picturesque little place, situated on the banks of the Schuylkill River, near the falls village, and was in every way most admirably adapted for an entertainment of this kind. Dr. Behrens, who had kindly consented to act as *chef* (and in which capacity he has no superior and few equals), together with his staff of assistants, arrived at the castle early in the afternoon, and hastily donning the long cooking aprons, were soon deep in the mysteries of oysters in various styles, salads, Hamburger steaks, etc. Later on the men came in by twos and fours, and ranging themselves about the huge log fire in the banqueting room, were soon discussing the effects of a fire of another kind which had so recently made many of us poorer

by several dollars. The last touches being given to the tables, the men now took their places, and, according to an old custom of the Castle's, tossed knife and fork, let fall, and gave way, at the first course with a will. Course followed course, each being voted better than the last, until at last, in came the Doctor, and "the Old Man," each bearing a huge bowl of the famous "Ringstetten punch," whose arrival was greeted with prolonged applause.

The Purser, who had kindly consented to act as toast master, arose, and after a few words, introduced in his inimitable way Mr. Dixon, the oldest member of the club. Mr. Dixon spoke with an ease and grace which well became him of the organization since his connection with it, and of his hopes for its future prosperity. Dr. Behrens was then called upon, and on behalf of the Undine Barge Club, welcomed the canoeists to Ringstetten. Mr. Warr followed with most amusing reminiscences of last summer's A. C. A. camp, which Mr. Goddard and Mr. Butler would have heartily enjoyed could they have been with us. The club was particularly fortunate in having for one of its guests the well-known artist Mr. Gerome Ferris, who, assisted by his friend, Mr Beaver, gave some exquisite Spanish music on the mandoline and guitar. The toasting and speaking was kept up until a late hour, when with cheers for the Undine Barge Club and its representatives the men groped their way through the circling wreaths of smoke out into the night, and the smoke of '89 was over.

The Directors of the Philadelphia C. C. would like to express their thanks to the Undine Barge Club and their appreciation of the courtesy shown our club by their representatives, and particularly to Mr. Behrens, whose trying and laborious duties as *chef* places us under lasting obligations to him. 1490.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

The Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls, Etc., Etc. With 96 illustrations.

By C. P. KUNHARDT.

This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
SAMPSON, LOW & CO., London, England.

Audubon Bird Portraits.

Twenty-four of the famous plates by J. J. Audubon, reproduced by the half-tone process, carefully printed on fine paper, size of plate 10 by 6½ inches. The set of 24, postpaid on receipt of price, $1. These plates were reproduced for the *Audubon Magazine*. There are but a few complete sets left. The subjects are as follows: Baltimore Oriole and nest. Chimney Swift. Great Auk. Cedar Bird. Purple Martin. Golden-Winged Woodpecker. Wood Thrush. Spotted Sandpiper. Brown Thrasher. Nighthawk. Cliff Swallow. European Magpie. European Coot. Tufted Titmouse. Kingbird. Fish-Tailed Flycatcher. Towhee Bunting. Pileated Woodpecker. Crow. Black and White Warbler. Night Heron. Mocking Bird. Rusty Grackle. Green Wodpecker. Hermit Thrush.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

ANSWERS TO CORRESPONDENTS.

UNIFORM STATE LAWS AGAIN.

AS shown by the reports of its officers at the last annual meeting of the Cuvier Club, of Cincinnati, last Saturday evening, the organization is in a prosperous condition, and has made substantial progress in securing the enforcement of the laws by the work of the new game protector, whose convictions secured during the year numbered thirty-five.

One subject discussed in the report of the trustees was that of a code of laws uniform in adjoining States. This is something that has come up before various societies in different parts of the country and at different periods for lo these many years. Uniformity of game seasons is conceded to be a most desirable factor in securing protection; it is urged here and there with enthusiasm, talked about, written about, hoped for, and never attained. Sometimes sportsmen have gathered in national conventions and discussed the subject for the whole country; again it has been proposed for two or three adjoining States; and, as a matter of fact, there is to-day just as much of diversity and contrariety as ever in the laws of adjacent States.

The condition of affairs that has prompted the Cuvier Club to give attention to this topic is thus stated in the report read before the meeting:

* * * The primary object of the club, in suggesting protective legislation, is that all our people may be benefitted by having in the proper season an abundance of the choicest food at prices that bring it within the reach of all. In this connection the determination of a proper open season especially for quail becomes important. In Ohio the open season for quail is from the 10th of November to the 15th of December, both days inclusive, while in Kentucky, Indiana and Illinois it commences sooner and ends later. It seems that all agree, or should agree, that the open season should be the same in all these States, and perhaps, also, in West Virginia, the difficulty being in fixing satisfactory dates. That these opinions may be reconciled, to the end that we may have a uniform law, it is suggested that the Game Committee of the Ohio Legislature take the initiative, and invite similar committees of the Kentucky, Indiana, Illinois and West Virginia Legislatures to a conference. The difficulty of enforcement and the hardship of the Ohio law are in this: Our people are deprived of quail lawfully killed in these States, and in prime condition for the table, because their use is prohibited in Ohio at that time, it being a misdemeanor to have them in possession. That such a uniform law would be in the interest of the legitimate shooter is clear; then he could enjoy friendly hospitality in another State, carry his birds home without concealment and with pardonable pride, speak of his success.

It is difficult to see how the people of Ohio can be given the privilege of a market season for quail unless the open season shall be made to cover more time; Ohio sportsmen we fear cannot hope to have the open seasons in other States shortened to correspond with their own. Indeed if we understand the subject such an extension of the Ohio open season will be the only practicable way to secure anything approaching uniformity. In that event, is uniformity to be counted as a gain, when secured at the expense of protection?

We take it that the members of the Cuvier Club are conversant with the condition of the quail supply of their State, and can judge intelligently of the probable effect on it of a longer shooting season. If the extension of the season means less efficacious conservation of Ohio quail, it will be better to keep the dates as they are now, even if the people have to forego their quail. Unless the birds are more abundant in Ohio than in most other sections of the country, the market price will never be so low that the birds can be counted as cheap food for the people.

THE SPORTSMAN'S FLORIDA.

IF any evidence were needed to demonstrate the charm Florida possesses for the angler and the sportsman, it would be found, varied and abundant, in the files of this journal almost from the first number. Not a volume but contains its generous quota of sketches of travel, sport and outdoor life in that favored sunny land. In the earlier years, when many portions of the State were as yet an unknown and practically unexplored wilderness, the readers of FOREST AND STREAM followed, with all the interest that attends the pioneers in strange lands, the footsteps of "Fred Beverly" penetrating the Everglades, and the shining sail of "Al Fresco's" boat charting the fishing resorts of the west coast. From those early days to the present the southern migration of health and pleasure seekers has been chronicled in these pages. If Florida has been the source of so much that has added to the interest and value of our columns, it is not too much to say as well that this journal in turn has done much for Florida. Multitudes of visitors to the State have been prompted to seek its game resorts and fishing waters because the FOREST AND STREAM has made them known.

In Florida the material changes of the past ten or fifteen years have been on a scale possible only in what was practically a frontier State. The past twenty years have virtually witnessed the settlement of Florida anew by a population drawn thither from other States. The inrush of new citizens, the building of new towns and cities, the multiplying and extension of railroads, the conversion of vast wilderness tracts from pine and hamak lands into orange groves and farms—all this has greatly changed the face of the country; and the State has ceased to be in many respects the great shooting resort it once was. Nowhere is this more readily observed than on some of the lines of river travel. The great abundance and accessibility of feathered game encountered on the waterways, once made it possible for the cads and cockneys—not in any remotest sense sportsmen—who shot from the moving craft, to slaughter foolishly, wantonly and wastefully, thousands of birds of plume. As time went by and the fusillade has kept up, the birds were destroyed or scared away until the river banks became practically barren of game. Then as the new railroads fortunately diverted the tide of travel away from the rivers, and the haunts of the birds were left unmolested, they multiplied and have in many districts become abundant. The time has gone by when a majority of Florida tourists are equipped with firearms; but those who are seeking legitimate sport with game birds are still to be found in hosts; the game supply is rich; and the tangible rewards of one's outing are generous. Florida is to-day more than ever before the winter home of the sportsman.

And more than ever before is it the salt-water fisherman's Mecca. The fish of Florida waters—their name is legion—have not been, and give no sign of being in the near future, diminished. Of course in some certain localities the supply has been largely lessened, but as a rule, especially on the West Coast, the fishing is as good to-day as it ever was. Each year, as access is made more easy and accommodations are bettered, and the fame of the fishing grows, the number of anglers is larger. The renown of the tarpon has gone forth to the end of the earth, and expert masters of the rod from abroad make their winter pilgrimage to Charlotte Harbor to win new angling renown by pitting their patience and skill against the caprice and strength of the silver king. Year by year our knowledge of Florida fishing waters and of Florida fish is made more complete; but there is yet a vast amount to be learned; and the FOREST AND STREAM indulges the hope that it may do its fair share in the future, as it has in the past, to increase popular information on these subjects and to cultivate popular appreciation of them. Our old-time contributor "Al Fresco," Dr. C. J. Kenworthy, of Jacksonville, who has already done so much to discover new fishing grounds and to direct his brother anglers to them, has in contemplation new explorations on the lower West Coast; and he has promised to give our readers the results of the trip.

Year by year less of hardship and more of comfort attend the sportsman tourist in Florida. As related elsewhere by our contributor "F. S. J. C." the resorts of the peninsula, even those most remote, are within two days' travel from Northern cities. It is practicable for those who must limit their absence from business to "take a run down to Florida," without sacrificing very much of their precious time on the way. The State enjoys a constantly growing popularity among sportsmen and anglers, and it would be the part of wisdom for Florida's citizens to take the steps so urgently needed to insure a continuance of that popularity by adopting judicious game laws. Under the present condition of affairs game is killed all the year around, deer are shot in proper season and at times when decency and manhood should recoil from murdering the mother doe. Citizens of Florida towns have not yet learned better than to encourage the robbing of mocking-birds' nests by idle boys. Small insectivorous birds have no protection; and in St. Augustine, where the native song birds have been largely killed off, some foolish people are actually talking of importing that horrible pest, the English sparrow, to fill their places.

THE FISH OF FLORIDA WATERS.

IN April of last year the FOREST AND STREAM presented to its readers a very large series of illustrations of the salmon and trout of North America, accompanied by a brief sketch of the distribution and chief characteristics of the species. This effort to please its friends was met with hearty praise and encouraged the idea of occasional supplements of a similar nature.

To-day we bring together illustrations of twenty-five species of Florida fishes, many of which anglers visiting that State will be pretty certain to meet in their travels. As there is a bewildering variety of fishes in this favored land, certainly not fewer than fifty of which can be caught by the angler, it is manifestly too great an undertaking to group them in one supplement. We have, therefore, selected those that seemed to us the best known, while some others of considerable importance are for the time being necessarily omitted.

The remarks on the fishes have to do with their common names, distribution, habits, haunts, food and feeding habits, size, reproduction, growth and mode of capture.

Dr. James A. Henshall, who has in past years contributed to our columns more than one entertaining serial descriptive of cruising and fishing in Florida, has enriched the text of this Forida number to-day out of his varied experience in angling for the fishes discussed. His remarks form the concluding portion of each section, and are set off by quotation marks.

The excellent figures, it will be observed, are mainly from that rich source of supplies for modern illustrations of fishes "The Fisheries and Fishery Industries of the United States," prepared by the United States Fish Commission.

THERE WAS INVOLVED in Mr. Aldrich's notes on the woodcock, which we published last week, a question much more important than any that relates to the habits of any one bird or of all birds. That problem is of how in this year of grace, 1890, we can cure the diseased mind of one who finds pleasure in shooting mother birds scared from their nests. Perhaps the wisest conclusion would be that there is no hope of ridding a grown man of such depraved tastes; and that effort should be directed to instil nobler sentiments into the souls of the younger generation of shooters.

THE ANNUAL DINNER of the Massachusetts Fish and Game Protective Association will be held January 30.

Florida Days.

A FLORIDA RETROSPECT.

JUST seventeen years have gone to rest since I introduced myself to the land of flowers, oranges, alligators, Ponce de Leon and the Fountain of Youth. True, I had often read of these things in a very disinterested way, but never dreamed that I should ever set foot in the "Italy of America," until my curiosity was aroused by reading the letters of a medical gentleman, whose "sands of life were fast running out," and who had made a pedestrian trip from Ohio to that land in order that, by the way or at the thither terminus, he might find sand enough to replace that which had slipped away from him. He found it in plenty. His experiences and observations were given to the public through the columns of the Cincinnati *Commercial*. They fired my soul. I wanted to go and surfeit my visual orbs with banana plantations, whose myriads of satiny fronds, "like an army with banners," responded to the caresses of the balmy zephyrs, and wafted delightful odors upon every breeze. I would gaze entranced on the laden orange groves, trees of which had been known to bear, according to our M. D., "ten thousand oranges apiece. But say five thousand. This at a cent apiece, and they are now selling at two cents on the tree, and seventy-five trees to the acre, makes a grand total of three thousand seven hundred and fifty dollars per acre! There is a gold mine in an orange grove." I did not know any better and thought that ten acres at the utmost would fill all my needs. Then there were bananas and pineapples, besides deer, alligators and other game, and fish galore. Result, I went, I saw (though not all I had been told of) and was captured, like thousands of others.

It was not ages ago by any means, though we have had electric lighting, cable roads, phonographs, telephones and such things since, but the railways were anything but satisfactorily efficient south of the Ohio River. We were behind time long before we reached Nashville, and continued getting more so as we dove into the bowels of the Old Confederacy, until what with hot boxes, break downs, belated freights, burned bridges and missed connections, we were a generation or so behind when we jolted into Savannah. In those days, and for years afterward, passengers were not whirled at the rate of forty miles an hour by the Waycross route from Savannah to Jacksonville, but were taken away out toward Texas until far enough into the turpentine solitudes to flank the Okefinokee Swamp. Then they jibed and bore away toward Jacksonville at twelve miles an hour and were shaken up until they lost their identity. At Jacksonville railways ended for southbound travelers, who took the anything but palatial steamer to destination on the coffee-colored St. Johns, broad and magnificent to Palatka and crookedisnonameforit the rest of the way. At Jacksonville I fell in with two or three others bound for the Promised Land, and finding that our chronic lateness had caused us to miss the only decent boat on the river, which ran but three times a week, rather than delay we went aboard the Lolly Boy, a gorgeous floating palace about twenty paces long and nearly as wide, and began to plow the waters of the noble river at the dizzying rate of three miles an hour. One of my companions was from Virginia, and had much to say of a "Majah Mawks," who had, as a land agent, secured certain lands for him. It was not until some months afterward that I recognized in the land agent Major Marks, with whom I became well acquainted. He had the reputation of being as keen as a brier; and of course he couldn't have been buncoed in New York city a few months since, as some one was reported by the papers who hailed from his county, bearing his name and identical initials. Perish the thought!

When at last we reached Mellonville, a little village on Lake Monroe, I at once sought out Col. B. F. Whitner, who lived at a little settlement called Fort Reed, three miles inland, and whom I had written for information before starting. He was a true type of a cultured, Christian Southern gentleman, formerly a planter and surveyor of note in Madison county, and like the hospitable nobleman he was, took me, a stranger, into his home while I was there, and with his lovely wife—now, I am sad to say, an invalid—treated me like a son. He has crossed to the other shore, but so long as memory serves us will we keep his memory green. His beautiful place was located on the shores of Silver Lake, along the immediate edge of which a fringe of hundreds of bananas was growing, and as I stood in the path leading from the house to the boat landing, on the evening, as it happened, of the full moon, with the orange grove around me and the lake gleaming between the majestic banana leaves, while the southern moon shed her effulgence through the balmy air on that January night, I needed not to apologize for brimming with enthusiasm. After looking around briefly I purchased a poverty-stricken bit of sand on Golden Lake near by, on which Col. Whitner killed a six-foot rattler while surveying it; and in just a year from that time, with my household gods and goddesses, in which latter were comprised my wife and baby daughter, I took possession of my "Araby the Blest," and began the dire conflict with palmetto and scrub oak roots, and the entomological creation of that section of our glorious republic. I chose the spot because it was adjacent to school, church, stores and excellent neighbors, and not with any reference to its adaptability to orange culture. At least, that conviction, though perhaps but dimly recognized then, was afterward, continues to be, and will continue to be to my last breath, stamped on my consciousness in fast colors. I don't mean to intimate that the average of Florida land was like my "gold mine." Some was worse, if possible, and much was infinitely better. Pine woods land or sand, "high pine land," was of different degrees of fertility or barrenness as you please, and what was called the best, might be for horticulture or agriculture, infinitely better and then be none too good. It had to be fertilized once every year and yearned for it all the time. What I mean is that the average pine land upon which so many millions of orange trees have been planted would not make an orange grove unless the roots were given something to feed upon. The soil or sand gave them nothing worth mentioning except a bed for their roots. Then there was the "flat woods" land, deemed too utterly worthless for any use, and "high" and "low hamak," the former the choicest land in the State for orange culture, and the latter rich, but too low and wet for cultivation, but excellent in which to hunt turkeys and fight mosquitoes. However, I found that I was not the only one who had come a long distance to purchase a sand bank.

There were black bass, called trout here, in the lake in front of my door, and in the reaches of forest and dwarf palmetto around, there were coveys of quail, from which I drew rations occasionally, also plenty of rabbits; in fact they were much too numerous. They watched me through the fence as I planted sweet potatoes, and afterward raised potatoes faster than I could. I had an idiotic idea that I could frighten them away by stretching a line lengthwise the rows, about 2ft. high, and from this at intervals suspending two or three empty cans together, here and there, and from this line running a line to my bedroom window. Then, whenever the baby waked in the night, which about that time was oftener than seldom, I'd jerk the lanyard and the artillery would jingle-jangle all down the line. The first night or two it worked nicely and was effective, and then the cottontails, on better acquaintance, would sit up during the performance of the orchestra, as the neighbors called it, and enjoy it with great gusto, after which they indulged in refreshments again. I bought my potatoes that season, for I could hardly afford to sit up o' nights to watch my potato rows, but I made the bunnies suffer, and with their aid and that of the quail and bass, reinforced the larder beautifully.

The St. Johns was only a few miles away on one side, and Lake Jesup, a body of water twelve or fifteen miles by four in extent, the same distance on the other. To either water we made frequent excursions, and were always sure of fish or game, for in the bordering hamaks or prairies were turkeys, gray squirrels, deer, and an occasional bear or wildcat. Picket Point, a spot in the St. Johns near its junction with the lower end of the lake, so called from pickets being stationed there in the Seminole war, was a favorite picnic ground, having large clusters of palmetto trees for shade, and here frequently a number of families would come for a pleasant day. A folding boat was usually taken along, and in an hour's trolling the bottom could generally be covered with fine bass, which afforded the desired "fish dinner." Alligators were very numerous there in Jesup and were hunted for their hides, which netted the slayer a dollar or more each; and speaking of 'gators reminds me that once while trolling for bass my hooks, that happened to be very strong, caught in a 'gator that happened to be swimming across the river just below the surface, when the hook came along, and before it broke away there was the liveliest kind of a circus.

It was a common thing to see large schools of bass breaking water and leaping here and there, and frequently the boat would pass directly through one of these schools, the oars striking among fish on either side. On one trip I hooked a large gar, a trifle over 5ft. long, and when I succeeded in getting him on a bar I was forced to beat his life out with a piece of drift wood before I could release the hook.

These occasional days off served to break the monotony of digging around orange trees, grubbing out oak and palmetto roots, or reclaiming bits of swamp, besides helping out the table wonderfully, for the beef of those days was not calculated to tickle one's ribs, but to weary his patience and jaws, and had almost as much flavor as a dish of fried scrap iron. Cow's milk was nearly as scarce as goat's milk, and there wasn't a goat in the country. If a pint could be got from the average Florida cow, after the measly calf had a pull, it was cause for a day of thanksgiving. Very frequently the cow produced the calf in the swamps and had little or nothing to let down to it. Then the buzzards did the scavenger act. Or if the lacteal supply was forthcoming, the calf was too weak to get to it and the end was the same. By one who has seen the herds of cattle on the prairies, or in the swamps searching for nourishing food and running almost like deer from the presence of man, the condition of Florida beef will be readily understood. The local butcher, who slaughtered the bovine shadows, came around twice a week, usually, in his little old greasy wagon and blew his conch shell at the gate, and we took what we could get, meekly, and ruminated until next the conch sounded. Two or three times, I think, we tasted fresh milk during our stay at our first home. That was sufficient. The foreign element in the bottles instigated rebellion in the inner man. During our eight or nine years of Florida life, two gallons, possibly three, would cover all the fresh milk we used, and much of that was the gift of a kind neighbor at Twin Lakes. But we spent a small fortune on the condensed article, as I suppose Floridians do perforce to-day. The great bulk of vegetables was bought in cans in those days and we had no ice. There was no railway south of Jacksonville and Cedar Keys, and supplies of all kinds were considerably dearer than at the North. Now a network of railways, quicker time, more demand and better supply, ice, refrigerator cars and "Chicago dressed," longer experience and better adaptation to the needs of that latitude make life much better worth the living. But notwithstanding the utmost that can be said in favor of Florida, her admirable winter climate and attractions for tourists and certain classes of invalids, it was and is my opinion that the influence of her climate on permanent residents is debilitating and enervating. Some of my friends there vigorously combat this idea, I'll admit, and I'm content not to argue the question. Perhaps the thousands of Northern settlers and tourists have unconsciously carried the breath of winter and ozone of the mountains in sufficient quantities to change the conditions during recent years.

It was during my residence at Fort Reed that I had my first experience in deer hunting at night. A friend invited me to go with him to the ranch of a friend down on the Wekiva River, some eight or ten miles distant, and I gladly accepted, for I had never witnessed this peculiar method of sport, though I had read and heard much about it. From the tales told of the number of deer in the country, I anticipated having something to show for trouble when we returned, but although we wandered through the darkness with our little spot of light, stumbled over logs and palmetto roots, stopping now and then to replenish the bag of lightwood knots or moisten our throats from a pool or spring, we bagged not a deer—only one poor little grinning possum. For three nights we roamed the woods, shining a pair of eyes at long intervals, but getting only a shot or two at long range at deer that had evidently been there before. My enthusiasm oozed away little by little, until I was bankrupt, and we returned home.

For nearly two years I wrestled with leathery beef, the grubbing hoe and the general situation, only to see my little orange grove, which I had set in the sand and watered with tears, wasting away and covering itself with scale insect before my distorted vision, when there came a man who was, as I had been, pleased with the adjacentness of things, and who wanted the place worse than I did, far worser; so amid a shower of blinding tears I gave him possession of my love and purchased a better piece of sand at Twin Lakes, four miles back of Sanford.

It was here that I renewed my experience in fire-hunting under more favorable circumstances. I found that the deer came from the swamps at night in the fall to feed on the black jack acorns fallen from the trees scattered about in the pine woods. Not fancying the fire pan and lightwood business, I sent to New York city and purchased a lamp with miniature headlight that would shine a deer's eyes at a hundred yards; and rigged a contrivance to wear it on my shoulder. I well remember the first time I used it, on a bright starlight night in September, when I left the house at about 8 o'clock, adjusted my lamp, took my Parker and a half dozen buckshot shells, passed through the grove, climbed the fence and entered the pine woods. I drew up the gun two or three times, changing the angle of the light so that it would show clearly what I aimed at, and began my tramp. How quiet everything was. There was scarcely air enough stirring to show me when I was going up wind, but I had noticed during the day the direction of the wind, and so was enabled, with the aid of the North Star, to shape my course. As I turned my shoulders from side to side, so as to cover as much space as possible with the light, the shadows darted right and left, and tree trunks flashed into view and disappeared again in a very uncanny way. In a pond off to my left the frogs were holding a very noisy concert, in which the tenors had it all their own way. A rabbit scuttled off with a faint rustle in the wire grass, a little bird flew up from his grassy hiding place, and down in the swamp an owl saluted the night with his *Hoo, hoo-hoo, hoo-hoo-oh!* My ears and eyes were keenly alert as I picked my way as carefully and noiselessly as possible, wondering if I was to be so fortunate as to shine a pair of eyes that night.

I came ere long to an undulating bit of ground, and as I passed up a little slope and looked over, there, just at the right shooting distance, was a pair of eyes sure enough, but down near the ground. I stopped and stood at a ready. For a second the eyes remained stationary. Then they rose, were motionless a second and dropped again, and I knew it was a deer feeding. I waited until they rose again, and holding a little under them so as to strike the neck, pulled. What an awful roar broke the silence and went rumbling away into the night, giving place to silence greater by contrast than before; and what a stream of fire shot into the darkness, and how pitchy black it was again. I listened. Not a sound. Slipped another cartridge in. Stepped forward a few paces, turning my light. No eyes; no movement. Moved forward again a few paces, when something light-colored attracted my attention lying on the ground, and a few steps more found me looking down at a handsome doe, that gasped pitifully once, and with glazing eye lay dead without a struggle. As I stooped down, alone with my first deer shot at night, with the silence of the forest around me, and looked into those beautiful eyes, I confess that for the moment I regretted having taken the innocent life, but exultation at my success came with a rush as I drew my knife and prepared the quarry for carrying. In less than an hour from the time I left the house I was back again, the deer strung up and I betook myself to rest. That was the first of a goodly number of deer shot at night within a short walk of my house. I thought at first that prowling around through the woods and palmetto thickets, or by the edge of bays with a fire pan, alone, with an occasional stumble that threw the coals among my back hair, in danger of stepping on a rattler and not knowing which way to jump, with hoot of owl and pipe of frog for company, as I strained my eyes to catch the first gleam of eyes from out the darkness, was very monotonous and tiresome business; but with my lamp and pipe and various voices of the night for company, I grew to love the sport exceedingly. Sometimes a neighbor accompanied me, and when tired we built a fire if the night was chill, and sitting by it, with pipes alight, enjoyed a pleasant chatty half hour.

My orange and lemon trees were growing apace under the encouraging influence of cultivation and commercial fertilizers, brought from New York at $40 a ton, notwithstanding the disheartening influences of scale insect and poor soil. I could see that they grew and that was a gain on the other place. My guava bushes were bearing and much enjoyment and jelly we got from them, if I did have to roof them all over with palmetto beams every winter, and have them frozen sometimes in spite of it. Watermelons and sweet potatoes throve and comprised about everything I raised for the table. A few banana plants waved their plumes in the breezes, but an occasional frosty night prevented much enjoyment of fruit. I had a little garden plot inclosed by a light fence to exclude rabbits, possums and chickens; and in the inclosure I spent some of the most agonizing moments of my life trying to persuade Irish potatoes, peas, beans and such things to do as I had known them to do elsewhere; but it came within an ace of being a pitiable failure. Night after night after the blazing sun had left Florida in a wilt, I "toted" water from the well to my suffering cabbages and hesitating tomatoes, and the insatiable sand sucked it all in and sizzled for more. My sweet corn grew about three feet high, with stalks as large, may be, as a chicken's leg below the hock; and made a pitiful attempt to put out ears, but gave up the useless attempt. From a little collection of pineapple plants we enjoyed a frequent treat, and by the way, no one has a faint idea of the possibilities of a pine unless he has eaten it thoroughly ripe from the plant. Picked when nearly ripe and hung up in the house, it fills the premises with an aroma that sends the inhaler to the seventh heaven of olfactory delight, and he goes one story higher when the nectar reaches the palate.

My gardening experiments were on what is called good pine land. In the hamaks fine vegetables were raised without trouble, and orange groves throve, and their thriftiness and beauty made a pine woodsman's mouth water. But it was only here and there at wide intervals that hamaks suitable for orange growing were to be found, and then good health demanded that the owner

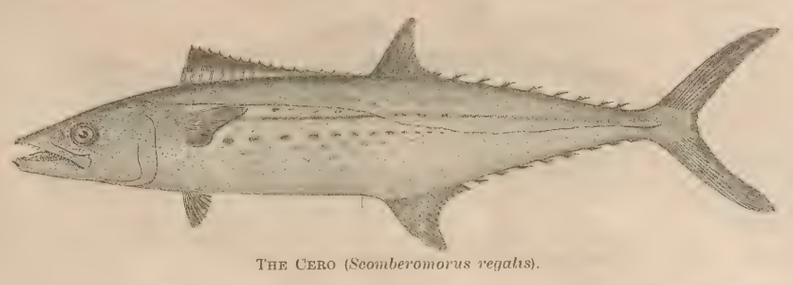
FISH OF FLORIDA WATERS.

FOREST AND STREAM SUPPLEMENT NO. 8.

THE TRUNKFISH (*Ostracion bicaudale*).

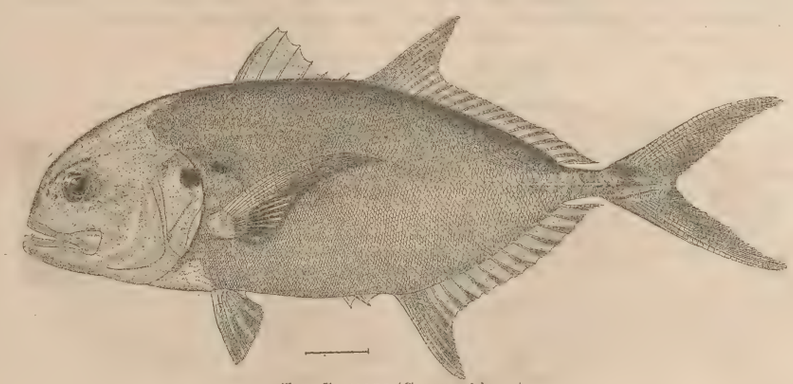
THE TRUNKFISH (*Ostracion bicaudale*), of which we show a front view, is not sought by the angler, but it is one of the most curious of the Florida fishes, and one of the best known in collections. This is the *pesce toro*, or bullfish, of Cozumel and the West Indies. Cofferfish is a general name for the species of *Ostracion*. Cowfish is the name applied to the common *O. quadricorne* in the Gulf of Mexico.



The subject of our sketch is a West Indian fish, but we have caught it at Cozumel and believe it may be found at Key West. In the clear waters of sheltered bays it is a conspicuous object while browsing around the rocks forming the shore line. Its jaws are armed with a single series of small slender teeth, well adapted for seizing the barnacles and small mollusks upon which it feeds. We took several individuals with small hooks baited with half grains of corn.

The covering of the body consists of hexagonal bony scutes, protecting all exposed parts except the snout, bases of the fins, and the hind portion of the tail. In tropical countries some cases of poisoning are reported from eating the flesh of the trunkfish, but it is probable that the fish was spoiled by keeping it too long. When baked in their shells, the trunkfishes, in some localities, are highly esteemed.

THE SPANISH MACKEREL (*Scomberomorus maculatus*).



THE SPANISH MACKEREL (*Scomberomorus maculatus*).—This handsome and active fish is sometimes styled mackerel and bay mackerel. It is found in summer as far north as Cape Cod. Southward it extends to the Gulf of Mexico. It has been recorded in the West Indies and on the coast of Brazil. Jordan reported it abundant in spring and summer at Pensacola in 1882. Individuals have been taken in rare instances north of Cape Cod, as, for instance, the one obtained by Capt. N. F. Atwood, off the Maine coast; but such occurrences are traceable to some unusual climatic condition. The species is a lover of warm water, preferring a temperature of 70 to 80 degrees Fahrenheit. The species is gregarious and migratory, traveling in immense schools, scattered over large ocean areas. It comes on to the coast in the spring, probably as the mackerel comes, from the Gulf Stream or from southern waters, advancing further and further north as the temperature becomes agreeable, reaching the northern limit of its migration about the end of July. The approach of cold weather causes a reverse movement; the end of October witnesses its disappearance north of the Carolinas. The Spanish mackerel feeds on the menhaden, alewife and other fishes that school at or near the surface. In pursuit of its prey it often leaps out of water and returns to it in a long curve, cleaving it noiselessly with its sharp and tapering muzzle.

THE CERO (*Scomberomorus regalis*).

THE KINGFISH (*Scomberomorus cavalla*).

THE CAVALLI (*Caranx hippos*).

The fish is voracious and associates with the bluefish in preying upon the dense masses of herring-like fishes that appear off the mouths of our bays in summer. The menhaden is said to furnish a large part of the food supply of the Spanish mackerel, and we believe it does minister largely to the wants of its rapacious follower; but many other small species are surface swimmers in the region frequented by menhaden, and share its fate.

Silas Stearns mentions specimens measuring 40in., but these large fish were generally solitary; 24in. is a fair average size. Chesapeake Bay individuals do not often exceed 2 or 3lbs. in weight. The largest examples recorded weighed 8 or 9lbs.

The spawning season begins in April in the Carolinas and becomes later and later northward; at Long Island it dates from the latter part of August. The eggs are very small, from $\frac{1}{25}$ to $\frac{1}{18}$ of an inch in diameter, and a quart measure will hold over a million. A 6lb. Spanish mackerel is estimated to yield 1,500,000 eggs. Spawning takes place in warm and very shoal water. The newly hatched embryo is about $\frac{1}{10}$ of an inch in length. It is believed that the species grows very little in the first two years of its life, and does not exceed a half pound in weight at the end of that period.

"The Spanish mackerel is one of the best food fishes, as well as one of the most beautiful in form and coloration. It swims in schools and is a surface feeder. I have seen it as early as January in Florida, though last winter, owing to the temperature of the water along the coast, I did not meet with it until the first week in March. The leaping of a Spanish mackerel while feeding, on a bright day, is a beautiful sight, but the fish are shy and difficult to approach in a boat for rod-fishing; therefore, on open waters, trolling with a long line is more successful, for which small pearl or bright metal squids, or the pilchard, anchovy or small mullets may be used.

"The most successful rod-fishing is from the points of inlets and passes, and from the end of long piers in the tide-ways. Ordinary black bass tackle may be used, as the inshore schools do not often run above two or three pounds in weight. For baits any of the small fishes just named are suitable. The best Spanish mackerel fishing I saw last winter was at San Carlos Pass in March, and from the piers of Port Tampa in April, where large schools were running at those times, at the latter place in company with the salt-water 'trout.' The mode of fishing is by making as long casts as possible, and slowly reeling in the bait, no sinker being used.

"The Spanish mackerel takes the artificial fly pretty well. Grayish or yellowish flies on No. 2 Sproat hooks, and rods and other tackle made for black bass fly-fishing, are all that are needed for this, the most enjoyable and most sportsmanlike method of angling for the Spanish mackerel. And it is a fish worthy of the fly-fisher's highest regard, being very gamy and exceedingly beautiful. Its manner of fighting when fast to the angler's hook is principally on the surface of the water—darting here and there with dazzling rapidity, in straight or curving lines, and leaping into the air—its bright form shining resplendent in the sunlight—like an animated silver arrow."

THE CERO (*Scomberomorus regalis*).—King cero, spotted cero, *sierra* and *pintado* are the names for this species.

The cero abounds in the West Indies, and has been recorded from Brazil. On the east coast it migrates northward occasionally as far as Cape Cod. About the Florida keys it is very common associated with other species of the genus.

The cero feeds on other fishes, but little is recorded of its habits; it swims on the surface and is taken there in large numbers by fishermen.

The species reaches a length of 5 or 6ft., and weighs up to 20 or 30lbs. It resembles the Spanish mackerel in a general way, but may be immediately distinguished by the narrow stripes along its sides, which are not present in any of the other American species.

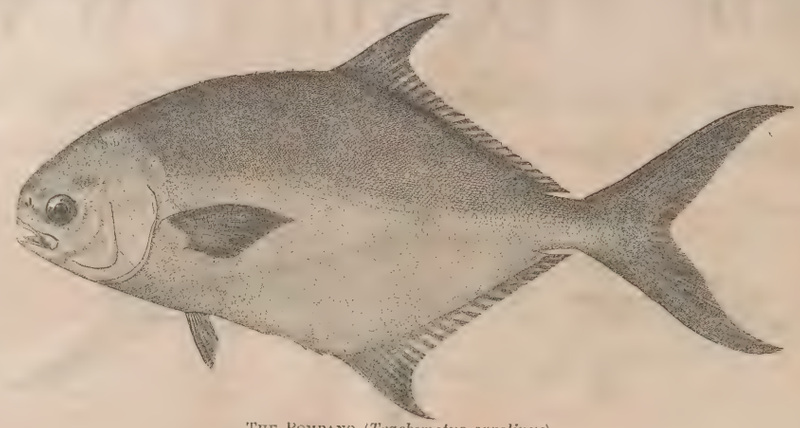
"Its spots are dark, where those of the Spanish mackerel are yellowish-bronze. The cero is caught in company with the kingfish by trolling along the Florida keys from Cape Florida to Key West, and they form the principal supply of food-fishes in the Key West market, where both species are sold under the name of 'kingfish.'

THE DOLPHIN (*Coryphæna hippurus*).

"The cero is sometimes caught from the wharves and piers of the Florida keys, or from anchored vessels by still-fishing, or rather by casting pilchard bait; but the usual and most successful method of fishing is by trolling with hand-line from a sailing vessel, using a small codfish hook baited with a strip of pork-rind cut in the semblance of a small fish. A wire snell is necessary on account of the sharp, lancet-shaped teeth of these fishes. A

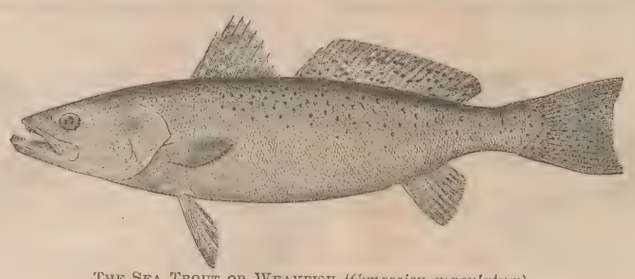
bright metal, or a pearl or bone squid answers just as wells for trolling as the pork-rind, but is neither so cheap nor convenient for the 'conch' fisherman of Key West."

THE KINGFISH (*Scomberomorus cavalla*).—This is also the silver cero and kingfish.



The kingfish abounds in the West Indies and ranges southward to Brazil. It is very common about the Florida keys. On the east coast individuals are occasionally taken as far north as Cape Cod.

The species is a powerful and swift forager at sea in company with the cero and Spanish mackerel. It preys on other fishes and is caught in great numbers at the surface by trolling.



This is the largest species of its genus, attaining a weight of 25lbs. Concerning its reproduction and growth nothing seems to be on record. "As has just been mentioned, this is a larger species than the others of the Spanish mackerel group, and is nearly as good for food. It is caught by trolling along the Florida keys with hand line and pork-rind bait, as mentioned in fishing for cero. A large fleet of fishing smacks is engaged in its capture, but the angling for this fine fish by regular and orthodox methods, with rod and reel, is yet to be developed, as I have no doubt it will be in the near future, for some piscatorial Alexander, sighing for new worlds to conquer, will be sure to find it.

"As a game fish the kingfish is second to none, being built for extraordinary bursts of speed, and leaps higher than any other fish, I believe, that swims. Its graceful form is spindle-shaped, very regular in outline, with small, conical head and wide mouth—a slender, keeled caudal peduncle, and a large, powerful, crescentic caudal fin—just the shape for quick and agile movements. I have frequently seen it leap fully 10ft. above the water. It is even better built for speed and leaping than the salmon, and among other fishes is as the Puritan or Volunteer among a fleet of oyster boats.

"I have taken several on the rod, off the keys near Bahia Honda, with pilchard bait, and venture the prediction that when its habits become better known it will some day rank higher, as a game fish, than all other coast fishes in Florida. I have no doubt that it will rise to the artificial fly, though I have never tried it, but I once took one on the bunch of feathers usually attached to a trolling spoon, by trolling with it after the spoon had been broken off."

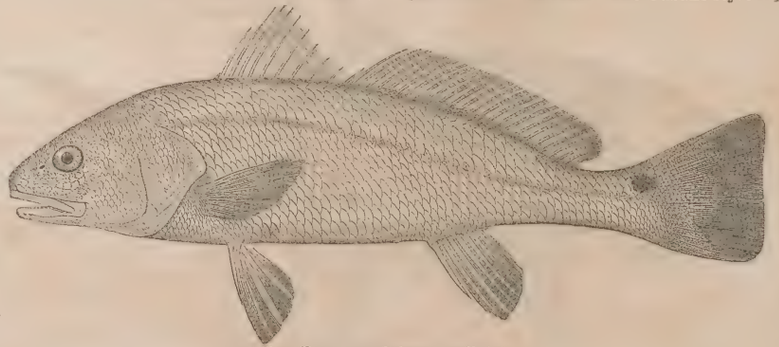
THE POMPANO (*Trachynotus carolinus*).

THE SEA TROUT OR WEAKFISH (*Cynoscion maculatum*).

THE WHITING OR KINGFISH (*Menticirrus americanus*).

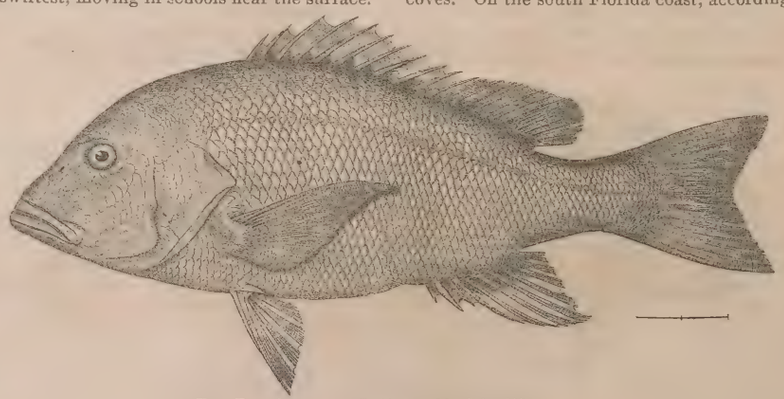
THE CAVALLI (*Caranx hippos*).—This handsome and active fish has various names, depending on locality. About Cape Cod it is confounded with a related species, the yellow mackerel. The best-known name is crevallé; other appellations are horse crevallé and cavalla.

The cavalli abounds in the Gulf of Mexico and East Florida. It occurs throughout the West Indies. Northward its range includes Cape Cope, and rarely it is extended still further. H. S. Williams considered the south end of Merritt's Island and the inlets opposite old Fort Capron to be centers of abundance of this fish. Clarke took it freely at Indian River Inlet. Jordan records it as common in Lake Pontchartrain. The same form is credited to the Pacific coast from Panama to the Gulf of California. The cavalli is a fish of prey, and one of the swiftest, moving in schools near the surface. It feeds in shallow water near the shore. There is a migration northward in summer, and the young especially move along frequently to Cape Cod in moderately large numbers. Great Egg Harbor is a favorite resort for small individuals in summer. In two examples, from 4 to 6¼in. long, taken at Ocean City and Longport late in August, we heard a very distinct croaking sound when the fish were held in the hands, but could not determine how it was produced.



In the Gulf of Mexico the cavalli feeds principally on the mullet and the menhaden, but there is a bewildering variety of other small fishes which will answer its purpose equally well. The size is large, individuals weighing 30lbs. being reported; such a fish would measure 3ft. or more. The young of about a pound are considered very fine for the table; large ones are dark and insipid.

Stearns observed that the cavalli arrives on the West Florida coast in May containing mature eggs, and believed that it spawns in the salt-water bayous. He saw the young come out of such places in the fall and move seaward.



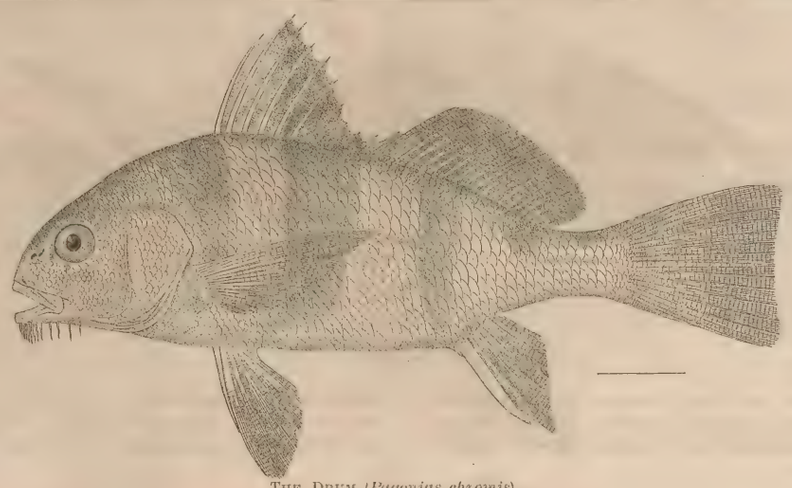
"The cavalli and its allied forms are good game fishes, and respond eagerly to the angler's lures, whether artificial fly, bait, trolling-spoon, or a bit of white or red rag. It makes a very strong and determined resistance when hooked, and always fights to the last gasp. It is, moreover, an exceedingly beautiful and gracefully-formed fish, but being so common and so easily captured, its merits are often overlooked."

"For bait-fishing, heavy black bass or light striped bass rods, or the Little Giant rod, are all suitable, with multiplying reel, E line, Sproat hooks, 2-0, and sinkers adapted to the strength of the tidal currents, or if in sheltered, quiet waters, the lightest sinker should be used.

"Any small fish makes a good bait, or shrimp may be used—fishing from the sand spits and shores of inlets on the flood tide or from an anchored boat. Trolling with the spoon, bright squid, pork-rind or bit of white rag is more successful than sportsmanlike. The cavalli will rise satisfactorily to a medium-sized, gay-tinted fly of almost any color, and it is by all odds the fittest and most desirable method of fishing for the cavalli and its kindred. In bait-fishing or fly-fishing for cavalli near the inlets and pas es the angler will often take the 'lady,' or 'bonefish,' and the 'ten-pounder,' both of which are game to the backbone, and fight as well in the air as in the water. They are long, slender and round, spindle-shaped fishes, belonging to the herring family, and are as gracefully-formed and as bright and silvery in appearance, and when fast to the angler's hook fly through the air and water like animated silver shuttles. They run from one to three pounds usually. I consider the 'ladyfish' to be the gamiest fish of salt water in proportion to its size."

THE REDFISH (*Sciæna ocellata*).

THE RED SNAPPER (*Lutjanus blackfordii*).



THE POMPANO (*Trachynotus carolinus*).—The name of this delicious species is corrupted into pompynose on some parts of the Gulf coast. The Cubans style it *palometa*. The common pompano is found at the Bermudas, in the West Indies, northward in summer on our coast to Cape Cod, southward to the Gulf of Mexico at least. It has been reported in the Gulf of California by Prof. C. H. Gilbert. In Florida, according to Dr. Henshall, "it is very abundant on the west coast, about Charlotte Harbor, and on the east coast at Jupiter Inlet and Lake Worth."

The species is migratory, and the number on our northern coast fluctuates greatly. The young are more confirmed travelers than the adults; they come north in force during some seasons, and again may scarcely be found at all in localities in which they have appeared in abundance. It loves warm waters and frequents sandy coves. On the south Florida coast, according to Stearns, it is a permanent resident. It comes on the coast at Pensacola from the eastward in spring in schools containing from fifty individuals to several thousands, swimming near the shore, but seldom at the surface. Its favorite feeding grounds are holes and gullies in sandy beaches, where it finds shells and sand flies. Dr. Henshall writes concerning it as follows: "It feeds principally on the 'pompano shell,' a very small and beautiful bivalve that is very abundant on the sea beaches of the localities named. It is fond also of beach fleas." Stearns mentions the sea beach from Tampa Bay to Charlotte Harbor as probably the favorite ground for pompano, because of the abundance of shell-

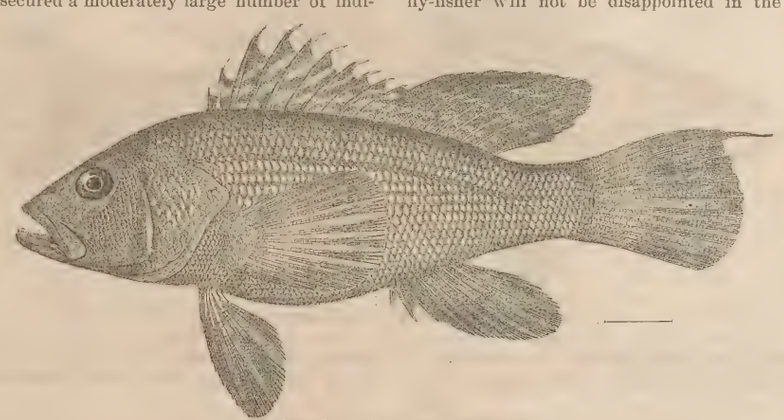
fish there. The pompano is stated to reach a length of 19½in. and a weight of 6¼lbs., but the average size is much smaller.

Pompano are in the best condition in the fall. I have seen great numbers of the fry about an inch long in August in various bays from New Jersey to Cape Cod, from which I infer that some individuals spawn in the spring in our waters. At Pensacola the greatest runs of pompano occur in April; some appear there in March, and the arrivals continue until late in May. It is supposed that the spawning takes place soon after the imcoming of the great schools.

"The pompano is the very best fish that swims for the table, and is a fine game fish as well if we are so fortunate as to get the hook fast to one, which does not often happen. It has quite a small mouth and is seldom known to take the hook. It runs to a pound or two in weight, usually. I have taken several with clam bait and mussel on the flood tide, near the inlets, as they were coming in to feed, but I have had more pompano jump in my boat of their own accord than I ever caught by angling—more's the pity."

THE DRUM (*Pogonias chromis*).

THE DOLPHIN (*Coryphæna hippurus*).—The dolphin, or *dorado*, is a pelagic fish, found most abundantly on the high seas. It is said to be common, also, in the Gulf of Mexico. Our species is believed to occur as well in the Mediterranean, the Atlantic, the Indian Ocean and the Pacific.



This powerful swimmer eagerly pursues the flying fishes and other surface species. Sailors prize its flesh very highly, and every one becomes more or less enthusiastic over its changing hues while dying. The fish is not well known to the angler, chiefly because of its inaccessibility. Silas Stearns has secured a moderately large number of individuals in the Gulf of Mexico. Dr. Henshall has "seen several taken on heavy trolling lines at sea near the Gulf Stream."

THE BLACK BASS (*Micropterus salmoides*).

THE SEA TROUT OR WEAKFISH (*Cynoscion maculatum*).—Popular names of this fish include spotted sea trout, salt-water trout, gray trout, sun trout, shad trout, salmon trout, speckled trout, weakfish and spotted weakfish.

The spotted weakfish is found occasionally as far north as Long Island, and is common southward, extending into the Gulf of Mexico. It runs up the tidal creeks after its food. In east Florida the species is very abundant, and also in the Gulf, where it ranks next to the channel bass in importance. In the Halifax River it is plentiful in March. The spotted weakfish is migratory within short distances, moving south in winter; it is an associate of the bluefish, and suffers greatly from the depredations of that tyrant. It swarms in brackish water, but does not enter fresh streams and ponds. In Florida Dr. Kenworthy found it abundant in rapid waters and on oyster beds and weedy flats. It feeds voraciously on small fishes, being a dear lover of anchovies and mullets. It takes the bait with a rush, fights hard, and is difficult to bring to net because of its tender mouth.

THE SEA BASS (*Centropristis striatus*).

In some parts of Florida this fish varies in weight from 1 to 5lbs. In the Gulf it sometimes reaches 10lbs., and measures 2ft. The spawning season is in the spring and summer, and the young will grow to 3 or 4in. in length by the middle of September. The annual increase in length has been estimated to be 6in. The best time for fishing is on the young flood, and mullet bait is preferred. Shedder crab and shrimp are good. The gear is similar to that used for the weakfish of Northern waters. A rod of 8 or 10ft. supplied with a multiplying reel and drag is recommended by Clarke. Hooks of the Cuttyhunk pattern on 15-thread lines of 100yds. or more and hollow sinkers weighing 1oz. complete the outfit. As this fish often moves in large schools the angler will not find time hang heavy on his hands when they begin business.

"The spotted weakfish, or, as it is called in Florida, spotted trout, or salt-water trout, is very abundant on both the east and west coasts, and withal is a better and gamier fish than its Northern brother. The 'trout' is usually taken of 2 or 3lbs. in weight, and occasionally of 6 or 8lbs. It is a bold biter and gives considerable play, and being a surface feeder rises well to the artificial fly. It is found not only in the bays and about the inlets, but it runs up the streams to fresh water, where it is frequently taken with bait and fly.

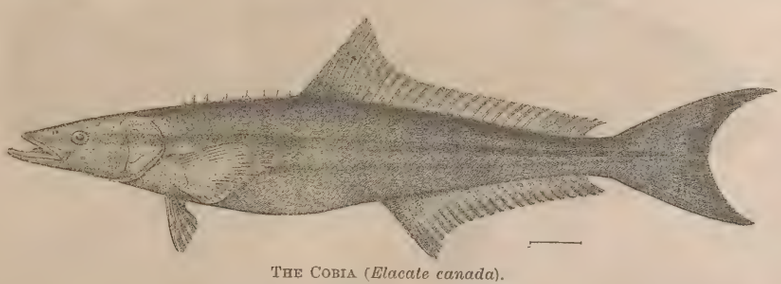
"The Henshall black bass rod of 8oz. is just the tool for bait-fishing, or the 'Little Giant' rod previously mentioned will answer for those of the heaviest weights. A medium-sized multiplying reel and a braided 'E' line, linen or silk, with Sproat hook, 3-0 to 4-0, on gimp snell, constitute the tackle for 'trout' fishing on the Florida coasts.

"The bait should be pilchard, an anchovy or a small mullet, all of which swarm in great schools in Florida waters. The shrimp is also an excellent bait, and the artificial rubber minnow may be used if kept in constant motion. The anglers of Tampa have great sport in taking the 'trout' from the piers at Port Tampa in March and April, when they appear in schools on the flood tide following the swarms of pilchard and other fry.

"For fly-fishing a heavy black bass fly-rod of not less than 9 or 10oz. is preferable to a lighter rod, for there is no knowing what fish may take a fancy to the angler's fly, it not being unusual for a ravallia or tarpon of 20lbs. to snap up the feathery lure. The line should be of enameled silk, size E, and the fly tied on a 3-0 Sproat hook. Almost any style or color of fly may be used, but one with some red or brown in it is best. If the tide serves right about sundown or later the fly-fisher will not be disappointed in the 'trout' of Florida."

THE WHITING OR KINGFISH (*Menticirrus americanus*).—Among the popular names of this fish are: Carolina whiting, ground mullet, barb and kingfish.

The whiting is found on the south Atlantic coast from New Jersey to Florida, and in the Gulf of Mexico. It frequents the deep channels and rarely approaches the shores. It prefers sandy bottoms. Stearns states that it rarely leaves the sea water, but specimens have been taken in fresh water in the Appalachicola River. Its dark coloration and different habits distinguish it readily from its associate, the pale colored surf whiting.



The whiting subsists upon crustaceans, including crabs and shrimp. It seizes the bait with a strong rush and fights hard for liberty. In Florida the average weight, according to Goode, is about three-quarters of a pound; Clarke states it to be 1lb. The maximum is recorded as about 1½lbs. Spawning takes place at sea in April and May. The rate of growth is not recorded.

"The whiting, or barb kingfish, is more common on the east coast than on the Gulf coast of Florida, though I have never found it abundant anywhere in that State, and it is rare about the Florida keys—it is rather a brackish water fish of the bays and estuaries. I took but one adult last winter in Florida, owing to the unusually cold water along the shores; it weighed nearly 2lbs., and was taken at Cape Haze, at the upper end of Charlotte Harbor. The whiting is quite palatable when perfectly fresh, and is a fair game fish, giving considerable play, and weighs from 1 to 5lbs., though usually about 2lbs. in weight. It has a small, tough mouth and holds the hook well. Black bass, or similar tackle, is quite suitable for this fish.

"In all coast fishing the weight of the sinker must be adapted to the strength and swiftness of the tidal currents, and may vary from the smallest size to one weighing 4oz. or more for rod and reel fishing. Small Sproat hooks, not larger than No. 1, are best, and the bait may be crab, fiddler or clam. On the Jersey and Long Island shores the kingfish is of more importance, being found in greater abundance than in Florida."

THE BLUEFISH (*Pomatomus saltatrix*).

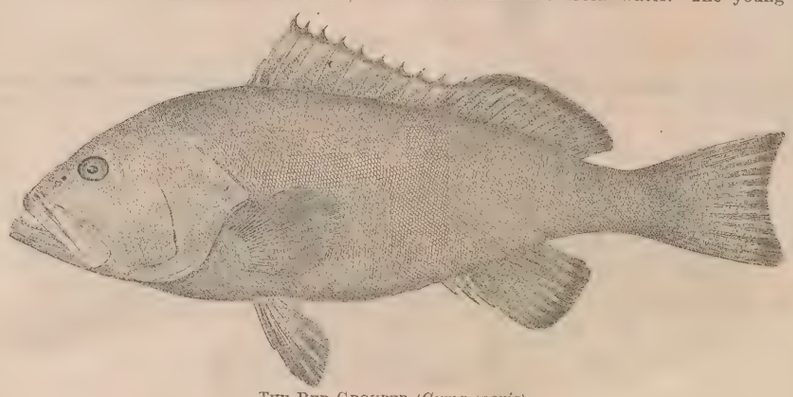
THE COBIA (*Elacate canada*).

THE DRUM (*Pogonias chromis*).—Common names of this species are black drum (adult), banded drum, striped drum and little drum (young). The name is derived from the sound produced by the fish in some uncertain way.

The drum is found along the east coast from Cape Cod to Florida, and is abundant in the Gulf of Mexico. The young ascend rivers for short distances. In the St. Johns Goode records them at Jacksonville and Doctor's Lake. North of New Jersey the drum is a comparatively rare fish, and none but adults are seen. In Great Egg Harbor Bay, N. J., the prettily banded young were found in abundance by Prof. Baird in August, 1854; but in 1887 the writer could not find them on the same grounds, and the adult was only taken occasionally. The drum migrates in schools along the coast, but its northern limit in winter is not recorded; it does not arrive on the New England shores until July. It lives on the bottom, where it passes a sluggish existence among the oysters, crabs and shrimps upon which it feeds. The chin is provided with sensitive barbels, which are supposed to aid the fish in its search for food. In the pharynx are series of large molar teeth, which enable the fish to crush oysters and other shell fish with great ease. Some naturalists believe that the drumming is caused by clapping together the pavement-like teeth of the pharynx; others think it due to some action of the air bladder; some ignorantly attribute it to the fishes beating the tail against the bottom of the vessel, to rid themselves of parasites infesting that region of the body. The sound is heard more especially in the breeding season, and is sometimes regarded as a signal between mates. The drum is generally considered very destructive to oysters.

THE YELLOWTAIL (*Ocyurus chrysurus*).

The drum is one of the largest game fishes on our coast. It is said that individuals have been taken exceeding 100lbs. in weight and measuring 4ft. in length. The usual size is far below this; examples weighing 20lbs. are mature. The bands are said to continue in specimens of 10 or 12lbs., and such fish are preferred to larger ones. Its food, as already stated, is hard-shelled invertebrates, and especially oysters, mussels, clams and crabs. Scallops have been given to it in aquaria. The male is larger than the female and more noisy. The spawning takes place in salt water during the spring months. In the salt-water rivers about Halifax Inlet March is stated by Clarke to be the breeding season, while Silas Stearns found April and May to be their months in the vicinity of Pensacola. The eggs sink to the bottom; they are brown and as big as B shot. The young are banded. They grow very fast and become "black drum," according to Mr. A. W. Roberts, at the age of about three years.



"The drum is found everywhere in Florida where there are oyster banks and mangrove roots laden with coon oysters. Their 'drumming' is constantly heard, especially at night, when one is anchored in the tideways and in the bays. The largest ones, of 20 to 60lbs., are taken near the inlets, and those of smaller size further up the bays, and the character of the tackle to be used will depend on the locality to be fished.

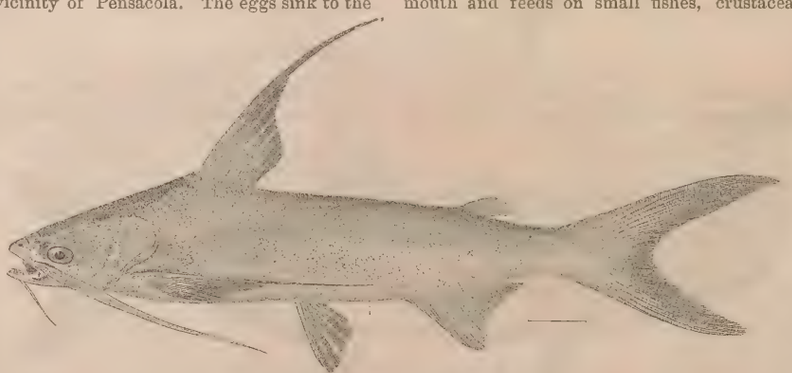
"For the 'Jumbos' heavy striped bass tools are required, while that recommended for the spotted weakfish is more suitable for those weighing less than 10lbs. They are often taken while fishing for sheepshead, and the smaller ones are barred in a similar manner. It feeds on mollusks mostly, and the best baits are clam and fiddler. The drum, unless of large size, is not much of a game fish, though it pulls and tugs strongly and bores toward the bottom like the sheepshead, being also a bottom fish."

THE REDFISH (*Sciæna ocellata*).—Drum, red drum, bass, red bass, spotted bass, channel bass, spot, red horse, *poisson rouge*, *pez colorado*, bull redfish, are some of the names of this valuable fish.

This is one of the most important fishes of the Gulf of Mexico, and extends northward in summer to the Chesapeake, and possibly to New Jersey. At Somers Point the fishermen were positive that they had caught the red drum occasionally. It is more abundant on the Texas coast than anywhere else, exceeding in number all the other food fishes.

The redfish is not much of a wanderer, and its limits are pretty sharply defined. It moves along the coast in large schools, which break up in the bayous and bays, where it improves greatly in flesh and color by feeding. In west Florida, according to Stearns, it arrives from sea in March and April, its coming being influenced by the temperature of the water. It remains for some weeks in shoal water near the inlets, or conceals itself for protection from its enemies. It spends the summer in brackish water, and sometimes ascends the streams into fresh water. The young fish are permanent residents in some regions, but the adults leave in a body after spawning.

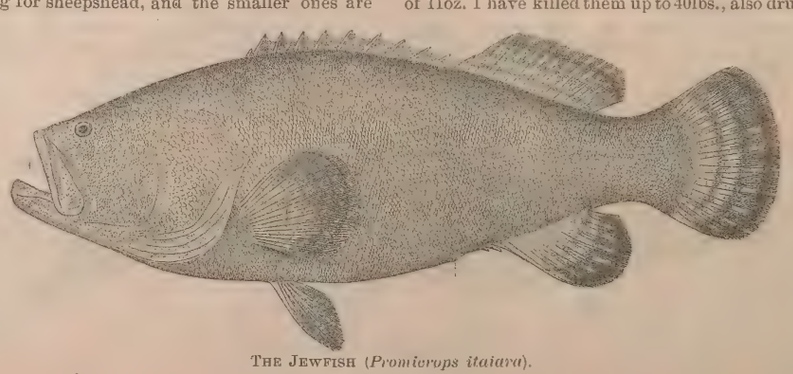
THE RED GROUPER (*Cerna morio*).



The species is carnivorous, subsisting on shrimp, crabs and small fish. It is said to root among the grasses and sea weeds with its head obliquely downward, in search of crustaceans, and to pursue schools of small fishes at the surface, when it sometimes breaches out of water.

Specimens taken in the rivers and inlets in the spring range from 5 to 10lbs. in weight, but adults reach a weight of 60lbs., when they are known in the Gulf of Mexico as bull redfish. Large individuals are not as well liked for eating as moderate sized ones. The species is rather elongate; an example of the largest size would measure more than 5ft. Clarke says they begin to breed in August and September in shallow bays and inlets, and are then unfit for food. The spawning season is not definitely known. Dr. Goode learned on the St. Johns that schooling begins in November and the fish are then gravid, but in December they are all spent. Jordan and Stearns found the young in Pensacola Bay in April, ranging from 2¼in. upward. The eggs, according to Clarke, are buoyant.

THE STRIPED BASS (*Roccus lineatus*).



"The channel bass, or redfish, is abundant in all Florida waters except along the southern keys from Cape Florida to Key West. It grows to 40 or 50lbs. in weight, and is then a difficult fish to handle on the rod. It is a good game fish and pretty fair for the table. When hooked it gives good play, and does not bore toward the bottom like the drum, but will test the angler's skill and tackle by frantic rushes and long runs, varied by energetic tugs and jerks. It has a large mouth and feeds on small fishes, crustaceans and thin-shelled mollusks, all of which are good for baits.

THE SEA CATFISH (*Galeichthys felis*).

"For the largest redfish heavy striped bass tackle is just right, for it is not very unlike that fish in its way of taking a bait and its mode of fighting after being hooked, though it is not so active and succumbs sooner. The largest redfish are caught near the inlets and passes, and the smaller ones further up the bays and in the streams emptying into them.

"The mode of fishing for the large fish is by casting mullet bait, exactly as in striped bass fishing, though there is no necessity for long casts in Florida waters. Most of the 40-pounders, however, are taken on hand lines. I once killed one of 35lbs. on an 8oz. Henshall rod and black bass tackle in twenty minutes; and with a rod of 11oz. I have killed them up to 40lbs., also drum and tarpon of as great a weight with the same rod, but a stout, well-made striped bass rod is the proper tool for such work.

THE JEWFISH (*Promicrops itaiara*).

"For the smaller (2 to 10lbs.) channel bass of the streams and coves, light striped bass tackle, or the 'Little Giant' rod, braided line, size E, and 3-0 Sproat or O'Shaughnessy hook will answer admirably. For bait use pilchard, anchovies or cut mullet, fiddlers or crabs.

"The smaller bass will also rise pretty well to the artificial fly, with predominating tints of red, brown or yellow. The best location for fly-fishing is under the mangroves on

THE SILVER MULLET (*Mugil curema*).

the deep-water side of channels and streams, the angler's boat being anchored 30 or 40ft. away."

THE SHEEPSHEAD (*Archosargus probatocephalus*).—This is one of the few common fishes of our coast which has only one popular name. It is remarkable in a species having such a wide range.

The sheepshead is not known to occur north of Cape Cod, and is rarely found that far north. In some Northern waters it is less abundant now than it was half a century ago. Some Northern localities in which the sheepshead is found in greater or less abundance have a varying supply of this fish. In 1854 Professor Baird failed to find it in Great Egg Harbor Bay, but in 1887 it was not at all an uncommon fish there, and was found to be breeding in several parts of the bay. From Virginia southward its abundance increases, and in the Gulf of Mexico it is very common from Florida to Mexico.

In the Northern States the species is not found near the shore during the winter, but in Florida and the Gulf it is a permanent resident. It is not common in New Jersey after September. It remains on the South Carolina coast until November. In mild seasons naturally the date of leaving becomes later. The sheepshead ascends certain rivers beyond the limits of brackish water. The species frequents the bottom in the shelter of high banks or the vicinity of submerged logs, wrecks, etc., in moderate depths. On the Florida coast it delights in the vicinity of mangrove roots on which barnacles are growing. From the peculiar structure of its teeth, which are adapted for crushing clams, oysters and other shellfish, we would naturally infer its occurrence in localities where such food can be easily obtained. The young hide under sod banks and in the shelter of leafy seaweeds.

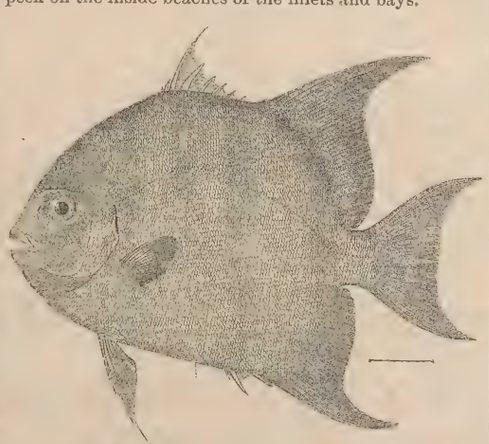
The natural food of the sheepshead includes barnacles, oysters, crabs, clams and mussels. It is particularly destructive to the oyster and may be attracted to a locality by placing crushed oysters on the bottom. The sheepshead is greatly affected by the condition of the tide. The best time for fishing is usually during the latter half of the flood.

The Florida sheepshead are smaller than those in Northern waters, averaging only 3lbs. or 5lbs. in weight. Some anglers mention 7lbs. as a rare size, but Silas Stearns claims 20lbs. as the maximum weight at Pensacola. In Northern waters the average will reach 6lbs., and specimens of 15lbs. are occasionally taken.

Thanks to Capt. Platt, of the U. S. Fish Commission, we now have definite information about the spawning time of the sheepshead. FOREST AND STREAM has recorded his successful development of eggs of this fish in Charlotte Harbor, in the latter part of last March, which resulted in planting about 10,000,000 of the young fish. In Great Egg Harbor Bay young individuals of 1in. to 1¼in. in length were seined on the 10th of August, and on the 23d of the same month examples about 2in. long were taken at Beesley's Point, N. J.

The spawning season in Florida is said to continue until May. In fishing for sheepshead the bait should lie on the bottom and must be held down, of course, by a sinker varying in weight with the strength of the tide. Special hooks are made for this fish because of the wonderful strength of its jaws and grinding power of its teeth. Clarke recommends the tautog hook used at Newport, and also the Virginia hook. Spangler uses the largest size Chestertown hook. The short shank hook in use in Great Egg Harbor Bay is one of the best we have been able to find. The line should be light but strong and very free from liability to kink; a twelve-thread Cuttyhunk is recommended.

For baits there is nothing better than the clam, which may be used either raw or boiled. Small soft-shell clams are very successful, shedder crabs and hermit crabs are particularly effective, and fiddler crabs, shrimp and conchs are also used.



"The sheepshead is as ubiquitous in Florida waters as the catfish. It is very abundant on both the east and west coasts, though rare about Key West. Wherever there are oyster beds, or barnacle-covered posts or piles, or mangrove roots laden with coon-oysters, the sheepshead will be found, its food being principally mollusks. It is the most abundant game fish in Florida, and is found not only in salt and brackish water, but runs up the streams to fresh water, where I have frequently taken it ten or twelve miles above tidewater. Between Cedar Key and Anclote, on the west coast, are several rivers that issue from the base of a high sand ridge in the form of immense springs, 50 to 75 ft. deep and an acre or more in extent. The water of these rivers—the Homosassa, Crystal, Pithlachesticootie, Withlacoochie, Weckawachee, etc.—are perfectly fresh, pure and transparent, and sheepshead can be seen in them in great numbers along their entire course, and even at the bottom of these large springs.

"At the fishing ranches of the west coast immense numbers of sheepshead are taken in the seines and salted with the mullet, and the settlers take them with the cast net whenever they need them. The angler can hardly go astray for sheepshead anywhere in Florida waters, except, as I said before, about the keys near Key West, the waters there being, I think, too salt, and their food is not abundant. About the piles of old wharves sheepshead can be taken as fast as the angler can bait his hooks. I know of a man taking four hundred on a single tide at the old cattle wharf at Punta Rassa. (I do not mention this as a meritorious performance, or a feat to be emulated, but to show the abundance of this fish in Florida.)

THE SHEEPSHEAD (*Archosargus probatocephalus*).

"The Florida sheepshead, however, is smaller than on the Jersey coast, running usually from a pound to five pounds in weight. At the lighthouse wharf on Sanibel Island, opposite Punta Rassa, they run larger than at the cattle wharf, and at Little Gasparilla, some thirty miles above, they are still larger. At any of the inlets or passes of the east or west coast, on the deep-water side, under the mangroves, sheepshead can be taken *ad libitum* with fiddler bait, which can be scooped up by the peck on the inside beaches of the inlets and bays.

THE ANGELFISH (*Chætodipterus faber*).

"For sheepshead fishing a short, stiffish rod is best, as this fish does not give much play, but pulls hard and bores constantly toward the bottom. The 'Little Giant' black bass rod, or a very light striped bass rod are just the tools. An impromptu rod, and one that answers pretty well, can be made in a few minutes from the leaf-stem or mid-rib of a large palmetto leaf, to which the line is to be tied, as a reel, of course, could not be used with a such a rod—and moreover, there is but little use for a reel in 'sheepsheading' in Florida.

"The line should be strong, about size E, and the hook should be of the best quality to withstand the sharp incisor teeth of the fish; it should have, moreover, a long shank, or else a wire snell should be used for the same reason. There is a special hook called 'blackfish hook' that answers a good purpose for sheepshead if the thick barb is kept sharp by a file, otherwise it is useless. I have found the Sproat hook all-sufficient and strong enough even for sheepshead, and prefer it to any other; the size should be 3-0 to 5-0, with gimp snell.

"The best bait in Florida is the fiddler, and is very easily obtained; it is taken by the fish as readily as clam or crab bait. A whole one is put on the hook (and but one hook should be used), passing it completely through the center of the body. Hook the fish—if you can—upon the slightest nibble being felt, otherwise you may lose your bait—and you will lose a good many despite every precaution—but then you will be able to take all the sheepshead you need in any event."

THE RED SNAPPER (*Lutjanus blackfordii*).—The *pargo colorado* of the Cuban fishermen in the Gulf of Mexico is the famous red snapper of Americans. Although long known to the residents of the Gulf States and sparingly shipped to Northern markets for many years, it was first introduced into the literature of science by Goode and Bean as recently as 1878 and associated with the name of the president of the American Fisheries Society and the New York Fish Commission.

The red snapper is now a familiar and appreciated species in most large cities of the East and helps to cheer the passage across the Atlantic on many ocean steamers.

The favorite grounds of this brilliant fish are in the Gulf of Mexico and the Caribbean Sea. Northward on our coast its range extends almost to Cape Cod. Mr. Blackford has recently found the young in Great South Bay. We may say, however, that Savannah Bank is the usual northern limit of the species.

The red snapper lives among the rocks in depths varying from 5 to 45 fathoms, changing its locations somewhat with the season. Off Pensacola, we are informed by the records of Silas Stearns, it appears to move inshore in the fall. It consumes an almost endless number of bottom fishes, including many forms that are never seen except in its interior. Crabs and prawns also form a part of its food.

We have seen red snappers weighing upward of 30lbs. Stearns has recorded the maximum weight at Pensacola as 35lbs. It is not uncommon to find an average weight of 25lbs. in lots of 200 fish.

There is not a more showy species known to us in Florida waters nor a more palatable one.

Red snapper fishing is a favorite pastime on the banks near Jacksonville. Off Egmont Key is a famous place for the species. About a year ago fifteen men, each using two lines, caught nine tons of these fish in a few hours. We have seen the deck of the Fish Commission steamer Albatross covered with red snappers on the Pensacola grounds in a very short time. The areas covered by the fish are usually small and vessels often drift away from the feeding place in a few minutes. We used groupers and porgies (*Calamus* sp.) for bait. Almost any kind of bright-colored fresh fish will answer. Dr. Goode says they will sometimes bite at a white rag. The line must have a sinker and be strong enough to withstand the weight and brief struggles of a large fish, or of a pair of large fish, for it is not uncommon to haul up two of a kind.

THE YELLOWTAIL (*Ocyurus chrysurus*).—This is the *rabirubia* of the old ichthyologists.

The yellowtail is an elegant species inhabiting the West Indies, the Gulf of Mexico, the Caribbean Sea and ranges southward to the coast of Brazil. About Cozumel it is one of the commoner fishes.

It is found in moderate depths and is sufficiently voracious to take almost any fresh bait. At Cozumel we were fishing with salt mackerel and, doubtless, the silvery color of the skin more than anything else attracted the yellowtail.

Poey states that this species reaches the weight of 15lbs. Our examples were under 3lbs., and we found them very palatable.

The yellowtail is a bottom fish with a moderately large mouth and a good appetite. "It is common in the waters of southern Florida, and is taken about Key West with sea-crawfish bait along with the grunts, porgies, porkfish and other pan fish. The same tackle recommended for the red grouper, and the same baits will do for the yellowtail."

THE BLACK BASS (*Micropterus salmoides*).—The large-mouthed black bass, known also as the green bass, Oswego bass, bayou bass, jumper, moss bass, chub, Welshman and trout, is one of the best known and most widely distributed of our fresh-water fishes. It extends to the northwest as far as Manitoba and is common in all the Gulf States. In Florida, writes Dr. Henshall, "it is abundant in all fresh-water lakes, ponds and streams, and even in the brackish water at the mouths of rivers." The species is not indigenous to New England and the Middle Atlantic States.

It would be superfluous for us to discuss here the habits of the black bass after what Dr. Henshall has written in his exhaustive monographs of the two species. The leaping of the large-mouth has often been referred to and

adds greatly to the sport of its capture, Dr. Goode has seen them rise five or six feet above the water.

May and June are the usual nest-building months of the black bass in Florida, but this season is extended in some instances by early and late spawning. In the FOREST AND STREAM office is the mounted head of a black bass caught in Florida, which weighed 23½lbs.

For giant black bass the angler must go to Florida; here, according to authentic records, he will find individuals reaching a weight of 20lbs., with powers of resistance equal to the struggles of a winninish. He will learn, also, that a veteran angler has taken three tons of black bass in Lake Monroe during a single winter.

"In running waters it is as gamy as in the North, and is a much better food fish. It rises well to the artificial fly of the conventional patterns and colors, and can be taken by any of the usual baits, or by trolling with the spoon, or even a bit of white rag.

"In view of its greater weight than at the North, a somewhat heavier rod should be used, from 8 to 10oz., both for bait and fly-rods, otherwise the same tackle is employed; and it will be found in Florida, as elsewhere, that inch for inch and pound for pound it is the gamest fish that swims."

THE SEA BASS (*Centropristis striatus*).—This is the blackfish of Florida and the black will of South Carolina. We have for years believed it to be distinct from the Northern sea bass (*Centropristis nigricans*). According to this belief the range of the species would not extend much north of South Carolina. In the Gulf of Mexico the species is rather abundant in some localities in west Florida and about certain of the keys; on the Texas coast it is rare or wanting. On the east coast of Florida it is common. Clarke found them in abundance at Mosquito Inlet.

The sea bass is a voracious feeder and one of the most persistent biters known. The young are found in the channels of shallow bays and around the piles of wharves and landings. The large fish frequent deeper waters of the off-shore banks where they hide under stones or in rock crevices. It is not necessary as a rule to locate the sea bass; the angler's fervent desire generally is to locate where he is "conspicuous by his absence."

The food of this fish includes shrimp and crabs, squids, sea worms, small fishes and all other animals of suitable size. The species is a bottom feeder.

The size of the Florida sea bass is much below that of its Northern relative, seldom exceeding 12 or 14in., with a weight of a pound or less.

Silas Stearns recorded the spawning season in the Gulf of Mexico to occur in early summer, and he has caught the young in July and August. The male develops a prominent hump on the top of his head during the breeding season and takes on great brilliancy of colors.

"I have seldom taken the sea bass on the Gulf coast of Florida with rod and line, though I have found it more common on the east coast, on Indian River. It is not much of a game fish and is usually but of a pound or two in weight.

"Ordinary black bass tackle will answer very well for the sea bass, but as it is usually met with in the tideways, in rocky situations, and where a rather heavy sinker is required, the "Little Giant" rod is more suitable. For baits—shrimp, fiddler and clam are all good."

THE RED GROUPER (*Cerna morio*).—Other names of this important fish are brown snapper, red snapper, red-bellied snapper, groper, red groper, *Cherna*, *Cherna americana* and *Cherna de vivero*.

The red grouper is one of the commonest fishes of the Gulf of Mexico, and occurs in less abundance in the West Indies. It is associated with the red snapper on the off-shore banks, where invertebrated animals are plentiful. Grouper banks are located eight miles due west of Clearwater Harbor. Along our east coast it comes north in summer occasionally as far as the bays of Long Island. Off the coast of Yucatan the Grampus found it on the Campeachy Banks. Along the Florida Keys small-sized grouper are the rule.

This is decidedly a bottom fish in moderate depths, but comes into the bays and inlets to spawn, and the young are most abundant in the inlets. At Mosquito Inlet small fish of 1 to 3lbs. are common. Indian River Inlet contains examples of 10 to 12lbs., and in the Gulf very large specimens are plentiful. The red grouper is a voracious destroyer of small fishes, and is very fond of crabs and other crustaceans. It is said to be wary in taking the hook, but we have never experienced any difficulty in catching even more than we needed when fishing for red snapper.

We have caught many individuals weighing 30lbs. or more on the red snapper banks, and Silas Stearns has recorded a maximum weight of 40lbs. for this species.

The spawning season appears to be late spring; Stearns has obtained the young an inch long in June.

An interesting account of red grouper fishing is published in FOREST AND STREAM of May 2, 1889.

"This is a pretty fair game fish with light tackle, and tries to keep near the bottom.

"The 'Little Giant,' or a light striped bass rod, multiplying reel, braided line, size E, and Sproat hook, 3-0, on a gimp snell, with sinker adapted to the tide, constitute the best tackle. For bait may be employed sea crawfish, shrimp, fiddler or clam. In the channels near Key West it is taken along with grunts, porgies, snappers, hogfish, etc., and with the same baits."

THE JEWFISH (*Promicrops ituiara*).—The guasa of the West Indies, changed into warsaw at Pensacola, and know also as jewfish and black grouper, is the largest scaled fish of Atlantic waters.

It inhabits both coasts of tropical America, coming north as far as the Savannah banks and the Gulf of California, and extending southward to Brazil, where it is the *meron*.

We know almost nothing about the habits of this species except that it lives on the bottom in moderate depths and preys on other fishes. When its appetite gets control of its movements the best thing its neighbors can do is to make themselves invisible.

Dr. Henshall tells us something about his own experience in catching the jewfish, and we will yield the column to him, merely pausing to remark that Prof. Poey records the maximum weight of this leviathan as 600lbs. It should be mentioned also that the jewfish is quite distinct from the black grouper (*Epinephelus nigritus*), and may be at once distinguished from it by comparing the very low spinous dorsal of the first with the high triangular first dorsal of the black grouper:

"The jewfish is a fair game fish, and the smaller ones can be caught in the deep portions of inlets and passes, where there are holes among the rocks, or on the sides of channels that are being washed away by the tide, leaving the banks perpendicular and the water deep, especially if the bank or shore is well wooded and the roots are exposed by the washing away of the soil. They are taken in such localities from 5 to 20lbs., generally with the hand line and mullet or crab bait. Light striped bass tackle answers well for the jewfish of these weights and it gives good sport, being a strong and active fish.

"The jewfish grows to an enormous size, however, and passes in and out of the inlets with the tide when of great weight. I helped to capture one on a shark line at Jupiter Lighthouse that weighed on the steelyard 340lbs. Col. Matt. S. Quay, of Philadelphia, was a witness to the taking and weighing of this immense fish. During the same winter I helped capture another on a shark line at Little Gasparilla Inlet that weighed fully 300lbs. These fishes were 7ft. long and of about the same girth at the pectoral fin.

"One of the best places I know of for jewfish of moderate weights is at Gordon's Pass, three miles below Naples, on the south shore of the pass, where the bank is steep and rocky and the water deepest. A similar situation, though on the northern side of the inlet, is at Little Gasparilla, and other good points for jewfish are on the south shores of Bocilla and Stump Passes, where the banks are wooded and steep and the water deep."

THE STRIPED BASS (*Roccus lineatus*).—The striped bass is known on the southern coast of the United States, from New Jersey southward, as rock or rockfish. In New England large individuals found occurring at sea are styled greenhead and squidhound. Streaked bass is one of the old names of the species.

The striped bass ranges along the entire Atlantic coast from the St. Lawrence to the Gulf of Mexico, everywhere entering rivers. It is now definitely known to occur in the Alabama River in moderate numbers and is represented there by some very large examples. Centers of abundance are the great bays and sounds from southern New England to North Carolina. Large specimens are said to be very abundant in Albemarle Sound.

Dr. Goode says it is unusual in the St. John's River; he knows of the capture of only two there since 1873. Silas Stearns obtained one or two in the vicinity of Pensacola; he reports them more common about the Mississippi River mouths; only in this region are they taken in seines. In 1850 Capt. John Washington, of Mystic, Conn., surrounded a large school of wild fish, only a few of which were saved, and wore striped bass of 15 to 40lbs. At New Orleans it is often found in the market.

The species was introduced into California soon after the successful planting of shad in that State, and is now occasionally found in the San Francisco markets.

The species lives indifferently at sea, in brackish water and in fresh water, ascending streams unless prevented by obstructions, and may be kept in artificial ponds. It is one of our permanent residents and may be taken under the ice in winter in the rivers and sounds. When ice-bound in shallow water, especially in the northern part of its habitat, it is said to hibernate. The bass is not a lover of warm water.

The striped bass is carnivorous and predaceous. In the streams it feeds upon small fishes, apparently taking great delight in the alewife or river herring, and the young of other members of the herring family.

In brackish water it obtains an abundance of killifish, silversides, anchovies, lant and other small species. In the bays and sounds they feed upon crabs and other crustaceans, and upon squids, clams, mussels and other mollusks.

The movements of the striped bass while feeding are governed largely by the tides; favorite feeding localities are at the mouths of small creeks and in tideways where an abundance of living prey is constantly brought within their reach.

At Avoca, North Carolina, fish weighing 95lbs. are recorded by Dr. Capehart. The limit of the weight of this species is about 112lbs. In Northern waters the large fish appear to be getting scarcer, and fish markets show for their principal supply great quantities of small fish, some of which weigh only a few ounces.

The striped bass spawns in May and June, either in the rivers or in the brackish waters of the bays and sounds. Eggs have been artificially hatched on Albemarle Sound in May. In the Delaware River Dr. Abbott has found young an inch long in the second week in June, which grew to a length of 4½in. by the middle of October.

By reference to FOREST AND STREAM of March 14, 1889, it will be found that striped bass kept in a pool 10ft. in diameter and 3ft. deep, and fed on crabs and oysters, increased in about eleven months from 6in. in length to 20in.

It is said that bass weighing from ½lb. to 1lb., placed in a Rhode Island pond in June, weighed 6lbs. in the following October.

In fresh water salted eel tail is a favorite bait, and the spoon or spinner is effective. Live minnows are preferred, however, to all other baits. For surf fishing shedder crab well secured to the hook is especially successful.

"The methods of fishing for the striped bass vary with its size. The "Jumbos" of from 20 to 60lbs. are taken on the New England coast from Gay Head to Montauk Point with menhaden bait. This is the top notch of striped bass fishing, requiring strong and excellent tools. The rod should be 8 or 9ft. long, of ash and lancewood, natural bamboo or split-bamboo, and should weigh from 10 to 16oz., according to the material of construction. The reel should be a multiplyer of large size and excellent workmanship; the best, in fact, that can be purchased, capable of holding 600ft. of 12 to 15-thread line. The best hook is the knobbed Sproat or knobbed O'Shaughnessy, from 6-0 to 8-0. The hook is affixed to the line by two or three half-hitches. The bait is cut from the posterior half of a menhaden and doubled around the shank of the hook, fleshy side out, with a half-hitch or two of the line around its upper portion to retain it in place. The portions of the menhaden left, after cutting off the baits, are chopped up and thrown into the water to 'chum' the bass by the oily 'slick' it occasions on the surface of the water, which is quite attractive to the fish.

"The bait is then cast from the shore or 'stands' from 50 to 100yds. out into the surf, which procedure can be followed exactly in Florida, wherever the bass may be found in sufficient numbers, except that mullet bait can be substituted for menhaden.

"Striped bass weighing from 2 to 10lbs. are taken in the estuaries and lower parts of streams with such baits as shrimps, sand worms, shedder or 'peeler' crabs, squids, soft clams, young eels, etc., and much lighter rods and tackle can be employed. The bass will also rise to a gaudy fly in such situations."

THE BLUEFISH (*Pomatomus saltatrix*). Popular names of this widespread species are horse mackerel, mackerel, snap-mackerel, snapping mackerel, snapper, blue snapper, skip mackerel, whitefish, tailor, greenfish, skip-jack, salt-water jack and bluefish.

On our coast the range of this fish extends from Maine to the Gulf of Mexico. The bluefish is found in varying abundance, and sometimes disappears for a long term of years. Omitting certain localities where it would be expected to occur, the species frequents warm seas of both continents. The young are scarcely known until they have reached a length of 1½ or 2in. Smaller ones have been taken occasionally at sea. The young often ascend rivers into entirely fresh water.

The bluefish is one of the most destructive in existence to other fishes; its delight in life is to gorge itself almost to the point of bursting and then maim and destroy its helpless victims for the mere love of killing. It follows, within certain limits, the vast shoals of menhaden and alewives that migrate along our coast in summer, and the young and half grown crowd fiercely into our bays and sounds in pursuit of anchovies, silversides, young herring and any other fish of suitable size that may be found.

In Florida the species is best known by small examples, but schools of adults occur at certain seasons. Two or three pounds is a fair average weight. Further north large individuals are common; specimens weighing 40 or 50lbs. and measuring 5ft. are recorded, but the average weight now is under 10lbs. The young fish are very thin, but the old increase greatly in plumpness.

The spawning grounds are undiscovered. It is probable that the bluefish, like many other marine species, has floating eggs and the young are developed at the surface, ready to begin their piratical career. The Fish Commission steamer Albatross and the schooner Grampus have taken specimens under an inch long off shore, and Dr. Bean seined examples from 1½ to 1¾in. long at Ocean City N. J., on the last of August. In the same month individuals of 8in. to 1ft. were obtained in Great Egg Harbor Bay. The rate of growth is very rapid, as it appears that the fish doubles its weight in the course of a summer.

The best known method of taking bluefish is by trolling at the surface with a squid of metal or bone, to which is attached a piece of white rag or part of an eel skin. In tide rips with a moderate breeze, this is very effective and full of excitement. Heaving and hauling in the surf, particularly near the mouths of small streams, into which alewives are passing, is a favorite pastime. At Indian River Inlet, according to Dr. Kenworthy, "small bluefish congregate in numbers during the winter months and at times will not refuse a fly." Artificial minnows are used with a light rod where schools of the young are seen feeding near the surface, and shrimp make a good bait under similar conditions.

"The bluefish is abundant on the east coast of Florida, though not so common on the Gulf coast. Last winter I took the young of 2in. in length on the southwest coast. At Jupiter Inlet and Lake Worth I have had fine sport bluefishing. The usual way of fishing for them is by trolling with the hand-line from a sailboat with a pearl, bone or metal squid, trolling spoon, or even a bit of pork rind or a white rag affixed to a hook. They are taken in this manner up to 10lbs. weight, though they usually run from 3 to 6lbs.

"The hand-line for trolling should be 50yds. of No. 1 braided linen or cotton line, or even a larger size, to prevent cutting the hands. The hook should be a Sproat or O'Shaughnessy—4-0 to 6-0 is large enough.

"But the preferable and sportsmanlike method of angling for the bluefish, or for any other fish for that matter, is with rod and reel. A light striped bass rod or a heavy black bass rod can be utilized, but a rod that I have recently devised for the black bass fishing of Lake Erie (where a very heavy sinker is used) is just the tool for bait-fishing for bluefish and most of the coast fishes that run up to 10 or 15lbs. in weight and where a heavy bait or sinker is cast from the reel.

"This rod is in two pieces (one joint), is 7½ft. long and weighs about 9oz., and is made of ash and lancewood or split-bamboo. It will be described in a future number of FOREST AND STREAM as the 'Little Giant' black bass rod.

"A good multiplying reel of medium size and a braided linen or silk line No. 3 or size E and Sproat hook 4-0 to 5-0, with gimp snell to withstand the lancet-shaped teeth, are the other necessary articles of tackle for bluefishing.

"For bait, a small mullet or other small fish, 3 to 6in. long, is best, which is to be cast from the reel as in striped bass or black bass fishing. A sinker should not be used, except a small brass swivel. The fishing should be practiced from an anchored boat in the tideways, though in Florida the shores of some of the narrow inlets answer as well. The sport of the angler will be more assured if he will employ 'chumming' as for striped bass by chopping up the mullet and throwing on the surface of the water to attract the fish. The bluefish is very gamy on the rod, frequently leaping from the water when hooked like the black bass, and will do his best to smash the angler's tackle."

THE COBIA (*Elacate canada*).—This striking fish has received many local names, among them crab-eater, bonito, coalfish, sergeant fish, snooks and ling. One of the largest and most predaceous of the salt-water inhabitants, resembling an overgrown pike in appearance and manners, it is a conspicuous objects of the angler's search, and is capable of satisfying completely his ambition for a trial of skill.

The cobia is found in the West Indies, the Gulf of Mexico and northward on our coast, rapidly decreasing in numbers above Cape Charles, and occurring only occasionally as far up as Cape Cod. The British Museum has specimens from Indian seas and the North Pacific which are referred to our species.

In the Indian River Clarke has seen it lurking under mangrove roots waiting for its prey. Holbrook describes it as a solitary fish, frequenting clear deep water. On the Carolina coast it is found from May to September.

The cobia feeds on crustaceans and fishes. In confinement it will destroy its fellow captives without remorse.

It reaches a length of 5ft. and a weight of twenty pounds.

The cobia breeds in Chesapeake Bay, and, perhaps, occasionally in Great Egg Harbor. Very little is known about the rate of growth of the young. I obtained two examples, the first I have seen, in Great Egg Harbor Bay, in August, 1887, and one of these is figured in the Bulletin U. S. Fish Commission for that year. A most remarkable thing takes place in the development of the caudal fin, which departs from the common rule and changes from a rounded and somewhat produced fin to one which is deeply forked when the fish becomes adult. The ventral fin of the young also is very much longer than in the adult, and the dark stripes of the sides are less sharply defined.

"The cobia is more often taken on the east coast than on the west coast, though it is not common in any portion of Florida. It has been confounded by anglers with another fish, the 'snook' or 'ravallia,' which is a very abundant fish on both coasts. The latter fish has two dorsal fins, like the pike-perch (wall-eyed pike), and a head and mouth somewhat similar, but has not the long, canine teeth of the pike-perch.

"The cobia has a single dorsal fin, extending from the middle of the back almost to the tail, and the anal fin is nearly of the same extent.

"The snook (*Centropomus undecimalis*) is greenish on the back and bright silvery on the sides and belly, with a single very black stripe or band running along the side from the gill-cover to the tail.

The cobia (*Elacate canada*) is brownish or olivaceous on the back and silvery below, with a dark band or stripe along the side, which, beginning at the snout and running through the eye and gill-cover, extends to the tail; and both above and below this stripe are fainter parallel stripes or bands.

"The cobia is hardly common enough to rank as a game fish of Florida, while the snook is very abundant, and is a gamy, hard-fighting fish on the hook. The name 'sergeant fish' has been applied to both fishes on account of the black stripes along their sides, and this name has led to most of the confusion of the two fishes by anglers.

"The cobia can be taken with mullet or crab bait by casting under the mangroves in rather deep water, near the inlets. Striped bass tackle should be used, as it runs up to 20 or 30lbs. in weight, and is a very voracious, strong and active fish.

"The snook or ravallia is taken in both brackish and fresh water almost anywhere along the coasts, in the bays, sounds and lower parts of streams with mullet, crab or fiddler bait, or with the trolling spoon. It is a vigorous, hard fighter, and good tackle is required for its capture. A light striped bass rod, multiplying reel, braided E line, and 3-0 to 6-0 Sproat hooks, with gimp snell, are about right for the snook up to 15lbs. It also rises well to an artificial fly of large size, composed mostly of red and yellow feathers, though, in fact, to almost any gay-colored fly. A heavy bleak bass fly-rod is needed for this fish, as its first rush, when hooked, is somewhat demoralizing to a timid angler and very trying to his tackle. It is not a bad fish for the table, being better, I think, than either the channel bass or drum."

THE ANGELFISH (*Chætodipterus faber*).—On the St. Johns and Indian Rivers and in most other parts of Florida and north to South Carolina this fine food fish is known by the name at the head of this sketch. It is the spadefish of the western part of the Gulf of Mexico. At Beaufort it is called porgee. Names said to have been used by New York fishermen are three-tailed porgee and three-tailed sheepshead. We have heard it styled the triple-tail also. Moonfish is still another name for the species.

The angelfish appears to range from Cape Cod, where it is an occasional visitor, to Brazil. It is known in the West Indies and is common in the Gulf of Mexico. In the warm portions of the Pacific it is recorded as far north as San Diego, but it is too rare in California to figure as an important food fish. Günther includes it in fauna of the East Indian seas.

Owing to the fact that the young is banded and the adult unicolor, two species were until recently credited to our coast.

A striking peculiarity of the skull of old specimens of the angelfish is the globular bony mass formed by the enlargement of some of the bones of the top of the head. As a curiosity this ranks as high as the molar-bearing pharyngeal bones of the drum.

Silas Stearns states that it is common on west Florida, Alabama and Louisiana shores, but not is south Florida, frequenting wharves, rock-piles and wrecks. It forms in large schools in October and November preparatory to leaving the coast.

The food of the angelfish is crustaceans. The fish reaches a length of 2ft. The spawning season is early summer, according to Stearns, and the young remain until October.

"The moonfish, or as it is universally called in Florida, the 'angelfish,' is abundant on both coasts, but is a much better fish for the table than for the angler. It is one of the best fish for the frying-pan of the camper, but it has a very small mouth and is seldom taken with the hook.

It grows to several pounds in weight, about 6lbs. being the heaviest I have seen, though it is oftener taken of but a pound in the seines of the fishermen. Light tackle is needed for its capture."

THE SILVER MULLET (*Mugil curema*).—This well-known and abundant fish has the additional names, jumping mullet, white mullet, blueback mullet, big-eyed mullet and liza. It is not included here because of its game qualities, but on account of its universal application as a bait fish and its excellence for food.

The silver mullet is recorded from the warm seas of both sides of our continent, in the Pacific extending north to Lower California, and in the Atlantic to Cape Cod. Southward it ranges to Peru and Brazil. In the West Indies the species is commonly called liza. In Florida the silver mullet is one of the most abundant of the fishes and one of the most useful to man, the fish-eating birds and the predaceous fishes. Swimming in shoals at the surface, it is constantly followed by myriads of birds and shoals of porpoises and fish as well as by the fishermen with their gill nets, seines and casting nets.

The mullet frequents shallow mud flats and runs up small creeks. It lives in fresh water during several months of the year. Its food consists of minute organisms imbedded in the bottom mud and is sifted before entering the gizzard-like stomach by passing through a filter in the pharynx. Stearns relates his experience in transferring mullet from salt to fresh water: "In 1879 I took a dozen or more medium-sized mullet from the warm shoal water of the bay and placed them in cool, fresh spring water. They swam around very rapidly for about half an hour, then sank to the bottom of the spring, where they remained, apparently comfortable for twelve hours. Before leaving the spring I returned them to their native waters, seemingly in as good condition as when first caught. The bay water was at that time 77° Fahrenheit, and the spring water 71°, a difference of 6°, and a change from pure salt to pure fresh water."

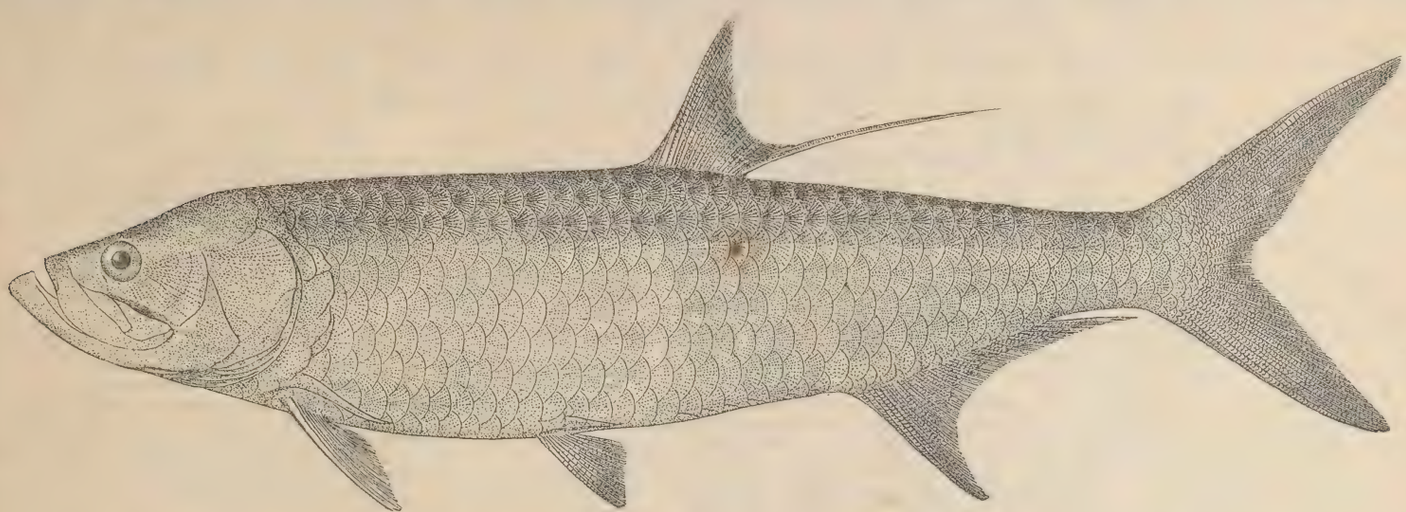
The average length of the silver mullet is 12in., and the weight about 1¼lbs. Stearns has seen individuals of 20in., weighing 4½lbs.

The spawning season begins in summer and lasts until November. Spawning takes place in fresh or brackish water, in bayous, river mouths, or heads of bays, where the proper combinations of grass, sand and mud can be found. The roe of the mullet is a great delicacy and an important article of commerce. The fresh mullet, in our estimation, is one of the finest pan fishes on our coast.

"Neither the silver mullet nor the striped mullet are game fishes. I once took one of the latter on a small artificial gray fly, as an experiment, but although it was hooked in the mouth, I think it was an accident, for I never succeeded in taking another. The mullets swarm in countless myriads in all the shallow waters in Florida, both salt and fresh. They furnish food for fishes, reptiles, birds and man. They are important to the angler only as bait-fishes, and because so easily captured with the cast-net are important as food fishes to the settlers of Florida. They are very valuable commercial fishes, likewise, being the principal objects of pursuit at the fishing ranches, where they are split, cleaned and salted."

THE TARPUM (*Megalops atlanticus*).—This renowned fish is known also as tarpon, tarpun, *grande écaille*, grandacoy, silver fish, silver king, *sabalo*, *sevanilla* and jewfish.

It is evidently more common in the West Indies than in our waters, for the only young examples we have seen are from Cuba. Occasionally an individual finds its way north to Cape Cod and the species ranges southward to Brazil; it is abundant everywhere in the Gulf of Mexico, but its appearance in certain localities depends largely on the warmth of the water. The tarpum has been taken in the Bermudas. Concerning its distribution last winter in Florida Dr. J. A. Henshall writes as follows:



"Last winter I saw plenty of tarpon on Barne's Sound and Card's Sound, east of Cape Sable, early in February, but north of the Cape I did not see a single tarpon, owing to the unusually cold water. When I arrived at Punta Rassa, early in March, I found a score or more of Northern anglers who had been fishing for several weeks, but the first tarpon had been taken only the day before my arrival."

The total catch at Punta Rossa to April 26, 1889, was only forty-two.

This is preëminently a predaceous species and very active in its movements. It preys upon smaller fishes, following them far up the river into fresh water. The young are said to enter fresh waters very freely. One of the most striking traits of the tarpum is its leaping high into the air. On this account it is difficult to handle and plays havoc when surrounded by a seine by breaking the net and sometimes maiming or even killing the fishermen. A fish of heroic size and endurance and of surpassing brilliance in its mail of burnished silver, it plays tantalizingly in the shallows, where it tempts the angler to come and match his skill and armor against its strength and energy.

The tarpum is the giant of its family and much larger than any member of the related herring family. It attains a length of 8ft. and a weight of 170lbs. Nothing is known to us about its reproduction and rate of growth; anglers could do good service by recording their observations on these points.

"The tarpon has achieved a notoriety as a game fish within the past five or six years, principally through the writings of Dr. C. J. Kenworthy, and Mr. W. A. Wood has received credit, generally, of killing the first tarpon of over 100lbs. with rod and reel, in March, 1885; but justice compels me to state that the first event of this kind occurred in the winter of 1880-81, when Mr. Samuel H. Jones, of Philadelphia, killed a tarpon of 170lbs., on ordinary heavy striped bass tackle, in the Fort Pierce channel of Indian River Inlet, on the east coast of Florida. I was at this locality the winter following this feat and learned the full particulars of this extraordinary performance from Mr. Thomas Paine (son of Judge Paine, of Fort Capron), who was Mr. Jones's boatman on the occasion referred to. Afterward I received a full account of it from a son of Mr. Jones, who was also with him and witnessed the capture of this immense fish, with striped bass rod and tackle and trolling spoon for bait. Mr. Jones was two hours in securing the fish. Honor to whom honor is due. Mr. Wood has glory enough in being the champion tarpon slayer of 1885, and he has an enviable record. He was the first to make known through the sporting press how the thing could be done. I was at Punta Rassa in March, 1886, and saw him bring in, from Estero Bay, his famous 146lb. tarpon and two others weighing nearly 100lbs. each.

THE TARPUM (*Megalops atlanticus*).

"Mr. Wood's record, however, was broken by Mr. Walter Man, who in 1886, I think, or may be in 1887, killed nine tarpon, near Punta Rassa, aggregating more than a thousand pounds; the largest two weighed, respectively, 151 and 149lbs. These fish were all killed on heavy striped bass rods and ordinary striped bass tackle.

"The largest tarpons I have seen in Florida—and I have seen thousands—were at Indian River Inlet, in the Fort Pierce channel (where Mr. Jones killed his big fish), and were from 6 to 8ft. long—a large school of them—rolling out on the surface like porpoises, and within a few feet of my boat. I have never fished for the largest tarpon with rod and reel (I once took one, on a shark line, weighing about 125lbs.), as I do not fancy, particularly, the sport.

"The rod for large tarpon should be a heavy striped bass rod, about 8ft. long, of natural cane or split-bamboo, the first, for so large a fish, being preferable on account of lightness. Most tarpon fishers, however, use a very short, stiff and heavy rod, from 5 to 7ft. long, more like a billiard cue than a rod, it being used more for the purpose of casting the bait and holding the reel than playing the fish.

"The tackle consists of a large, perfectly-made, freely-running multiplying reel, capable of holding 600ft. of 12 to 18-thread striped bass line, and knobbed 8-0 Sproat or O'Shaughnessy hooks, with braided linen snells, 2 or 3ft. long and ⅛ of an inch diameter—the braided linen snell is better than wire or chain, which are often used.

"The bait is cut from a mullet and fastened to the hook as the menhaden bait in striped bass fishing, and is cast in the same way, but suffered to lie on the bottom, as the fishing is done in comparatively shallow bays and coves where there is no current.

"The angler proceeds to such places in his boat, accompanied by his boatman. After casting his bait, preferably on a clear sandy bottom, but near to mossy bottom, he reels off a quantity of line, ten or fifteen yards, in the boat, so that the fish can take the bait, move off with it, and swallow it, without resistance; and when it swims away quietly and the slack is all taken up the angler hooks it in the throat or gullet, when it is only a question of time, if the angler is level-headed and the tackle holds, before the colossal fish exhausts itself in its grand and terrific leaps and vain efforts to dislodge the hook or smash the tackle, while towing the boat and its occupants. The angler holds the rod and gives and takes line when necessary, the grand fish, meanwhile, leaping out, sometimes to a height of six feet, and may be for a dozen or more times, until finally it lies on the surface utterly exhausted, when it is either gaffed or towed ashore.

"The tarpon's mouth opens vertically and its jaws close like a pair of shears, and are nearly as sharp, hence the necessity for using a chain, wire or braided snell. Its mouth is quite bony, with but little flesh or loose skin about it for holding the hook, so that it is a rare occurrence to safely play and land a large one so hooked, as the fish in its extraordinary and wonderful leaps and violent shaking of its head and jaws is pretty sure to free itself.

"Tarpon of from 10 to 40lbs. run up the streams to brackish and fresh water, where I have had grand sport taking them with a large, gaudily-colored artificial fly and a heavy fly-rod. It does not matter about the color or the pattern of the fly if it is gay and attractive in appearance. Of course, but one fish in a dozen or more hooked, is landed, but it is fine sport all the same. On the St. Sebastian and St. Lucie rivers on the east coast, and the Caloosahatchie and Myakka on the Gulf coast, and on Biscayne Bay, I have had such sport with tarpon of these weights that the hooking in the gullet of the giants of the bays pales before it as the morning stars before the rising sun. I say this in no captious spirit of comparison, for it is indeed a feat to be proud of, and to boast of, to hook, play and land a fish of 150lbs. with rod and reel, but as I said before, I do not particularly fancy that kind of angling."

THE SEA CATFISH (*Galeichthys felis*).—Welcome or unwelcome, this is one of the angler's fishes in Florida, and must come into the array with more desired forms. Blue cat and salt-water catfish are names applied to this species.

The sea catfish is accredited to our east coast from New York to Mexico; in the Northern States, however, it is not common. Florida has it *ad nauseam*, as will be observed while reading the remarks of Dr. Henshall later on. The species is, apparently, not recorded from entirely fresh water, although it runs into the rivers for some distance.

This is a bottom fish, which lives upon worms and crustaceans, and will refuse nothing in the shape of flesh. As a grunter, the sea catfish can give points to the grunt, the drum, croaker, cavalli, mademoiselle and other ventriloquists. Stearns complains of many nights on the water made sleepless on account of the noisy catfish.

Twelve pounds is the maximum weight recorded for this fish, but the average size is much smaller.

The most striking peculiarity of the species is its habit of carrying the fertilized eggs, which resemble white grapes in size and shape, in the gill cavity. Protected in this manner, they remain until the young are sufficiently developed to support themselves.

There is a second species of marine catfish, known as the gafftopsail cat from the peculiar shape of the first dorsal fin; this fish comes northward more frequently than the one just described. The gafftopsail has large eggs and is similar in habits to *G. felis*.

"The marine catfish is omnipresent on the coasts of Florida, rather more so than the angler desires, and often to his extreme disgust; for it takes both bait and fly intended for other and more desirable species—though it is more readily taken toward dusk or after dark. Anything in the way of bait will answer for the catfish, as it is not at all choice or fastidious in its tastes and desires, and will grunt its satisfaction just the same, when in the angler's possession, whether chewing up his best fly or a bit of white rag.

"I have never known it to be eaten. I tried it once as a matter of experiment, and, although my curiosity was satisfied, my palate was so outraged and disgusted that I have ever since been almost ashamed to look one in the face. And really I have no gastronomic use for a fish that makes a cradle of its mouth by carrying its eggs and young in it.

"There are several fresh-water species, any of which can be taken with any kind of bait and almost any kind of tackle; the only difficulty with the angler is to avoid taking them."

A FLORIDA RETROSPECT.

(Concluded from Page 486.)

should put his dwelling elsewhere. About the time I removed from Fort Reed an elegant tract of high hamak was being offered for sale in lots to suit on the south side of Lake Jessup. What I thought was an exorbitant price was asked for it; but I went through it, and rode around the edge of it, through the pine woods, searching for a suitable bit of pine land for a home, but failed to find what I sought. I did not wish to live miles away from my grove. Col. Whitner purchased twenty acres in that hamak and planted a grove after great labor in clearing off the dense growth of trees and vines, living at his home at Fort Reed. He was ably seconded by his son, Capt. B. F. W., an old Confederate officer, a chip of the old block, who was, and is, one of my dearest friends. On that twenty acres is to-day one of the finest groves I ever saw, and very profitable. It might have been money in my pocket had I purchased there and it might not. Col. W.'s arduous labors and exposures in that hamak and journeying to and fro no doubt shortened his useful life. Capt. W. still cares for the old grove, and in addition has a fine one of his own adjoining. Many a very pleasant visit I made there with him, where in the little cabin, around the camp-fire or table at meal time, with our pipes in the evening, deer driving with a neighbor in the adjacent woods, or fishing at the mouth of Soldier Creek, we passed some mighty happy hours. On Dec. 26, 1878, we left his boat landing for a duck hunt across Jessup and up the St. Johns. The day was "just too lovely for anything," though the ash breeze that kept us company was a trifle warm, and as we skirted the sawgrass, pulling in a bass here and there or bowling over a duck now and then, stopping at noon to lunch in the warm sunshine, I thought the situation could not easily be improved. Emerging from the lake we entered the river, and rowed along up easily until sunset warned us to camp. We found an unfurnished cabin back a piece from the shore on dry ground in the woods, roofed and sided, but frontless. Under the projecting roof at one end, where the outside chimney was to be placed, we made our bed on the ground, built a fire, brought up some extra wood, got supper, and after pipes and a chat turned in. I happened to be on the windward side, though there was scarcely any wind then.

A day or two before a blizzard had organized a raid away up among the ice and snow and other features of Hudson's Bay, and with all the "imps of the air" started for the identical spot where our innocent and unsuspecting selves were slumbering, gaining impetus as it hummed past Baltimore until, in the vernacular of the engineer, it "pulled her wide open" at Jacksonville, and somewhere about midnight struck our camp, as Uncle Remus says, "ker-blam." I had been dreaming for an hour, I suppose, as the temperature fell, that I was lost in a snowstorm on the plains, and that, overcome by the cold, the process of congelation had begun in my limbs, when I awoke to find that I had kicked the blanket off and was about to freeze to death on the spot. I was nearly stiffened out, but after a while managed to get on my feet, when with chattering teeth I beat my arms across my body, and braced against the wind that drove the rain like No. 10 shot from a chokebore at forty yards. Suffering Nicodemus! I was never so cold in my life. My very bones cried out, and I don't know as it was to be wondered at, for I had on no underclothing. Presently I got control of my fingers sufficiently to seize the ax, which I grasped for in the darkness, and though the wind had blown most of the fire bodily away, I succeed in rebuilding it, and after thawing out awhile turned in again, only to repeat the experience before morning, when Capt. W. wielded the ax. We did not get ducks enough on that trip to pay for our trouble.

But the nicest, easiest duck hunting I ever did in Florida or elsewhere, was over by Sylvan Lake, three or four miles from my place, shooting wood duck. Early in the fall the young ducks had a fly-way from their roosting place in some inland lake to the St. Johns in the morning and back in the evening. Driving over about 3 P. M., and hitching the horse to a tree a little distance back in the woods, I took my stand by a tree near the margin of the lake, where I had a good view out over the water and could see the incomers afar off. They skimmed along above the treetops just a "zoonin," and when the gun spoke, if killed, they fell on the pine carpet just in the rear. If winged, they could not escape; and if they went along unhurt, why, I had a shy at them some other day. No dogs, no wading in mud and water, no shivering in a blind, no lying spitted on one's back in a boat until half frozen, or blinded looking into the zenith, no chasing diving cripples—no trouble or annoyance of any kind. When the flight was over, pick up your ducks, put them into the wagon, and mosey off home as comfortable as you please.

For turkeys I went to Sulphur Creek Hamak, five or six miles away, sometimes starting horseback long before day, so as to be on the ground when the turkeys flew down; and again fire-hunting for deer down through the flat woods with a companion, camping in the edge of the hamak about midnight. I started one morning on muleback on a hunt of this kind, when the fog was so thick that it trembled like jelly on each side as I rode through it; and I had not been on the trail, just outside my gate, five minutes when the mule wandered off at his own sweet will somewhere else, and by the time I had seized the fact I was, as I found out later, away down at the lower end of my place, half a mile away from the trail, and as completely lost in the pine wood sameness as if I had been set down in the Okechobee swamps; and before I found myself I had run an oak limb in my eye and was too late to go turkey hunting. Gray squirrels, called there "cat squirrels," were very numerous in that hamak, and I have shot as many as twenty in an hour. They do not frequent pine woods, and the fox squirrel is not found in hamaks. The latter is as large as his Northern congener, but the former smaller, as are rabbits, quail and deer.

But time and space fail me to tell of the many, many happy hours spent in the vast stretches of pine forest or shady depths of hamak, in the almost impenetrable "scrub" or on the far-reaching prairie sentineled by picturesque round-headed palmetto trees; of excursions to inland lakes for fish, on camp hunts for deer, or of trips to the Upper St. Johns, Lake Harney and Indian River, and the comfortable camps by the shore beneath wide-branching oaks with their swaying canopies of moss, where the moon and the owl looked down upon us, and the great blue heron hoarsely squawked to his following mate as he leisurely led the way in search of fresh pastures.

The scenes of those days in many ways are wonderfully changed. Where then we journeyed by wagon and ground the slow and weary miles out in the yielding sand, beneath a merciless sun, while the great black flies bled the reeking horse unmercifully, leaving the blood trickling in a tiny stream from the pierced flesh, as it flew gorged and heavily away, now the firm rails bear the swift train to its destination, the iron horse heeds not the buzzing insect, and the comfortable passengers are whisked across river and prairie, through pine woods and gloomy hamak, by lakes and orange groves, speedily to their journey's end. Where formerly it took from twenty-four or more hours to go from Jacksonville to Sanford by the snaky coarse of the St. Johns, now by rail the distance is compassed in four or five. Yet to the stranger the river scenery would be the most interesting and instructive. Villages with villas, fine schools and churches, gas and water works have sprung up like Jonah's Gourd (let us hope they will not have worms and perish). Church bells call to worship; the noise of trade and traffic and whirr of mills drown the hoarse bellow of the alligator; the engine bell and whistle frighten the timid deer and suspicious turkey; and thousands of orange groves dot the land, wherein their owners hoe crab-grass, grub out stumps, set traps for the cunning and destructive gopher, mix all sorts of villainous compounds with which to dose "scale insects," raise sweet potatoes, gather oranges if they can, fight fleas, pick ticks, spend their little all for fertilizers, and do it again, get sand spurs in their legs, swear, hunt wood lice, experiment with all sorts of foreign truck that won't thrive, buy Northern hay in the bale at $30 the ton, ditto oats at ruination the bushel, have hen lice travel off with the poultry, and attempt the same with the horses on occasions, have roaches run off with the kitchen, scratch jiggers and howl, kill 'possums under the house, get Florida sore eyes, congratulate each other that they are not covered up by snow drifts, and curse the man who said that five thousand oranges were grown to the tree. I do not mean to be understood, you understand, that all these recreations were indulged in every day. By no means. They were sandwiched in with ordinary labor and other pleasures from time to time so as to avoid monotony.

I have enumerated a few of the entertainments provided for me. As I have intimated, I have had many funny and other experiences in Florida. I have enjoyed unspeakably the companionship, assistance, and entertainment of friends and neighbors, without which life would have been a burden, and in their company, when irresponsible cattlemen have set the woods afire, have fought to protect our groves and fences until reeking with perspiration, eyes blood-hot, throats parched with thirst, smutched from head to foot with grime and smoke of pitch, and on the verge of exhaustion with strife, life was as big a burden as we cared to "tote" back to the house. This is one of the recreations which I did not mention.

And yet, notwithstanding all the discomforts, I would not be robbed of my Florida memories for all the ice palaces and frozen noses from Maine to Oregon. The Florida winters as a rule are incomparably beautiful, the summers incomparably lengthy, and some of the aforementioned occupations incomparably incomparable.

There is probably no one locality on the globe that has every imaginable requisite for profit and happiness and not a single exception, excepting Col fornia. (For excursion rates see small bills.) We can not all look on these things alike. For those who are suited with Florida, that is just the place to suit them. For invalids whose health is benefited by that climate, that is their Mecca. For hotel keepers and land agents it is more of a "gold mine" than an orange grove. For those who are in limited circumstances and who go down there expecting to amass a fortune in a pine land grove, it is a delusion and a snare. For those who have gone there from other sections and having burned their bridges behind them, can't get away, it is a lovely place to cultivate patience, endurance and economy. For the owner of a large and profitable grove it is an admirable place to raise oranges, while for any who have abundant means to "monkey" with a pine land grove and not feel it, or purchase one in a hamak, having a winter residence at Lightwood Villa and a summer ditto at Bar Harbor, I am willing to act as legatee if they will act promptly.

O. O. S.

CHARLOTTE HARBOR.

FOURTH PAPER.

"The stormy March is come at last
With wind and cloud and changing skies;
I hear the rushing of the blast
That through the snowy valley flies.

"Ah! passing few are those who speak,
Wild, stormy month, in praise of thee.
Yet, though thy winds are loud and bleak,
Thou art a welcome month to me.

"Thou bringst the hope of those calm skies,
And that soft clime of sunny showers,
Where the wide bloom on earth that lies,
Seems of a brighter world than ours."

I HAVE spent four successive months of March at the southern end of Charlotte Harbor; the novelty has passed away, and the place and its incidents have become almost as familiar as my home, and it needs the genius of a Walton or a White to make the recital of familiar and homely incidents interesting. However, I observe that I eagerly read all stories of Florida journeyings—especially when they tell of scenes and regions with which I am familiar—and it may be that there are others to whom some notes of my six weeks' sojourn on Pine Island of the season of 1889 will be of interest.

The yellow fever scourge of 1888 had, last winter, thrown a pall over Florida. Northern visitors were very few. The great hotels were almost empty of guests. Many were closed. To emphasize the general gloom, the weather was execrable. The whole nothern part of the State was under water. I observed at Sandford that the palmetto trees that used to fringe the shore were well out in the St. Johns. There was one compensation, the trains ran promptly on time, and there was plenty of room.

North P. Norris, my companion, and myself, arrived at Jacksonville by the West India Mail at noon of Sunday, Feb. 24. We had taken our ticket for Palatka, and spent the hour's stop at Jacksonville visiting the Sub-Tropical Exposition. The sky was gloomy and the streets deserted. The big Everett was closed; no one was visible at the Wind-or; and two persons stood on the verandah of the St. James. At the Exposition there were no visitors but ourselves. A dude flamingo stalked about the aisles, turning his toes out with laughable precision, and apparently commenting in hoarse tones upon the exhibits. My old acquaintance, the manatee, was covered with a growth of moss, but devoured the lily pads thrown to him with relish, using the little claws which project from his nostrils to clutch them. A covey of quail roamed about the building, seemingly very little alarmed, but shy enough to show their faculty of quick concealment.

A prominent official of the railroad was the only passenger in the Pullman, besides ourselves, for Palatka, and learning our wish to reach Punta Gorda as soon as possible, informed us that there was a Sunday night train from Lakeland, near Tampa, and kindly had our baggage rechecked for us. We arrived at Punta Gorda shortly after midnight, being the only passengers from Lakeland southward. So we reached the head of Charlotte Harbor in two days from Philadelphia.

The next morning gave us typical Charlotte Harbor weather; clear sky, and a warm, soft breeze. The handsome hotel was admirably kept, as usual, but there was the prevailing gloom on the manager's countenance, which indicated that there was no profit in the season. In the morning we hired a wagon and drove through the woods five miles to Alligator Creek—a little stream—and took a half dozen black bass, the largest three pounds. After dinner we sailed down to the railroad pier, and witnessed the taking of a jewfish weighing 300lbs. The next noon we arrived at San Carlos Hotel, St. James city, had a handle put on my gaff by the blacksmith, arranged our rooms, and prepared for six weeks' fishing.

There is something very homelike about this little hotel. I found many of the same people there who witnessed its opening. The hotel itself was nearly full, but there was no overflow into the annex or cottages as in former years. The service was very good and the table excellent. A professional fish cook had been brought from Boston, and the guests could have their fish prepared in any manner they liked. Spanish mackerel never appeared on the bill of fare, yet enough of that delicious fish were taken by the guests and prepared by private orders to keep the table well supplied. The at-

tendance at the table was by neat-looking girls from Maine.

A most important duty was also performed; that is, the selection and employment of a boatman, for upon that individual the pleasure and success of the expedition largely depends. Through Capt. John Smith—the Russian Finn who is commander-in-chief of the wharf and the boatmen—we obtained an honest and reliable colored man, who owned an excellent catboat, the Gracie, and who was tolerably familiar with the holes and rocks and reefs where the fish congregate. His name was Theodore Donathan, shortened by Capt. Smith to "Dode." He was our guide during our whole stay, and we had no cause to complain of him.

The invariable routine of days fit for fishing was an early breakfast, so that a start from the dock might be made at eight o'clock at the latest. A basket or bucket of provisions, ordered the evening before, was furnished each boat for luncheon. At six o'clock in the evening there was served a good dinner in courses.

The first duty in these waters is to dispose of the sheepshead, so that there will be no further desire on the part of the Northern comrade to pursue that fish to the prejudice of the rarer and more vigorous varieties. When I told Norris, before our Southern journey, that he could take a sheepshead a minute, and that one trial—I said one day, knowing his preference for that fish over all others—would suffice for his whole sojourn, I saw that, while he expressed no doubt as to the rapidity of catch, in words, he had mental reservations, and he was not slow in saying that sheepshead were good enough for him, and that he would be content to leave tarpon and lesser fish to others. Many a day have he and I spent at Cross Ledge Light, and in the Cape May sounds, patiently waiting for the sheepshead's "nod," and well repaid were we if we could carry back at nightfall only one of the fish.

Dode was directed to have the Gracie ready for the next morning, and meet us at the dock at 8 o'clock provided with a bucket of "pink fiddlers."

Promptly on time we started, the morning air, warm and sweet, and though gentle, favorable. In an hour or two, we tied our boat at the steps of the government dock at Sanibel. The trail line, as the breeze freshened, captured a trout and a Spanish mackerel before we reached our moorings.

Sanibel dock is a short pier, extending about 50ft. into deep water of San Carlos Bay, in front of the lighthouse, which is 200yds. distant from the bay, and stands about two-thirds of the distance across the island to the Gulf of Mexico. The lighthouse (or houses) consists of two neat, low, white buildings for the three keepers, and between them is the high iron light tower. The dwelling houses are elevated on open foundations 15ft. high. The extremity of the island, and surrounding the buildings is covered with a heavy growth of Spanish bayonet, beach grape, palmetto-, flowering vines and other semi-tropical growths, very odd and pleasing to the Northern eye. Along the gallery toward the south, numerous rude bird cages hung, filled with nonpareil birds and cardinal grosbeaks which had been trapped by the keepers.

Upon the dock were piles of lumber collected from wreckage, and we found a shady place and prepared for the sheepshead. I also had a desire to take a jewfish, and had brought with me a shark hook and 100ft. of clothes line. The jewfish are said to be numerous under the dock, but it is an extremely rare thing to take one, because of cutting the line on the barnacles which crowd the pilings I tied four snells to my line, and filed the barbs from the hooks so that the fish could be quickly disengaged when landed. Norris said he would not risk barbless hooks, and evidently suspected that I was making sport of him and not the fish. I proposed that we should take one hundred fish, and then I should stop. I directed Dode to bait the jewfish line with the first sheepshead, and cast out. We then moved to the edge of the wharf, and dropped the fiddlers into the water.

The bait reached bottom without molestation, and I feared that the infallibility of the place was gone. But in an instant there was a gentle nip and I was playing a fish, which was at once transferred to the jewfish line, which Dode cast out, and in fifteen minutes there were as many sheepshead flopping on the dock. These were cast overboard, very little injured. Just then the jewfish line began running out, and seizing it, we allowed a run of 50ft. or so, fortunately away from the dock, and then struck. Dode seized the ball of line and ran ashore and down the beach so as to prevent the fish from running under the dock, while we worried the fish until Dode was ready, and then threw the line clear and ran ashore to assist. In ten minutes the big fish was drawn to the beach, and Dode had a gaff and a boat hook in his gills and we drew him ashore—a young jewfish, looking like an enormous bright brown perch, and weighing 18½lbs.

We hooked four more jewfish during our stay at St. James, but this was the only one saved, and the only one taken by any one at the lower end of the harbor, so far as we could learn, during the season. The flesh of this fish is highly prized, and it was relished at the hotel table.

Returning from this episode, an hour more completed the task of taking the one hundred sheepshead. When I called to Norris that the score was complete, he made no comment, but quietly remarked that he would go over on the beach and get some shells, and left me. I lay down in the shade and took a short nap. Then, Norris not returning, I baited up again, and when he came back the score was 157—all taken, jewfish included, in about three hours.

So far as Southern sheepshead are concerned, Norris is cured. I believe neither he nor I cast a bait for them again during the trip.

The most abundant and one of the most beautiful fish in these waters is the trout, or Southern weakfish, ornamented with scattered circular black spots on a ground of opal. They differ from their Northern brethren in seizing the troll with avidity and in taking a very large bait in preference to a small one. They are also of firmer flesh and of finer flavor. Some of the guests who were fly-fishermen seemed to have great sport taking them with trout rod and fly. Norris and I, while trolling for channel bass, took four in succession that aggregated 24lbs.

The most reliable and altogether most satisfactory denizen of these waters is the channel bass, generally called redfish in Florida and on the New Jersey coast, where the largest ones are abundant in autumn, always known as red drum. On the incoming tide they swarm along the shores and oyster bar reefs, and in the shallow water they can often be seen and the bait cast to them. They are not so large here as on the New Jersey coast, the largest recorded here being 34lbs. The average weight is, I should judge, 10lbs. I had a delightful afternoon, when Norris was unfortunately confined to the house, and I had started out late, the Gracie reaching the "Six Mile Rookery," where I purposed fishing, about 2 o'clock. In the skiff, with Dode at the oars, I trolled slowly around the islands, now and then taking a bass or trout, until I happened on a sand bar, over which the flood tide was pouring. I knew this to be the place, anchored the skiff and cast my bait over the bar and into the eddy. It was exciting and exhausting work, for by the time I had to leave, to save daylight and the wind for my nine-mile trip homeward, I had taken from that spot twenty-five channel bass and twenty-five trout—a skiff load of beautiful fish. A few days later a lady took from the same place twenty-five bass.

There was one kind of fishing which Norris and I developed during our trip, and that was the pursuit of the grouper. Norris thinks this the most exciting and interesting of all fishing, and in my opinion it is of the highest rank. There are two kinds of grouper, the black and the red. The black grouper is a powerful, symmetrical fish, with mottled dark green sides, and looks a good deal like the black bass. The red variety is shorter and of wider build, and has an enormous mouth and throat of most brilliant scarlet hue. The body is of bright reddish hue, which as the fish dies turns to a sickly gray, the colors returning after death. Both varieties are highly prized as food, even the boatmen at the dock begging the lucky fisherman who has more than he can use. Leigh Hunt never heard of the grouper when he wrote—

> "The fish is swift, small-needing, vague, yet clear,
> A cool, sweet, silver life, wrapt in round waves,
> Quickened with touches of transporting fear!"

For the grouper is fierce and a glutton. Dode says it is the only fish which doesn't know when it has enough. The more it is fed the more it wants, and the biggest "chum," the largest bait, the largest hooks and stoutest tackle are in order. I had often taken grouper, now and then—*rari nantes*—when fishing for channel bass or tarpon, but never until last season had pursued them systematically.

Dode, early in his engagement by us, often spoke of a great habitat of the fish which he had discovered while "turtlin'" in summer, and to which he was anxious to guide us. Our first trip was a failure, owing to high winds. We reached the ground and fished a half hour without any success. We found the bed to be close along shore, near the mouth of the harbor and in the Gulf of Mexico. Patches of coral rock made vague, black, cloudy spots on the yellow sands, and in these rocks the grouper has his lair. For his first impulse, when he feels the prick of the hook, is to wedge himself in the rocks, and he can with difficulty be dislodged by the heaviest tackle. When captured, the scratches made by the rocks, from which he has been pulled by main strength, are plainly visible. Of course the fisherman, as soon as his fish is hooked, must exert all his strength to keep the grouper from the rocks; and after that is done, there is plenty of fight in the fish until it is brought into the boat and a quietus administered with the "paralyzer."

Dode did not take kindly to our scoffs at his famous "grouper hole," after our failure, and finding a day which he thought propitious, we made another visit there. As we passed Sanibel Point, with a gentle breeze making the Gracie slip swiftly through the pale green Gulf water, we found the inlet alive with gulls and pelicans, all in great excitement, for below them, all over the surface, were the silver flashes of Spanish mackerel, looking like the flash of raindrops from a summer shower on the surface of a placid pond. The Spanish mackerel is shy of the lure, but by making several tacks through the schools and scoring many strikes and many misses, we took five of the fish—ample for our needs.

We reached the "grouper hole" and prepared for action. We used the tarpon outfit, except that the snells were the damaged ones in stock which we would not risk on the greater fish. Dode cut up a great quantity of mullet chum in large pieces, and cast it around the boat. It was a full hour before there was a strike, and then a grouper rushed into his hole in the rocks and the line had to be broken to continue fishing. This occurred two or three times, and then when we had a strike we would keep the fish away from the bottom by main strength. We then began to take the fish in rapidly and ran the score up to thirteen black and three red groupers, in weight from 4 to 15lbs. Two instances showed the power of the fish. In each case Norris's rod was jerked below the surface, and his line spun out against his strongest pressure on the reel, until it broke. "Jewfish!" quoth Dode, "There are plenty of 'em here." Great was our surprise when shortly after we took two groupers of about 12lbs. weight each, with the missing snells hanging from their mouths. Another of Dode's "jewfish" was very difficult to handle, and gave Norris a protracted tussle which ended in disclosing a 35lb. green turtle, which was a welcome addition to the larder at the hotel.

During our stay we made three other excursions to this ground, and took thirteen, fourteen and thirty groupers. Dode took great pride in keeping its location a secret, and refused $10 to disclose its whereabouts, and was much chagrined when we innocently revealed our knowledge of it. Our directions must have been too vague, however, for no one besides ourselves brought grouper from there.

And the tarpon, which is the final cause—*raison d'être*—of this Ultima Thule of fishing resorts.

The great silver king classed with the herring! It may be correct as a scientific grouping; just as the jewfish—most bulky and uninteresting, though savory—is a perch. But think of a perch weighing 600lbs., and picture a herring seven feet in length (as Colonel Kew's fish was), clad in mail of solid silver, with a mouth big enough to engulf a man, and so powerful that he can, and does, throw his great bulk six feet in air and, while above the surface of the sea, twist every muscle with frantic contortion. For beauty and power he has among fishes no equal. Those who have once pursued him—except now and then an Englishman, who cannot forget the traditions as to salmon and the literature appurtenant—acknowledge his supremacy, and come again and again and invoke the old thrill. And it is not necessary to creation and sustaining of interest to have taken his majesty; for has not my friend, the Colonel (from Kentucky, of course), spent three solid winters, and devised many ingenious mechanical patented appliance for his capture? and has he not had many strikes? and has he captured one king? Nay, verily. But he will come again this winter.

There are some canons as to the taking of tarpon which have not been emphasized in writing; some have not been mentioned. What Mr. W. H. Wood says is good, for he is the chief of tarpon fishermen. Col. Pinckney has related what he gleaned from Mr. Wood and others during a short stay at the harbor, when he did not take a fish. Mr. S. C. Clarke, whose writings are agreeable reading, relates the old opinion of the fish by describing a terrifying monster, "with scales as big as a half dollar," which can never be captured with a rod, and only by tying a barrel to him or fastening a dipsey by which the tarpon can beat his own brains out. This is perhaps to be excused in one who is content to while away his time at Mosquito Inlet, instead of crossing the peninsula to Charlotte Harbor, where the only tarpon fishing is. Let me give two or three canons of my own.

First—Procure a long pole, and when anchored attach the stern of the skiff to it by a cord. Never allow the boat to swing. A moving boat draws the bait over the bottom, collecting seaweed and fouling the line. It makes it necessary also for the fisherman to constantly give out and take in line as the boat swings, a nuisance to the placid soul who wishes to read a book or take a nap.

Second—Do not coil any spare line on the stern sheets. The boat being (according to the first rule) without motion this is not necessary, for a well-built reel will give out line without a check or friction. The tarpon, while a cautious fish, will not notice such resistance. This rule is valuable, although contrary to the accepted notions. Almost all the tarpon are taken on the incoming tide, and as it makes, the wind rises until toward high water there is a stiff breeze. The line coiled on the after thwart in the conventional fashion offers a favorite plaything to this brisk air, and it will be twisted and tangled in many loops, and one single kink means a lost fish.

Lastly—Do not strike. Let the fish alone, and he will hook himself. If the hook is not gorged he will eject it anyway. I have known two fish taken which were hooked in the mouth; mere chance, which does not avoid the rule. The prick of the hook in the walls of the stomach sends the monster with sudden impulse into the air, and his contortions imbed the steel firmly in his system, when after his first leap you see him flash by, with only a foot of snell streaming behind him, you may know he is your fish—barring accidents.

To this I should add that no great strain should be put on the fish while he is leaping. Let him have the floor the first fifteen minutes. He will be out of the water a good deal of that time, and every leap he makes is at the expense of his vitality. Merely keep your line taut enough to prevent fouling and save your strength for the next fifteen minutes. Then he will be weary and you fresh, and you can yank and haul and "lift" him with deadly effect. If he comes to the surface to breathe—as he will—lift him with all your strength; don't let him get a mouthful of air.

Many fishermen have fallen exhausted and spent in the bottom of the boat because of useless struggles with a fresh fish. I have made it a practice to stop tarpon fishing after the annual fish. The chance of a strike is too uncertain to justify the waste of time. There is abundance of other fish which give constant pleasurable excitement, and pursuit of them contrasts favorably with the long and tiresome waiting and sleeping attendant on pursuit of their greater neighbor. This year, I gave the king four solid days before he noticed me.

March 23, I anchored just inside of Punta Blanca, in the mouth of the Caloosahatchie, at the precise point where I took my first tarpon, in 1887. The skiff's stern, pointed toward the land, was firmly fastened to a pole. A hundred yards off was the nearest yacht, anchored permanently on the fishing ground, and beyond that another yacht, both of them the winter homes of New York tarpon fishermen. Soon the boats from Punta Rassa, a half dozen of them, appeared, and then two or three from St. James, among them Dr. K.'s, nearly out in the channel. I cast my bait toward the shore and to the left, and Norris his to the right of mine, and then we made ourselves comfortable and awaited—as Uncle Remus says—"what the news was gwine to be."

About eleven o'clock we were aroused by a great splash behind us, and, out near the channel, saw a great silver body rear itself in air in front of Dr. K. Immediately from those old mossbackers of Punta Rassa, came the simultaneous shout of "Tar-pon! Tar-pon!" which war cry they kept up during the contest. The fight was brief. Dr. K. had the theory that he could take the fish in a few minutes, and putting a tremendous strain on his rod, he smashed that—with a report like a pistol shot—and, singularly enough, the line broke at the same time.

The day was lovely, scarcely any wind, and the occupants of the different boats discussed the late contest with freedom, every one satisfied, as usual, that he would have improved on it. Norris and I betook ourselves to our lunch-basket. We had renewed our baits which had been torn by the catfish, thousands of which swarmed about our boat. Dode would now and then scale a mullet for bait or chum, and, as the catfish swarmed to the surface for the scales or offal, he would strike quickly with his knife and a dead catfish would float away with the tide. He killed not less than twenty in this way.

We were finishing the post-prandial grape fruit, when my reel handle began to revolve. There is no more vivid and intense emotion on earth than that simple revolution conveys to the sensoria of the tarpon fisherman. I threw the remains of the luncheon into the basket, put the dinner table—a board—across the boat, seated myself upon it, facing the stern, yelled to Dode to take up the grapnel, untied the line from the pole at the stern, and then picked up my rod. The reel, by this time, was going so fast that the handle was invisible. Dode had the grapnel in the boat, and Norris his line half reeled in, when out of the brown water shot a magnificent fish, to be saluted by the Punta Rassa contingent with their war cry. After his leap he went by me, right at the surface of the water, with about a foot of chain snell visible. I knew then that there were two good feet of it in him, and that he was mine, barring accidents.

We were now adrift, with Dode at the oars, keeping

the stern of the boat toward the course of the fish. How the beauty did leap! He was the liveliest fish on record, for he cleared the surface twenty-three times. As we passed one of the yachts, a handsome fish came out of the water, making a straight course for us, but we escaped him (as we learned afterward) because the fisherman had coiled spare line on the thwart, which became entangled with the reel handle.

After fifteen minutes or so, the fish had finished his acrobatic feats, and I took my turn, and, in fifteen minutes more I am sure he was ready for the gaff, but I preferred to kill him, because our skiff was small and heavily laden. I had him in the boat in forty-four minutes—dead.

"Heavens!" said Norris, "I don't want one of these fish, I am so nervous now looking on that I am tired out."

Dode's comment was characteristic, "O, Mr. Tarpon, he's a man!"

The fish was a most symmetrical specimen, and was a fac-simile in every respect, except weight and length, of that taken by Mr. Robert Grant, and described by him in *Scribner's Magazine*. These two were the most beautiful fish I ever saw at St. James. Mine was 5ft. 10½in. long and weighed 121lbs.

I had heard many accounts of the tarpon fishing at Estero Creek—called by Dode Lasterre—which is a network of lagoons lying below the mouth of the harbor. So the last three days of our stay were devoted to a trip in the Gracie of exploration in that locality. A big dry-goods box was filled with provisions and Apollinaris bottles, and on a brilliant, cloudless morning we started in tow of the little steamer Harry C This useful little boat had been chartered by a gentleman from Philadelphia, who was taking a party of friends out in the Gulf to kill a devilfish. But for his kindness in offering us assistance we would have been unable to reach Carlos Pass, well down Estero, before night, for there was no breeze until our line was cast off well out in the Gulf, and the steamer went on its way looking for the great sea bats, which on calm days are accustomed to bask on the surface.

We were moving swiftly down the coast, and had passed the steamer, when we heard pistol shots, and saw that a devilfish had been harpooned and was towing the steamer at a rapid rate, his great wings throwing spray high in the air. The pistol was being used as rapidly as possible to kill the fish, and after a while the effort was successful, the fish—a medium-sized one of 15ft. width, as we afterward learned—was taken in tow, and our friends steamed back to the hotel.

About noon we drew near Carlos Pass. As we approached the entrance a school of great fish, dimly seen, shot past us, coming from within the pass, which Dode pronounced tarpon. From the pass poured a flood of white water—an ill augury of success for us. As we drew near, my trail line was snatched fiercely, and I landed a 10lb. cavallii—a beautiful fish. Within the pass was a large flock of white pelicans, now a rare bird, and many egrets on the sand bars. We landed opposite an old wharf, beyond which was a cabin, in a clearing looking like a gash in the mangroves and palmettos, and further up the stream was a schooner in which was living a surveying party engaged in running lines for a railway, projected probably with an eye to land grants. Close by us the lance of a tarpon slowly moved along. Water perfectly opaque, so that prospect for fishing was poor. After luncheon we started off, however, for we needed bait, and fish for our table. We entered, and ascended for a mile or two, a broad lagoon studded with mangrove islands. I never saw so many mullet; they were leaping everywhere, but the water was so roiled that Dode's cast net took but few of them. Our fishing was a failure; we hardly secured enough trout for supper and breakfast.

Returning toward the Gracie, we found a good-looking catboat, hauled up near the cabin, and Dode informed us that its occupants were August, a Portuguese named Juan Augusta, and a man who lived with him. We landed and I walked up to the cabin and found the place swarming with dogs and cats. A single room was all the structure contained, and in it lived August, his friend, and his friend's wife. I found August and Norris in animated conversation when I reached the shore. August was exclaiming, "Ta'-pon?" With a sweep of his arm, "Hunneds ta'-pon! One dem s'veya fellar, he tol' ma he gi' ma ten-a-dolla put' 'im on a ta'-pon. A tol' 'im a fin' 'im a-plenty un um, he come-a July or August!" The disgust on Norris's countenance was ludicrous, and I think he repented certain incentives to loquacity which he had expended.

The next morning we spent in searching along the shores for tarpon, and we anchored and fished an hour or two, taking a number of large cavallii, and one large blue shark, which leaped from the water four times, turning himself over and over laterally until he twisted the line about his body and broke it.

In the afternoon, we sailed through Estero Lagoon, arriving in the narrow Estero Creek opposite the "Lime Grove," after passing over lagoons of great extent, just about sunset. Here the water was clear, and we spent two or three hours fishing for tarpon by moonlight. We had plenty of runs, which gave momentary excitement, but all proved to be from sharks. We removed the "cool, sweet, silver life" from a dozen of these pests, by means of the rod and a revolver.

The next morning at ten o'clock saw us anchored on our old grouper ground, with Dode ashore with his cast net getting bait. He soon returned with an ample supply of mullet. It was agreed that we should stop at thirty grouper, and by three o'clock in the afternoon we had that number, and so closed my trip to St. James of the season of 1889. F. S. J. C.

AFTER BREAKFAST.—You may take the most elegant and complete vestibule train ever constructed, leaving Chicago daily at 10:15 A. M., via the Chicago and Atlantic Railway. The magnificent trains offer unsurpassed accommodations for all classes of travel for New York, Boston and Eastern cities. Pullman dining cars are a feature of this new departure, and run through in either direction between Chicago and New York. Instead of exacting extra charges for fast time and the peerless accommodations proffered, the Chicago and Atlantic through its own agencies and those of connecting lines quotes fares to Eastern cities from $1.50 to $3.00 less than is charged by other routes. Consult your local ticket agent on this important item, or for maps, folders and time cards giving full information of the Chicago and Atlantic, New York and Chicago Vestibuled Limited carrying all classes of passengers. Address for prompt reply F. C. DONALD, General Passenger Agent, Chicago. Inclose two green stamps for an amusing, novel and paradoxically ingenious toy. A harmless, fireless, powderless, everlasting fire cracker.—*Adv.*

A ST. AUGUSTINE HUNTER.

NO sketch of St. Augustine would be complete without some account of Mr. James Ponce, familiarly called "Jim," the famous guide and hunter, to whom every trail and lurking place of deer, bear and other game, for many miles, are as familiar as his own domicile. Indeed, this intimate knowledge of the country extends over a great part of eastern Florida. Mr. Ponce is about fifty years of age; and his heavy frame and clean-shaven, weather-beaten countenance give evidence of his powers of endurance. His whole make up is that of a typical hunter.

He still uses a muzzleloader, with the old powder horn and shot pouch slung over his shoulder; and there is yet to be found the sporting tourist, with his elegant breechloader, who will bring home as much game as the hunter with his rusty muzzle-loader, which he always carries ready for use on his Mexican saddle in front of him. How he manages to ride at a sharp canter for ever so long a distance, without once touching his gun to keep it in place, is something I could never understand.

At the near approach of the hounds the deer breaks cover, Ponce's pony at the word springs with all eagerness into a sharp run, until his rider judges he is near enough for a shot; then a sudden pull up to a dead halt; and the rider from the saddle with a well-aimed shot brings down the deer. A sight worth seeing and long to be remembered.

His record now shows over a thousand deer, and of bears nearly four hundred. Mr. Ponce can imitate the call of any bird or animal so perfect that he always gets an answer from the forest dweller. Numerous anecdotes of the results of this faculty might be told did space permit. A pronounced stammer adds zest to his speech and enhances the interest with which one listens' to his stories. During the season his services are always in demand. One of the later incidents, which found its way into almost all the Southern papers, is that accidentally coming upon a combat between a wildcat and a large alligator, he killed them both and brought them in triumph to St. Augustine. W.

ST. AUGUSTINE, Fla., Dec. 24.

A FLORIDA COAST ADVENTURE.

LAST Friday morning about four o'clock Keeper J. M. Hopkins, of the Cape Malabar House of Refuge, near Melbourne, discovered a small sloop riding at anchor about a mile off shore. He signalled the boat, and presently three persons—two men and a boy—emerged from the cabin, and, entering a dingey, sculled slowly towards the shore. A heavy surf was on, and it seemed impossible for the little boat to live in the breakers. Half the time the boat and its crew were wholly hidden from sight but it arose safely to the crest of the following wave every time until within almost a rod of the beach, when a huge breaker lifted it up and threw it forward like a rocket. So terrific was its speed that the persons were unable to hold on to the seats. All three were thrown into the breakers. The oldest man managed to grasp the stern of the boat as it shot past him, and when the boat was thrown high on the sands he rolled like a ball half way up the beach.

Anticipating the trouble, Keeper Hopkins had run to the beach and waded out into the surf. When the three were thrown out of the boat, Mr. Hopkins plunged into the breakers and caught the little boy and succeeded in drawing him safely to the shore. Then he ran back into the water and rescued the young man just as the undertow seized him. But for his prompt action the little boy and the young man would have been drowned.

The old man was still lying where the waves had thrown him, when Mr. Hopkins was able to give him attention. Although he said his rough-and-tumble on the beach had not hurt him any, he was trembling violently and unable to rise. He was too weak to hold a cup of coffee, which was at once carried to him, but after drinking it he revived enough to tell that for four days they had been without food. Then the poor old colored man, with tears of joy running down his wrinkled cheeks, poured out prayers of thanksgiving to God for saving them from starvation and drowning.

The young man and the little boy walked to the house, but the old man was so feeble that food was carried to where he was lying on the sand. The spark of life in him was very low, but in an hour or two the old man was able to walk to the house, on the edge of the bluff. Later he was able to give an account of his experience, which was a fearful one. He was what Northerners would deem a typical "Uncle Tom," tall and venerable in appearance, simple and religious in his conversation, humble and polite in his actions. His age was perhaps sixty, and he was born in slavery at St. Augustine, where he was owned by Daniel Rolle. His own name is Simon Rolle, and he is the father of fourteen children, all of whom are living. The little boy, aged about nine years, who was in the boat, is his youngest son. The other was an adopted son, about twenty years old, named James Evans. The following is a condensation of the old man's story:

"On June 8 I left my home in Nassau for a trip to Courtney Key after turtles, taking along a week's provisions. We had just got off the Bahama banks when a calm, which lasted two days, settled down on us, and we drifted into the Gulf Stream, which carried us along rapidly. Our anchor cable was only ten fathoms long and we tried to row back to the banks, but could not do it. The third day a gale struck us. I've lived all my life on the salt water, but I never saw such a sea as there was in that Gulf Stream. I've seen more than there in the last week than my grandfather saw in all his life. The waves rolled twice as high as our mast. We gave up all hopes but by the power of God and a good understanding we kept the boat from sinking. After the gale broke I headed the boat west-southwest, thinking I'd strike the Florida coast somewhere. I thought we were nearer St. Augustine, and knew our provisions would not last until we struck land, although from the day we were blown off the Bahama bank we limited our food to two crackers a day, and finally to one a day. But four days ago Ben ate the last crum. We had plenty of water, though, and that kept us from getting so hungry. We sighted land last night at six o'clock. I praised the good Lord for letting me see it and once more.

"But I was afraid that perhaps we would be killed by the Indians or wild beasts. I didn't sleep any last night for thinking about them. We sailed on until midnight, guided by two lights on the shore. We anchored before the first one. It was the good Lord that ordered it. He brought us safe out of that wild, raw sea, and to the very door of the good keeper of your Goverment's house. He has done everything in the world for us. We would have drowned and died of starvation but for Him. As long as God lets me live I'll pray for him."

There is little more to be told. Mr. Hopkins gave the men enough provisions to last them six weeks, and Sunday morning they started south. It is their intention to enter the Indian River at Ft. Capron bar, and sell their sloop there. Nothing could induce them to cross the Gulf Stream again, although their boat has proved itself to be wonderfully seaworthy. It is but twenty-one feet long, ten-foot beam, draft three feet. It is on the English model, without centreboard. The boat cleared from Port Semini, New Providence, Capt. James Evans, although the old man, Simon Rolle, is her owner.—*Melbourne (Fla.) News, August, 1889.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Natural History.

NESTING OF THE LOGGERHEAD TURTLE

[Read before the Linnæan Society of New York, at its meeting held Nov. 15, 1889.]

BY MRS. F. E. B. LATHAM.

[While collecting in Florida during the spring of 1889, the writer was located at Oak Lodge, the residence of Mrs. Latham, on the last peninsula opposite Micco, Brevard county, and procured from this lady for the American Museum of Natural History, a series of embryonic loggerhead turtles, collected by her, representing the third to sixtieth, or last, day of incubation. Mrs. Latham accompanied these specimens with her observations on the nesting habits of the species, which are so valuable and interesting that it has been deemed advisable to publish them. In addition to the loggerhead turtle, which nests at Oak Lodge in great abundance, Mrs. Latham has found one nest of the green turtle containing 100 eggs, the turtle being captured; and also one nest of the hawksbill turtle, containing 200 eggs, from which she secured fully developed young. She further mentions seeing a peculiar "crawl" or trail on the beach which differed from any with which she was familiar, and may have been the leather-backed turtle.—FRANK M. CHAPMAN (American Museum of Natural History, New York city.)]

ON the beach the turtles commence to lay about the middle of May, and the latest date at which I have observed them was the full moon of September. A full moon night is generally selected for a hunt, as at that time the tide is higher and the turtles seem instinctively to know that the waves will help them on their journey to a nesting place. Closely watching the water, we often fancy we see a black object nearing the shore. If the sea be rough we know none will land, for they seem to fear being caught by a breaker and thrown on their back, when they would be totally helpless. At last our patience is rewarded; creeping up out of the waves, the turtle stops and looks around; should anything now alarm her she quickly slips back into the sea; but if the coast is clear she laboriously mounts the sandy beach in a direct line. When near the barrier she commences to dig. First one hindfoot removes some sand, then slightly shifting her body sideways, the other is used, until a hole from 12 to 20in. deep and from 14 to 18in. in diameter is formed. She now deposits her eggs, covering them loosely with sand, the whole operation taking from thirty to forty minutes.

During this time the turtle completely ignores our presence; her large bulging eyes seem to have lost all fear in her anxiety to accomplish her maternal work; indeed so intent is she upon her task that one may take the eggs in his hands as she drops them, or may catch them in a bag or pail, curious as the statement may seem, and the turtle, apparently unaware of her loss, will proceed to fill in the cavity, even after every egg has been removed. Having scraped the sand back into the hole, heaping it higher over the nest than the surrounding beach, she seems in a hurry to return to her native element. In returning they seldom take the same crawl, but ascending and descending trails generally resemble a contracted letter V.

In the earlier part of the season the turtles seem to feel a desire to nest before the eggs are developed enough to be deposited. I assume this for the reason that I have often found false nests, that is, where excavations have been made and no eggs deposited. As we have no neighbors nearer than eight miles the nests could not have been tampered with. I also have found crawls where the turtles had dug from three to five holes on their upward journey, and finally placed their eggs in a nest close under the barrier.

I have taken great pains to dissect and examine the turtles killed since our residence here, and from evidence furnished by such dissection, I have come to the conclusion that these turtles lay several nests of eggs in a season. We have permitted the turtle to deposit her eggs in a nest, cover, and leave them; then, on her return to the ocean, "turned" her and taken her home. From one such specimen we took 300 matured eggs, and from the nest she had previously made we took 140. I also counted 800 immature eggs, yolks, and there was also a mass of yolks I did not try to count. Comparing the length of empty egg-sac with that which was filled with matured eggs, I concluded that the turtle had already laid one nest of eggs previous to the one at the time of capture.

Our last turtle, captured in July, I also examined, and the length of empty egg-sac compared with previous examinations led me to the conclusion that the turtle had already laid three nests of eggs, as she contained only 140 matured eggs, and there were no indications of any more eggs coming to maturity this season. This turtle was very fat; from the green fat I made two and a half gallons of fine oil, and I could have saved more had I cared to do so. The contents of its stomach were composed of sea weed and a few bits of barnacle shells; there was also a quantity of parasitic worms, quite slender in shape and about 2in. long. A still larger mass of these was found in the throat.

Having determined to watch the process from laying to hatching, I began to hunt for new nests and to number them, knowing that the bears would probably claim their share ere my work was accomplished. To commence with, therefore, I dated and numbered nineteen nests, this within a distance of three miles along the beach. Each day at 3 P.M. I took my six eggs from the nest; for the first three days I failed to secure an embryo, but the third day, or fourth morning, I procured a few embryos out of 100 eggs, for they were so delicate that a touch destroyed them. Thus far the waste of eggs was so great, that I began to consider how to avoid it. Noticing that the shell was changing from a delicate pink-white to a dull opaque-white at one spot on the egg at the age of twenty-four hours, and that each succeeding day increased the size of this spot, I searched there for my treasure, and there I found it.

The collection of each day from the same nest showed a marked difference in development according to the position of the egg, and this difference continued until the day of hatching. I also found in each nest about twenty eggs that never developed an embryo; this I considered a wise provision of nature and supposed that these eggs were in some way useful to the young turtle. Some nests I found were buried by the drifting sands deeper than the mother had placed her eggs, so deep in fact, that without assistance the young turtles must inevitably have perished; but the "spirit crabs," for the sake of the unfertile eggs and perhaps young turtles, makes a fine tunnel direct to the nest, and of this the little prisoners avail themselves to effect their escape.

When the turtles unaided leave the nest, they seem

to accomplish the feat by constant crawling and climbing, dislodging the sand above them until they emerge on the beach, and hasten to the sea. Of the many young turtles I have liberated, carrying them as close to the barrier as possible, not one made a mistake in going straight to the ocean; and although repeatedly tossed back by the surf they always righted themselves and made for the water again.

For an experiment I brought part of three nests home, handling them with great care, placing them in warm moist sand in the same position and depth as I had found them, and where they would be exposed to the full heat of the sun. They did not develop as rapidly as the eggs on the beach and the embryos were poor and feeble. The first indication of life and movement I found on the twentieth day, and sixty days from laying to hatching I found to be the correct time for the twenty-three nests I have carefully observed.

HAWKS THAT KILL HENS.

Editor Forest and Stream:

Here in Howard county, Maryland, we have just now extraordinary numbers of hawks, broadwings predominating. This morning, Dec. 30, my son, Mr. J. Murray Ellzey, surprised and shot a broadwing, which had seized near the house a large Plymouth Rock rooster, which he had lacerated and almost denuded of feathers along the back, and certainly would have killed but for timely rescue in a very few moments. This is the second instance this season in which Mr. Ellzey has shot this species in the act of seizing poultry. At West River in this State some weeks ago broadwings appeared in greater numbers than ever before remembered, and numerous complaints of their attacks upon poultry were made.

Redtails are also very numerous this season. This species is well known as a hen hawk. A short time ago I saw a roughleg seize and carry off a red squirrel. Those who know the quickness of this animal will recognize a feat more considerable than Mr. Audubon's chronicle of the seizure of a "lethargic frog" as the most considerable feat of this species witnessed by him. I also saw a marsh harrier seize and carry away a partridge not many weeks ago.

I do not know what would be found mostly in the stomachs of hawks around here now. I take it mice, as there are more mice than partridges or Plymouth Rock roosters or red squirrels to be had by them. There is no doubt that the professional ornithologists have been led into error as to the innocence of many species of the hawk by deduction from the contents of their stomachs, which rather represent the food supply for the time being accessible to them in the district they are foraging. Three weeks ago any hawk killed near here would very likely have had remains of partridge in his craw. To-day I doubt if there is a partridge in Howard county. About the middle of December every year they leave here; where they go I cannot say, I suspect to the Potomac. About the same time numerous hawks of various species appear here, and I believe drive the partridges off.

M. G. ELLZEY, M.D.

SNOWY HERON ON LAKE ONTARIO.—Mr. E. E. Chapman writes us from the shores of Lake Ontario as follows: "Looking down upon me from his perch over my head is a bird that I am told is a white or snowy heron. This bird was shot by me at Mexico Point, south shore of Mexico Bay, Lake Ontario, in July, 1888. The taxidermist who put him up for me says that so far as he can learn this is the only one ever seen as far north as Lake Ontario. Thinking that this might be of interest to you I take the liberty of making it known. The bird is perhaps 30in. from end of bill to tip of tail, pure white with yellow eyes, light bronze bill, and legs and feet black." [If this is *Ardea candidissima* it is certainly an unusual occurrence, and is very near the northern limit of its range.]

LARGE ANTLERS.—From a private letter received from our correspondent "Percyval" we extract the following notes on large antlers. He says: "My friend Mr. B. tells me that in the post-office at Lusk, Wyoming, he saw a blacktail [mule] deer head with a very abnormal growth of antlers. H counted fifty-four points on them. They tried to secure the specimen, but were not able to do so. Lately Mr. H. returned from the field and brought in an elk's head, obtained in the Bighorn Mountains, which has an enormous pair of antlers. The crown is at least 4in. in diameter, and the pair have nineteen points between them."

A JANUARY FROG.—Scarborough, N. Y., Jan. 3.—A half-grown bullfrog put in an appearance here yesterday. He found the weather so delightful that he could not resist the temptation to give himself a sun bath. We have dandelions in bloom and caterpillars crawling around. The frog was not musical.—STILLABOY.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

WINCHESTER 10 and 12, Oct. 3.

HOUNDERS AND STILL-HUNTERS.

Editor Forest and Stream:

In a recent issue was a letter from the pen of Wm. H. Gordon, setting forth the destruction of deer in the past open season by hounding in the Adirondack country. He reports that a young man from Clinton county, in going as far as Indian Lake, Hamilton county, during the hounding season, had said, "I'll bet you I saw over a thousand deer beside the road, in wagons and every way." What a scene! Nevertheless, but a few years since that same thing could have been said by a person passing through some portions of the State of Pennsylvania. Never was there a country in every particular more suited to the deer family than the Keystone State. It was argued at the time that the dog and deer flourished together. True of the former, but where is the latter? "None left to sing his requiem." And now the Adirondack country is being denuded of its game in the same manner and by the same class of sportsmen, while the laws of the State uphold them, allowing two months and a half for driving deer in warm weather to ponds and lakes, where they can be potted over while in the water, and completely at the mercy of the hunter. And this crusade going on season after season, while men call it sport to destroy hundreds of animals, when not one-fourth of the meat—owing to the temperature of the weather—can be utilized.

I recently had a conversation with a noted hunter who used to hound deer in Forest county, Pennsylvania, and said to him, "If you had some of those deer back again in the woods, that you used to kill by dogging into the river, off of Bald Hill, you could now—since the law prohibits hounding—go down in November or December and kill one or two by still-hunting to use in your family through the winter." I knew that he had spent a week the fall before down on his old stamping ground, still-hunting upon snow, seeing but the track of one deer and a man ahead of him on that, and came home quite out of sorts about still-hunting deer.

"Yes," said he, "I can now see where we missed it, for we did clean the deer all out of that section in two or three falls' hounding."

It will be just the same in this State within a very few years, unless the law is altered. It does not pay the distant still-hunter to visit the Adirondacks any longer, for the sake of bagging one deer in warm weather, among the baying of hounds, which game, if shipped, would be found stinking at the end of the route. Not many, I predict, will be found visiting those woods under such circumstances.

The State of Maine, thanks to her law makers, has a good wise game law, giving the still-hunter the months of October, November and December to follow the trail, limiting the number to three deer, two caribou and one moose for each hunter during open season. There he can go and pursue his chosen game unmolested from the noise of the dogs, and bag it late enough in the season, so that every pound can be utilized before it spoils; and there game is plenty and increasing steadily from year to year.

CAP LOCK.

FREWSBURGH, N. Y., Dec. 30.

TRAMPS WITH A POCKET RIFLE.

II.—A WINTER DAY.

THE December morning was well advanced by the time the sun had risen above the bank of leaden-hued vapor stretching along the horizon. For over an hour, in the chill of the gray dawn, a rigid form preserved its motionless position, seated on a rock in the center of a grove of chestnut trees. At intervals there issued from this apparently inanimate object a faint "bark." The perseverance of this human squirrel is rewarded ere long. Suddenly I discovered several of the wily rascals among the treetops. One came down a chestnut and commenced skirmishing for breakfast within twenty feet of me. My long vigil on this old stone had rendered my nerves a trifle unsteady, and I could not trust myself to draw on him until he ceased scampering around. Slowly, without any sudden movements, the little elongated pistol rose to my face. He stops for an instant, raises himself on his hindlegs, and looks suspiciously in what he has perhaps imagined to be an old brown stump. The sight paused for a second in line with his pert head; a delicate pressure released the hair trigger; a tiny spurt of fire; a sharp report—but one little life had gone where noises of this earth no longer have power to frighten him into a break for safety toward some hole.

Like a ball of dull fire the sun appeared in the southeast for but a few minutes. Gradually the fog swept between in thicker stratas. The sky clouded over with neutral vapor that betokens storm, and the noises of the forest resolved into a softened hum. Along the edges of the wood some of the oaks have still retained their dead and dry leaves, and the wind that comes in scarcely perceptible breaths, as it moves among them awakes a murmur of protest against the hand of winter. It is not to be one of those still storms, in which the earth is wrapped in a dream of unbroken silence. In increasing and varying gusts the vanguard of the storm comes out of the nor'east, rousing the sleeping music of the gaunt limbs, now singing in wild cadence, suddenly sinking low into a strain so weird and mournful that it haunts the memory of the listener months, yes years, after. How strangely in sympathy with each other nature's moods are sometimes. Solemn as these mutterings are, yet they are in perfect accord with the desolate appearance of brown fields and bare, striped branches of the wood.

And now come the tiny, innumerable advance scouts, traveling swiftly downward and noiselessly dropping upon the grass. How fine the flakes are at first; but wait; their size will increase fast enough. Soon the storm is under full headway, and the fitful gusts of wind hurry the driving bits of white onward in great curves like the spray from the break of some enormous surge. How the wind does rollick among those swaying, tossing branches, and pipe a lively accompaniment to the dance of the old North King's breath. Even the pines are forced to succumb to its power. The soft snow is the only garment that can change the foliage of the evergreen pines. They rise in silent majesty like a troop of white-robed spectres.

In many a snug little crevice old Br'er Rabbit is safely ensconced, and the cheery quail have huddled together beneath the sheltering junipers, while the feathery flakes drift over their warm bodies, keeping them still better protected from the cold without. The area of vision is bounded by a restricted radius, and yet sometimes there comes a lull, the snow ceases for a few moments and I catch a glimpse of the lowlands in their white shroud; and then the waves of wind recommence, shutting out the distance. The deathlike silence, intensified rather than broken by the mournful sobbing of the wind, forced my thoughts into a channel of dejection. I had fallen into a reverie upon the shadowed side of life.

Wandering aimlessly on, I followed unconsciously an old road through the woods and was absorbed in kicking up the dry powder underneath my feet. Suddenly a whirr startled me, and I collected my senses just in time to see five or six hustling brown balls disappearing in the underbrush. Now for a still-hunt, with the chances ten to one in Bob White's favor. The trees in the direction the bevy flew were all open and tall. Swiftly, the carpet of snow making my advance noiseless, I crept forward as far as I judged they had gone and found myself on the border of a clump of white birches. The stump of a decayed button-ball was just the thing for an ambush, and I stowed myself behind it. For five minutes nothing but the harsh *quank-quank* of a cheery little white-bellied nuthatch broke the stillnesss, as he circled the rugged bark of an oak, head downward. Faintly at first, and then perhaps gathering courage from the answered call, the notes grew louder, and soon by scrutinizing carefully the underbrush I detect one of the flock. Slowly I reached my hand around to the pocket where I had the noiseless conical cartridges, opened the breech and inserted it instead of the .22 short. The background of leaves and dark shadows render a clear sight or even a sight at all a matter of extreme difficulty. I held the rifle to my shoulder fully three minutes before I got a chance. He paused a second in front of a little opening and the white snow behind made him stand out plainly. The light snap, scarcely louder than the breaking of a small twig, of the cartridge, did not frighten away the remaining birds. Two more ran up against a small leaden pill and then the rest took warning and departed.

It is about time for me to vamose also, for I have nearly an hour's walk ahead before I reach the way and means of transportation. How the vacillating wind plays with the driving snow, twisting it around in great columns and anon sweeping it along in great sheets with such power that its flakes sting when they strike the unprotected face. For two miles along this dreary, lonely road I walked before I saw the welcome glow from one of the houses of Hinsdale. The light was dimmed so by the intervening feathery blast and gathering darkness that I was almost abreast of the house before its gleam was perceptible.

"Unwarned by any sunset light,
The gray day darkens into night."

And still through the gloom come the low, fluctuating moans of the wind, and when there comes a lull, the sifting of the snow through the trees along the roadside fills the short respite with a steady, incessant sound. Everything seemed muffled and unreal. A wagon passed by like a mass of animated shadow—a couple of forms, muffled to the eyes, I see advance for a second and fade swiftly back into obscurity, like spectres. The thin, far away whistle of a locomotive comes trembling through the air, sounding like a mere wraith of an echo. Even the train seems to glide instead of coming to a stop with a grating of the brakes and jumble of cars. It moves much more silently, but none the less swiftly, for I have just begun to review the incidents of the day when "Brooklyn" from the other end of the car settles matters in that line, until I recline again in my "den." REX B.

WID MEDFORD.

THE enterprise of Mr. J. C. S. Timberlake, manager of the St. Elmo Hotel at Monticello, Fla., deserves recognition. Having genuine attractions for sportsmen, in a country blessed with game, Mr. Timberlake tells of them in a full-page advertisemeat in this issue, to which we invite attention. The quail shooting at Monticello has frequently been reported in past years in our columns, and the letters of Mr. Hoey and others show that the game supply still holds out.

In response to our request for some particulars about Wid Medford, Mr. Timberlake writes:

This remarkable personage, who is referred to in the article on Monticello, Florida, is extensively and most favorably known by the thousands of summer visitors who for the past fifty years have thronged the mountains of western North Carolina. He has been from his youth up a "mighty hunter before the Lord," in which capacity he has slaughtered more bear, deer, panthers, wildcats and rattlesnakes than any living citizen of the United States.

In personal appearance, in manners, in independent bearing, in quaintness of phrase, originality of expression and sterling integrity, he is an exact representative of Cooper's celebrated character "Old Leather Stocking." He has often been aptly described as the Leather Stocking of the southern Alleghanies.

There is not a cove, nor mountain height, nor trout-bearing streamlet in that majestic chain of mountains with which he is not perfectly familiar.

His feats of prowess and bloody encounters with denizens of the woods are innumerable, full of romance, and a simple narrative of them is of never-failing interest to the listener. The courtly deference which he pays to the ladies, with whom he is invariably a favorite, is as marked and admirable as if he had obtained his education in the ball rooms of fashionable society.

Though his hair is bleached with the snows of seventy winters, his eye is undimmed, and the vigorous step with which he scales the mountains is as elastic as in the days of his early manhood.

This unique and celebrated sportsman with his pack of well trained bear hounds will spend the winter at the Hotel St. Elmo, at Monticello, Florida, during which it will be determined whether the tactics of the dogs trained to pursue the bear among the laurel thickets of the Balsam Mountains will be equally successful among the bay galls, palmetto brakes and chapparal of Jefferson county, Florida.

It is suggested that our friends who contemplate joining in the hunt for large game take with them their Winchester rifles as well as their bird guns and fishing tackle for gentler game.

TWO BIBLICAL ALLUSIONS.—Baltimore, Sept. 23.—*Editor Forest and Stream:* I beg to congratulate you on your Christmas number. FOREST AND STREAM is always interesting, but this number particularly so. Apropos, is not Mr. Hough a "little off" in his Biblical reading when he wrote, "almost as did a Naomi of old, wherever you go, I will go, etc.?" It is Ruth who is recorded as having said to Naomi, not Naomi. I like my brother sportsmen to be correct, even in their quotations from Scripture.—E. S. Y. [This is not so bad as something the *Churchman* did the other day. In this city a certain plot of ground, to which an Episcopalian church supposed it had good title, has been successfully claimed by a Roman Catholic institution, and the Episcopalians have been holding a fair to raise funds for buying off the other claimants, "determined," says the *Churchman*, "that no Romish Naboth should possess that vineyard."]

THOSE CHERISHED MEMORIES.

Editor Forest and Stream:

My last fox chase resulted in a good wetting, and though I didn't catch the fox I did catch a bad cold, and for three days I have been nursing a first-class case of influenza. Not being able to go outdoors further than to see that Fannie, my foxhound, was well taken care of, I "rummaged through the attic" to-day and brought down my old files of the FOREST AND STREAM, and after going over the paper critically, and comparing it carefully with this year, I notice a marked improvement. I congratulate you on being on the right side of every question discussed, and I cheerfully commend the paper to every true sportsman.

Jan. 1 will close the game season in Pennsylvania on all kinds of game except bears, foxes, wildcats and coons. Altogether the season has been a favorable one for the deer, and because of the scarcity of tracking snows but few have been killed. We have a few Jock Darlings here, who still continue to hound and kill deer, though the season closed Dec. 15. They are being looked after by a few law-abiding sportsmen, who it is hoped will see the vandals brought to justice. Just here a word concerning the Pennsylvania game laws. The laws are all right so far as they go, but the Legislature has always failed to provide for their enforcement. What is everybody's business is nobody's business, and as a result our game laws are generally a dead letter. Unless the good people of the State take the matter in hand and secure the proper enforcement of our game laws, by such means as are provided in Maine and some few other States, we will wake up about Jan. 1, 1900, to find our last deer, wild turkey, pheasant and quail slaughtered by pothunters. They are going just as surely as did the elk, that roamed over these hills fifty years ago, and whose horns still lay whitening on the mountains when I was a boy, a last sad reminder of that noble animal.

The excellent article by "Von W." in last week's FOREST AND STREAM, on the "Hill Farms of New Hampshire," recalls many pleasant memories of boyhood days spent on the hill farms of Pennsylvania, and of the trout streams, long since dried up, where, with birch rod and thread line borrowed from mother's sewing basket, and with hook purchased from that prince of merchants, Israel Cooper, the Quaker, we lured the speckled beauties from their hiding places under old log and stump and rock.

"Shall the Boy Have a Gun?" by the editor, in the same number, will elicit a ready answer from all the old boys who had to wait through many long years for a gun, and then perhaps buy it themselves. Too many parents, on the principle that you must not go near the water until you have learned to swim, keep a gun away from their boys when they should teach them how to use one intelligently and carefully, and by so doing sow the seed of many of the brightest memories of after years. The memories of my first gunning exploits carry me back to 1856, when I first met John W. Mitchell, a Hoboken boy, a year or two my senior, who was the happy owner of a double barrel shotgun, once the property of Joseph Bonaparte. The memories of the days we spent together came back like strains of music from some far off shore. A prince of sportsmen, though but a boy, the lessons he taught me in the use of a gun and in a thousand other good things came to stay. Afterward a captain in the Twelfth New Jersey Volunteers, he wrote me many letters from the front. When the war closed I learned of his going West. For years I have heard nothing from him. If his eye shall somewhere fall upon these lines I know he will stand up and answer to his name, and if he will but wander back again to the old hills of his boyhood days he will find at least one warm friend, the latch string will be outside the door, the best gun shall be his, and we will live over again the days of long ago.

But my letter grows long. A happy New Year to the FOREST AND STREAM and all its readers.

FRANK G. HARRIS.

CLEARFIELD, Pa., Dec. 29.

A CHRISTMAS MISADVENTURE.

THE Massachusetts season on ruffed grouse closed with but few bags of good size being made. "The birds were very wild," is the verdict of all the gunners, especially when the trees were stripped of their leaves. For this reason many of the gunners have sought for better fortunes in Maine and New Hampshire and in the extreme northern part of Massachusetts. A party of Boston gunners spent Christmas in New Hampshire. The day was magnificent, but they got no birds. They were very wild, starting before the gunners had got within shooting distance, and flying with tremendous speed till out of sight. Other gunners, with rather more experience, tried the method of posting members of their party just on the borders of swamps, and in other places where the birds would be likely to turn, and shots were obtained, with good results in some cases. Quail shooting has amounted to but little in this State this fall, at least such is the verdict of some of the Boston gunners who have tried their hand.

Just here a rather amusing story may be told at the expense of a newspaper man and his friend, who went "out to Dedham" after quail on Christmas day. The newspaper man is a good wing shot, and has a very fine setter bitch, of his own training. He is a man of kind heart and very fond of his dog. He is good to his friends also. Among his friends may be named the secretary of a prominent Boston institution. This friend is entirely green as to the use of the gun. He was reared in Boston, and his knowledge of field sports is about as limited as it is possible to imagine, and his ideas of game are equal, designating a woodchuck as a "sort of a squirrel"—exact words of the Secretary—when speaking of this animal. Well, he is anxious to become posted on these matters, and his kind friend, the newspaper man, is willing to aid him in acquiring the coveted knowledge. They planned for a gunning trip on Christmas. The newspaper man borrowed a gun for his friend, a double breechloader. Reaching the field, he instructed the Secretary in its use. He was also particularly anxious that his friend should see the splendid working of his dog. The Secretary was instructed to cock his gun when the dog pointed, and to blaze away when the bird was flushed. But he was not instructed how to get out of the scrape if the bird did not flush. Soon the dog came to a point on something. The gun of the Secretary was duly cocked. His nerves were not quite as steady as those of a veteran shootist, for he had never fired a gun in all his life, but he could not afford to tell his friend that he was really a little gunshy. The bird did not flush at all, and the dog went on hunting for a better point. The Secretary lowered his gun, with rather uncertain movement born of too great respect for what the thing might do. He very carefully placed his thumb on the right-hand hammer and his finger on the left-hand trigger. He pulled just a little to see if he was right. The old thing spoke right out in meeting and nearly kicked the Secretary over. The poor dog cried out with pain. She had received the whole charge of fine shot in her side, at long range, as good luck would have it. The newspaper man thought she was done for, but the poor thing is now about over the shooting, thanks to good care and nursing. The shooting for the day was over. The agony of the poor dog covered with blood was too much for both. The Secretary feels very badly over the first time he ever fired a shotgun, or rather the first time a shotgun ever fired him. He made the newspaper man promise not to tell of the circumstance, and that is the reason the names are not mentioned here. The moral of the story is, that the boy should have a gun.

Dr. French, of Boston, has been down in North Carolina shooting. He found the deer quite plenty in the section he visited, and other game fairly plenty. He succeeded in killing three deer, one a specially fine buck, he sent home to his friend, Geo. C. Moore, a manufacturer of North Chelmsford, in this State. The deer came through in due season, as due seasons go on these Southern railways, and the express bill was unduly heavy. The deer was spoiled by long delay. Here is another moral. Go shooting and fishing as often as you can, and you will live the longer and happier for so doing, but do not send home the game or fish to your friends.

SPECIAL.

CAPE COD QUAIL.—Taunton, Mass., Jan. 2.—I was rather surprised upon skinning a quail recently to find its crop completely filled with medium-sized beans. This bird was shot on Cape Cod, about the middle of December, after the crops had all been harvested, with the ground frozen at the time; and how and where the bird got the beans is a mystery to me. In skinning a dozen or more quail shot on Cape Cod and in the vicinity of Taunton, Mass., I noticed that they were all fat, indeed, more so than I have ever seen quail before at this season of the year. This is, I think, owing to the mildness of the season and the absence of snow.—J. C. C.

MINNESOTA DEER.—Forest City, Iowa, Dec. 24.—Venison has passed through this city this week en route from St. Paul to Des Moines. This does not look much like enforcing the Minnesota game law, when they allow game to be shipped from the seat of government in their own State to the capital of another. Now how can it be expected that small local clubs can be successful in enforcing our game laws, when such acts of open defiance as the above are winked at by persons who should keep (and whose duty it is) to enforce them?—WM. H. STEELE.

A TAME FEMALE GROUSE.—Moorefield, West Virginia.—We read the other day a story copied from your paper about a tamed ruffed grouse. Last week Col. W. H. Harness, from near Wardensville, this county (Hardy), spent a night with me. He is an old sportsman, and told me, among other clever feats, of capturing and taming a female pheasant. Here is a pair for you, gentlemen of the feather. We only claim for our services a pair of the domesticated birds when we get to be President of the United States.—YOUNG AMERICA.

KILLED ON THE TRACK.—Huntington, Mass., Jan. 4.—Thursday morning, Jan. 2, while the track walker was making his rounds over his section of the Boston & Albany Railroad, at Huntington, about a mile and a half west of our village, he came upon the dead body of a woods gray fox, which had been cut in two at the small of its back and both its forepaws had been cut off, otherwise it was not mutilated. Who ever heard of the wily fox being killed by the cars before?—H. W. M.

TAXING GUNS IN NEW JERSEY.

Editor Forest and Stream:

Where I am now living in New Jersey there are very many true lovers of the dog and gun, men who will tramp over hill and dale, through wood or swamp for hours, and be perfectly contented at the end of a long day's hunt if they have obtained a half dozen shots. These men are for the most part farmers, carpenters, masons, boat builders, etc., and of course cannot afford either the time or money necessary to take them to where game may be more abundant. It must also be remembered that the days are few and far between that they can spare for an outing. This is my first season for some years in this neighborhood, but these kind fellows seemed to vie with each other in their efforts to procure me the best shooting to be had; but though my dogs were excellent and my patience I think most commendable, I have only too often returned home at night with my gun as clean as when I started in the morning.

One day toward the end of November, returning from an almost fruitless hunt, and accompanied by two other equally unsuccessful sportsmen, and three tired and jaded dogs, we stopped at a wayside inn, feeling ourselves and our dumb companions in need of something cheering after our somewhat disheartening day's tramp. There seated or standing about the big stove were grouped some eight or ten farmers and mechanics, having dropped in for a bit of chat before returning home to their suppers. Upon our appearance there was the usual question, "What luck?" and what had come to be the usual answer, "No luck."

Our landlord, somewhat of an authority upon gunning and gunners, here slowly removed his pipe from his mouth and emphasizing his words by gently tapping the palm of his left hand with the stem, expressed the following decided opinion: "Protection, yes, proper game protection, that's what we want; and until we get it, there'll be no shooting hereabouts worth speaking about, and that I will tell ye. I've been reading in this paper [and here he produced a copy of FOREST AND STREAM] something about a gun tax, and I think it a good idea. Why, Mr. Everett [and here he turned and addressed himself directly to me], I'll venture to say, and I think I can speak for every man here present that with the exception of those dirty sneak thieves who kill or disperse before the law is up what little game we might have, every sportsman in these parts would cheerfully pay a gun tax of $5, or maybe more if necessary, in order to see the proper officers ready to enforce proper game laws as they should be enforced." There was a general murmur of approval here, and there being no dissenting voice our host continued, "As to any surplus after having paid the officers, why that of course should be expended in restocking the country with whatever game is best suited to the locality."

The landlord's speech was heartily approved of and applauded by every one present, and in the general discussion that followed his remarks before the dispersal of the party to their several homes, I could see that this subject had taken a firm hold upon their minds, and that they were of one opinion, and that certainly in favor of a gun tax.

H. B. EVERETT.

A BEAUTIFUL CATALOGUE.

AS one of the oldest advertisers in the FOREST AND STREAM, Mr. Henry C. Squires, of No. 178 Broadway, this city, has long been known to the readers of this journal as an extensive dealer in guns and other goods for the field. We have just received from Mr. Squires his new illustrated catalogue of sportsmen's supplies. In the preparation of what may justly be termed an elaborate and artistic publication, Mr. Squires has gone quite beyond all previous catalogue makers in this line. An illustrated price list of guns and fishing tackle always possesses an interest for sportsmen, because there is some degree of satisfaction in studying even the pictures of a field outfit; but to the interest of the things which are catalogued, Mr. Squires has here added on almost every page tangible suggestions and reminders of the game, the fish, the forests, streams, fields, mountain and shore, and outdoor pleasure life in its widest and most charming phases. From these beautifully printed pages the moose looks out upon you, the deer stands by the river bank, the woodcock is found at home, the mother grouse guards her chicks, the trout leaps; and there are bass and grayling, and flushing waters, with glimpses of old-time log shanties; and so on in a succession of kaleidoscopic views, which transport one to scenes of summer and autumn. For these suggestive pages the catalogue is sure to be appreciated and valued, and many a delightful reverie is in store for those who turn its leaves. Of the high character of the drawings, the admirable taste shown in their selection and the excellent manner in which the catalogue has been printed, by the Knickerbocker Press, it would be difficult to speak in terms of too high praise.

As an inventory of merchandise the catalogue fairly represents the development so far made in the perfection of the appurtenances for land and water sport. The firearms, fishing tackle, camping outfits, water craft and kennel supplies of to-day, as here displayed, are far more varied and more perfect than could be shown in a catalogue ten years ago. If we would know just what progress outdoor sport is making in this country, and on what substantial and varied lines that progress is laid, we may perhaps learn it more quickly and comprehensively by turning over the pages of such a catalogue than in any other way. It sets one to wondering what the next quarter of a century will bring forth.

Sea and River Fishing.

ANGLING NOTES.

THOUGH so far the season has not been one to hurry sportsmen South, still quite a number have already left for Florida, among them Messrs. A. W. Dimmock, of Elizabeth, N. J., and H. M. Cutting, of this city.

Mr. Dimmock, with his soft felt hat and spectacles, does not suggest the famous sportsman that he is, but though small and rather delicate looking, with quiet manners and soft of speech, he is famous for his nerve, and faces a grizzly as coolly as he catches a trout. He is an excellent still-hunter, and not long ago succeeded in stalking a big bull elk and took his photograph before killing him with his Winchester. J. Q. A. Ward, the sculptor, another excellent sportsman, is generally Mr. Dimmock's companion on his hunting trips to Colorado and Wyoming.

Mr. Dimmock does not believe in tarpon fishing with the rod and reel, but inclines to the more exciting sport of following these fish in a small boat and harpooning them, though he prefers the great bat-like devilfish for sport, and a big shark is not to be despised. His accounts of this method of hunting up the fish and then killing them is certainly very exciting and must be not without danger to the sportsman. A collection of photographs taken on these trips have been received from him by Mr. Chas. F. Imbrie, 18 Vesey street, where they can be seen by those interested.

CHICAGO AND THE WEST.

CHICAGO, Jan. 1.—All the way from Winnipeg, Manitoba, there comes to me Christmas greetings from Mr. Thos. Johnson, in the form of an elegant Manitoba souvenir, in which the photographer's art, in some very beautiful and wonderful way, has managed to combine scenes of the Indian, sportsman and settler life of that north country, wreathing the whole with cereals arranged tastefully about the margin. The center piece of the card is one of good cheer about a well-laden table, and there are placed about this the figures of game birds, the upper center being occupied by a buffalo skull and jaw bones. The whole card is very tasty and suggestive, and it would be hard to contrive a neater or more appropriate memento for a sportsman to send to a friend.

I am afraid that the correspondent who writes about "Locked Antlers" in the issue of Dec. 26 has chronicled a case of law-breaking for his friend, who at Dec. 14, "had just returned from a hunt in the Upper Peninsula" unless they had remained in the woods without hunting for something like thirty days. The deer season for the Upper Peninsula closes Nov. 15, if my dates are right. Is this another case of "Oh, nobody minds the law?"

In writing of Mr. Grinnell's Pawnee book, Dec. 19, I am afraid I got Ruth and Naomi a little bit mixed in my allusion. A friend reminds me of it. I am glad to see that there are readers of FOREST AND STREAM who can set one right on the Scriptures as well as other things. I ought to have been able to get this right, for I remember that when I was a boy I thought for a long time that Naomi was a man, until my good parents taught me better.

A year ago last fall I wrote for FOREST AND STREAM a little description of the efforts we made to catch "Jim Curry's trout," in the Rio Grande, Colorado, not far from Del Norte. Jim Curry is a conductor on the D. & R. G., and I stopped at his ranch, near which is the pool where this big trout lies. As stated in the article, this fish has been hooked often, but nobody can stop him. He is thought to weigh 8 or 10lbs. I was not fortunate enough to raise him, but promised to come back some day and fish till I did. On Dec. 19 Mr. Curry wrote me from Alamosa, "I had my rod out of the case just once the past season, on the Chama. I didn't get a chance at the "big un," and suppose he is there yet. Proved up on the ranch in November after you were there, and haven't seen it since. Bought some lots here and built. Last March I laid off for a week, went to Espanola and bought me a ranch, am going to make a fruit ranch of it. The wife, Grace and little Jim are well. Don't forget us if you should come this way. Always glad to show you where the big fish lie.—JIM CURRY."

There is no discount on Mr. Curry's ability to do that latter. Late as it was when we fished the big pool (Oct. 13), the party caught two trout, either of which would weigh 4lbs. One of these was mine, and it was the largest trout I ever landed. If Jim Curry's "big un" is ever caught, however, it will be so well-known in that country that we are pretty sure to hear of it.

E. HOUGH.

LAKE CHAMPLAIN FISHING.—We are indebted to Mr. Thomas Lee for information about the fishing between Westport and Essex, on Lake Champlain. Black bass have been taken in goodly numbers with live minnows, called chubs. Artificial flies were less killing. The fishing was influenced a good deal by the direction of the wind. The boatmen show considerable skill in locating the fish, and it is best to secure their services if one cares for a big creel. On the St. Lawrence Mr. Lee used yellow perch up to 5 or 6in. long in bass fishing, and while they were not taken so freely as minnows, they proved quite effective. Pickerel, elsewhere known as pike, will snap at such perch most ravenously. Wall-eyed pike are said to be increasing rapidly in Lake Champlain, and they furnish excellent sport.

THE MCGINTY BAIT.—Our ever vivacious and always veracious contributor, "J. M. S.," has invented a specially alluring bait for red drum fishing in the deep sea. The working formula is to fasten the new bait on to the hook, drop it overboard, and utter the charm, "Down goes McGinty to the bottom of the sea." It never fails.

ANOTHER HEATED FERRULE.

Editor Forest and Stream:

Life is too short, and space in "the good old paper" too valuable, to waste in a war of ink between a couple o' loon-atics about heated brass, albeit I am glad it has given Bro. Clapham an opportunity to air his knowledge on metallurgy, and to give me "another shot," but I crave your indulgence for a few more "last words."

What I wrote in FOREST AND STREAM of Sept. 19 was not the result of an elaborate experiment, seeking the exact degree of softening that would insure from heating a brass ferrule and plunging it in cold water, or allowing it to cool in the air; it was simply a fact learned by having occasion to burn the broken stump of a rod out of a ferrule, when on refitting it, after letting it cool in the air, I found it seemingly as stiff and serviceable as before. Another one treated to a cold water bath while red hot I found to be soft and utterly worthless as a ferrule. That was all, and that was all I cared at that time to know about, and I told it in my own way. As to my "chaste and beautiful phraseology," it seems to usually express my meaning and reach the spot, and I am sorry to note, too, that it sometimes strokes the fur the wrong way.

I am aware that backwoods "dialect" is not as a rule "chaste, or beautiful," and "I hev shed bar'ls an' bar'ls o' tears" over my inability to steer clear of it when writing—as Dick Mc would say—for "facetious" readers; but to no purpose, and if any one wants "another shot" at me for it they can blaze away and waste their ammunition. I will say, moreover, that I did not use the word "obtuseness" in my last communication. I used another word not calculated to generate quite so much "heat," and if that was the offending word, "chaste, beautiful," or otherwise, that "heated the brass" in your worthy and painstaking correspondent, I heartily beg his pardon, as it was the fault of the type and not mine, "an' that's my hand on't."

For the sake of peace I may say that my statement "may hev bin a leetle mite hasty" as far as it went, but I didn't see the fairness in Bro. Clapham's turning the information sought to be given (brief and hasty though it may have been) completely upside down, giving it an entirely different meaning from that which was plain on the face, and then claiming to have made the discovery himself; hence, I was moved to object, in "chaste and beautiful phraseology." I trust, however, that the editor's decision, "The heated is the softer," will "cool" the ferrule question without the use of water (or more ink) and cause the fur to resume its natural position. KINGFISHER.

Fishculture.

TROUT SPAWNING BELOW HIGHWATER MARK.—Roslyn, L. I., Dec. 31.—*Editor Forest and Stream:* I have recently noticed a, to me, new performance in the spawning of brook trout. During the past two weeks we have been finishing up a 40ft. yacht, and while doing so she was moored in a creek, the outlet of my trout pond. At high tide the water in this creek is 3 or 4ft. deep, and is salt. Right alongside the yacht, scarce 10ft. distant, several trout have made their spawning beds. There is a fine swift stream for about 200ft. above the spot to the pond, also a still better stream above the latter. The trout have a free run to and from the pond and tidewater, but I have never before known them to spawn below highwater mark. Is it a common thing?—THOMAS CLAPHAM. [We have never heard of such a spawning locality for the brook trout, and believe nothing of the kind has been observed before. We should like to be informed about the further history of these trout and their ova.]

TROUT FROM CORRY, PA.—The Pennsylvania Fish Commission has presented to the U. S. Fish Commission a lot of beautiful living trout, which are now exhibited in the Central Station at Washington. We have referred before to the efficient work of Mr. William Buller, superintendent of the hatchery at Corry, and these trout are an additional proof of his skill. The shipment includes lake trout about five or six years old, rainbow, brook and Von Behr trout, and some curious hybrids, resulting chiefly from the crossing of lake and brook trout in different ratios of the two forms. The Pennsylvania Commission has concluded to place its rainbows in landlocked bodies of water, to control its migratory habit.

YELLOW PERCH SPAWNING.—Some of the yellow perch (*Perca americana*) in the U. S. Fish Commission aquaria at Washington have begun spawning in the latter part of December, nearly three months ahead of their time in the wild state. Some of the ovaries containing fertilized eggs are in a hatching jar at the central station. The mass is fusiform and is made up of a series of irregular lobules, which are twisted into a screw-shape and pressed more or less closely together. The eggs are about as large as a No. 7 shot. The form of the embryo can be distinctly seen. The usual period of incubation is about two weeks.

EASTERN BROOK TROUT IN COLORADO.—The new station of the U. S. Fish Commission in Colorado had obtained, up to Dec. 25, a total of 550,000 eggs of wild brook trout from breeding fish belonging to Dr. Laws. It is believed that 1,000,000 eggs will be collected before the season closes. The low temperature of the water, which is uniformly 43 degrees Fahrenheit, will greatly lengthen the season for taking eggs. According to the experience of Dr. Laws, the period of incubation will be 120 days. Mr. Robinson reports that eggs at the end of thirty-eight days do not show the eye spots.

PENOBSCOT SALMON FOR PENNSYLVANIA.—The State of Pennsylvania will receive its allotment of salmon eggs from the United States station at Bucksport, Maine, and will hatch them at Allentown for distribution in the headwaters of Delaware River. This plan will be continued several years in succession, in order to test its results fully. The captures of salmon in the Delaware last year encourage the Commissioners to keep up the efforts at stocking the river.

THE FOX-TERRIERS OF TO-DAY.

Editor Forest and Stream:

Not a great while after the publication of Mr. Mason's excellent book, "Our Prize Dogs," I heard a very influential exhibitor of fox-terriers say that Mr. Mason had committed most serious blunders anent the past and present status of the fox-terriers. The criticism to which the fox-terrier breeder took exception is on page 554; and I was told that it was not only "untrue," but that it had already been "condemned" by English judges of the breed. In this criticism Mr. Mason, after giving one of the most perfect descriptions of a dog that I have ever read, launches forth on a subject of vast import to fox-terrier breeders in general. He writes: "A question we have frequently asked ourselves of late is, are the terriers of the present much or any better than those of ten or fifteen years ago? Are they better as a whole, or are there to-day individual specimens that could beat the old champions? A dog like Trimmer would not of course be able to beat one of Lucifer's quality, and a badly-coated specimen like Tyke would be equally incapable of winning over Mr. Belmont's crack. A bitch like Belona would be outclassed by Richmond Olive, Richmond Dazzle and Safety. But what would be the position on the bench to-day of such dogs as Buffet and Dorcas? How many are there that could beat Olive (Murchison's)? How many in this country would be able to beat old Fussy? For a brace prize where could two be found to beat Buffet and Dorcas? How many of our dogs show the character that was seen in old Belgrave Joe? When we consider the great inducements that are offered in the way of valuable prizes and extravagant prices for good specimens, we are forced to the conclusion that the old fanciers were more than a match for the new in the science of breeding."

This was decidedly unpalatable to certain owners who had paid exorbitant prices for imported dogs, so it must be "condemned" and "untrue." I had never seen the dogs referred to in this criticism, excepting of course those that had been exhibited in this country, and I was unable to give substantial indorsement to Mr Mason's views, so a rather heated discussion terminated with my saying, "Mason don't write like that without knowing what he is about." The rejoinder being, "Mason is right so very often on these dog questions that it's about time he got things mixed, and this time we have got him." I suggested leaving the settlement of the matter to the London *Field* or *Stock-Keeper*, with a new hat on the result for the winner; but experience, or something else, had taught my friend that betting against Mason on matters pertaining to our canine friends was a decidedly risky business, and so the thing was dropped then and there.

A recent issue of the *Stock-Keeper* contains a strong letter by Mr. W. Allison, headed "Concerning the 'Front' of the Fox-Terrier and Other Matters." That Mr. Allison is one of the oldest, most experienced and best judges alive nobody will deny; and this being the case, I claim that his opinions, as expressed in this article, are the strongest possible indorsement of Mr. Mason's pungent criticism.

Mr. Allison writes: "As to terriers of to-day being better than those one can call to mind, the thing is absurd. Such bitches as Fussy, X. L., Burbidge's Nettle, Dorcas and Fan were miles ahead of anything I have seen at the Kennel Club shows. Wire-haired terriers have improved, and that to a very great extent; but smooth ones are on the down line, and will continue so unless some radical change is made."

I claim for Mr. Mason's criticism that instead of being "untrue" and "condemned," it is correct in every particular, and will be indorsed by most eminent authority.

BELVOIR.

DOG TALK.

MR. F. R. HITCHCOCK has disposed of his pointers to the Hempstead Farm Kennel. Seven in all were sold, including Duke of Hessen, Woolton Game, Gem of Kippen, Tory Tanner, Tory White, Stella and Tory Dick, the latter a puppy by Lad of Bow out of Gladys. The price paid for Duke of Hessen and Woolton Game was $2,000.

The Hempstead Farm Kennel has also purchased from the Westminster Kennel Club the litter of nine, five dogs and four bitches, by Naso of Kippen out of Lass of Bow. Their kennel now contains 26 pointers, and it will take a very strong team to beat them either on the bench or in the field.

Every member of the Eastern Field Trials Club should be present at the annual meeting next Tuesday, as business of great importance will be brought before the club, and it is desirable that all who can should attend.

GIVE THE AMERICAN FOXHOUNDS A PLACE.

Editor Forest and Stream:

I was glad to read in one of your recent issues the article over Dr. Heffinger's signature in regard to foxhounds at bench shows. Yes, we have talked it over at our meetings held by the Brunswick Fur Club, and I have also had the subject mentioned to me by owners of fine foxhounds who do not belong to the club, and they agree with the members of the club that there should be a standard for the American foxhound. I think that we have in the American-born foxhound just as good blood and just as good type for points as can be found in any foxhound in the world, and I cannot see why we should not have a standard to judge by as well as the English. The managers of our New England bench shows must bear in mind that a great many of our American dog men own fine braces and packs, and do not consider it worth their while to enter hounds for the small prizes offered at bench shows held in this section, and furthermore judged under English rules. Now if the managers of the Boston bench show will, as Dr. Heffinger has suggested, offer some handsome prizes for the best bitch, the best puppy under eighteen months old, best brace and best pack, in addition to the regular single dog, I am sure that the patrons of the Boston bench show will see as handsome a collection of genuine foxhounds as ever was seen together in any part of the country. I certainly hope that this matter will be taken into consideration before our next show season.

As vice-president of the Brunswick Fur Club, I take this opportunity of extending an invitation to the managers of the New England bench shows and all others who are interested in foxhounds and the manly sport of fox hunting to the meet of this club, which takes place at New Meadows, Maine, from Feb. 1 to March 1. L. O. DENNISON.

WALTHAM, Mass.

THE REPORTER.

Editor Forest and Stream:

In the article on "The Reporter" in your issue of Dec. 19, your correspondent writes: "It is asserted that a dog cannot be trained to report." I trained a setter to report. Out of five dogs that I have owned I have trained two to report. I consider that any dog that is not inclined to be timid can be taught to report. I use a dog call and whistle on it while I am feeding him and whenever I want him to come to me. Then, suppose I am in the field and he should run off after a rabbit or birds and does not come back at once when I whistle; as soon as I catch him I give him a severe thrashing and whistle all the time. Thus he learns that he must come when he hears the whistle. I also whip or scold him every time he flushes a partridge, whether I have called him or not. Teach the dog (1) that he must come to the whistle, (2) that he must not flush a bird under any circumstances. Then he will reason out the matter for himself. If any one will try this I do not think he will have any trouble that will not be well repaid when hunting in a rough country.

B.

KING WILLIAM COUNTY, Va.

Editor Forest and Stream:

As I was reading over your paper of Dec. 19, I was quite interested with the article entitled "The Reporter," and I would like to inquire through your much esteemed paper where I can obtain a pointer dog pup that would be likely to possess such qualities for reporting. E. E. B.

[This habit is not peculiar to any strain of pointer or setter, so far as we know, as we have seen individuals of almost every strain that would at times practice it. We do not remember having seen a dog do this until he had considerable experience on game. The first instance of the kind that we saw took place more than forty years ago. A full description of it may be found in the history of "My old Dog Trim" in "Training vs. Breaking."]

THE ALL-ROUND DOG.

Editor Forest and Stream:

You have been publishing articles of late on the "all-round dog." They are readable, as the "all-round dog" is the most interesting animal of the dog kind. I had one, a cross between a collie and a so-called Newfoundland. He was as black as jet, with a beautiful face; and was much more trustworthy, affectionate, useful and intelligent than many of my human acquaintances.

He was a coon dog from the word go; and moreover, he was a military engineer. I heard him giving the coon signal in a piece of swamp near my place one day; and I went in to see what was the matter. He had raised a big swamp coon and the animal had taken refuge in a high hollow stump, a perfectly impregnable position. On my approach Dufferin showed the wildest delight and implored me to help him out with the coon. This I refused to do, being determined to leave him to his own resources. Being at a complete disadvantage, as the coon would have been nearly his match on fair ground, and as he saw no way of pulling the beast out at the top, my dog set to work and burrowed under the stump, tearing away the partially decayed roots with his teeth, and forced his head in, seized the coon by the haunches, pulled him down and out of the stump, and then after a magnificent battle killed him. Now here was a clear case of intelligent and logical reasoning. When he found I would not help him, after repeatedly and eloquently asking me to do so, and knowing that it was impossible to pull the coon out at the top, he deliberately laid his plans to mine the enemy's position, which he did. It was a piece of reasoning which would do credit to a man. I dressed the coon, stuffed him with sage and onions, and Dufferin and I ate it the following Sunday.

He was a noble sheep dog, a good heeler, a perfect watch-dog, would lie down beside a grip, a parcel, a coat, or meat or grouse and watch it for a day. In short it would take up too much of your space to give a list of his good qualities. Old age came on him, and I put him out of misery with my own hand, preferring that than to permit a stranger to do it. THE KHAN.

DIP AND DASH.

DIP is an imported pointer belonging to Mr. W. H. Force, General Manager of the Post Percheron Horse Association, at Ariosa, Wyoming; and Dash is a liver-colored pointer belonging to Major Whipple of Cheyenne. Dash was invited to the P. O. ranch, and as Dip had not been consulted in giving the invitation he rather resented the presence of Dash and made known his objections in no uncertain manner, especially when he thought Dash was paying too much attention to Bessie, Linn, and Dimples; and after repeatedly giving voice to his displeasure he made a savage onslaught on the stranger, but Dash was all there, game as a pebble and willing to scrap, despite the fact of his having but three legs in good condition. When he was a pup he had been injured in one of his shoulders and never fully recovered and was obliged to do his running mostly on three legs. This unpleasantness continued for several weeks and until the two dogs struck up a friendship in rather a peculiar manner.

One morning I had to go about four miles from the ranch, on horseback; and the dogs followed me. On coming back I noticed that Dip was going lame, and calling him to me I examined the foot but found nothing at fault; and let him go. Away he went sound as a dollar, until he joined Dash, when again he went lame; and again I dismounted but failed to discover the cause of his limping. He started away all right, but no sooner catching up with Dash than again the lameness appeared and I understood the reason. It was a perfect imitation of Dash's gait and resulted from sympathy and good fellowship. He seemed to realize the disadvantage Dash was laboring under, and from that morning they were inseparable companions and the best of friends; and there was never anything too good for Dash during the remainder of his visit, and Dip was apparently lame half the time; and even now when his thoughts revert to his quarrel and reconciliation with Dash, he goes lame with a dot and carry three sort of motion. MILLARD.

ARIOSA, Wyo.

AMERICAN KENNEL CLUB MEETING.

NEW YORK, Jan. 7.—A special meeting of the American Kennel Club is hereby called for Saturday, Jan. 18, 1890, at 12 o'clock M., for the purpose of ratifying the adoption of the changes in the rules, and the articles in the constitution at the last quarterly meeting, to conform with the technical requirements of Art. XIX. of the Constitution.

The annual meeting is hereby ordered to be held on Thursday, Feb. 13, 1890, at 1 o'clock P. M. Both meetings to be held at the office of the club. By order of August Belmont, Jr., President. A. P. VREDENBURGH, Secretary.

A. K. C. STUD BOOK REGULATIONS.—*Editor Forest and Stream:* I have had two mastiff pedigrees sent me lately with a view of the animals being entered in that compendium of blunders, the official Stud Book of the American Kennel Club. In one case I was able to supply all the links of the three generations required, in the other there was a fatal defect in the animal's granddam having no ascertained pedigree. Now for the animals; the first was a fifty cent mastiff owned in the West, and in the entire pedigree, the only animals of the least merit were Hero II. and my late De Buch. The other was none other than the famous Cambrian Princess, the greatest prize winning bitch that ever appeared in England, a bitch that has beaten every crack in England save Jack Thyr and perhaps Beaufort, a bitch. litter sister to the famed King Canute, said to be the best all-round dog ever seen in England, and to crown all, the dam of Minting. Yet plenty of miserable scrubs and mongrels, whose pedigrees are nothing but a string of names, can get into the Stud Book, and such a bitch as this is excluded. Volumes could not more clearly show the intense stupidity of the regulations that guide this ridiculous bantling and money-making expedient.—W. WADE (Hulton, Pa., Jan. 3).

COLLIE STUD DOG STAKES.—The attention of the executive committee has been called to the unnecessary restriction as to date of birth of the progeny, by which the stud dog is to be judged, and it being the object to encourage and not restrict competition, it is hereby ordered that the date be extended to include any born since Jan. 1, 1888, provided they have not previously competed for the stake. Stud dogs and their progeny may be entered for competition any time previous to Jan. 27. No blanks required; send names and description with fee inclosed to J. D. Shotwell, secretary, Rahway, N. J.

EASTERN COURSING CLUB MEET.—*Editor Forest and Stream:* The Eastern Coursing Club's meet was held to-day. The S. P. C. A. officers were there in full force, but did not interfere with the coursing. The result was as follows: Winner of the cup, Mr. F. Hoey's Minnie Staton; runner up, Mr. W. B. Growlage's Zoe; Mr. H. W. Huntington's Highland Chief and Mr. W. R. Caminoni's Wanda divided third. Darkness prevented further coursing. The Puppy Stakes did not fill.—H. W. HUNTINGTON, Sec'y.

RABBITS IN ENGLAND.—*Editor Forest and Stream:* In your answers to correspondents (Dec. 19) "M. H. C." asks if rabbits are classed as game in England, and if there is any law protecting them. Unless the law has been changed of late years, rabbits are not classed as game, nor is there any law to protect them, except that you cannot shoot them without permission of land owner or of tenant. You can shoot them without a game license, but must have a gun license costing about $2 50 per year.—R.

EASTERN FIELD TRIALS CLUB MEETING.—The adjourned annual meeting of the Eastern Field Trials Club will be held at the office of Mr. F. R. Hitchcock, 44 Broadway, New York, at 2:30 P. M., on Tuesday, Jan. 14. A full attendance is specially requested, as in addition to the election of officers, business of importance will be transacted. All who are unable to attend should send a written proxy to the secretary, Mr. W. A. Coster, 44 Broadway, New York.

ST. BERNARD CLUB MEETING.—The January meeting of the Board of Governors of the St. Bernard Club of America will be held Jan. 13, at 7 P. M., at the Hoffman House, New York. A full attendance is requested, as a number of applications for membership are pending. The annual meeting will be held Feb. 11, at 7 P. M., at the Westminster Kennel Club show, American Institute Fair Building, New York.—LORENZO DANIELS, Sec'y.

BELGIAN HARES—Rye, N. Y., Dec. 26.—*Editor Forest and Stream:* Will some one kindly give me some information through FOREST AND STREAM. I am at present engaged in breeding Belgian hares for the purpose of turning them loose in the spring. Will they make good work for a dog when hunted? How will they compare with the cottontail or the English hare in the chase?—G. W. G.

FOXHOUNDS LOST.—Six foxhounds, one spotted, two black and three black, white and tan, with collars marked "Myopia Hunt, Hamilton, Mass.," have been lost. Any information regarding them will be thankfully received and a reward of $5 each will be paid for ther return. Address Mr. John M. White, Tourtellott House, Millbury, Mass., or Mr. Frank Seabury, 60 State street, Boston, Mass.

EASTERN COURSING CLUB.—*Editor Forest and Stream:* The officers of the Eastern Coursing Club are as follows: Pres., N. Q. Pope; Treas., L. C. Wheton; Sec., H. W. Huntington; Board of Directors, N. Q. Pope, L. C. Whelon, H. W. Huntington, I. H. Wolson, W. R. Caminoni, C. L. Griffith, Dr. F. J. Henshaw, R. Lambert and E. A. Garbutt.—H. W. HUNTINGTON, Secretary.

BEAGLE LOST.—The beagle bitch Melody strayed from the studio of Mr. J. M. Tracy, New York, Jan. 6. She is white with black and tan on head, a large patch of black on left side, and two very small dots of black on right flank. Any information concerning her will be thankfully received by her owner, Mr. H. F. Schellhass, 171 Broadway, New York.

LIVER, WHITE AND LEMON.—*Editor Forest and Stream:* I have a fine-bred pointer dog marked in the three distinct colors of liver, white and lemon. Is the marking anything unusual?—J. F. WRIGHT. [This combination of color is not often seen. We remember but two cases of the kind where the different colors were well defined.]

ANDY McGREGOR.—*Editor Forest and Stream:* I wish to say through your valuable paper that my dog Andy McGregor, which showed up so well in the Eastern Coursing Club meet, has really the name Scudding Cloud (*A. K. R.* 6022). The name of Andy McGregor was a mistake.—ERASTUS HOPKINS (Worcester, Jan. 3).

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Authority, Edgewood Fancy and Edgewood Maiden. By F. F. Dole, New Haven, Conn., for white bull-terriers, one dog and two bitches, whelped Aug. 3, 1889, by Hinks (White Sam—Duchess III.) out of Starlight (champion Grand Duke—champion Maggie May).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Primrose—Portswood Tiger. R. Winthrop's bull bitch Primrose to J. H. Matthews's Portswood Tiger, Dec. 19.

Lady Bonaparte—Douglass II. A. W. Albright's (Chattanooga, Tenn.) pug bitch Lady Bonaparte to Eberhart Pug Kennels' Douglass II. (Douglass I.—June), Jan. 3.

Rose—Parson. Damon & Taggart's (Miller's Falls, Mass.) St. Bernard bitch Rose (—— —Fanny) to Contoocook Kennels' Parson (Bello—Thyras), Sept. 7.

Yum Yum—Parson. Contoocook Kennels' (Peterborough, N. H.) St. Bernard bitch Yum Yum (Marco—Hermita) to their Parson (Bello—Thyras), Dec. 26.

Burton Belle—Parson. Contoocook Kennels' (Peterborough, N. H.) St. Bernard bitch Burton Belle (Guide—Saus Peur) to their Parson (Bello—Thyras), Dec. 8.

Regina—Sir Herbert. Contoocook Kennels' (Peterborough, N. H.) St. Bernard bitch Regina (champion Sirius—Hilda Josepha) to Chequasset Kennels' Sir Herbert (champion Plinlimmon—Queen Jura), Dec. 3.

Princess—Parson. F. A. Bragdon's (Peterborough, N. H.) St. Bernard bitch Princess (Grimsell—Yum Yum) to Contoocook Kennels' Parson (Bello—Thyras), Dec. 15.

Flossy T.—Capt. Stubbs. G. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Flossy T. (Col. Stubbs—Pet) to Handsome Brook Kennels' Capt. Stubbs, Dec. 23.

Jule C.—Prince Obo III. Handsome Brook Kennels' (Franklin, N. Y.) cocker spaniel bitch Jule C. to their Prince Obo III., Dec. 20.

Gypsie C.—Prince Obo III. Handsome Brook Kennels' (Franklin, N. Y.) cocker spaniel bitch Gypsie C. to their Prince Obo III., Dec. 25.

Lady Mellville—Bendigo. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Lady Mellville (champion Trentham Dutch—Old Lill) to his Bendigo (Marquis—Kit), Dec. 19.

Starlight—Bendigo. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Starlight (champion Grand Duke—champion Maggie May) to his Bendigo (Marquis—Kit) Dec. 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Bernard. P. H. Hurley's (Worcester, Mass.) St. Bernard bitch Lady Bernard (Grimsell—Yum Yum), Oct. 31, eight (five dogs), by Contoocook Kennels' Parson (Bello—Thyras).

Rose. Damon & Taggart's (Miller's Falls, Mass.) St. Bernard bitch Rose (—— —Fanny), Nov. 11, six (three dogs), by Contoocook Kennels' Parson (Bello—Thyras).

Chloe. J. B. Blossom's (New York) Gordon setter bitch Chloe (champion Argus—Rhona), Dec. 20, nine (four dogs), by Humberto (Royal Duke—Nora).

Whisper. W. H. Daley's (Bangor, Me.) Yorkshire terrier bitch Whisper (Bradford Harry—Belva), Nov. 30, five (one dog), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Rush. Black, white and tan beagle dog, whelped March 24 1889, by Tony out of Spangle, by G. W. Proctor, West Gloucester, Mass., to Wm. H. Patrick, Gloversville, N. Y.

Tony—Uno whelps. Black, white and tan beagles, age not given, by G. W. Proctor, West Gloucester, Mass. a dog each to Samuel Petingill, Swampscott, Mass., and S. C. Huidekoper, Dover, Mass., and a bitch to Associated Fanciers, Philadelphia, Pa.

Pilot. Black, white and tan beagle dog, whelped May 6, 1889, by Tony out of Vic, by G. W. Proctor, West Gloucester, Mass., to Frank Sheffield, Athens, N. Y.

Sport. Black, white and tan beagle dog, whelped March 8, 1889, by Tony out of Skippy, by G. W. Proctor, West Gloucester, Mass., to Wm. N. Le Page, Gloucester, Mass.

Hunter. Sable, white and black collie dog, whelped June 18, 1888, by Glenwood out of Raspberry Girl, by W. R. Adamson, Bon Air, Va., to C. W. Thomas, Gloversville, N. Y.

Gem. Orange and white St. Bernard bitch, whelped April 1, 1889, by Grimsell out of Yum Yum, by Contoocook Kennels, Peterborough, N. H., to Phil C. Seigu, Troy, N. Y.

Grimsell—Yum Yum whelps. St. Bernards, whelped April 1, 1889, by Contoocook Kennels, Peterborough, N. H., an orange and white dog to Dr. A. Striemer, Sleepy Eye, Minn., and an orange, white markings, dog to J. W. Heard, West Point, Miss.

Jewel. White and orange St. Bernard bitch, whelped June 12, 1880, by Keeper out of Regina, by Contoocook Kennels, Peterborough, N. H., to P. T. Betts, Brooklyn, N. Y.

Count. Orange and white St. Bernard dog, whelped June 12, 1889, by Keeper out of Regina, by Contoocook Kennels, Peterborough, N. H., to Dr. C. J. Allen, same place.

Judith. White and orange St. Bernard bitch, whelped June 12, 1889, by Keeper out of Regina, by Contoocook Kennels, Peterborough, N. H., to G. P. Wiggin, Lawrence, Mass.

Rena Bondhu Blue belton English setter bitch, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to John G. Bachhuber, Mayville, Wis.

Prince Obo—Queen Bess whelp. Black cocker spaniel dog, whelped Nov. 9, 1889, by Handsome Brook Kennels, Franklin, N. Y., to O. B. Hark, Bethlehem, Pa.

Capt. Stubbs—Princess Obo whelps. Orange and white cocker spaniels, whelped Nov. 6, 1889, by Handsome Brook Kennels, Franklin, N. Y., a dog to Maud H. Stevens, St. Joseph, Mich., and a bitch to C. L. Brandeis, Spencer, N. Y.

Conine. Black cocker spaniel bitch, whelped June 6, 1889, by Prince Obo out of Black Beauty, by Handsome Brook Kennels, Franklin, N. Y., to S. P. Heartt, Parkersburg, Ia.

Milo. Liver cocker spaniel dog, whelped March 23, 1889, by Capt. Stubbs out of Queen Bess, by Handsome Brook Kennels, Franklin, N. Y., to A. B. Smith, Trumansburg, N. Y.

Nellie C. Black cocker spaniel bitch, whelped June 6, 1889, by Prince Obo III., out of Black Beauty, by Handsome Brook Kennels, Franklin, N. Y., to O. B. Hark, Bethlehem, Pa.

Richard Obo. Liver cocker spaniel dog, whelped April 7, 1889, by Capt. Stubbs out of Princess Obo, by Handsome Brook Kennels, Franklin, N. Y., to S. C. Barrows, Storr's Corner, N. Y.

Colonel J. Black and white and ticked cocker spaniel dog, whelped July 3, 1889, by Capt. Stubbs out of Maud S. II., by Handsome Brook Kennels, Franklin, N. Y., to G. C. Jones, Emporia, Kan.

Dilly J. Black and white and ticked cocker spaniel dog, whelped June 6, 1889, by Prince Obo III. out of Black Beauty, by Handsome Brook Kennels, Franklin, N. Y., to G. C. Jones, Emporia, Kan.

Homer. Black cocker spaniel dog, whelped June 6, 1889, by Prince Obo III. out of Black Beauty, by Handsome Brook Kennels, Franklin, N. Y., to W. H. Byram, Dover, N. J.

White Sam—Queen Bendigo whelp. White bull-terrier bitch, whelped Oct. 20, 1889, by F. F. Dole, New Haven, Conn., to J. H. Day, Jr., Saybrook, Conn.

Bessie. White bull-terrier bitch, whelped July 25, 1889, by White Sam out of Lady Mellville, by F. F. Dole, New Haven, Conn., to Perry A. Fuller, Providence, R. I.

Capsicum. White, black and tan wire-haired fox-terrier dog, whelped March 31, 1887, by Knaveswire Jest out of Goldhanger Nettle, by F. C. Wheeler, London, Ont., to Neuville Kennels, same place.

Billet. White, black and tan wire-haired fox-terrier dog, whelped April, 1887, by Knaveswire Jest out of Blemish, by F. C. Wheeler, London, Ont., to Neuville Kennels, same place.

Glencoe, Jr. Brindle Scotch terrier dog, whelped Feb. 12, 1888, by Glencoe out of Jessie, by E. A. Buck, Chattanooga, Tenn., to Neuville Kennels, London, Ont.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. E. G., Providence.—Ans. Give the dog 5grs. of quinine night and morning in a pill hidden in a bit of meat, and give also a teaspoonful of syrup of buckthorn each day for fo r days.

R. O. S., St. John, N. B.—Ans. 1. Give 2 teaspoonsful of castor oil and follow this in three hours with 10grs. areca nut powder made in a pill. Give 2grs. of quinine twice daily. 2. Letter received and will be published.

J. B. T., Hudson, Mich.—English setter puppy 3½ months, have had about 10 weeks; when he came from the kennel he was covered with lice and small sores. I have got rid of the lice, the sores are all healed except three or four, which are much better; but when the skin is broken by cat scratches or any other cause the places do not heal readily. Is his blood in bad condition, and, if so, what medicine should be given? Ans. Give 2grs. quinine pill three times daily, paint the sores with balsam of Peru, give half a teaspoonful of syrup of buckthorn.

C. E. P., Hartford.—Can you tell me what to do for a 9-months-old St. Bernard bitch that is lame? Seems to be in the left leg, or at the loin where the leg joins backbone. Has been so about 3 months; does not affect running or walking, and is only lame after resting. Seems to be in part mentioned, and I think she does not stand full on that leg—think she stands on the toes of that foot. Ans. Looks like rheumatic joint trouble. Give 5grs. salol three times daily. Keep bowels easy with teaspoon doses of syrup of buckthorn.

Rifle and Trap Shooting.

RANGE AND GALLERY.

AT CONLIN'S IN 1889.

During the past year a great many very interesting indoor records with rifle and revolver have been made at Conklin's gallery, Thirty-first street and Broadway, this city. Among the feats accomplished with the revolver at 12yds. are the following six best scores of a large number on the Standard Decimal target. The possible on this target is 60, size of bullseye is 1¼in.; to make the possible it is necessary to hit a circle of ½in. Major W. R. Pryor and Ed Wassermann have each a perfect score. A. A. Cohen and Theo. E. Beck have 59. Geo. Bird and J. T. B. Collins have 58. C. F. Stagg has 57.

Shooting at suspended musket bullets is another very difficult feat with the revolver. The four leaders and their records are: Major W. R. Pryor, 8 consecutive 11 in 12 shots; J. T. B. Collins, 8 consecutive 9 in 11 shots; Geo. Bird, 6 consecutive; Capt. T. H. Swift, 5 in 6 shots.

On the Massachusetts target the bullseye is 1¾in. diameter, but in order to make a full score or 72, it is necessary to hit a circle of ⅝in. Among the best of the many the leading ones are: George Bird and A. A. Cohen, full score each of 6 shots at 12yds. distance. J. T. B Collins and Geo. L. Garrigues have each 71. W. R. Pryor, Theo. E. Beck and A. L. Brackett have 70 each. Edward Wassermann has 69 to his credit.

What can be accomplished with a double-action revolver can be seen by the following, each shot being fatal at 12yds. if fired at a burglar: A. A. Cohen and Wm. Kent have each fired 5 shots in ¾ of a second. George Bird, Pierre Lorillard, Jr., and Capt. Theo. H. Swift have fired 5 shots in 1 second.

To split the edge of a playing card with a rifle bullet is a thing most people will not credit, still the following will show what some of Conlin's patrons can do in this line: R. V. R. Schuyler succeeded in splitting 10 consecutively at the word, Geo. Baird, M. Bixby and W. K. Griffin have 9 in 10 shots. P. Lorillard has 7 consecutive of 8 in 10 shots, E. H. Wales and Fred Sands have 7 each. J. L. Webb and J. B. Blydenburgh have 6 in 10 shots. The size of the bullet used is .22. With the revolver it is more difficult, as you are only allowed the use of one hand, still the following few will show what can be done with this weapon of defense: The revolver used is the .44cal. Smith & Wesson, single action. Geo. Bird split 10 in 12 shots. A. A. Cohen has 6 consecutive in 12 in 14 shots.

The silver coin target was designed by Mr. J. S. Conlin to give an exact idea of what could be done with the American weapon in the hands of a good shot. The whole diameter of the target is the size of a silver dollar and counts 1, the second ring counts 2 and is the size of a 50 cent piece, the third ring counts 3 and is the size of a 25-cent piece, the bullseye counts 4 and is the size of a 10-cent piece, inside of the bullseye is a white ring which counts 5, it is the size of the old 5-cent piece. On this target at a distance of 100ft. the following gentlemen have succeeded in hitting the 5-cent piece or center the following number of times: H. C. Starkweather 35, W. C. Althause and Chas. Mehlig 28, C. F. Stagg and C. C. Hiscoe 21, D. Crocker and C. L. Pottle 7. With revolver this same object has been hit by Geo. Bird, Ed. Wasserman, W. R. Pryor and A. A. Cohen 5 times in 6 shots each; on the "expert" target, which is designed for very close work with rifle and revolver, the rings on this target are .22in. apart. The best rifle records on this target are H. L. Lee 98, C. C. Hiscoe 98, Maj. D. Crocker and H. C. Starkweather 97, C. F. Stagg, Geo. Bird, Maj. W. R. Pryor and W. C. Althause 96 each. These scores are only a few of the thousands on exhibition which can be seen in the record room of this celebrated gallery.

BOSTON, Jan. 1.—The Massachusetts Rifle Association opened its new matches at Walnut Hill to-day. Only a few shooters were present, but the shooting was lively. The conditions for shooting were poor, it being dark, and a 6 o'clock, fishtail wind blowing. Mr. Burnite won the silver military medal. Following are the best scores made:

Record off-hand match: S. O. Merville, 83; S. T. George, 70; P. Fitz, 67; A. R. Long, 45.

Champion medal match: H. Severance, 82; S. O. Merville, 72; P. Fitz, 70.

Record rest match: L. B. Avay, 102.

Victory medal match: S. O. Merville, 75; F. T. West, 72.

Military medal match: R. Robertson, 39; S. B. Black, 36; A. S. Field, 35; O. S. Moore, 35.

Silver military medal, won on 10 scores of 42 or better: W. O. Burnite, 44, 44, 43, 43, 42, 46, 44, 44, 43, 42.

Off-hand match: P. Fitz, 81; F. T. West, 67; O. S. Moore, 65; A. R. Long, 58.

Rest match: L. R. Avay, 109; S. W. Cook, 105; T. Warren, 101; A. H. Ballard, 101; A. R. Long, 99; O. S. Moore, 98; S. B. Black, 97; A. L. Stone, 84.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

AMERICAN SHOOTING ASSOCIATION DATES.

Feb. 12, 13, 14.—Birmingham, Ala.
Feb. 20, 21, 22.—New Orleans, La.
April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May —.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.

The Kansas City dates have not yet been determined, but they will probably be May 25, 26 and 27.

ELLIOTT'S KANSAS CITY SHOOT.

KANSAS CITY, Mo., Dec. 24.—The third annual tournament given by J. A. R. Elliott, opened this morning to continue four days. There was not a very large attendance in the morning, owing to the fact that many were interested in the outcome of the Erb trial and they remained down town expecting it to come off. The weather was somewhat cloudy part of the day, although not enough so to mar the sport. The temperature was exceptionally mild. The park where the shoot was held is a new one. The shooter faces directly north and a rapidly rising hill acts as a background. This is not so serious for live bird shooting as for targets, still if the shooter is not careful on live birds he is very apt to undershoot, because when tailing or quartering to the left they are constantly rising very rapidly.

Among the prominent trap shots from a distance present, the following may be mentioned: C. W. Budd, Jake Crabill, Clarinda, Ia.; J. A. Ruble, Beloit, Wis.; C. M. Grimm, Clear Lake, Ia.; S. A. Tucker, of Parker gun fame; W. H. Skinner, shooting the first Whitney safety hammerless made; R. D. Watson, Cameron, Mo., president of the Missouri State Sportsmen's Association; C. W. Schnieder, Cameron; Ed. Spencer and Chas. McAninch, Carrolton, Ill.; D. A. Swiggett, Towanda, Kan.; Frank Parmelee, Omaha; C. E. Strawn, Jacksonville, Ill., and many others.

Crabill certainly had on his shooting clothes, for he managed to take a slice of first money in every shoot he took part in. Budd shot very well, but could not forge to the front often. The live birds used were with few exceptions a splendid lot. For the single live bird events ground traps were used exclusively, but for the double events plunge traps were substituted. The rules of the American Shooting Association with a few minor changes applied. Instead of measuring 80yds. from where the shooter is accustomed to stand, the boundary was laid off 60yds. from the center trap.

On the opening day there was no classification of the shooters in the target events. Major J. M. Taylor, manager of the A. S. A., had promised to be present to attend to the matter, but for some unknown reason he failed to come. There was some little kicking because the announcement had been made in the programme that all target shoots would be held under the classification of the A. S. A. Toward the latter part of the day the scheme was agitated to appoint a committee to classify the shooters, which was acted upon immediately, and C. W. Budd, Dr. Underwood and Jim Elliott were unanimously chosen to perform the thankless undertaking.

As a whole the shooting on the opening day was of a very high class, enough to sustain the reputation of this city as the greatest trap-shooting place in all this land.

At the live-bird traps Mr. D. Underwood acted as referee. The scores are as follows:

Match No. 1, 10 sing'e bluerocks, entrance $2:

Twitchell	1111110011—8	W C Wiggins	0110111100—6
C E Strawn	1001010111—6	C W Budd	1111110111—9
J Anderson	1111001111—8	S Crabill	1100111101—7
Spencer	1110111111—9	Grimm	1110011111—8
W C Beck	1110111010—7	F Parmalee	1011111011—8
Hert	0001111001—5	W E Nason	0111110111—8
Swiggett	0111101111—8		

All ties were divided except second, which was won by Parmalee.

Match No. 2, 10 Ligowsky clays, entrance $2:

F Deuser	1111110111—9	Budd	1101110111— 8
Crabill	1111111111—10	Strawn	1101011001— 6
Anderson	1111111101— 9	Ed Spencer	1111111101— 9
C M Grimm	1101101110— 7	"Lone Jack"	1101011111— 8
Parmalee	1100111111— 8	Hert	0101111010— 6
L Scott	1101101100— 6	Mack	1010011011— 6
L Porter	1110111110— 8	S A Miller	1111101111— 9
Nason	1110111110— 8	Swiggett	0111101101— 7
W B Twitchell	1101111011— 8	Wiggins	0101111110— 7
Beck	1010101011— 6	J A Ruble	1111111111—10

Crabill and Parmalee first, Anderson second, Twitchell third, Swiggett fourth.

Match No. 3.—Guaranteed purse, $100, 10 live birds, entrance $10:

Hawkins	1112211221—10	Elliott	1111111111—10
Crabill	1111111111—10	Scott	0110112111— 8
Parmalee	1101211111— 9	Grimm	2121011101— 8
Budd	2011111221— 9	Hert	1111111211—10
Nason	2100210122— 7	"Lone Jack"	1121212111—10
Thomas	2110221101— 8	Deuser	1212121111—10
Twitchell	2101211111— 9	Beck	1111111001— 8
Spencer	1101le1211— 8	Strawn	0111001e21— 6
J Porter	11112112e1— 9	L Porter	1111101ee1— 7
J Anderson	2122111121—10		

Four moneys and all ties div.

Match No. 4, 15 Peoria blackbirds, entrance $2.50:

Ruble	1111111111111—15	Parmalee	1111111111110—14
Crabill	1111111111111—15	J Porter	1101110101111011—11

Strawn	1111111011110—13		

Four moneys, all ties div.

Match No. 5, 7 live birds, entrance $5:

Budd	1211121—7	Lone Jack	1011011—5
F Smith	0102001—3	Beck	1121101—6
Eads	1021110—5	Twitchell	2221112—7
Grimm	1122111—7	A E Thomas	1112012—6
Brown	1111111—7	D Underwood	3020000—2
Wiggins	2121100—4	W Rieger	2220222—6
Stockwell	1111221—7	Swiggett	2123011—6
Crabill	1112111—7	Miller	1211200—5
L Potter	1112112—7	Parmalee	1112111—7
L Scott	1112121—7	Nason	2101121—6
Hawkins	1111101—6	Spencer	1211111—7
J Anderson	0121201—5	Deuser	1111111—7
W Anderson	1111201—6	Ruble	1011122—6
Hert	2111011—6	Elliott	1121111—7
J Porter	1110211—6		

Grimm, Brown, Crabill, Twitchell, Elliott and Parmalee first, W. Anderson, Thomas and Ruble second, J. Anderson, Lone Jack and Miller third, Wiggins fourth.

Match No. 6, guaranteed purse $100, 20 Keystone targets, entrance $5:

Grimm	1111010111111111110—17	Brown	1111111111011011111—18
Ruble	1110111111111111111—19	Beck	1011010111101111111—16
Crabill	1110111011011011111—16	Milligan	0101001010010011011—10
J Anders'n	1111111111111111111—20	Elliott	1111010100111011111w.
Eads	1010011111011111101—15	Parmalee	1010111011100101111—14
Spencer	1110110111100w.	Scott	1101110111011011111—16
Budd	1111110111111111110—18		

Anderson first, Ruble second, Budd and Brown third, Grimm fourth.

Dec. 25.—When the guns began cracking at the park this morn- heavy threatening clouds hung overhead, but the temperature was mild. About noon the clouds parted and passed away. As expected the localites were out in full force and a heavy programme was gone through with to the satisfaction of all present. The surprise of the day was the result of the double bird event. Of the thirty-three parties entered in the shoot but one, D. W. Edwards was the only one of the number to make a straight score, which made him $107.45 richer in pocket. J. A. Ruble was in hard luck. Just after shooting at his third pair the belt of his gun broke, and he was compelled to use a strange gun. Edwards was in extra luck, for the second bird of his second pair, called dead by the referee, took to its wings when the boys went out to fill the traps and alighted upon the club house, in the rear of the shooting score. No one offered a challenge on the bird, since no one looked upon him as a winner. After this straight scores became very common and several hotly contested shoot-offs were witnessed by a large crowd of onlookers. Crabill fell slightly in the rear and his visits to the cashier's department were not so frequent as the day previous.

Charley Budd, the western cyclone, is not setting the world afire by the number of birds that he is having attached to his score as being dead. He lays the blame to the fact that the gun he has been accustomed to shooting, falling out of a wagon while on a recent shoot and sustaining the breaking of the stock, the one he is using here being entirely too croked for trap work.

Another good lot of live birds were trapped for the various events, and some remarkable stops with second barrels were quite numerous. The two sets of target traps were kept running quite steadily, and quite a number of the so-called "mud saucers" were broken. The classification conuittee made its report, and all target events have after will be conducted under the classification as arranged by it. Some little kicking was heard but on the whole the classification gives satisfaction. All live bird events to-day were refereed by Ed. Hickman. The scores are as follows:

Match No. 7, guaranteed purse $100, 4 pairs live birds, plunge trans; entrance $10:

Grimm	01 01 00 11—4	Stockwell	01 00 00 01—2
Beck	11 01 01 10—5	Swiggett	01 01 10 00—3
Ed Bingham	11 11 00 11—6	J Anderson	10 11 11 10—6
Riley	10 11 11 10—6	W Anderson	11 10 11 11—7
D Underwood	11 10 00 10—4	Lone Jack	11 10 00 01—4
Parmalee	11 01 11 11—7	S A Tucker	11 11 10 01—6
Budd	01 11 10 11—6	Ruble	11 11 11 10—7
Hert	11 10 10 11—6	W H Skinner	00 11 01 11—5
Maegley	00 10 10 11—4	Scott	10 01 11 11—6
W B Crosby	10 01 10 01—4	Miller	01 00 10 10—3
Spencer	11 00 01 10—4	Payne	11 11 00 01—5
Hawkins	11 11 10 01—6	D W Edwards	11 11 11 11—8
Elliott	11 01 11 11—7	Hickman	11 10 10 01—5
Deuser	00 11 1o 11—5	J H McGee	10 11 10 11—6
Twitchell	01 10 11 11—6	L Vories	11 10 11 01—6
Nason	10 11 11 01—6	Thomas	00 11 11 10—5
Crabill	11 10 10 11—6		

Edwards first; ties on 7 divided second; Vories, Hawkins, Bingham Twitchell and Brown third; ties on 5 divided fourth.

Match No. 8, 10 champion clay birds, entrance $2:

W H Skinner	1011101111— 8	Cosby	0111101011— 7
J Anderson	1111111111—10	Budd	0111111111— 9
Mulligan	0111100001— 5	Nason	0111101011— 7
Grimm	1101111111— 9	Ruble	1111111111—10
Scott	0100111011— 5	West	1101111010— 7
Crabill	1111011001— 7	Miller	1111111110—10
E H Young	1110011111— 8	Deuser	1101111010— 7
Buchanan	1111101010— 7	Spencer	1011111011— 8
Strawn	1101111111— 9	Payne	0111111011— 8
Elliott	1111111111—10	Scoville	1101111111— 9
Swiggett	1110011011— 7	Lone Jack	1111101101— 8
Parmalee	1111111101— 9	W B Cave	1111101011— 8
Pettie	0111011101— 7	Rickmers	1111111111—10
Back	1111111100— 8		

Ties on 10 and 9 div.; Payne and Lone Jack, third; Pettie fourth.

Match No. 9, 10 single live birds, entrance $10:

Grimm	1121101102— 8	Deuser	2100211021— 7
Nason	0101210200— 5	Budd	1111011211— 9
Twitchell	1221111111—10	Hawkins	1110011102— 7
Tucker	2111112112—10	J Anderson	1212110011— 8
Smith	1111111221—10	W Anderson	1111111111—10
Spencer	2012110112— 8	Edwards	0121111020— 7
Beck	0200111222— 7	Crabill	0011011111— 7
Elliott	1111112211— 9	Lone Jack	2111111111—10
Hert	1211021011— 8	Young	1212112212—10
Parmalee	1021211111— 9	J E Riley	1111011111— 9
Cosby	0101013202— 5	Wiggins	1112111111—10
Bingham	2111111112—10	Ruble	1112012112— 9

Ties on 10 div. first; after shooting off, Budd and Elliott div. second; the ties on 8 and 7 div.

Match No. 10, 20 single bluerocks, entrance $5:

Scott	11111111011101101111—17	Spencer	01110011101111111101—15
Grimm	11111111011111111101—18	Riley	00100w.
J Anders'n	01111111111111111011—18	Parmalee	11111111111111111111 —20
Crabill	11111111101111011111—18	Budd	11111111111111111110—19
Skinner	11101101111111111111—17	Payne	1111000011w.
Mulligan	01010000111010000101—10	Deuser	01110101111111001111—15
Eads	00011111111001101110 -13	Ruble	11111111111111111111—20
Strawn	11111111111001111111—18	Swiggett	10111111101111111111—18
Elliott	11111111111111111111—20	Best	0011100000100w.
Buchanan	10111111101111111111—18	Cosby	01111111011111111011—17

Ties on 20 div. first, Budd second, J. Anderson and Crabill third, ties on 17 fourth.

Match No. 11, 7 single live birds, entrance $5:

Grimm	0211121—6	Skinner	1111211—7
Budd	1211112—7	Hert	11o1111—6
Crabill	2011111—6	Beck	0111110—5
Parmalee	1111111—7	Cosby	21121e0—5
Nason	2212121—7	Ruble	2222111—7
Twitchell	1111121—7	"Lone Jack"	1111220—6
D Underwood	1002001—3	Swiggett	0210202—4
Elliott	1211111—7	Young	1201111—6
Spencer	1112111—7	Wiggins	1211021—6
Strawn	1112010—5	W M Anderson	0101110—4
Payne	2120111—6	J Anderson	1122210—6
Pettie	2210102—5	Scoville	2111001—5
Atkinson	1122021—5	Miller	1111020—5
Riley	1123122—7	Edwards	2102221—6
Deuser	0112111—6		

Skinner, Brown, Ruble and Parmalee shot the balance of the straight men out and div. first, Payne, J. Anderson, Edwards, "Lone Jack" and Grimm second, Cosby and Pettie third, W. Anderson and Swiggett fourth.

Match No. 12, C Class, 10 bluerocks, entrance $2:

Cheeseman	0000001001—2	Stockwell	1111111111—10
Kuntz	0001010101—4	Best	0010101011— 5
Mack	0011011111—6	Beck	1011111110— 8
Cave	1111011110—8	D Underwood	1111101111— 9
Self	0101110110—6	Hert	1111111111—10
Mulligan	0111111111—9	S Underwood	0110011011— 6
Strawn	1111111111—10		

The ties on 10, 9 and 8 div., S. Underwood fourth.

Match No. 13, B Class, 10 bluerocks, entrance $2:

Grimm	1111111101—9	Cosby	1101110010—6
Wiggins	1010101111—7	Spencer	1110111110—8
Pettie	1011101011—7	"Lone Jack"	0111110011—7
Young	1111110111—9	Cave	0101011001—5
Swiggett	1111111001—8	Miller	1100110001—5
J Self	1101100111—7	Rickmers	1110111111 -9
Strawn	1111111101—9	Nason	1110001111—7
Payne	1010101100—6	Mulligan	0100100000—2

Ties on 9 and 8 div. first and second respectively, Pettie third, and Payne took fourth.

Dec. 26.—Another beautiful day and a large crowd favored the third of the tournament. Quite a number of new names appear among to-day's scores, many of them coming from a distance. The feature of to-day's programme was the two team event which had a large entry. C. P. Fairman and W. B. Cosby, both of this city, are comparatively speaking only ordinary trap-shots. The former scored but 8 out of 30 live birds shot at the State tournament held here last May, which gave the lowest average of all who participated, for which he was awarded a handsome bamboo fishing rod. Cosby has done but very little trap-shooting and seldom did anything remarkable. That this "pony team" as the boys had dubbed them, should go to the front, in such company as was battling for the "lucre" in that race was a great surprise to all present. The luck that people have in live bird shooting is proverbial and in their case it was no exception. Both had easy birds.

There was some talk to-day of a team match between Elliott and Riley on one side, and Budd and Parmalee on the other, but as yet nothing definite has developed. Elliott has a liking for match shooting, and appears to be out-of-sorts unless he has some special event on his hands. Owing to the care upon his hands this week his shooting in the various events has been of a low standard.

Mr. Hickman again officiated at the live bird traps, with Mr. Jenkins keeping tab on the score. The scores follow in detail:

Match No. 14, 5 pairs standard targets, entrance $2:

Skinner	10 10 00 11 10— 6	Swiggett	10 00 11 10 11— 6
Elliott	11 10 11 11 10— 8	Jones	00 11 00 10 11— 5
Grimm	11 11 11 11 11—10	"Lone Jack"	11 11 11 00 01— 7
Budd	10 11 10 10 10— 6	Crabill	11 00 11 01 11— 7
Brown	10 11 10 10 11— 8	Bolen	10 01 11 11 11— 8
Parmalee	10 11 11 11 11— 9	Hayson	11 11 01 11 11— 9
Payne	10 11 01 11 11— 8	Petty	11 11 00 11 00— 6
Jenkins	11 10 10 11 01— 7	Miller	11 10 11 11 11— 9
Watson	00 10 10 11 10— 5	Strawn	11 10 11 00 10— 6
Rieger	10 10 10 10 10— 5	Edwards	00 11 11 01 01— 6
Twitchell	11 11 10 10 10— 7		

Grimm first, ties on 9 and 8 div., Twitchell and "Lone Jack" fourth,

Match No. 15, 5 single live birds, entrance $3:

Cosby	21020—3	Bolen	10222—4
Grimm	21101—4	J Porter	01111—4
Halliwell	10012—3	Buchanan	10001—2

Best	1110111101—8	Hirt	1101101110—7

Four moneys, all ties div.

Dec. 27.—There was plenty of push and dash about matters to-day and the consequence was that an extra large number of shoots were brought to a termination. The weather was again favorable and a splendid crowd of trap-shooting enthusiasts were present to try conclusions with each other.

Al Bandle, in reply to Charley Budd's message asking about the return match promised last September with Elliott, arrived to-day as follows:

"I was under the impression that the shoot took place in December, 1890, having heard nothing from Elliott. Give the boys my regards and regrets. Merry Christmas to all."

When this was read aloud on the grounds many sarcastic comments were made and Bandle will surely have to stand a great deal of roasting from the fraternity for some time to come for his action in regard to this match. Several programmes were sent him of the present tournament with the announcement of the match printed in large type, and his *fides achates*, whose shooting *nom de plume* is "Wick," but a few days ago wrote quite an item about the coming match.

There was considerable "ginger" in many of the birds used to-day and the way some of them did go was a caution. Very few of the cracks being compelled to interview the cashier to any extent.

Mr. Hickman again gave perfect satisfaction in the thankless position of referee. The scores are as follows, all ties div:

Match No. 20, Class C, 10 single bluerocks, entrance $1.50:

Best	1011011011—7	Craig	1000111100—5
Webb	0110010000—3	Edwards	1101001011—6

Twichell.....22223—4 Fowler.....00010—1
Vorhies.....11111—5

Vorhies, Parmalee and Nason, first; Brown won second, after Halliwell, Cave, Wiggins and Walmsley had drawn; Bisco, Watson and Hert drew out and McGee shot the balance of the 3 men out and took third; Beck won fourth. So ended a good 4 days' shoot. UNSER FRITZ.

ELM CITY GUN CLUB.

NEW HAVEN, Conn., Jan. 1.—The following are the scores of the tournament held by the Elm City Gun Club on their grounds to-day. The weather was not first-class, but we had a pretty fair attendance of shooters, and the spectators witnessed some very good shooting indeed. Among the visitors present were Yerrington, of Norwich, Conn.; T. P. Bill, of Middletown, Conn.; Dr. W. Craig Burke, of South Norwalk, Conn., and Hendric, of Stamford, all of them staying until the last gun was fired. It was then too dark to finish the ninth event, so we split it in two and called it quits for the time being.

No. 1, 9 tongueless bats, Keystone trap, entrance 50 cents, four moneys:

Gould.....111111111—9 Folsom.....111111011—8
Tyler.....111111111—9 Bill.....111111110—8
Bates.....111111111—9 Woods.....111110110—7
Hendrie.....111111111—9 Savage.....111010111—7
Sherman.....111111111—9 Beers.....111110011—7
Yerrington.....111111111—9 Saunders.....111011011—7

Ed. Reeves first, Geo. Kleinman second, R. B. Wadsworth and L. Willard div. third. RAVELRIGG.

THE TRAP-SHOOTERS' TOUR.

"TEE KAY," who goes as an advance agent, has reached St. Louis, and he has met with most encouraging success. He writes under date of Jan. 3 from St. Louis:

"I have met with a very hearty reception everywhere, and if the boys are favored with good weather they will have large attendances. The Dayton Gun Club are going to give the team a reception the evening of the shoot, and will give them a good send-off. I shot a match at Cincinnati with Kauffman, who shoots under the name of "Bohemian." I was told I had a soft snap, but at the first part of the match it looked as if I was in the soup. I shot Bandle's gun and missed 9 out of the first 15 I shot at. I then got a gun that fitted me and pounded out 21 straight, which broke my opponent's heart. He went all to pieces and I finished with 87, which was good enough after such a poor beginning.

"I have made arrangements for the following regular and extra matches: Jan. 27, Dayton, Ohio, on the fair grounds; regular match between East and West at 200 bluerocks a side, and a 25 live bird match between Heikes and McMurchy. Jan. 28, regular No. 2, East and West, at Cincinnati Base Ball Park; Jan. 29, regular No. 3, Louisville Base Ball ground is. Extra match at 25 live birds between W. H. Wolstencroft of the East and J. A. Ruble of the Western team."

NEW YEAR'S DAY AT NEWARK.

NEWARK, Jan. 1.—At Erb's to day some 200 persons watched the progress of the shooting in the different contests. The birds were a great lot of flyers. Of all those shot at not a half dozen had to be put by the trappers. The shooting began at 11 A. M. and continued until the fogs put an end to it. At 3:30 it was so dense that not a bird could be seen in the thick air. All the events were of similar character, namely, 4 birds each man, 3 entrance, if under 10 entries, two moneys; if over 10, three, Hurlingham rules to govern:

First event—Chris Reinhardt took first money, Castle, C. M. Hedden, E. Huff and J. Erb tied for second and carried it forward to the next contest.

Second event—Huff, Reinhardt and Erb tied for first and divided it, Castle and Hedden did the same with second, Huff and Erb took the undivided second money from previous sweep and amicably separated it.

Third event—Castle and Hedden this time captured first between them, Reinhardt dropped a bird, as the company was hot and took second all by himself.

Fourth event—Castle and Erb separated first between them with 4 kills each. Hedden and Reinhardt, with 3 each, took second.

Fifth event, 8 entries—Erb and Reinhardt were first with straight scores, Hedden, Newhouse and Castle tied for second and shot it off in the next sweepstake.

Sixth event, 8 entries—Hedden, Castle and Erb tied for first with clean scores of kills and agreed to shoot it out, the best record made in the next contest to take the whole. Again Reinhardt was foxy and dropped a bird for place and captured second money all alone.

Seventh event, 9 entries—Castle and Reinhardt this time made clean scores and divided the cash, Frb, Hedden, Bercauch and Wheaton tied for second, with 3 kills, and carried it over for a shoot-off in the next sweep. The first money of sweep No. 6 was won by Castle, he shooting out all others interested.

Eighth event—As usual Castle, C. M. Hedden and Erb tied and divided; Wheaton and Reinhardt separated second between them.

Ninth event—Reinhardt and Castle divided first, Harris, Wheaton and Erb tied for second and carried the tie forward to the following sweep.

Tenth event, 8 entries—C. M. Hedden, J. Erb, C. Reinhardt and J. Wheaton killed 3 birds and agreed to shoot it off in the next event, but Castle got 3 out of his 4 and gathered in the money, with no one to claim a part of it.

Eleventh event, and last regular of the day, 9 entries—C. M. Hedden was the only man who got a clean score and so took first money of this and first money of the sweep preceding—a beautiful little jackpot.

Twelfth and finishing contest, miss and out sweepstake, $1 entrance—Wheaton and Irvy Castle slipped out on their first bird, and Bercauch on his second. Then the birds gave out too, after Castle, Hedden, Erb and Reinhardt had killed 5 each, so they were forced to divide the cash.

The South Side Gun Club had one of its outing days to-day. It is probably the strongest club in the State of New Jersey. Such men as Brientnall, W. R. Hobart, Quod, Phillips and B lman can be depended upon always to roll up great scores, whether in club contests or in competition with teams of other guns.

First event—10 bluerocks per man, 3 moneys, $1 entrance. Brientnall and Hobart broke 8 each and divided first. I. H. Terrill, L. Thomas and E. Bellman 7 each and divided second. E. Phillips, with 6 broke out of the 10, took third.

Second event—$1 entrance, 3 moneys, 15 bluerocks each man. Brientnall broke 13 out of his 15 and took first. L. Thomas broke 10 and took second. Phillips and Hobart 9 each and divided third.

Third event—Entrance $1, 5 pairs bluerocks, 3 moneys. D. D. Terrill broke half of the 10 and captured first money. Phillips, Hobart, Thomas and Orton broke 4 each and shot the tie off at 3 pairs of saucers each. Thomas broke 4 out of the 6 and captured the money.

Fourth event—Entrance $1, 3 moneys, 10 bluerocks each. R. H. Brientnall made a clean score of breaks and took first money. Hobart and Phillips divided second on 8 breaks each; Thomas took third with 7.

Fifth event—$2 entrance, 15 single bluerocks, 2 moneys. Brientnall broke 13 and took first. Hobart and Phillips tied for second with 12 breaks each. Phillips took third with 9.

Seventh and eighth events of similar character, viz., 10 single bluerocks each man, $1 entrance, 3 moneys in each. In the first named Hobart took first, Brientnall second, Phillips and Thomas dividing third. In the last Brientnall secured a straight 10 breaks and won first. Thomas second with 9, and Phillips third with 8.

Ninth event—Entrance $5, 50 single bluerocks, three moneys. Brientnall broke 42 and took first money, W. R. Hobart broke 41 and took second, Thomas broke 39 and captured third.

Tenth and eleventh events—Ten single bluerocks, $1 entrance, three moneys. In the former Quod and Phillips broke 8 each and divided first. I. H. Terrill and Dukes broke 7 each and divided second. Sickles took second on 4 breaks. In the latter Dukes and Terrill got 9 breaks each and divided first, Sickles and Quod broke 8 each and separated third amicably. Third went to Phillips with 7 smashes.

The Mutual Gun Club has been recently reorganized. The members have put up a neat little club house in Weidemeyer's Park, and expect to hold the usual club competitions. The shooting is at inanimate targets altogether, and on the first the scores ran:

First event, entrance $1, 5 bluerocks each man, three moneys: Schieff and Bansom broke all and divided first; Ostrander broke 4 and captured second; Bear, Perment Schoewassen and C. von Lengerke tied for third and divided.

Second event, same conditions: Schieff, Perment and Bransom broke first and divided first; Ostrander took second all alone, and third was divided between Bear and Von Lengerke.

Third event, 5 pair bluerocks, $1 entrance: C. von Lengerke broke his 5 pair and took first; Schaaft, 4½ pair, and took second; and Bear, 3½ pair, scooped the third.

Fourth event, $1 entrance, 10 single bluerocks each man, three moneys: Schaaft broke 9 of the 10 shot at and took first money; Keeler broke his 8, as did Hassinger, and these two divided second; third went to Krassler with 6 killed out of 10 shot at.

Fifth event, $1 entrance, 5 single bluerocks each man, three moneys: Hassinger broke 5 straight and took first money; C. Hassinger and Austin broke 4 each and divided second; Kramer and Hilferts with 3 breaks each out of the 5 shot at, divided third.

Sixth event, entrance $2, two moneys, 10 single bluerocks: Hilfers broke 8 and took first money; Schaaft, Millers, Kramer and Perment broke 7 each and divided second.

Seventh event, entrance $1, 5 single bluerocks, two moneys: C. von Lengerke and Keller got clean scores and divided first; Hessinger, Schaaft, West and Kramer missed one each and divided second money.

Eighth event, similar to former one: Hassinger was the only one out of nine entries who got his 5 straight, and he took the first money; Baer took second, having but a single miss.

BERGEN POINT, N. J., Jan. 1.—The gunning contingent of the New Jersey Athletic Club spent much of the morning and all of the afternoon at the traps on the organization's grounds at Bergen Point. The day's sport comprised a number of prize clay-pigeon shooting matches and several sweepstake events, in which about twelve hundred shells were exploded and over half that number of bluerocks shattered. In connection with the prize shoots the gunning committee began a new and somewhat novel competition for points. This feature entitles those who are first, second, third and fourth in prize events to respectively score 5, 4, 3, and 2 points to their records. At the end of the year the three marksmen who are credited with the highest scores of points will be awarded valuable prizes. The records made in to-day's shoot were as follows: Maj. J. M. Taylor 13, J. V. Lawrence 10, C. A. Pope 8, Rufus Story Paret 7, Richard Sundermann 5, Elmer E. Bigoney 4, Henry M. Popham 4, George W. Purdy 3, A. Clinton Wilmerding 2.

The prize matches and their results were as subjoined: Event A, 10 birds each—First, C. A. Pope, 7 breaks and 3 misses; second, Henry M. Popham, 6 breaks and 4 misses; third, G. V. Lawrence, 5 breaks and 5 misses; fourth, A. Clinton Wilmerding, 4 breaks and 6 misses.

Event B, 5 singles and 3 pairs—First, Richard Sundermann, 8 breaks and 3 misses; second, Major J. M. Taylor, 7 breaks and 4 misses; third, J. V. Lawrence, 6 breaks and 5 misses; fourth, Rufus Story Paret, 4 breaks and 7 misses.

Event C, 10 pair and took first; Rufus Story Paret (3 birds allowed) 18 breaks and 2 misses; second, Maj. J. M. Taylor (scratch), 17 breaks and 3 misses; third, C. A. Pope (3 birds allowed), 13 breaks and 7 misses; fourth, Elmer E. Bigoney (3 birds allowed), 12 breaks and 8 misses.

Event D, 5 birds each—First, Major J. M. Taylor, 4 breaks and 1 miss; second, J. V. Lawrence, 3 breaks and 2 misses; third, Geo. W. Purdy, 2 breaks and 3 misses; fourth, Elmer E. Bigoney, 1 break and 4 misses.

Event E, 20 birds each—First, Major J. M. Taylor, 19 successive breaks and 1 miss; second, J. V. Lawrence (2 birds allowed), 19 breaks and 10 misses; third, Elmer E. Bigoney, (3 birds allowed), 9 breaks and 11 misses.

Event F, 10 birds, one of five traps sprung while marksman is walking—First, Major J. M. Taylor, 7 breaks and 3 misses; second, Richard Sundermann, 5 breaks and 5 misses; third, J. V. Lawrence, 4 breaks and 6 misses.

Event G, 5 pairs each—First, J. V. Lawrence, 6 breaks and 4 misses; second, Richard Sundermann, 4 breaks and 6 misses.

The prizes were silk umbrellas, portions of shooting outfits, jewelry, and quantities of cartridges.

Of the sweepstake events the chief was a shoot at 20 birds for each entry. Major J. M. Taylor won first money with a score of 17 breaks and 3 misses. J. V. Lawrence broke 11 and missed 9, winning second money.

ELIZABETH, N. J., Dec. 30.—A pigeon shooting match for $25 a side, took place to-day between Wm. Dackerman, of the Elizabeth Gun Club, and Frank La Motte, of the East End Gun Club. The conditions were each man to shoot at 15 birds, 30yds. rise, 80yds boundary, both barrels to be used. La Motte killed 10 birds and Dackerman 11. One of the latter's, however, dropped just out of bounds, and the match was declared a tie. Both men threw their stakes, and will shoot next week for $100 a side. The birds were strong erratic flyers and difficult to kill.

NEW BEDFORD, Mass., Jan. 1.—On the Russell Mills Gun Club's grounds to-day, the Russell Mills Gun Club defeated the Westport Gun Club 105 to 98, in a clay-pigeon shooting contest. In a contest between T. F. Allen and Dr. Post, of this city, at 25 birds, Allen won, breaking 22 to 21 for Post.

TOWANDA, Pa., Jan. 4.—The New Year's tournament of the Towanda Rod and Gun Club was very successful in attendance at least, but the scores as given below show to a disadvantage as to the participants being experts with the shotgun. A number for the first time faced the traps in a tournament, and while making good scores on their home grounds, went to pieces among strange traps and entertaining an audience. Two of the participants have made grouse hunting for the market a business for days the past season, and bagged many birds, but missed the flying bluerocks as well as the others. W. K. Park, of Athens, Pa., is an expert with the shotgun at flying targets, and had very little trouble winning first money nearly every time. He shoots a 12-gauge Colt hammer gun. W. A. Chamberlin, of this place, is the champion live bird shot, and although over 60 years of age, makes all the youngsters take a back seat. Live birds were thrown from one trap, while the inanimates were thrown from three. Bluerock targets were used. American Association rules governed in both. Entrance money was the same in all events, and divided 40 30, 20 and 10 per cent., giving all a chance to win at least a small amount. Many shooters used American wood powder, showing that it is coming in use "even back in the woods." Nearly all of our American guns were represented, Smith, Lefever, Parker, Daly, Colt, also many foreign makers. Scores as follow:

First event, 6 single targets:

Dittrich	0 0110—3	Montanye	001101—3
Park	011011—5	Frutchy	010101—3
Snider	110100—3	Rittenbury	110110—4

Park first, Rittenbury second, Dittrich third, fourth div.

Second event, 6 single targets:

Dittrich	103110—3	Cranska	001000—1
Park	111101—5	Rittenbury	001001—2
Snider	110010—3		

Park first Dittrich and Snider div. second, Rittenbury third, Cranska fourth.

Third event, 3 singles and 2 doubles:

Dittrich	011 00 01—3	Adams	111 01 03—4
Park	011 10 11—5	Streeter	110 01 00—3
Snider	111 11 10—6	W H Tyrrell	101 01 00—3
Cranska	010 01 10—3	Moore	010 10 10—3
Rittenbury	010 00 11—3	Thatcher	030 10 00—1
Frutchy	001 11 10—3	Lang	011 10 00—3
Montanye	001 01 11—4	Hamaker	001 00 00—1
Clapp	010 11 11—5		

Snider first, ties div.

Fourth event, 5 single targets:

Snider	01010—1	LaPlant	10100—2
Cranska	01100—2	Benjamin	00000—0
Park	11111—5	Lang	00111—3
Hamaker	00001—0	W H Tyrrell	01111—4
Thatcher	00000—0	Moore	00300—0
Clapp	03011—2	Streeter	10111—6
Adams	101 1 3	Dittrich	01110—3
Rittenbury	11011—4	D C Tyrrell	10300—1

Park first, ties div.

Fifth event, 5 single targets:

Park	11111—5	Montanye	00100—1
Snider	03001—2	Adams	10311—3
Hamaker	00000—0	Clapp	10110—3
Dittrich	11111—5	Thatcher	01000—1
Frutchy	00110—2	Lang	01100—2
Rittenbury	01111—4		

Park and Dittrich div. first, Rittenbury second, ties div.

Sixth event, 5 live birds:

Dittrich	21111—4	Lang	11022—4
Park	01201—3	LaPlant	01000—1
Thatcher	01010—2	W H Tyrrell	01023—3
Montanye	20.01—3	Chamberlin	21111—5
Snider	2:023—4	Moore	01021—3
Clapp	01010—2	D C Tyrrell	21011—4
Hamaker	00010—1	Worthing	00101—2
Adams	13110—3	V N Tyrrell	20021—3

Chamberlin first.

Seventh event, 3 double targets:

Thatcher	00 00 00—0	Snider	00 01 10—2
Cranska	10 00 00—1	Frutchy	10 00 00—1
Park	10 00 11—3	Hamaker	00 00 00—0
Clapp	01 01 00—2	Rittenbury	00 00 01—1
Montanye	10 00 00—1	W H Tyrrell	00 01 01—2
Adams	11 10 00—3		

Park and Adams first, ties div.

Eighth eventh, 5 single targets:

Rittenbury	1 101—4	Dittrich	11101—4
Cranska	10011—3	Ostmaus	00001—1
Snider	03101—3	La Plant	11011—4

Ties shot off in next event.

Ninth event:

Rittenbury	11000—2	McCann	10101—3
Cranska	10001 2	Turner	00001—1
Snider	11001—3	Dittrich	01101—3
La Plant	01110—3		

W. F. DITTRICH.

CINCINNATI, Jan. 1.—Over 1,000 people weathered the rain and other inconveniences today to witness the first ten-men team shoot on the East End Gun Club Grounds, between 10 picked shots of the Dayton (O.) Gun Club and an equal number selected from the Cincinnatis. The Dayton Club some time ago announced their readiness to meet any 10 shooters in the universe. The Cincinnati shooters and aspirants for trap-shooting honors took exception thereto, the consequence being the match of today and results—a defeat. Generally speaking, a defeat for the local club was expected, the match being strictly the Dayton boys' choice of conditions and race. The weather was of the worst possible measure—the flight of the birds apparently easy, and that there was not one perfect score made a miracle. Mr. Bandle, with the disappointment of Shurt, McPhee and Schaller's absence, used good judgment in the selection of his men. Mr. Walter Keenan, in place of Mr. Heikes, officiated as captain for the Daytonians. Cincinnati won the choice and sent their opponents to the score first, Wm. E Limp-ig being chosen as judge for Cincinnati, Wm. Pratchett for Dayton, and S. S. Trump, a very modest gentleman the Dayton delegation brought with them, being selected as referee. The match opened at 11:20 A.M., the first gentleman to the score being Dayton's leading shot, Heikes. Five Dayton and an equal number of Cincinnati shots were sandwiched in the first squad. Heikes, with 45, shooting against Cincinnati's "Old Reliable" Ed. Taylor, with 47; the Dayton boy wonder, Keenan, with 36, against Stewart's 39; McDonald, with 45, again t Miller's 41; Rike 39, against Bandle's 47; Buntain, Miami county's enterprising game warden, with 39, against Richards's 37. Result, a lead of 12 birds for Cincinnati. After a very slight intermission the second squad selected was ordered to shoot, which, though it was supposed to be the awkward one, virtually won the race. The friends of the defeated claimed that some of the Daytonians were not proper members of the club, but no formal protest was made. Conditions, 50 single standard birds, National American Shooting Association rules:

Dayton.

MONTREAL, Jan. 1.—The shoot given by the Dominion Gun Club today was a great success. Seventy-five entries were received in the merchandise match, and from noon to 5 P. M., shooting was the order of the day. The first prize was carried off by one of the crack shots of the Montreal Gun Club, and in view of the large number of expert shots competing, Mr. James may well feel proud of his victory. Score:

R James	10	V Heurebon	8
C Darby	10	W Greer	8
L Thackwell	10	B Higgins	8
J Cooke	9	Plato	8
C Aubin	9	Smith	8
E Octave	8	Paton	7
		Brr Coon	7
		Jones	7
		Masterson	6
		Sulley	6

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

CLAREMONT, N. J., Jan. 4.—At the newly-organized Claremont Shooting Grounds many pleasant sweeps were shot to-day. All at 10 bluerocks each. All ties shot off on following sweep.

Lefever Trophy Shoot: Tatham killed 22, missed 3; Hathaway killed 13, missed 12.

CATSKILL, N. Y., Jan. 1.—New Year's day being raw and drizzly, the attendance at the Catskill Gun Club grounds was somewhat smaller than that at the Christmas shoot. Teams were made up with Lever and Roberts at their heads, Lever's winning by 9 points through a fortunate selection of shooters—Shufelt with 16. Burg with 15 and Rosa with 13, making remarkable scores for amateurs. The comforts afforded by a club house with a hot stove and all the conveniences were appreciated by all present. A jolly time was had in the two hours' shooting. Below are the scores made in order of shooting:

Lever's Team.		Roberts' Team.	
Lever	1110105110111101011—14	Roberts	1111111111001111111—18
Yellot	100 0000000011010010— 6	Benter	1111111110110111100—16
Tolley	1111000101110000001— 9	Hand	00110 0001000000110— 5

	76		64

Six sweepstakes followed.—DR TOLL.

DAVENPORT, Iowa, Jan. 1.—The Forester Gun Club held its regular holiday shoot to-day. The weather was anything but propitious for a large attendance, a drizzling rain falling all day, but nevertheless a fair number of good shots were present and made the best of a poor day. Only two matches were shot with the following results:

No. 1, 6 live birds, 5 ground traps, 30yds. rise, Keystone rules, 3 prizes:

John Racester	110101—4	Friday	011100—3
Kray	110111—5	Scheef	111110—5
Emerson	111111—6	Collin	101010—3
Davis	111111—6	Goos	101110—4
Tucker	110010—3	Howard	111100—4
Janss	111111—6		

Emerson and Janss div. first, Scheef was awarded second, Racester third.

No. 2, 6 live birds, 5 ground traps, 30yds. rise, Keystone rules, 3 prizes:

Emerson	010111—4	Scheef	001111—4
Tucker	101101—4	Janss	010111—4
Howard	111011—5	Goos	001011—3
Kray	111001—4	Davis	111010—4
Collin	110111—5	Racester	111011—5
Friday	111011—5	Brangan	101111—5

Howard and Racester first, Janss second, the third money was added to first.

W. N. PURCE.

CŒUR D'ALENE CITY, Idaho, Dec. 23.—The Cœur d'Alene Rod and Gun Club's turkey shoot and shotgun rifle and pistol match closed to-day. The 22d opened with plenty of snow and winds, but the boys go on to the turkeys in fine shape, killing two dozen before 11 o'clock. The shooting was at the heads at 65yds. At about 11:30 the pistol match was opened with 7 entries only, owing to a terrific wind and blinding snow. Had the weather been favorable we should have had many more. The scores of the winners stood as follows, 50yds. off-hand, standard American target: J. Warren first, 79; Fred S. Budd second, 73; J. Fellows 70. The next event was a rifle match at 100yds. off-hand, standard American target, with 19 entries. Scores of winners as follows:

Bergman	87	Quinlan	79
White	84	J Warren	79
Eckhardt	80	Millias	75
		Pollock	74

Dec. 23.—The day opened with turkey shooting till about 11 o'clock, by which time the boys had disposed of about 24 turkeys. Next came the shotgun at blackbirds and bluerocks.

First event, 6 singles, sweepstakes:

Carlin	101111—5	Norton	101100—3
Herrick	001111—4	Warren	0110.0—3
Eckhardt	011110—4	Pettibone	001010—2
Pollock	100101—3	McFarland	000101—1

Ties on 4 div. second, Pollock third. Second event, 15 singles, 10 entries:

Herrick	011111101011111—12	Norton	011000110011111—7
Carlin	10111.011011111—12	Quinlan	011001011100100—7
Pettibone	011111101111000—10	Pollock	010001100111001—6
Warren	10111.001110011—10	McFarland	000010000057600— 1
Eckhardt	01101000101.10— 8		

Herrick first, Pettibone second, Eckhardt third.

Third event, 12 singles, 11 entries:

Herrick	111111111111—12	Norton	000111111000—6
Warren	011110111111—10	McFarland	001101010010—6
Bubb	11110010111— 9	Carter	100001101100—6
Eckhardt	001111010101— 7	Pettibone	000100011101—6
Carlin	11000111 010— 7	White	0.0000000001—1
Pollock	10.01100110— 7		

Fourth event, 6 singles and 3 pairs:

Herrick	11 11 11 00—19	Bubb	101100 11 00 10—6
Carlin	11 11 11 00— 9	Pettibone	110011 10 10 10—6
Eckhardt	11 01 00 11— 8	McFarland	001101 11 10 30—6
Warren	01 0001 10 11 11— 7		

Eckhardt won tie for second after shooting at 13 birds. McFarland fourth.

Taking it all in all every one had a very pleasant time. The weather was very unfavorable for good shooting. Mr. Herrick made a splendid run of 27 consecutive birds, which was very fine under the circumstances. Mr. Warren won the banner for highest average in rifle and pistol matches.

CHELAY.

KANSAS CITY, Dec. 24.—The trial of Fred Erb by the Board of Directors of the Missouri Fish and Game Protective Association, which was to have been held here to-day, was postponed on account of lack of a quorum until the meeting of the convention of the above association, to be held at Cameron, Mo., some time next June. President H. D. Watson and Secretary C. W. Schneider, of Cameron, Mo., and J. E. Riley, of this city, were present at the appointed time. The latter was not eligible to serve on the committee because he is a witness in the case against Erb. The missing members who failed to be present are Dr. J. G. Parrish, of St. Louis; P. Dallmeyer, of Jefferson City, and J. B. Bates, of Palmyra. As the Board consists of six members and but two present, the trial of the case could not proceed. Dr. Joseph Ingersoll, of Lafayette, Ind., who generously consented to act as Erb's counsel in the matter, was here with Erb and was ready to proceed with the case. The whole trouble was brought on by the recent Budd-Erb controversy over the champion cup, the former refusing to accept the latter's challenge for it, owing, as Budd claimed, to several shady transactions of the latter while a resident of this city some years back. Budd was finally compelled to meet Erb, and the latter defeated him for the trophy at Davenport, Ia., recently.—UNSER FRITZ

PINE BROOK, N. J.—Frank class has arranged to have a big opening shoot at the birds on his place at Pine Brook on Friday, Jan. 10; 1,000 birds will be on hand. It will be the first big shoot at the new place, and invitations have been sent out to all the crack shots within a hundred miles. Among those who have entered are Castles, Erb, Sigler, Leddy, Harrison, Riggott, Uptegrove, Daily, Heritage, Green, Lever, Charles Smith, William Voorhees, Seymour Smith, Milt Linnsley, Collins, Goff, Frank Kleintz, Richard Irwin, Thompson, Tay or and C. M. Hedden. There will be handicapping to suit all, and shooting will last all day.

WASHINGTON HEIGHTS, N. Y., Jan. 1.—One of the most interesting pigeon shooting events of the season was decided on the grounds of the Washington Heights Gun Club, at 186th street and the Bloomingdale road, to-day. The principal event was a match for $50 a side, between W. J. Elliott of West Farms, and Hugh Harrison of the Washington Heights Gun Club. The conditions were from 30yds. rise, at 25 live pigeons, inside of 50yds. boundary. Harrison had defeated Elliott in a similar match, and was a favorite in the speculation on the result. Mr. E. A. Fountain of the Washington Heights Gun Club officiated as referee. Elliott shot first and killed his first bird, missing the next, and then bowling over eight straight, missing the eleventh bird, and then killing three straight, missing the next, and then killing seven straight. He failed to kill the twenty-first bird, and killed the remaining two. Harrison led off with eight straight killed, missed the next two, killed the next couple, and missed the next bird. He brought down the next brace, and again missed the sixteenth bird. The seventeenth and eighteenth birds were dropped, and the next bird, a swift quarterer got away, and he missed the next three, which were lively birds, and killed the remaining two. The score:

Elliott	10111111111011101111111011—21
Harrison	11111110010.10110100011—17

A sweepstakes at 7 live birds followed: For the birds, handicap rises, entrance $5 divided. The score: Elliot, 30yds., 7; Preyer, 28yds., 6; Peters, 26yds., 6; Fortunato, 25yds., 2; Mullen, 24yds., 1. Elliott thus raked in the first money, Preyer and Peters dividing the second.

PHILADELPHIA, Jan. 1.—There was a good crowd to witness a sparrow-shooting match between Capt. A. H. Bogardus, the veteran marksman, and J. Frank Kleintz, the well-known local shot. Each man shot at 25 sparrows, 30yds., 5 traps being used. The sparrows were strong flyers, and it required very skillful shooting to bring them down. Bogardus killed his first two birds and missed the third. Kleintz did the same. Then each man killed the next three. Bogardus killed two out of the next four, and then took the lead, as Kleintz only brought down one out of his four. Kleintz caught up, however, on the next three birds, and at the finish the score was a tie, each man having killed 16 birds, as follows:

Bogardus	1101110110100101110101011—16
Kleintz	1101110010111010101101011—16

Referee, E. R. Irwin. This was the fourth match shot by Bogardus and Kleintz, each having won two.

TORONTO, Jan. 1.—The members of the Owl Gun Club held a sparrow shoot at C. Stark & Co.'s grounds to-day, and taking into consideration the bad weather the shoot was a very successful one every way. The attendance was rather light, but those who shot made very good scores.

Notwithstanding the disagreeable weather of New Year's Day a very successful shoot was carried out at McDowall's grounds, the scores being among the best ever made there. The comfortable building at the grounds was never more appreciated than on this occasion, as without it a postponement would have been necessary. Several small matches were shot, and the afternoon's sport was brought to a close by a 50-bird sweepstake, the scores being as follows:

Fifty bluerocks, entrance $2, 2 prizes:

W McDowall	1111011011101111101111111111111111111111111111101011—43
C Charles	1101111111011011111111111111011011011011111111111110—42
J Draisey	1101111011111101111111111001111111111011011010110111—40
C Budd	0113011111011110100111111011111011111011111111111010—37

Double rise match, 5 pairs:

Charles	11 11 11 01 11—9	McDowall	11 11 10 10 11—8

Jan. 3.—The West Toronto Junction Gun Club held a shoot today at D. Olea's ground at live pigeons. The birds were a lively lot and the shooting was very good.

COUNTRY CLUB, N. Y., Jan 1.—The members of the Country Club enjoyed the first day of the new year by a shooting tourney at live pigeons over the finely equipped shooting plant of the organization on Pelham Bay. Many of the best-known society people of the metropolis were present. Among those who participated in the shooting were: Messrs. Allen, 25 yards rise; Story, 22 yards rise; Duane, 29 yards rise; Iselin, 30 yards rise; Hoyt, 24 yards rise; Potter, 25 yards rise; Gladwin, 32 yards rise; and M. D. Thorne, 25 yards rise. It was a poor day for the sport, as the unfavorable conditions of the atmosphere tried both the flying qualities of the birds and the skill of the contestants. The birds were an exceptionally strong lot of targets, and many of them managed to get away from the guns of the amateur shooters, who were not as proficient as they might have been with the complete shooting paraphernalia which they had, everything being of the best quality, both in shells and guns. The shooting began promptly at 11½ o'clock, and the first event was for a cup offered by a member of the club, at ten birds per man, $5 entrance fee, 40 per cent. of the entrance to go to a second man, 10 per cent. to the third man, and the remainder to the club, all contestants who were handicapped at 26 yards rise or under to stand where they pleased, and all above that mark at handicap rises. Mr. Story won this event, with a clean score of ten birds killed. The second event was for a cup valued at $250, and the winner had the privilege of accepting the same amount in cash in lieu of the trophy. It was at ten birds per man, entry fee $10 per man, handicap rises; all competitors standing at the 27yds. rise or under; one miss to count as no bird. Mr. Story won this event also.

LONG BRANCH, Jan. 1.—A big crowd attended the shoot on the grounds of the Central Gun Club to-day. There were several sweepstakes shot at live birds, and some remarkable shooting was done by Cannon, the one-armed shooter. The principal event was the shoot for a Leavy silver cup, to go to the member of the Central Gun Club making the best score in the year's monthly shoots. The prize, a silver drinking cup, was presented by John Hoey, Jr., son of John Hoey, President of the Adams Express Company. The conditions were: Seven birds each, Hurlingham rules to govern. Three men killed seven straight birds, five killed six each, four men five each, and two men four each. The best score was made by Mr. Shaw, who shot for Mr. Hoey. Mr. Shaw killed his seven birds with his first barrel. E. Taber killing seven birds with eight barrels, and W. Taber seven with nine barrels. Several matches were shot with bluerocks.

NEW YORK, Jan. 1.—The Bronx River Gun Club had a gala time at their grounds New Year's Day. The first event was a sweepstake shoot at live birds. Five birds were sprung for each competitor, and resulted in the following scores: Murphy 5, Miller 5, Breidenbach 5, Jacques 4, and Zorn 4. The first three divided the first prize, and the latter two divided the second prize. This shoot was followed by another shoot at live birds and resulted as follows: Jacques 5, Murphy 4, Dittmar 4, Breidenbach 3, and Zorn 3. The first prize was awarded to Jacques and the second was divided between Murphy and Dittmar. The third and last event was a sweepstakes shoot at clay-birds, 6 birds being sprung for each man, with the following result: Murphy 6, Jacques 6, Dittmar 5, W. Pringle 4, F. Pringle 3, and "Jim" Pulsing, on 1. The first prize was divided between Murphy and Jacques, and the second was scooped in by Dittmar.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their address-s, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and rigs, and all items relating to the sport.

FIXTURES.

JUNE.

7. Marine and Field Club, Bath 21. New York Annual.

ARLINGTON C. C.—The annual meeting of the Arlington C. C. was held on Dec. 23, the following officers being elected: Com., R. E. Molloy; Vice-Com., F. Place, Jr.; Sec'y-Treas., C. V. Schuyler. Executive Committee, H. Morgan and Wm. B. Daily. The club now has a membership of 17, and with the aid of a sinking fund started some time since, it is endeavoring to purchase suitable land for its house, which is now on leased property. A committee has been appointed to look up good places for short club cruises this season. Last year the club, in addition to a good representation at the division meet, sent seven members to the A. C. A. meet, and this year a still larger attendance is promised.

1,500 MILES IN AN ADIRONDACK BOAT.

PART II.

ERIE CANAL, Sept. 8, Monday.—I was out of bed at 6, to find that the rain had ceased, but had left everything damp and reeking, with a heavy fog that did not rise until 8:30. Packing up, I launched and rowed one mile to the lock, where I had breakfast at the usual little store. They informed me that a bear was killed hard by not long before. Putting off again I rowed through another one-mile level, beyond which came one fourteen miles long. At the last lock I met two interesting and interested inhabitants, who gave me much information about the country. Three miles further on I passed a small town, Auriesville; and, shortly beyond, Fultonville, fifty-six miles from Albany. Opposite here is the town of Fonda, whence is a railroad to Gloversville, ten miles distant. On this level the canal once more crosses the Mohawk on a fine aqueduct, and three small streams on lesser bridges. The next village was Yatesville, sixty-two miles from Albany, and three miles beyond came the lock at Sprakers. The mountains above here rose still higher and had some fine timber on them; they form the southern base of the Adirondacks. The valley and the river grow gradually narrower, and several of the gorges are extremely picturesque. The bottom lands are covered with pretty groves, and occasionally a farm appears. The whole scene was very beautiful, and I had an unobstructed view all along.

At Fultonville I stopped at the bank and bought some fruit and a watermelon at the store without leaving the boat. The watermelon was completely disposed of within the next five miles; I kept it between my knees, with a big spoon handy, and a lump of ice inside it, while a sponge at my elbow was frequently called into service to wet my bursting head, the heat being terrific. As a consequence I took matters very easily, though making seven miles in an hour and a quarter, and the whole fourteen-mile level in two hours and forty-five minutes, in spite of the heat, watermelon, and eel grass. This last was the worst, being so thick as to completely stop the boat several times, which proved exceedingly exasperating to my already overtaxed feelings. The mules and horses on the towpath generally have fearful galls on their shoulders, but otherwise seem to be tolerably well treated. The boats are numerous and run often all night, making Buffalo from Albany in ten days. The heavy boats, those that are loaded, run two miles per hour; and the light boats about three miles. The profanity is unsurpassed by anything I have ever heard; and the language of the skippers and muleteers seems to consist altogether of a set of choice oaths and profane expressions. The captains, and the underlings too, always have a word for one; and I generally cultivate those going my way; being apt to see them again. My boat distances theirs quickly, but they catch up during the night. They invariably believe that I am bound on a fishing excursion; and consequently think that all I tell them is very "fishy."

Though quite worn out by the heat at the end of the long stretch, having reached the terminal lock, I pushed on three miles to Canajoharie, half way over a six-mile level and sixty-eight miles from Albany. This is a large town, and the prospects for a dinner ahead being slim, I dined here at a fair hotel; having run nineteen miles thus far from the bivouac of last night. A tarry of an hour and a half to cool off was grateful, and then I started on in a thunder storm, but did not get more than a slight wetting. Three miles from Canajoharie comes another lock, opening on a five-mile level. Owing to the action of a feeder above, the current was pretty strong against me; and this, together with a head wind and floating masses of the ever-present grass, made the work very irksome. However, the fine scenery almost made up for all this. The broad canal lay rolled on as far as the eye could very well see, fine farms and heavy timber lines alternating through the hills. The pine groves were especially fine, consisting of large trees. At the commencement of this level is Fort Plain, quite a sizable place. There was much delay there on account of an accumulation of canal boats; but at last I got through, though the tenders allowed a canal boat to get in ahead of my turn. This was the first piece of such negligence as I had met with, and I gave the tender my views on the subject, he admitting his fault. The number of boats going and coming on the canal is astonishing. There are some hard-looking charactors along the route, but so far I have had no trouble with them.

The following level was three miles long, and while in the lock at the end a great swirl of water, caused by a damaged gate, forced me to pull hard on the port oar to avoid disaster, whereupon the oar broke in the neck—a serious mishap. Rocky Rift feeder from the Mohawk comes in on this level, and Herkimer county begins at Mindenville, a little hamlet at the lock, where I had supper in a wretched shanty; afterward proceeding for half a mile under my double-bladed paddle until I found a wagon maker near the canal who promised to mend my oar in the morning. This man owned a dog of a very enterprising disposition, who proved averse to my landing; but I conquered his scruples after a little parleying, in which a club took part. Paddling to a quiet spot a quarter of a mile away, I drew the boat up on a high bank, and as the moon rose went in swimming; then, after reading for an hour, turned in under my blankets. Thirty and one-half miles run to this point since morning.

Erie Canal, Sept. 9, Tuesday.—I rose at 6 and found two inquisitive young builocks discussing me, and anxiously awaiting further developments. I first went for the oar, which my farrier had repaired, making it half a pound heavier at the end, a serious defect, as it was much harder to row with thenceforth. Breakfast was had in a vile little house where a domestic row was in progress. The proprietor's better, and much more muscular half, threatening to go up and haul him out of bed if he did not get up "right off." The master of the house had evidently been on a spree the night before; in fact everybody about this country seems to get drunk whenever opportunity offers. The eel-grass was not quite so bad as yesterday, but I had a strong head wind all day to fight against.

This level was a three miler, and next followed one 5½ miles long, on which were two aqueducts over small streams. East Canada Creek, from the Adirondacks, comes into the Mohawk 3 miles above Mindenville. At the end of the level Little Falls appears situated in a romantic place and surrounded by very pretty scenery. There are 10,000 people here. The canal makes quite a rise hereafter, there being four locks near together; while on either side rocky cliffs rise abruptly from the water. The place itself seems to be cut out of the solid rock, the canal resembling a river in some wild locality. Above the falls of the Mohawk a feeder comes into the canal. After passing through five levels aggregating 5½ miles, I reached another of three miles. Next comes a two and then a one mile stretch, the latter ending at the town of Mohawk, and on this level is Fulmer's Creek Aqueduct. Mohawk has 1,800 people, and reminds one of a New England town. On the far side of the valley opposite is Herkimer, the capital of the county. The surrounding region is beautiful, having all the features of an attractive landscape, hills, mountains and valleys; while from the canal one has a noble view of it. There was a good hotel at Mohawk—and two pretty girls, one a waitress and one a fair boarder. These attractions within, and the dread of the great heat outside, nearly tempted me to stay until the next day; but, although the boarder was remarkably handsome, and played the piano very well indeed, I pushed on, callous to all allurements, at 3 P.M., having run 18½ miles during the morning.

This level was three miles long, ending opposite the town of Ilion, across the river; then a one-mile level ended at the beginning of a nine-miler, which terminated at Utica, 110 miles from Albany. Ilion Creek feeder comes in the one-mile level, and at the end of it is the little village of Frankport. Three-quarters of a mile across the following nine-mile stretch Oneida county begins. Having rowed one mile on this level I observed some choice "king" apples, and soon obtained permission to gather them; they proved exceedingly fine and large.

A hearty young farmer and his wife lived here, and an invitation to sup following, I was regaled with honey and other good things at their generous board. It was somewhat early for tea, but I thought best to take advantage of such a golden opportunity. From here to the Adirondacks is but twenty miles, and those mountains flank the valley on the north; while a lovely scene stretched between. The Mohawk here is but a small stream, meandering slowly in long windings through the peaceful landscape. Having had a pleasant conversation with the farmer, I put off again, stopping after dark within one mile of Utica. After the usual swim and reading I turned under the canvas, feeling tired and sore with sitting so long in the boat; and having had to contend with a strong head wind, a broiling sun and a head current all day. Thirty and one-half miles to this point from Mindensville.

Erie Canal, Sept. 10—Wednesday.—I was aroused this morning by the cheery voice of a captain through a dense fog; I had seen him and passed him two days ago, and his surprise was great at finding me here. I had bivouacked upon a high bank, and, as there was no screening shrubbery, my domestic arrangements were all in full view of the ladies on the canal boats; but they were evidently accustomed to such scenes, as they did not appear to be at all abashed. I rowed a mile to the lock in the city of Utica, where, showing my letter to the lock-tender, and leaving my boat under his protection, I chartered a friendly rough to show me the way to the "best hotel in the place." He took me straight to a dirty little saloon around the corner, but seeing my unqualified disgust, had the kindness to walk half a mile into the city, and there, with an air of patronage, took me into Bagg's Hotel. It was a good house, and Utica struck me as a beautiful city.

I was away again at 9:30, and, as the fog and heavy dew be tokened, had another day of broiling heat, with a brisk head wind, and quite a current in the canal. This is a "summit" level, the canal descending from it in both directions, and it is 60 miles long. At Utica, from the south, comes in the Chenango Canal, which boasts 60 or 70 locks close together; all within 24 miles of Utica. This canal runs south to Binghamton, there joining the Susquehanna River system. The sun was so overpowering that I had to keep my head wet all the time, and even then it often exhausted me. This level ends at Syracuse, and though a "summit" level is neither the only one nor the highest on the Erie Canal. After rowing through a fine farming country for 15 miles, I came to the city of Rome, of 13,000 inhabitants. Leaving my boat here in the charge of an obliging engineer at a mill, I repaired for dinner to Stanwix Hall, the largest house here, and found an atrocious meal. The canal here was very dirty, quite an unusual thing, as it uniformly has had beautiful water throughout. There appeared in it dead horses, mules, cats, dogs, rats, muskrats and cows; besides which it served as a receptacle for various other kinds of filth, the odors of course being fearful. The entrance of the Black River Canal is here; it runs north to Lyons Falls, and has a succession of locks for 70 miles. I stayed some little time in Rome to purchase a few necessaries, and then pushed on, passing Port Bull, New London and Higginsville. The latter place is 135 miles from Albany.

When within 5 miles from Durhamville, I broke my oar again, just above the former splice, and then paddled 4 miles, to within one mile of Durhamville; passing the little hamlets of Dumbarton and Loomis. Having reached the point of my bivouac some time after dark, I was driven ashore by an imminent thunder storm. The wind suddenly became a gale, and the thunder boomed nearer and nearer, while I hauled my boat out on a grassy bank by the aid of the lightning, it being inky dark; and having hastily pitched my tent, ducked under just in time to escape a tremendous downpour of rain. It was a fine storm, and very violent, but my canvas was faithful, and kept all dry inside. After lighting up, I went in swimming during the storm. It was so dark that no object could be discerned save the cheerful light glowing through my tent. Before going to sleep I ate a canteloupe and read a little. Made 35 miles to-day rowing and paddling.

Erie Canal, Sept. 11.—Thursday.—It rained hard during the night, but I slept the sleep of the just, and at 6:10 A. M. was under way, paddling one mile to Durhamville, where I got a good breakfast at a little country inn, and found a Yankee named Hank Palmerly, who mended my oar. He had to put two heavy iron clamps along the neck for a foot, making it very heavy. As the weight was at the extreme end of the oar, the unusual strain on my arm made me sore for many a day, the work being not only tiresome, but the oar was very troublesome and clumsy. The town has a population of only 1,000. Fox & Co. have extensive glass works here.

I finally got away at 9:20, the day being bright and sunny, but somewhat cooler. One misses the Mohawk River after leaving Utica, as it branched off there; in fact, afterward it has but the proportions of a small creek. Just after leaving Durhamville the canal crosses Oneida Creek, one of the inlets of the lake of that name, which is not far north of this place. Its outlet joins the Oswego River further west. When four miles beyond Durhamville a heavy gust came up, giving me quite a soaking in spite of a poncho and a convenient bridge, though by reason of the gaping cracks the latter I would have been better off perhaps from under it, as streams of mud poured through. The wind was so violent that rowing was out of the question, so I amused myself by eating a huge canteloupe and laughing at some of the canal boats, which, blown together by the wind, were in an apparently inextricable mess. The crews relieved their dampened feelings by swearing profoundly.

After this the wind blew hard against me, hindering the progress of the boat very much. At Canastota, five miles from Durhamville, Cowasselon Creek comes into the canal. From Canastota the direction of the canal was westerly, having been nearly due south from New London, thus avoiding Oneida Lake. New Boston Landing, a small place four miles further on, and a short distance beyond the feeder from Canenovia Lake, rejoicing in the name of Chittenango Feeder, flows in. Here is also the little town of Chittenango, half a mile from the canal, and walking there I got a cold lunch. It is a pretty spot, high ridges encompassing the town, covered with fine timber, and the two lakes are hard by. They told me about the bicyclist who is traveling across the continent, and who stopped here to dine. A considerable product of this region is hops, and a goodly-sized corn canning factory stands near the canal.

I started on at 3:30 P. M., in the face of a gale of wind which blew without intermission until night. At first the clouds were lowering, but it cleared off cold, and the sunset, together with the afterglow over the water and the surrounding country, were exquisite. I rowed without a break for 12 miles, though having some serious impediments, especially that of my broken oar, which made the recover tiresome, and greatly fatigued my wrist. The other oar now gave signs of weakening, and I had to be very careful, not daring to pull hard upon it. Quite a number of steam canal boats went by to-day; they are generally pushing another boat, and sometimes towing one as well. Their speed is about that of a light barge. Passed the villages of Bolivar and Kirkville, near Chittenango, and 8 miles thence Manlius on the north, where the De Ruyter's Reservoir comes in. Onondaga county begins at Canastota. After passing two other villages, Clarksville and Thompson, I stopped at a fine farmhouse to get some milk. I had a disagreeable adventure with an energetic dog of large size, but got off unscathed.

About this neighborhood there are several large basins in the canal, some of them almost lakes; and the scenery was very beautiful about them. The country lately has not been thickly settled; on the contrary, except around the villages, I have seen but few houses. For the most part, toward the north, was one wide extent of swamp land, as far as the eye can see, dotted over with forests and apparently uninhabited. It was rather flat also, but on the south there was much pasture and farm land, with rolling hills. I passed Green Lake just beyond Canastota Lake, and was told that people had in vain tried to fathom it. Large rafts of pine logs, on their way from Michigan to New York, are frequently met with; each raft entire is nearly half a mile long, but it is towed in sections, so as to get through the locks.

I ran within half a mile of Syracuse, and, considerably after dark, tied up at a little boat house on the water at the edge of a large basin, where one could hear the sounds and see the lights of the city. Have made to-day but 25½ miles, owing to my grievous detentions. After a supper of bread, milk and jam, and some reading, I turned under the blankets, though not before a hospitable inhabitant, attracted by the light, had come down and offered to do anything for me, remarking that he "had often been there" himself.

Erie Canal, Sept. 12—Friday.—At 6 A. M. I rowed into Syracuse, passing through two locks. They were "machine" locks, and fell to the west. At the third, 2¾ mile from my camp, I left my boat in charge of the lock-keeper, and proceeded my speech. The country hereabouts was quite desolate, and I saw but few houses except-ing in some villages by the way; Camillus, opposite which the Camillus Creek comes into the canal, called Nine-Mile Creek; Peru and Jordan at the next lock. At Camillus begins Cayuga county. Just east of Jordan the outlet of Skaneateles Lake comes in. At 1:30 P. M., when half a mile beyond the little village of Memphis, I got my coffeepot filled with hot water, and landing on a shady spot made some chocolate and dined on canned chicken, wafers, jam and canteloupe. After dining I saw a tramp on the towpath opposite, and threw him the remainder of my chicken. It fell short into the water, but he captured it and ate it nevertheless. One meets some dangerous-looking rascals now and then; strange and eccentric characters too are frequent, but they are always known by the questions they ask. The hills dotting the country are very beautiful, and makes an attractive picture.

My dinner station from bivouac this morning was about 13¾ miles. I left again at 3 P. M. and rowed to the lock, then came a 7-mile level, on which was the town of Weedsport, and the small villages of Cold Spring and Centreport. Just north of Weedsport, the outlet of Seneca and Cayuga lakes flows into Cross Lake, which itself empties into the outlet of Onondaga. A feeder comes in at Westport, and the canal itself is 402ft. above tide-water, being 22ft. lower than the highest level I have yet been on; the 60 miles ending at Syracuse. Port Byron ended this level beyond Weedsport, and the next was 17 miles long. I stopped for tea at Port Byron, a characteristic western New York town, has 2,000 inhabitants and resembles closely a pretty New England village, with broad lanes, lined with tall and fine trees, among them many elms arching across. The surrounding country is not so hilly as heretofore, but exceedingly picturesque. I have seen all along much *arbor vita*, or white cedar, the banks at places being lined with it for some distance. Plum trees also are plenty, and other fruits, but I am told that the former were ruined this year by the early frost killing the blossoms.

I started on at dusk, much refreshed by a "strum" on the hotel piano, though my fingers are getting very stiff for that amusement from continued rowing. I soon passed the lock about half a mile beyond the town, and when the huge gates closed behind me I lit my buckeye and placed it on the forward deck. There was a dense fog rising from the water, as the night was cold, and it was so thick as to plainly show my shadow in the lamplight. The night was a quiet one, not a sound disturbed the silence, save the plashing of my oars. I rowed 4 miles to a large basin near the town of Montezuma; here my boat ran into a flock of tame geese, which were so dazed by my lantern that I could put my hand upon them, as I proved by grasping one old fellow around the neck, which action caused a great fluttering and flying of water and feathers. Further on, while nosing along shore to find a good place to tie up, I got as near a pair of wild woodducks, and muskrats were quite numerous. The boat makes no noise and consequently approaches without alarming these creatures.

I tied up to a bank near this place, having made all told 33½ miles. There was much eel grass to-day, and this together with the wind detained me sadly. After reading and a swim I went below, tying a poncho over the well, as the night was cold. To-night turns up just one week from Albany and a distance of 207 miles. I have daily had a full day's rowing, except 3½ hours loss on account of the broken oar, thus making 30 miles per day on the average. With no extra detention at the locks, no head winds and none of the ubiquitous eel grass, I would have made 35 miles per day at least.

Erie Canal, Sept. 13.—Saturday.—A cloudy morning and raining a little. Rowing around to the bridge at 6:30 A. M., on which the town street crossed the canal, I got breakfast at a small inn. Apples are plenty here and a store was laid in. Plums are a drug on the market hereabouts, and I procured a peck of them also to lighten the way. Started again at 8:30. Five wild ducks greeted me on leaving Montezuma. Near the town one passes the mouth of the Seneca and Cayuga Lake Canal. Cayuga Lake is 40 miles long, Ithaca at its head, being 56½ miles from the Erie Canal. Seneca Lake is 39 miles in length, and 61 miles lie between Montezuma and Watkins' Glen at its head. Union Springs and Auburn are but 12 or 15 miles distant also.

In the vicinity numerous salt springs and deposits are found. The old stage road from Albany to Buffalo passes through Montezuma, and I have been following it all the way along. Somewhat west of Montezuma, the canal crosses the outlet of the above lakes on a magnificent aqueduct, the outlet being a large river. Marshes covered with a curious reed extended on all sides for miles, and beyond they were flanked by thick masses of forest. It was a wild-looking place, and doubtless a great feeding ground for wild ducks. The current appeared to be quite swift, while the reeds were 8 to 10ft. high, lining the river completely. These reeds, not rushes, are only found at this place, and are cut, stored, seasoned and shipped all over the country for coopers' use, being the best for this purpose found anywhere in the country. This business forms the chief industry of Montezuma.

About half way to Clyde, at the end of this seventeen-mile level, I passed into Wayne county and Section 8 of the Erie Canal. The eel grass was especially bad on this level, and dodging it was very fatiguing. Running into a lot of the stuff would bring the boat to a complete standstill. A strong head wind blew throughout also, and these two evils detained me a great deal. At Clyde ended the wild part of the region, then began a three-mile level, at the end of which stands the village of Lockberlin. This is a great grape-growing locality, but on account of the vineyards being planted on the southern exposure of the hills and ridges south of the canal, I have actually seen but few. The various orchards were large and well kept. Along this last level appear enormous conically-shaped mounds and hills in rows, generally some distance from and parallel to the canal. Though evidently artificial, their origin is entirely unknown.

At the end of the following level of three miles came Lyons, of 6,000 inhabitants, where I dined at a good hotel, having run eighteen miles since breakfast. Pushed off again at 3:40. The next level was short; then came one of one and one-half miles; next came three locks close together, which brought me to a twelve-mile stretch. The village of Arcadia is built on one of the shorter levels, and I passed Newark, 224 miles from Albany, about one mile beyond the lock on the twelve-miler. Thence I rowed to within one mile of Palmyra. At dark some hot water was had at a farmhouse, and thus making chocolate, I had supper in the boat. Proceeding again, I stopped for the night at a bank whereon were some tall trees, these being desirable as a protection from the heavy dew. Tying up here, a swim was indulged in.

The night was cold and cheerless, with a thick fog, though before the latter began to rise a fine Aurora Borealis lighted my way. An unusual number of boats passed me to-day, mostly bound east. A large flock of wild ducks gladdened my eyes during the afternoon. Have made 32 miles to-day. After reading for an hour I turned in.

PHILADELPHIA, Pa. M. B.

[TO BE CONTINUED.]

PURITAN C. C.—The annual meeting of the Puritan C. C. was held on Jan. 2, the following officers being elected: Com., Francis J. Baxter; Vice-Com., Josiah S. Dean; Pear-Com., Joseph E. Hill; Treas., Lothrop Hedge; Sec., Jas. W. Cartwright, Jr.; Meas., John R. Robertson. The commodore, vice-commodore, rear-commodore, secretary and treasurer, together with Samuel A. Brown and Charles F. Dodge, form the Board of Directors. The House Committee comprises Messrs. Brown, Baxter and Hedge. The Membership Committee comprises Messrs. Hill, Hedge and G. R. Underwood. The Regatta Committee consists of Messrs. Forbush, MacDonald and Cartwright. The treasurer's report shows a balance on the right side. The secretary's report upon the matters under his control shows that the club has a membership of 26 active members and 12 associate members. The fleet consists of 28 canoes. There are more coming, a 16×30 racer for A. H. Forbush, from Joyner, and two 16½×30 Class C canoes for Messrs. J. E. Hill and Lothrop Hedge, from Robertson & Auburndale. Of the 26 members in the club 15 are A. C. A. men, or will be as soon as their applications have gone through the proper course. The weather has been so mild here that on no holiday has it been uncomfortable canoeing. Christmas Day was but 7 degrees colder than the Fourth of July. The annual dinner of the club will be held at the Thorndike on Jan. 22.—JAMES WELD CARTWRIGHT, Jr., Sec.

FIXTURES.—We publish this week the first fixtures for the year 1890. Now is the time to fix the dates for all races, and clubs doing so at once will avoid much trouble later in the season.

NEW YORK C. C.—Arrangements have been made for a series of three "smokes" during the winter, the programme including canoe talks, music, stereopticon views, etc.

A. C. A. MEMBERSHIP.—Eastern Division—James Craddock, South Boston, Mass.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

JUNE.

14, 28. Beverly.

JULY.

5, 19. Beverly. 19. Sippican, Open.

AUGUST.

6. New York, Cruise. Rendezvous for 2, 16, 30. Beverly. 16. Sippican, Club.

SEPTEMBER.

1, 20. Beverly. 30. Sippican, Sweepstake.

BRETAGNE.—The steam yacht Bretagne, built in Baltimore, in 1881, for Mr. Leon Say, has just been sold to a Norwegian yachtsman for 125,000 francs.

SHAMROCK.—Mr. J. R. Maxwell's sloop is now hauled out on Wintringham's ways, where she will be materially altered, the greater part of the planking will be stripped off and the frames will be nipped from the turn of the bilge up, while at the same time the waterline will be lengthened 2ft., and the forward deck 3ft. The beam at waterline will be increased about 8in., and the forebody, from the chainplates to the stern, will be filled out considerably, the entire forward waterline being made straighter. The hipping will be carried aft, each frame in the counter showing a slight increase. The displacement will be about 5 tons greater. The sail plan will be practically unchanged. Mr. Wintringham made all the drawings for the alterations. He has now planked and decked two new compromise boats of his design, one being 44ft. over all, 35ft. l.w.l., 13ft. 9in. beam, and 5ft. 5in. draft, with 5 tons of lead on keel and 2 tons inside. The other is 31ft. over all, 24ft. 8in. l.w.l., 9ft. 10½in. beam, 4ft. dratt, with 3 tons of ballast, all of which may be put in the keel. Both boats are of the fashionable type, with clipper stems and very nice looking counters. They will have centerboards and trunk cabins. Kathleen, now hauled out on Wintringham's ways, is having her after cabin remodelled, a watercloset being added. A scag has been lately added to the heel of keel to improve the steering.

INTREPID.—The schooner Intrepid, now lying at Tebo's wharf, has lately been altered on deck aft, the officers' quarters and part of the after cabins, below a flush deck, having been removed, and a deck house, from bulwark to bulwark, the top level with the rail, has been built in their place. This house, which is entered from the after deck, near the wheel, makes a very light and comfortable saloon.

SEAWANHAKA CORINTHIAN Y. C.—The annual meeting will be held on Saturday night at 8:30. The annual dinner will be held at Delmonico's on Feb. 1.

SIPPICAN Y. C.—The Sippican Y. C., of Marion, Mass., has chosen the following dates for 1890: July 19, open race; Aug. 16, club race; 30, sweepstakes.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. S. E., Binghamton, N. Y.—Write to Dr. H. H. Smith, Malvern, Ia.

S. C. C., Marietta, Ga.—A well-bred mastiff would probably answer your purpose.

F. F., Falls Village.—Write to Wm. Macnaughton's Sons, South Fifth avenue, New York.

W. J. B.—What breed of the bull-terrier is the most fashionable and also what color? Ans. The modern bull-terrier is pure white.

A. W. B., Sheepshead Bay, L. I.—Write to Colton & Co., 180 William street, New York, for maps. We do not pay for logs of cruises.

H. W. S., Toms River, N. J.—You can reach Georgian Bay by rail from Toronto, Can. The latter point may be reached by rail from New York or by cruising over the route now being described in "M.'s" cruise. The best plan would be to buy a cheap canoe in Canada.

A. G. B., Holland, Mich.—Brass shells do not injure a gun, but if the shell is so thin that the shot strikes the shoulder of the chamber, you should have the chamber shoulder reduced by boring out the barrel, so that the shells will fit snug. The objection to brass shells is the difficulty in keeping the charge properly wadded.

W. W. B., Boston.—The following case actually occurred; please decide: 1. Four men shooting one pair each, two moneys. Three men break 1 each, one man breaks none, who wins second money? 2. Also six men shoot same terms, four break 1 each, two break none; three moneys. Who wins second and third? Ans. 1. Ties of 1 divide first and the fourth man takes second. 2. Ties of 1 divide first, ties of 0 shoot off for second and third. If in each case it is class shooting.

A NEW SUBSCRIBER, Providence, R. I.—Among the many good points for black bass in Florida are Homosassa, on Homosassa River, where a record of 16 bass, weighing 43lbs., in 1½ hours' fishing, is published. The largest of these weighed 7¼lbs. Enterprise, on Lake Monroe, is another famous resort. In a little over three months at that place a New York gentleman caught 7,287lbs. of black bass, the daily average being 86½lbs. In 1886 Mr. Benson took nearly three tons during the winter in this lake, the largest of them 13¼lbs. The upper St. Johns, the tributaries of Indian River, the Kissimmee, and the streams and lagoons of the southwest coast are all full of black bass, locally known as trout or black trout.

A. C. COLLINS, Hartford, Conn.—Will you kindly give the pedigrees for five generations back of the English setter Duke (A.K.C.S.B. 3408) and Vic (A.K.C.S.B. 3858)? Ans. Duke, by Dan Purcell (Duke Gladstone—Beauty) and out of Bess (Rake—Phyllis). Duke Gladstone, by Gladstone (Llewellin's Dan—Petrel) and out of Lavalette (Druid—Princess Draco), Beauty not given. Rake, by Llewellin's Dan (Duke—Rhœbe) and out of Ruby (Fred—Rhœbe). Phyllis, by Leicester (Dan—Lill II.) and out of Petrel (Prince—Lill II.). Druid (Prince—Dora). Princess Draco (Rob Roy—Livy). Duke (Graham's Duke—Corbett's Slut) Rhœbe (Hackett's Rake—Psyche). Fred (Rock—Belle). Lill II. (Dash II.—Lill I.). Prince (Dash II.—Moll III.).

Vic, by Ted Llewellin (Druid—Gussie) and out of Blanche Lewis (Young Lark—Alice Lewis). Druid, by Prince (Dash II.—Moll III.) and out of Dora (Duke—Rhœbe). Gussie, by Dash III. (Blue Prince—Armstrong's Old Kate) and out of Modjeska (Leicester—Peeress). Young Lark, by champion Lark (Phil—Dido) and out of Belle (Dash—Lady). Alice Lewis, by Con (Rock—May) and out of imported Jessie. Dash II. (Sting—Cora II.). Moll III. (Fred I.—Belle II.). Duke (Duke—Slut). Rhœbe (Rake—Psyche). Blue Prince (Pride of the Border—Llewellin's Nellie). Old Kate (Blue Dash—Kate). Leicester (Dan—Lill II.). Peeress (Prince—Lill II.). We have no record of Phil, Dido, Dash, Lady, Rock, May and Jessie.

FLORIDA.

Go to DeLAND and LAKE HELEN,

THE MOST DELIGHTFUL PLACES IN THE SOUTH.

Why go to DeLAND and LAKE HELEN?

We reply, because they are not only two of the most delightful places in Florida, but are universally conceded to be among THE HEALTHIEST PLACES IN THE UNION

IMPRESSIONS OF DELAND.—My impression of DeLand on viewing it from the balcony of the Parceland Hotel, was that it was one of the prettiest cities in Florida. My conviction as I viewed it from the balcony on the third story of the University building, was that it was without exception THE PRETTIEST IN FLORIDA. Most Florida cities convey the impression under a bird's-eye view, that, like Topsy, "they just growed." DeLand shows every indication of having been carefully planned, and developed in accordance with a preconceived design. It is a city of ample spaces, with park-like stretches of the original pine forests and a vast area of orange grove within the city limits. Parceland Hotel has an orange grove on one side and an acre of lofty, heaven-kissing pines on the other. So it is with private residences. Most of them are either in the midst of orange groves, or situated on one side of the lot, with orange trees filling the remainder. From any commanding point the city looks like a vast orange plantation with a clustering town in the center, and houses dotted here and there amid the verdurous foliage.—*C. H. Jones in letter, February, 1888, in Times-Union.*

LAKE HELEN, FLORIDA.—The uncommon beauty of the place caught the eye of wealthy visitors, and immediately cottages began to spring up on the shores of Lake Helen. Queen Anne cottages, designed by Mace, the Ohio architect, and roomy, verandahed dwellings vie with each other in beauty. These are painted in delicate and pretty shades—grays, drabs, creams, etc.—with gables, towers, balconies and other features in keeping with their styles. In fact everything about Lake Helen is ornamental. Even the shops and stables are pretty enough to live in.

HOTELS OF DeLAND AND LAKE HELEN, FLA.—DeLand has four and Lake Helen has two good home-like hotels, with tables good enough for the most fastidious taste, and at prices that will strike every one as very reasonable, besides a score or more of well-kept boarding houses. The hotel at Lake Helen, which Mr. DeLand has named the Harlan House (or Piney Woods Hotel of Florida), is as a whole elegant and complete, with absolutely everything in a style that must suit the most fastidious.

Harlan Hotel,

OR,

Piney Woods Hotel of Florida.

Enlarged and improved. Capacity doubled in 1886, and again in 1887. Elegant new furniture, electric bells, etc., tennis, croquet, billiards, boating, bowling alley, etc. Table supplied with the best of everything. Fresh vegetables and berries from hotel garden every day. Milk in abundance. Lake Helen, Fla., is on the Atlantic & Western Railroad, eight miles from Blue Springs Landing on the St. Johns River.

The Harlan Hotel,

LAKE HELEN, FLA.,

Is located in a pine grove overlooking a beautiful lake. It has accommodations for over one hundred guests. It is new and modern. Conveniently arranged, and its surroundings are in the highest degree cheerful and pleasant. The climate here is celebrated for its evenness and

HEALTHFULNESS.

All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

SMITH & WESSON,

SPRINGFIELD, MASS.

MONTICELLO, FLORIDA,

The Coming Mecca of American Sportsmen.

WHERE shall we go for sports afield? Where can the lover of rod and reel while the idle hours away, indulging to satiety in his favorite fascinating pastime? Shall he turn again to the truly great Northwest? great in agricultural and mineral wealth, great in rich development of material resources, great in its ever-increasing population, which but a decade or two past was numbered by scant thousands, but which now spread over the face of the land in teeming millions? Shall he go to this once vast reservoir of sport, whither the tide of an empire of millions of active, restless, enterprising American citizens has taken its flight? Nay! The very greatness which is the proud boast of the West of to-day has risen as if by magic out of the ashes of the game-seekers' West of ten and twenty years ago. What is the history of the great Northwest? A few years since a vast domain of unexplored territory, where sectional landlines were unknown, and where the savage Indians contested the right of homestead with the little more savage bear, and the buffalo, elk, moose, antelope and deer roamed the forest and tramped the plains "with none to molest them or make them afraid," where every stream was a veritable Izaak Walton's paradise, and where nature ruled and reigned in undisturbed simplicity.

Such was the West in the days of our fathers; the ideal land of every boy in whose bosom burned the ambitious spirit of adventure; the veritable "happy hunting grounds" of the red man. Alas for the sportsman of to-day! The enterprising sons of toil, those who till the soil, turn the spindle, delve in the bowels of Mother Earth and span this continent with scores of lines of steel rail and electric wires, have stamped upon this Mecca of the Fathers the ineffaceable "Ichabod," for to him the glories of the West "have departed," the red man and his contemporaries, the bear, buffalo, elk, moose, antelope and deer, have yielded to the superiority of the Anglo-Saxon. The vast forests have melted away before the axe of the pioneer, the fertile plains are turned by the thrifty ploughman, and yield a rich harvest of grain where once pastured the numberless herds of wild animals, the course of every stream is a beaten footpath for the school boy, and the tourist sees "the desert blossom as the rose." With a sigh the sportsman yields to the inevitable and casts about for "green fields and pastures new." He realizes that it is only a question of short time when wild game shall be a thing of the past, and individual preserves a last lone semblance of what was once so plenteous and free. Indeed, he realizes that even now the scope of territory open to the sportsman and worthy of his love, is closely circumscribed.

In view of this state of affairs, which must concern every true sportsman, it must be a relief to know that there is still one spot at least where the sportsman can revel in a season's feast of sports afield, and angle in the wilds of nature, far away from the chill winds of the North, and where the blizzard is experienced through the Associated Press alone, there is a quiet little town, resting upon beautiful hills and drained by pleasant valleys, little known beyond its individual limits; a town which although settled over sixty years ago has developed gradually, not rapidly, and although substantially, is still a little town and not a city. It is the home of a refined, hospitable, happy people, who number fifteen hundred souls, and who have been reared in the grace which bids the stranger welcome and speeds the parting guest. It is the center of a rich agricultural county, and surrounded by the country homes of hospitable country gentlemen. It is distant from the Miccossukie Lake on the west three miles, and the Aucilla River on the east nine miles; from the Wacissa River on the south fifteen miles, and the Gulf of Mexico on the south twenty-five miles. It is easily accessible from Jacksonville by the F., C. & P. R. R., after five hours run, and from Savannah, Ga., by the S., F. & W. upon a run of six hours. From New Orleans it is approached directly through the L. & N. R. R., and from the West by lines basing upon Atlanta, Ga., or Montgomery, Alabama.

It is the town of MONTICELLO, in the county of Jefferson and State of Florida. It has been the quiet home of a limited number (limited by its capacity only) of Northern visitors for ten years past, and their regular annual visits have semi-citizenized them, and they have really become part and parcel of the community; they have proven such a satisfactory sample that the "old timer" asks for a larger supply, and has built a large hotel to suit the tastes of the most esthetic, and now that the ST. ELMO, under the management of Mr. J. C. S. Timberlake, has thrown open its doors, the town of Monticello bids the tourist welcome, and offers to the sportsman the finest quail shooting in the State. With thousands of unbroken acres in cornfields, with an aftergrowth of "beggar weed," rich in food seed, with here and there a broom-sedge patch for cover at the first flight, with running rills for water, and hedges to protect the young in breeding season, this country has more natural advantages for the propagation of the quail, and more attractions for the sportsman, than can be found elsewhere. It is a matter of record that the Monticello Gun Club turned out for a day, and dividing its fourteen members into pairs, hunted in different parts of the county, and bagged 406 quail, an average of 28 to the gun. The rules were, "nothing but quail on the wing." This shoot was in February, 1888; the individual scores were from 1 to 66; one gentleman with a good dog and fair chances but *bad aim* earned his seat at the club dinner by scoring *one*. There is a larger area of free shooting ground around Monticello, and a more friendly hospitable class of land owners perhaps than can be found in any community North or South. The "posted" farm is the rare exception, and as a rule the least desirable of all places to the sportsman. The best grounds are free. The lakes and rivers abound in wildfowl, and they pass the winter here almost without molestation. The mallard, teal, raft duck, widgeon and others winter here. It requires some extra preparation to shoot ducks with comfort anywhere, and the native and tourist as well neglect this rare sport, preferring the more easily accessible quail.

A ride of two and a half hours will reach the head of the Wacissa River. This stream springs from the earth a full-grown river, and flows a canoe day's journey into the Gulf of Mexico. From start to finish it is one of the most typical pieces of wild tropical scenery imaginable. There is not a human habitation to be seen from source to mouth, except one hunter's cabin at the mouth. A whole day's journey, perhaps, without a sign of human life except that which you carry in your boat. As one glides along the stream, overhung by Spanish moss, pendant from the cypress, cedar and live oak, and sees reflected in the clear, crystal water the stately palm, the evergreen myrtle, and fragrant wild rose, which fringe the banks, he may be excused if he "sees visions and dreams dreams." The time is propitious and the place fit to worship God in nature; no sound save the whirring of the wild duck, as flight after flight make way for the intruder, and stir the still air with their fleet wings, or the chirp of the ivory-billed woodpecker as he calls to his mate, or the rush of the deer which is startled from his rest on the river bank, or perhaps the crash of a black bear as he escapes through the cane brake. These sounds, with the cry of the heron, the bittern, the snake bird, and the innumerable host of the smaller members of the feathered tribe, with the hoot of the great owl, or the whirr of the flock of wild turkeys you have surprised near the water's edge, are all that is left to console you for the other world you have left "so near and yet so far."

East or west from this river the sportsman will find ample use for his Winchester or breechloader, as the country for twenty miles from the Gulf inland, and lying west of the Wacissa to Pinhook and St. Marks rivers, and east of Wacissa to Aucilla and Econfena rivers, is nature's preserve in this portion of the moral vineyard for the black bear, deer and turkey. It is no exaggeration right here to say that such game is very plentiful. Boats, guides, dogs and complete camping outfits can be secured at very reasonable rates from parties in Monticello. The celebrated bear hunter, "Wid Medford," of the Balsam Mountains, a professional woodsman and bear hunter of fifty years' experience, will spend the winter and bring his famous pack of bear dogs down with him, and any ambitious sportsman who thinks he has lost a bear can safely come to Monticello and find one, when "old coon skin" leads in the chase. Now if open field shooting, where the find of quail in a day will run from twelve to twenty coveys, and deer, turkey and black bear, mallard, teal and other wildfowl don't suit you, take your rod and line and try for a ten-pound black bass or the lively pickerel, the red breast perch or lucious bream. The rivers and lakes abound in these varieties, and rare sport is within easy reach. Monticello is not limited to the sportsman's fancy alone, but for pleasant drives and walks, comfortable homes, rare flowers, good churches, fine schools, first-rate horse flesh, nice vehicles, gallant men and lovely women, the little town is squarely to the front. With its new hotel and the boarding houses, all of which are worthy of their town, it bids the stranger welcome.

ADAMS EXPRESS CO.,
59 Broadway, N. Y., Dec. 16, 1889.

My Dear Mr. Timberlake:

You have asked my opinion and impressions regarding sport afield near Monticello, Florida. I can inform you as to quail shooting only, for that to me is the sport of sports, and in my experience I have never found any locality to compare with that section of Florida. I have loved a dog and gun for nearly thirty years, and I have enjoyed all the pleasures their association brings, both North and South, off and on, for that time. To a man not physically strong, like myself, I can fancy no place to compare to this part of Florida for quail shooting. I can ride or drive all over the adjacent country, follow up my dogs without getting exhausted, as the country is quite open, dismount or get out of the wagon, when they find birds, and put in a full day's sport afield, and reach Monticello in fair trim at night. Then again there is less posted land there than any place that I have ever visited, and even then a little courtesy will generally be rewarded with permission to shoot over the most exclusive plantations. I get but 50 per cent. of the birds I shoot at, and still I get a good bag. For hospitality and courtesy, Middle Florida is indeed a favored land. To this, I who have so long enjoyed its privileges, can heartily testify. There is a gun club there too, well-known, and it has gone through the brunt of many a hard fought struggle, and it has always been victorious. To one who enjoys shooting for its true pleasure, the love of the fields, the good work of one's dogs and wishes quail shooting in a true and sportsmanlike spirit, I know of no place like the surroundings of Monticello, Florida. Sincerely yours, J. S. HOEY.

BRISTOL, Pa., Dec. 20, '89.

J. C. S. Timberlake, Monticello, Fla.:

DEAR SIR—Having spent the last eight winters in Monticello, Fla., and having hunted quail in other States of the Union, I can say that I consider yours the best country that I have ever shot in. Quail in abundance in all directions from Monticello, hunting the easiest that can be found anywhere, an open country, well watered, and good traveling for man, dog and wagon. First-class teams and careful drivers are to be had at all times. I am, yours respectfully,

R. F. HARNED.

"HAPPY HUNTING GROUNDS."

THE BEAUTIFUL WACISSA.

In asserting that a few miles below Monticello is located the finest natural hunting park on our continent, we defy challenge. A broad stretch of open pine woods, covering over 200,000 acres, is filled with game of all sorts—partridges, turkeys, deer, bear and foxes. It is free to all, and if there is a "Hunter's Paradise" here it is. Hunting parties can leave the St. Elmo in the morning and enjoy a day of pleasure in the chase and return by nightfall. Ample livery service is at hand and every facility which huntsmen can demand. Sometimes parties spend several days in the woods and return with from three to a dozen deer, numbers of turkeys and hundreds of quail. Numerous other kinds of small game can be had in a mile or two of the town. The Wacissa, a beautiful river which has it source fifteen miles below Monticello, is in the midst of the hunting park referred to, and is one of the loveliest streams in the South.

HOTEL ST. ELMO.

J. C. S. TIMBERLAKE, Manager. MONTICELLO, FLORIDA.

A writer who visited it several months ago has this to say about the drive to the place and about the river and its environments:

"Here a hundred gushing springs mingle their waters, clear as crystal and pregnant with mineral wealth, forming a river over a hundred yards in width and teeming with myriads of the finny tribe. The waters are as cold as mountain springs, and as one quaffs its cooling draughts a thrilling sensation seems to tingle the whole body with its invigorating refreshment.

"Two large springs constitute attractions which no visitor can afford to overlook. As one floats on the surface of these immense pools and looks down into the fathomless depths of their limpid waters, he feels as if he were suspended in mid-air. On the craggy lateral surfaces of these streams, and beyond the reach of measurement, lazy alligators can be seen lying around in sluggish languor. Fish of all sizes, and some of them of immense proportions, loiter in these azure waters, and the whole scene lends a peculiar enchantment to the observer. The river grows broader as it proceeds to the Gulf and schools of fresh water mullet and myriads of trout and bream and blackfish can be seen all over it. The entire stream is as clear as distilled water and deep enough for large craft. The day cannot certainly be far distant when this stream will be utilized for commercial purposes. To the sportsman what more can he wish than the fish that are here, the thousands of ducks that make this their winter home, and hundreds of deer and turkeys that abound. We doubt if the United States has a spot more favored than this."

T. B. Simpkins and John E. Turnbull returned from a camp hunt in the flat woods on Wednesday. They killed seven deer on the trip.—*Monticello (Fla.) Tribune, Dec. 20, 1889.*

A SUCCESSFUL HUNT.—A party of hunters, consisting of M. J. Nicholson, S. B. Love and T. R. Smith, of Quincy, and J. J. Chaires and E. K. Moore, of this county, have just returned from the Pinhook valley, in the neighborhood of the so-called Florida volcano. They were out ten days and killed ten deer and several wild turkeys, besides numerous smaller game.—*Tallahassee Cor. Sav. Morning News.*

Note: The Pinhook valley above mentioned is but a few miles south of Monticello, Fla.

Parties desiring information concerning the agricultural or horticultural interests of Middle Florida, price of lands etc., should address G. S. Van Buskirk & Son, Monticello, Fla.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 16, 1890.

VOL. XXXIII.—No. 26. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

WILD TURKEYS FOR MASSACHUSETTS.

NOT many weeks ago we printed several notes on the former occurrence of the wild turkey in Massachusetts. The bird has been known and hunted there within the memory of men still living; and one of our contributors, Mr. Milton P. Peirce, suggested that if the turkey should be introduced into the State wilds and duly protected, the supply might again be permanently renewed. This scheme of restocking the woodlands of Massachusetts with wild turkeys and other game birds has been a project long cherished by some of the more enterprising and public-spirited members of the Massachusetts Fish and Game Protective Association. As reported in our shooting columns to-day, the subject came up for renewed consideration at a meeting of the Association last week, and it was decided to undertake the work. The members have raised a fund for purchasing live wild turkeys, and a special committee will have in charge the task of securing the birds.

It is quite clear that in this thing the Massachusetts sportsmen have undertaken what is not at all child's play. They will have many difficulties to overcome, from procuring the live game to its putting out and protection; but there are brains and money in the Association sufficient to carry the enterprise through. If the Boston society shall succeed in restoring to the Bay State this magnificent species, it will deserve a large share of public gratitude.

All these endeavors to increase the game supply of a section are admirable in purpose; and such enterprises are watched with keen interest. A correspondent reported in our issue of Jan. 2 the success that has crowned the importation of Chinese pheasants into the Northwest. California has just contracted for 200 dozen quail from Texas to be put out at San Mateo, Menlo Park and elsewhere; and it is possible that part of the money appropriated by the Legislature for increasing the game supply may be devoted to the purchase of wild turkeys.

Here and there all through the country local clubs are engaged in stocking the quail covers. The gun club of Passaic, N. J., has just received a consignment of birds from the South.

BRITISH COLUMBIAN BUTCHERS.

A NOTE concerning the destruction of large game on the newly opened line of the Chicago and Northwestern Railway system up the North Platte River in Wyoming appears in our columns to-day, and is very suggestive. Men who hunt large game in the mountains of the West know how swift and sure is the extermination of the game in any region reached by a new railway or which is at all accessible. We have seen this process of destruction take place in many localities, and though it occurs less frequently now than in former years on account of the practical extinction of the game in many sections where it was once abundant, we expect to see it happen again and again. Wyoming, once one of the best game countries in the West, has been especially the scene of such wholesale destruction. We well remember the time when in the Shirley Basin it would have been possible for an ordinary hunter to kill in one day to his own gun from fifty to seventy-five elk and as many deer, besides scores of antelope, while seven or eight years later one might have hunted for months without seeing an elk, deer were almost unknown, and the only game to be seen were a few wild antelope on the sage brush prairie. The same thing has taken place in Colorado, which, however, as a more thickly settled State, has passed laws protecting its game, though these laws were not enacted until the large game had been exterminated almost everywhere except in the rough mountains. Wyoming, with a small population, a population which consists largely of stockmen, has been careless of its game, and has attained a bad eminence as a scene of wholesale butchery.

We are accustomed, and very naturally, to deplore the destruction of the game within our own borders, and to think that this is more important than game destruction elsewhere, yet there are hunting grounds in Her Majesty's Dominion accessible to sportsmen of the United States, where game slaughter for a year or two past has gone on in a brutally wholesale fashion, which has not been known in the United States except among the skin hunters, who exterminated the buffalo over the whole country, and the elk over a large part of it.

On certain tributaries of the Smilkameen River, deer, sheep and white goats have in the past been quite abundant. In winter these animals are driven down into the valleys by the deep snows, where they are slaughtered by whites and Indians for their meat, for their hides, for their heads and for food for the settlers' hogs. One white man killed a year or two ago in the beginning of the winter ninety-three deer. The weather was cold, the carcasses froze, and the man taking his horse into the mountains snaked down the frozen carcasses to his house a dozen at a time. These deer were used to feed and fatten his hogs that winter. Hide hunting goes on without let or hindrance. It was begun by white men and has been taken up by the Indians. A few years ago the latter killed only what meat they needed to eat fresh and to dry for winter supplies, but now, having been taught by the whites, they have become as bad as they.

A year or two ago somebody residing in this section thought that he had found an easy road to fortune by shipping the heads of mountain sheep to a London taxidermist. He made a contract to deliver a lot at a certain price, and in the beginning of winter announced to the Indians that he would pay $3 per head for them. Before spring over one hundred had been delivered to him. He was careless, however, and neglected to prepare the heads, feeling sure that they would take no harm while the cold weather lasted. One day it became warm, and before he knew it the whole lot had spoiled on his hands. He probably learned a lesson.

The country in which this extraordinary and wholly inexcusable destruction of game takes place is sparsely settled, and contains but few white people. The land produces little, and the rough mountains are not known to contain precious metals in paying quantities. The few old mining camps are most of them "busted" ones. Very little money is brought into the country except by hunting parties, who come to it in search of game. Every such party pays out, at a moderate estimate, for horse hire, packers, guides, provisions and outfit from $500 to $1,000. If the game is all killed off, as it seems likely that it has been or soon will be, such hunting parties will speedily find out the fact, and will certainly not come into the country to look for game that is not there. The section therefore will be deprived of a revenue which, if not enormous, at least amounts to a respectable sum yearly, and which is divided up so that it benefits a considerable part of the population.

British Columbia has game laws which are good enough, but they are not enforced. Worse than this, there is no strongly expressed public sentiment on these matters. If men like Mr. John Fannin, Mr. Corson, Mr. J. Wardel, Mr. Allison and others, would explain to the white and Indian population of this district that the game preserved means money in everybody's pocket, and that the game destroyed means that a revenue, which at present is steady and regular, will be cut off, we venture to say that Indians and whites would become a very effective body of unorganized game keepers, and that skin hunting, head hunting and wanton butchery of all descriptions would be so frowned upon that before long they would altogether cease.

SNAP SHOTS.

WE publish elsewhere two letters called out by our suggestions in the issue of Dec. 26 in relation to inclosed coursing and its possible tendencies. The only pertinent comment on these two communications is that the reader of them will do well to refer again to the editorial remarks to which they allude. It will there be found that there was no good basis for any implication that our expressed opinions were prompted by sectionalism: and that we did not "in the least reflect on the managers as gamblers," nor suggest even remotely that those who had introduced this mode of coursing had any intention of turning it into a gambling machine. What we did mean to say, and to say very clearly, was that inclosed coursing, because it is dependent for its support on gate money, which implies a crowd of spectators, was in its future development more likely than open coursing to be adapted to the purpose of gambling. This was saying not one whit more than Dr. Royce concedes in his letter, when he writes, "That the exhibitions may yet be controlled by dishonorable parties we will admit, and then be run in the interest of the pool seller." As to the possibilities of inclosed coursing, as thus expressed by Dr. Royce, there is no difference of opinion between him and ourselves. If our inclosed coursing friends will eliminate the personal equation, disabuse their minds of the notion that our remarks were an attack on themselves, and consider this subject dispassionately and philosophically, they will perhaps assent to all that we have said about the possible future tendencies of the sport.

There is everything in the standpoint. And the standpoint from which the shooting man looks at things is that of shooting. Does a gale rage, it is good weather for ducks; does the October frost bite, it is just the day for the partridge cover; does an ice storm enshroud the earth, it means that the quail supply will be diminished. In these days of extraordinary mid-winter mildness the professors of woodcraft are telling us that it is a great year for the birds. The wet summer and autumn gave a big crop of weeds, and the supply of seeds on which birds feed was unusually heavy. The quail and grouse have been well fed and strong; they have had little ice and snow to contend against: and even if hard weather should set in before spring, the birds will be in excellent condition to withstand hardship. All this gives reasonable ground for anticipating a large game supply next season.

In striking contrast with the prevailing reports of a warm sun in January, comes the story of two Rock Springs, Wyoming, men who went hunting in the mountains last Sunday. Overtaken by a snowstorm, and the weather turning bitterly cold, both became greatly exhausted; one managed to make his way back to the town and a searching party went out for his companion, who when discovered was so badly frozen that he died before he could be carried home.

The Sportsman Tourist.

"PAWNEE HERO STORIES AND FOLK-TALES."

WHEN the deft hands of cunning science frame,
From the rough fossils found in long-dried lakes,
A jointed skeleton, each fragment takes
A meaning new, and the vast wreck can claim
Its place in time's long list. With kindred lore
Here one has woven from a hundred shreds
Of myths' and legends' many-colored threads
The stately robe a vanished nation wore.
No! not yet vanished. For the stalwart bones
Are clothed with living flesh. The nerves can thrill
With hope at the grave leader's earnest tones—
The gallant records that these pages fill
Would rouse to mutiny the Roman stones,
And give despair heart for the future still.

DEC. 4, 1889. H. G. DULOG.

WINTER GLIMPSES.

THE snow came hard all night and the following morning, but ceased in the afternoon, Sunday afternoon. The first winter landscape is complete, and there is a place where it might be fairly viewed, but the path to Jason's Hill is a mile long and a foot deep. Once in the road, a primitive country highway, we are chagrined to note that the wilderness of snow, yet unscarred by wheel or runner, has been invaded by a pedestrian. We can only fall in and take a lesson in trailing—an easy lesson. Deduction first, a boy, from the diminutive track. Deduction second, top boots, for see how he shuns the easy places, and kicks through the drifts. Third, a whip, from the serpentine coils and lengths imprinted. And lastly, the proof of it all in the full-length mould where he threw himself, arms extended, whip and all, in very wantonness of life. The snow retains it all, but the wind has gone off with the whistle and laughter.

* * * * * * *

A low farmhouse, a black barn and a barnyard, with a bunch of young stock—yearlings and over—black and white, the whole six. They simulate an interest in a few trampled cornstalks. Their coats are rough, unkempt, cowlicked. A melancholy group.

* * * * * * *

A farmer, in a yellow sleigh, breaking track toward us. Can this spirited Dobbin be the drooping plow-slave of the spring? He has forgotten his spavins. His nostrils spurn every breath to try another. The check hangs loose; his neck arches from side to side; the knees act high and the hoofs strike through to the ground, thud, thud. He goes by with a plunge that strains all the fastenings and alarms the bells into chime.

* * * * * * *

Jason's Hill, a massive white house with closed blinds and nailed doors, well back from the road in conservative fashion. A clump of laurel in the corner of the wall, a rustic seat, newly upholstered in snow, and a magnificent spruce, gracefully bending under its new weight of foliage, an ideal Christmas tree. The clouds have not dispersed, but are drawn out in ranks to show their linings, while the sun has taken advantage of an opening low down to establish a throne. The view slopes gently down to the valley a mile away, where a single smoke from the village, a thin graceful smoke, pours aspiringly up, up, up. Above and beyond the woods begin, thin at first and interspersed with frozen acres, mere snow patches at this distance, but growing thicker and ending in a forest of oak with its withered foliage blending with the sunset to make a purple horizon. A patch of leafless forest in shadow shows absolutely black, and the pastures with underbrush above the white, furnish all the shades of brown, but only the evergreens seem really indigenous to the scene. The oak rustles and shivers under the obnoxious burden, but the pine spreads its hospitable arms, and the tiniest needle is a perch for a snowflake. At the foot of the hill the swamp, inaccessible at other seasons, is recognized now by its fringe of alders, and the black streak of ice kept clear by the wind among the yellow bogs.

The sun is beginning to abdicate his reign, and all the splendor of the scene is gone. The apparent sparkle of warmth has become a genuine glitter of cold, and the attenuated air seems full of invisible icicles. Darkness comes and brings the wind of the night before to accelerate the retreat of the intruder and obliterate the obnoxious tracks. JEFFERSON SCRIBB.

HUNTING THE HORSE-HEAD SEAL.

THE great gray seal (*Halichœrus grypus*) is known at the Mingan Islands as the "horse-head." This name has been given to the species by the coast residents because in shape and size the gray seal's head has a fancied resemblance to the head of a horse.

About the Mingan Islands is one of the very few localities where this animal can be found, and the fact that it still exists here is sufficient proof of its extreme shyness and acuteness, qualities which are essential to protect it from extermination. Could it be easily approached it would soon be destroyed by the coast fishermen and the Indians of this region, who would kill the animal for its pelt to barter with the traders. And it would also become the target for the rifles of sportsmen who not infrequently visit southern Labrador in summer, and who would no doubt find much gratification in shooting at such noble game. That the gray seal has been shot at more or less goes without saying. Its larger head and heavy snout, seen occasionally above the water among the Mingan Islands, are too great a temptation for the average individual to resist who chances to have a "shooting iron" handy. But these chance shots seldom have any other effect than to frighten the seals. The consequence is that they have been educated to the extent at least of learning that man is their most deadly enemy, and the wariness and intelligence they exhibit in avoiding his immediate presence, while remaining in his proximity, is remarkable. With a keen scent and quick ear, this animal depends more on the sense of smell and hearing than on sight for protection, or rather for escape from its enemies. While it appears to be not at all deficient in sight, and quickly notices the approach of a vessel, boat or man, if the latter is walking upright, the great luminous eyes cannot, however, so certainly detect the presence of an enemy as the organs of hearing and scent. An Indian dressed in sealskin, crawling along the shore among the boulders and carefully imitating the actions of a seal on shore, may deceive the wary watchers hauled out on some projecting ledge. But let them once get a sniff of Mr. Lo, even at a distance of a hundred yards, or catch the sound made by a stone falling beneath his feet, and instantly they plunge into the water. Nor will they always haul out again until they have patrolled the shore for some distance, watching, listening and sniffing to detect the presence of a foe. On the occasion of our first visit to Mingan Island we had a fine opportunity to note this peculiarity in the habits of this species. Although Mr. Lucas and the writer had secured a position where we lay in perfect concealment from the seals off shore, and which were to leeward of us, we repeatedly saw them come to the surface, raise their heads and shoulders out of water to look around, and an instant later disappear with a great splurge as they got our scent that the stiff breeze wafted down to them. The gray seal is said to haul out invariably on the lee side of the island or reef which it frequents. The Indians, who concede that this animal is "heap smart," believe that it has a double purpose in thus choosing its hauling ground. By doing this it has smooth water, and no surf, where it approaches the shore, and, in choosing a projecting, isolated ledge or reef to leeward, it is able to scent the approach of an enemy from the landward side. Thus, taking into account the wariness of this creature, and its almost human intelligence in avoiding danger, together with the fact that it immediately sinks and is lost, if shot in deep water, the task of securing specimens of it is by no means so easy as it might seem to be.

Commander Wakeham, of the La Canadienne, very kindly interested himself to secure for us the services of two Indians who were at the Hudson's Bay Post, at Mingan Harbor, to assist us in the attempt to get specimens of the horse-head. One of these was a half-breed, and, like most half-breed voyagers, who figure in stories of the North and Northwest, he answered to the name of Jean Batiste. The name awakened half forgotten memories of stories we had read in years long gone by, wherein adventures with wild animals, frontier fights, portages, etc., were inextricably mixed with some remarkable being of the half-breed persuasion, who gloried in the name of Jean Batiste, and who, unlike his famous prototype, John the Baptist, never lost his head.

On Monday, Aug. 15, the Indians paddled alongside at an early hour in the morning, and though they expressed their doubts about the fitness of the day for seal hunting—their opinion being that the wind would blow "heap too hard"—they were willing to go. Immediately after they came on board our anchor broke ground and the Grampus went skipping out of the harbor, and we steered for the Perroquets, a group of islets and rocky, wave-washed reefs, about two miles to the westward of Mingan Island. This group is said to be the favorite haunt of the gray seal; and here a great number of puffins (or perroquets) breed, also a few gannets, murres and terns.

The wind, which was from west-northwest, blew so strong by the time we had reached our destination, that it kicked up a choppy sea of considerable size that broke heavily on the Perroquets. The Indians shook their heads significantly, grunted in disapprobation, and finally told us that nothing could be done on the reefs while such a wind and sea prevailed. We were determined, however, not to lose the day absolutely, if we could help it; therefore, we up helm and ran down under the lee of Mingan Island, where we anchored. It was our intention to land on the island and collect birds, plants, etc., but a small herd of seals were seen hauled out on a projecting point, about a half mile from the vessel, and their discovery was followed by an instant resolve to try and bag one, at least. Jean Batiste and his more aged coadjutor had little hopes of success with such a breeze blowing, but they were willing to try. The possibility of achieving success, coupled with the fact that failure would leave us no worse off than before, and the interest we had in watching one of the Indians personate a seal, fixed our determination to make the attempt. Accordingly, Mr. Lucas and the writer went on shore, accompanied by our two native assistants. Our landing was effected about 1,000yds. from the seals. Soon after the oldest Indian drew on a garment of sealskin, with a hood attached to represent a seal's head. Having made this change in his dress, and loaded his gun with bullets, he started for the seals. But, notwithstanding, he crawled and crouched, worming his way among the boulders and elevated ridges of stone, with the proverbial cunning of the aboriginal hunter, and although his external appearance at a distance bore no mean resemblance to a seal, nevertheless, all of the seals but one, were so suspicious that they flopped off into the sea and began their usual cautious patrol of the shore, their great heads being seen now and then a little way out as they rose to make a reconnoissance. The imagination can best picture the intense interest with which we watched that seal on the rock, and our hunter wriggling his way slowly toward the animal. Unaided by our glasses, we could not distinguish either seal or man from the ledges, but the binoculars enabled us to watch closely every movement. At last the Indian, having approached the seal as closely as possible (perhaps within 30yds.) without getting directly to windward of it, rose on his knees and fired. We had many regrets and some mortification when we saw the animal flounder off the ledge and plunge headlong into the sea. We knew full well that, even if mortally wounded, its first instinct would be to get off shore into deep water, where, in the event of its death, it would be lost to us. Besides, it was certain that seal hunting was ended for that day, for, if badly frightened, these animals often leave the locality for some other island. And soon we saw them swimming past, as fast as they could go, poking their heads out now and then to take a hasty glance around, and then diving beneath the surface. Our noble red claimed that he had killed the seal and that the latter had sunk near the shore. But this statement in its entirety was accepted with a reasonable amount of salt, though no audible doubts were expressed.

The seals having gone, Mr. Lucas and I turned our attention to shooting birds. We met with the best success in bagging snipe or beach birds (*Tringa ruficollis*), which were very abundant. I knocked over 47 of these birds with one discharge of both barrels, and my companion did nearly as well.

The next day proved more favorable. A party was left on Mingan Island early in the morning, to make collections of such game and other material as could be secured there, while the Grampus went over to the Perroquets and anchored. It was flood tide at this time, and since the seals haul out only on the ebb, I improved the opportunity thus presented of visiting two of the inlets. We went entirely unarmed, for it would have frightened the seals to have fired a gun.

However, we did not return empty-handed to the vessel. A fine series of young puffins, in various stages of plumage, an adult bird of the same species, several murre's eggs, and a young and an adult murre were obtained. These were taken from their nests and the birds, of course, alive when we got them and in first-class condition for specimens. The adult murre was put into the well of the Grampus, and though it was extremely shy at first and would dive on the smallest provocation, it soon became quite tame and would eat fish from our own hands, with as much readiness as a chicken would take crumbs. The securing of live specimens of these sea birds is often of considerable advantage to us, for the naturalists are thus enabled to study more closely their attitudes and habits.

As the tide ebbed Mr. Lucas, the two reds and I went on shore upon a rocky reef, around which we saw a dozen or more of the great horse-heads, some of them evidently somewhat disposed to haul out, though none of them would stay on the rocks longer than a few minutes at a time. During the afternoon we all did a reasonable amount of crawling and crouching *à la* Indian. But before Mr. Lucas and I entered upon this we gave the Indians a reasonable opportunity to distinguish themselves. The seals were too shy, however, to be beguiled by even the wily old red hunter, who tried in vain all his arts of imitating the calls and movements of the animals that were watching him from a safe distance, their curiosity being blended with sufficient caution to keep them out of danger. Jean Batiste wounded a seal pretty badly in the water and probably it died, but before we could reach the spot in our dory it had vanished. Other shots were fired at the seals, but although we thought some of them hit the mark no game was secured.

A low barometer and the rather threatening appearance of the weather, together with the desirability of taking the Indians home, induced us to start for Mingan Harbor in the evening. On our way we picked up Mr. Palmer and Capt. Baxter, who had bagged a good lot of specimens at Mingan Island, among which wore some young black ducks in three varieties of plumage.

U. S. FISH COMMISSION, Washington, D. C.

MIXED FEATHERS.

"LA GRIPPE" has been upon my trail ever since I returned from Maryland, where I had been tarrying for several weeks sampling the quail of the Eastern Shore and reviewing old landmarks; but that European disorder has at last brought me to a point where the doctor steps up and bangs it into me right and left.

Since I last wrote for these columns I have had the misfortune to lose my dog Dan. Poor old fellow, I trust he has found comfortable quarters in dog heaven, for he richly deserved reward for his good work on earth. His death determined me to drop the gun and resort to rod and reel for amusement. Now, I had never attempted fresh-water fishing, and to prepare for the new order of things I read all the finny literature in sight and purchased an outfit. The first trip was to the headwaters of the Hudson after black bass, and resulted in no fish; but I acquired considerable aptness in the matter of procuring bait. Next Milton Lake, in New Jersey, was tried. I know there are bass in that lake, for I have seen and talked to them. The first day the weather conditions were not favorable. The next day, after fishing several hours and expecting a strike every minute, it began to rain. I was beginning to grow discouraged, and had I not met a man who had seen another man who had caught a bass in Milton Lake two years before, I should have given up in despair. So I tried again, and carried with me this time six different kinds of bait, one of them being raw beef. The bass did not seem to want it, but it must have attracted a large, unfriendly-looking dog that came sauntering down through the woods, and who made me feel very uncomfortable by his presence. But he departed without doing violence to my person, and left me discontented and meditative beside that pretty stream. It was as likely a bit of water as I ever read of in which to fish for black bass. Placid pools, noisy rapids, moss-fringed rocks and overhanging banks, and a perfect autumn afternoon, with the birds hopping about in search of food and the leaves fluttering to the ground as the trees disrobed for their long winter sleep. A pretty picture to dream over, but I had come for bass, and did not feel "fully repaid" for my ill-success by the beautiful scenery, as I have read others have. I am now calculating the probable cost of my first bass.

So far fishing had not been the brilliant success I anticipated, and when the birds grew ripe I concluded to pluck a few. Last month I bought a ticket for Easton, Maryland, on the eastern side of the Chesapeake Bay, my former home, and where I first learned to handle a gun. My mission was quail, with probably a rabbit hunt by way of variety. The quail of Talbot county are scarce, strong flyers, and educated to a degree that is simply astonishing. When the young brood are able to navigate and retain impressions the mother hen calls them about her and points out all the magnolia swamps and impenetrable thickets in the vicinity of their feeding grounds, and they never forget the way to these retreats. She also instructs them to rise early and get breakfast over before the gunner gets around, and then retire to the woods until the afternoon is well advanced, when they may come out and take supper, not forgetting to remind them to always sleep in a clearing or open field in a bunch, with their heads out. I have often been asked how far quail can fly. That depends entirely upon how far they are feeding from a swamp or thicket. They always manage to get there.

I fancy they fly a little mite faster and spend more of their time in the woods than they used to in the "good old days" before pot-hunters and hawks were so numerous. Speaking of hawks, Talbot county for many years paid a bounty of fifty cents on hawks, but several years ago a great flock of hawks crossed the bay into one of the districts of the county, and by night there was hardly a charge of powder and shot remaining in that portion of the county, and when the returns were all in the county treasury was about as empty as the guns. There is no bounty on them now.

Quail shooting in Talbot necessitates a great amount of

walking, even under the most favorable circumstances, though there are no hills to climb, the country being only slightly rolling, but many of the stubble fields are large and separated from each other by fresh-sown wheat land. I located at my brother's the first week. His farm is about three miles from the town of Easton. G. is not much of a shot, but loves to poke around after the birds and see them fly. He generally keeps a dog, but this time I found him without that important animal, so he borrowed for the occasion a large pointer by the name of Prince, a splendid field dog, but hunting too wild for cover shooting. Accompanied by Prince we started out the afternoon of my arrival to sample the shooting. We found only two coveys, getting but four birds from both of them. The next morning we were joined by a young friend from town. We found eight or ten coveys, and I had eight or ten as nice shots as one could wish, but for the life of me I could not stop a bird. Again and again I sighted carefully, but the bird kept on, and the only quail killed that morning was by my brother. I could not account for this, as I had killed four out of five shots the first afternoon.

I did not try the birds again until the following Tuesday, and then under circumstances which almost induced me to pack my grip and start for New York. If any of my readers have ever hunted quail with worthless dogs where quail were scarce I feel reasonably sure of sympathy. A friend, whom I shall designate as B., and myself, made the start from Easton, where I had gone to stay over Sunday. He had no dog, so we had to borrow, the owner of Prince having taken his dog for a few days' hunting. There was nothing to do but skirmish around for the necessary equipment of four-footed helpers. A fine-looking Irish setter came into view, following Dr. T., such a dog as would attract attention at a bench show.

"Say, Doc.," called out B., "whose dog is that?"

"Don't know," says Doc., "but take him out and try him."

B. put a handkerchief around reddy's neck and took him to the stable, both of us well pleased with our prize and expecting great things of him in the field. We secured two more dogs, one a red pup that a friend desired me to break in and the other an old setter by the name of Bruce. Strong in numbers, if uncertain as to quality, we got off as soon as the team could be hitched up. I will spare myself the pain of recalling in detail the story of that afternoon's hunt The bench show dog was gun shy, the pup flushed all the birds that old Bruce could find, and B. fell off a slippery log into the water. The combined bag was one quail. Hot and weary we wandered back to my brother's, where we had left our team, to find that he had gone to town and brought back another dog for me to try. We took him out in the orchard to observe his style. He hunted that piece of ground twice before we had walked half way across it. He was a hummer, and no mistake, and his name was Cato, but I observed a merry twinkle in my brother's eyes that made me feel uneasy.

The next morning the horse was hitched to the carriage, and with Bruce and Cato as companions, I started for Chapel, a cross-roads settlement where lived a friend of my youth. The two red rangers I had sent back to town with B. I would seek out Charlie F. and get his dog. On the road to Chapel, spying a likely piece of stubble, I thought to give Cato a trial. I had hardly finished making the horse fast to the fence before Cato was into the field and yelping; yes, actually giving tongue, after a covey of quail that he had flushed. I groaned inwardly. Was this to be my fate? I tied Cato to the fence near the horse, hoping he might choke himself before I returned, and with Bruce, followed the birds into the woods. I got two of them, and returning to the carriage, continued my journey to Chapel.

I found Charlie running his sawmill down in the woods. Seated upon a sawlog I unfolded my "tale of woe." He was pretty much the same Charlie of by-gone days, only just a trifle more serious. He knocked off work for the day, and after a good dinner we issued forth, with many misgivings as to the conduct of Cato. Charlie had loaned his dog to a friend. He would get him in the morning. We found five coveys of birds, but that confounded dog flushed them all before we could get near him. Once, exasperated beyond endurance, I shot him when he was off a safe distance. He yelped a little, but forgot the lesson with the very next birds he found. I afterward heard that Cato had been shot eight times in one afternoon. It does'n't take long to lose all interest in gunning when the dogs are worthless. You become so disgusted that you hardly care to shoot, even when the birds get up from under your very feet.

"Pete," says Charlie, it was my old nick-name; "if you will come up in the morning I will get my dog and we'll have some sport; but don't bring Cato." The next morning found me on hand, and with old Bruce and Charlie's dog Frank, a white native setter, we had two days of fair sport. The dogs worked beautifully, not flushing half a dozen quail in the two days. This was something like old times, and it was a satisfaction and pleasure to see those two dogs stand and back each other. We never had to hurry ourselves to reach the dogs when a point was made. They pointed as steady as a frozen weather vane. Frank, the younger dog, found nearly all the coveys, but old Bruce would get in his work on the singles. He seemed to have a knack of trotting up on a single bird and dropping beside it with an easy familiarity that charmed it. No bird could take exception at his style of approach, and he was up to all their little tricks. Though quite old his nose was excellent, and his judgment the very best.

I inquired of Charlie how went the world with Jim S., a former companion of our gunning excursions, and to my sorrow heard that he was dead. I remember once that while the three of us were gunning one day many years ago we grew desperately hungry. The nearest store was several miles away, and we were not acquainted with a single farmer in the neighborhood. Crossing a farm we intercepted the farmer as he was carrying a bucket of slops to his pigs. "Say, mister," says Jim, "are you going to waste that nice bucket of slops on those hogs?" at the same time placing his hands on his empty stomach and smacking his lips. But this delicate and eloquent appeal had no effect upon the horny-handed son of the soil, and we tramped three miles before we ran afoul of a country store and filled in on crackers and cheese.

After bidding Charlie good-bye I located in Easton and made several trips out through the country. I was staying with Dr. S., an old chum and one with whom I had engaged in many hunts. I think his wife one of the most amiable women on earth. Guns, cartridges, coats, boots and gunning clothing were scattered all over that house, besides several dogs constantly in the kitchen, yet she never complained once, however often she found it necessary to gather up our belongings and put them in their proper places. Doc was too busy to do much gunning, but we did lots of talking over old times and the dogs we had owned. One afternoon I enticed him from his office and found that he could shoot as well as ever. On another occasion we took the beagles out for a run. He had four of them, and very good dogs they were. We found more sport in watching the dogs run than in shooting the rabbits, and some of the cottontails made desperate efforts to throw off their pursuers. One little fellow came out of the woods and squatted hardly a dozen paces from us while the dogs were circling in the woods after the lost trail. Presently they started him, and when he came out again one of the dogs was right behind him. He made a break for the branch across a plowed field. Well, that dog was dead sure Mr. Rabbit was his meat, and as he wanted him all to himself he never opened his mouth, but the way he dug across that field was a caution. However, the rabbit beat him to the branch, and when the dogs ran him around again some one shot him. A little further on we got in with another party of rabbit hunters, but as the two packs of dogs were strangers to each other they ran very poorly together, and eight dogs (the other party had four) are too many to do good work; four will give much better satisfaction.

B. and myself agreed to have another go at the quail. He secured a young pointer named Pilot and I took Prince. Old Bruce had a sore foot and had to be left at home. We got off between 8 and 9 o'clock, with a boy in the wagon to drive while we hunted, and the grub stowed away in a couple of baskets. Our first attempt was a piece of new ground bordering a woods. A fine covey got up ahead of Prince and went to the woods without giving us a shot, and were so wild that they would not lie to the dogs when found again. We got two of them. Went to the wagon and drove about half a mile, starting in at a peach orchard. Instructed the boy to wait for us a mile or two up the road while we made the circle. Prince found again, Pilot backing in fine style; but the birds flew before we got near enough to shoot, and we failed to start them again in the woods. Hunted over some nice-looking ground on two farms without striking a scent. Met a farmer who had a horse sick with the colic. B. prescribed for the horse and in return got permission to gun on his land, but found no birds. It was now after 12 o'clock, and we were growing tired and hungry. B. said the wagon was at least three miles away, and that the boy had one of the most ungovernable appetites in the county; that quite likely he would eat both lunches before we reached him. This was alarming. We climbed through several more wire fences; there seemed to be no other kind of fence in that section. Down by a raspberry patch we found another covey of birds, but away they went as wild as deer. It began to look as if we should find nothing but wild birds that day. One consolation, we were slowly approaching the place where the boy and wagon should be. At last we struck the road. Then Prince was missing. After calling and whistling for about five minutes we went to look for him. B. found him with a covey of birds a few feet from his nose, but missed with both barrels; said he couldn't shoot on an empty stomach. I marked a bird that pitched on the limb of a large oak tree. My feet grew lighter and the pangs of hunger ceased to gnaw at my vitals. I got as near as I thought safe, and blazed away; but off went the birds. We looked in the trees for more, and shot seven out of a clump of tall pines within a circle of 20yds.; big, plump birds they were. We finished by firing three charges into a pine knot that bore a striking resemblance to a quail, but wasn't. Shooting birds out of trees was something we had not bargained for, and, to say the least, was not legitimate sport. But all the birds so far had refused to lie for the dogs, and to leave them roosting in those trees was going dead against Providence; besides, we wanted them.

This piece of luck cheered us up immensely and was an experience, I believe, that never before happened to any two gunners in Talbot county, and will probably never occur again. I have often seen one or two birds out of a covey take to the trees, but never the entire lot, and then to sit there like pine burs, while we knocked them out, the dogs looking on in amazement and wondering where the dead birds were coming from.

Our good luck continued by sighting the boy and wagon up the road by a gypsy camp, and finding that he had not disturbed the grub. We were soon in the wagon with a sandwich in each hand, while one of the gypsies was trying to trade horses with us. What a lazy contented lot they were, the men sitting around in the sun, the dirty-faced children playing in the road, two of the young girls dressing their hair in front of a small glass hanging from the bow of a tree, while the older women were talking together or attending to the duties of the camp. A little distance away were two colored damsels of the neighborhood, timidly awaiting an opportunity to cross the palm of the fortune-teller with silver and learn what fate had in store for them.

Scattered about on each side of the road, and a hundred yards or so apart, are a dozen or more negro shanties, collectively known as Ivytown. Some of the lots look to be excellent feeding ground for quail and B. wants to try them, but the boy has told us of a large covey he saw crossing the road as he drove to meet us, and I insist upon looking for them, although B. takes little stock in the boy's yarn. We drive on half a mile to a country store. I begin to yearn for a glass of cider, real cider made from apples, such as I used to suck through a straw years ago not many miles from this very spot. But no, we are just out, expect some next week, says the proprietor; and not caring to wait and this being a local option county we take water. Leaving the boy and wagon at the store we start to find that covey of birds. We hunt down the edge of the woods and around a pine thicket into an old sedge field without finding the birds. I am fast losing confidence in that boy's story, and climb on top of the rail fence to get back into the woods. Snap goes the top rail and up get a large covey of quail. Hanging by one leg I take a snap shot, but on they all go. One bird pitches in the woods and I walk him up and score a kill. B. works them down out in the sedge field. We drive them from the field into the woods and along a ditch bank. The dogs work well and we succeed in bagging nine of them, B. getting the majority of the birds.

Back to the wagon and off again, this time for the county poor house farm, where B. says we are apt to find birds. A likely piece of stubble tempts us before we reach the abode of the poor, and Prince draws up on a fine covey, out of which we only secure two birds, making a sad mess of it. The birds fly through a grove of trees in front of us that shelter the ruins of White Marsh church, a stone structure over two hundred years old, and our dogs hunt over sunken graves, now overgrown with briers that contain the dust of some of the first settlers of Talbot county. The little village near by for many years struggled along under the name Hole-in-the-Wall. It looked much as it did years ago, and changing its name to Hamilton or Hambleton seems to have added nothing to its prosperity. I remember stopping there one day with my father, about the days of my first pair of pants or red top boots, and the good lady at the store presenting me with a white-handled knife full of tin blades.

"Pete," says B., and I notice a sort of parched look about his mouth and a huskiness to his voice that alarms me, "there's a club at this place and I am a member of it: would you like some beer?" We appeal to the president of the club, B. assures him that his name is upon the roll and we are admitted to the sanctum. But the name cannot be found. "Must have been destroyed in the last fire," says B. "Shall I put her there again?" and down she goes and mine also. Being now full-pledged (fledged) members we partake of the hospitalities of the club and depart much refreshed.

Once more we are behind the dogs, as they hunt a large stubble of the poor farm, but find no birds until it grows too dark to shoot, so we climb into the wagon and start for home, fairly satisfied with our bag of twenty birds.

I would like to tell of several more hunts I had around Easton, but I have already claimed too much of your space. Next year I hope to repeat my visit, and I shall most certainly take with me a dog of my own, broken by myself. There are any number of dogs in and about Easton, and not one of them properly broken, and only about one in a dozen worth following into the field. It is not the fault of the dogs; the masters are to blame for it. The dogs are of a good hardy stock, capable of nice work if intelligently handled when young. I care little for blue blood. Give me a dog with a good disposition, staying qualities and intelligence, and the other fellow may have the pedigree. A great many gunners pet their dogs too much; it is not good for the dogs, as I have found to my loss.

OLD MAN.

Natural History.

THE SNOWY OWL.

Editor Forest and Stream:

Mr. L. S. Foster's inquiries concerning the snowy owl (*Nyctea nyctea*) come very opportunely. The southern flight of these birds during the past two weeks has been remarkable, only exceeded by the great migration of '76-77. At present the snowy owl is to be found in great numbers between the Platte and Loup rivers in Buffalo and Dawson counties, Nebraska. A Kearney taxidermist has received nine specimens within the past week. These will average 24in. in length, with 17in. wings. There have been all shades, from the heavily mottled female to the immaculate male, two specimens being without spot or bar. A marked peculiarity was their emaciated condition, the entire digestive apparatus being in some cases empty. One specimen that I examined contained shreds of gopher hair. The great body of owls arrived about eight days before the recent cold wave, and their advent is a sure precursor of low temperature. SHOSHONE.

KEARNEY, Neb., Jan. 1.

Editor Forest and Stream:

A correspondent in your paper of Dec. 26 makes inquiries about the snowy owl, to some of which I can reply. On the prairies around Chicago, in the winter months of 1840 to 1850 this owl was common; many were shot, and the writer stuffed some specimens, which were in good condition. This owl was supposed to feed on grouse and other game, which in those days was abundant in that region. The plumage generally was white, with minute black spots, though some were pure white, supposed to be the older specimens. The writer had a fine specimen in captivity one winter, it had been slightly wounded, and was kept in a garret, where it soon recovered. It was fed with raw beef, and with birds, such as grouse and quail, and became rather tame. A large living red-tailed hawk was turned loose into the garret, and on the first night it was killed and partly eaten by the owl. This owl is less nocturnal in its habits than most owls, being often seen flying about in broad daylight. After keeping the bird for two months or so, it was liberated from the housetop, and made a beeline for the prairies. This owl is probably rare in those parts now, on account of the disappearance of the birds on which it subsisted. S. C. CLARKE.

MARIETTA, Ga.

NOTES FROM IOWA.—Coralville, Ia., Jan. 1.—Last fall there was a family of meadow larks about here which contained several albinos. One of them a young man shot and presented to the State University Museum at Iowa City....Not long since the pastor of the M. E. Church at Tiffin, Ia., informed me that the flying squirrels had literally taken possession of the church attic, and the noise they made scampering about and rolling nuts around was strongly suggestive of spirits....A jack rabbit weighing 8lbs. was killed not far from this place last November. It is said that nothing of the kind was ever seen here before.—V. S. W.

CALIFORNIA ACADEMY OF SCIENCES.—The following officers were re-elected Jan. 6: President, H. W. Harkness; First Vice-President, H. H. Behr; Second Vice-President, George Hewston; Corresponding Secretary, Frederick Gutzkow; Recording Secretary, J. R. Scupham; Treasurer, I. E. Thayer; Librarian, Carlos Trover; Director of Museum, J. G. Cooper. Trustees: Charles F. Crocker, D. E. Hayes, S. W. Holladay, Geo. C. Perkins, E. J. Molera, Irving M. Scott, John Taylor.

AN ARTICLE OF LUXURY.

A LITTLE swallow, scarcely larger than a sand martin, finds its home among the islands washed by the warm waters of the East Indian Achipelago.

This little creature, measuring but 4¾in. in length, 11 in spread of wing, and dainty in all his build, seems to be hardly heavy enough to balance his ponderous scientific name of *Hirundo esculenta*. Fortunately he is commonly called by another not quite so formidable, the salaugan swallow.

His plumage, like that of all swallows, is quiet in color, but its texture is extremely rich and lustrous. He has a dusky brown back, a breast of pale ash color, and his forked tail is prettily tipped with white. His flight is almost incredible in its speed and precision.

These little swallows congregate in vast flocks, and build their nests within dark and sombre caves, lying at the base of the highest and most precipitous rocks to be found in the Indian Ocean. Against these walls of rock the surging waves are continually dashing, beating and breaking themselves into clouds of the finest spray, in the midst of which swarms of the tiny fellows seem to be ever darting about.

By fixing the eye on the surface of the water it is possible to discover the holes, now flooded, now open again, which form the entrance to the caverns. The birds, watching their chance during the moment when the holes are bare, dash into them with lightning speed, and find there a place of safety wherein to build their nests, which they fasten to the arched roofs of the caves. These nests weigh scarcely half an ounce; but small as they are, it is as their architects that our birds have been able to achieve a world-wide fame; for they are the edible birds' nests—that luxury, *par excellence*, of the wealthy Chinese. The nests are built in two parts, one being a sort of bracket, fastened upon the wall of rock and supporting the true nest, which is made principally of seaweed and bits of grass. The bracket is that which forms the delicate portion of the *bonne bouche*. It is built in two shapes, one flat like an oyster shell, the other deeper and more spoon-shaped, and is composed of a semi-transparent moss that reminds one of isinglass.

It was once thought that this gelatine-like substance was produced in the bird's crop from a partial digestion of seaweeds, but this is now believed to have been an error. In these little birds, as in all species of the family of swifts, the crop is wanting; and an examination of the contents of the stomach during the period of nest building shows that it contains no vegetable matter. The salivary glands, however, are greatly developed at this time, becoming so large as to form considerable swellings beneath the tongue, one upon each side. From these the bird draws much of the material for its nest, while it is not unlikely that certain largely-developed glands of the stomach contribute their share to the work. The secretion is of gluelike tenacity, and can be drawn directly from the living birds in long threads, which soon dry in the air, and correspond under the microscope in the texture with the substance of the bracket.

When the swallow is making ready to begin its nest, it flies again and again to that spot in the top of the cavern which it has selected for its site. There it presses its bill against the rock, leaving a little saliva dropped from the tip of its tongue. This action it repeats from a dozen to twenty times, circling off for a brief flight between each visit. Finally it alights, and proceeds to spread out the gluey stuff into a sort of horseshoe shape upon its rocky base, adding to it all the while. The motion of the little creature's body from side to side, while engaged in this spreading process, drops the softer saliva over that which has partially hardened, and gives rise to the undulatory bands which form a distinguishing feature of the nest. When finished, the structure is about the size of a goose egg, of an irregular, shallow, bowl-like shape, scarcely thicker than a silver spoon, and in color is white, slightly tinged with red.

The process of incubation is so brief that the little home is vacated within a month, and it is never used a second time. Indeed, after the brood has flown it quickly dries, becomes brittle and falls to pieces, dropping upon the floor of the cave. Its quality as a merchantable article varies greatly, being wholly dependent upon its age. If secured before the eggs are laid its value is at its greatest; if it contains eggs that are unhatched it is still very valuable; but should the young have been hatched in it, or, still worse, should they have used it until nearly ready for flight, it will be found to be discolored, soiled, perhaps streaked with intermixed masses of blood, feathers and dirt, and is hardly worth the trouble of bringing away.

The men whose trade it is to "pluck" the nests are nearly as dexterous and surprising in the feats which they perform as are the tiny birds themselves. They are from a separate craft, or caste, of which the goddess Loro is counted special guardian. Loro, queen of the coast and ruler of the surge, is held by all in deepest reverence. Her temple is upon the crest of a high rock near which no mortal dwells; and none will venture to pass before it without bending low, with hands uplifted in humble salutation.

The goddess is believed, like Venus, to rise from the sea, whence she comes to enter her temple, which is filled with couches, rich hangings and all sorts of luxuries and things of beauty for her use and pleasure. On pain of death no one is permitted to enter the sacred precincts of this place save the priest, who is also chief of the caste of "nest-pluckers." Even in his case incense must be burned upon the threshold, no word may pass his lips, and he remains only long enough to perform the menial services of the temple. Previous to the plucking of the nests, a solemn feast is held before this sacred place, in worship and honor of the goddess; during whose supposed presence all prostrate themselves in silent awe, with faces pressed upon the ground. When ample time has elapsed for her to regale herself and bless the feast, the priest gives the signal that she has passed within the temple. The men then rise from the ground and their feasting begins to the sound of merry music, and the peaceful, swaying motions of dancing girls, decked with wreaths of flowers.

In final preparation for the gathering the nests, the plucker strips himself of all clothing, save a cloth about his loins. A knife, a netted bag and a torch are fastened at his side. Then comes the peril of the descent. Occasionally it is possible to accomplish this with less of danger by means of rope or bamboo ladders attached to the rock; but oftener the man is lowered by a rope, at the end of which a crossbar is lashed. Upon this bar he sits, pushing himself as far as possible away from the rock with a rod held in his right hand, while with his left he clings tightly to the rope. In his descent of often several hundred feet, the plucker's vision is confused by the rapid flight of numberless swallows passing and repassing before his eyes in endless swarms, while his ears are nearly deafened by the roaring of the breakers.

At last he is opposite the salaugan hole; he gives a signal and the lowering is stopped. By the aid of his rod he now begins to swing himself, gradually increasing the length of swing, until he judges that he may with some hope of safety spring from the rope with a leap that shall either carry him into the hole, and to a footing upon some projecting ledge, which he has marked, or, terrible alternative, be dashed to instant destruction amid the jagged rocks and tumbling waters below.

Once safely landed inside, the plucker detaches from the rock such nests as are within his reach, and then, fastening the knife upon the end of his rod, he manages to cut off those upon the higher points of the cave. But to accomplish even this part of the task is no easy matter; on the contrary, the greatest skill and prudence are indispensable, for the rock beneath his feet affords at best but scantest standing ground, and is, moreover, slippery, while phosphorescent waters are flashing below, and frightened birds flit here and there, adding their quota to the confusion in a gloom which is scarcely broken by the dim light of the torch. He clings by his spare hand, as well as his feet, to every crack and projection, and finally his bag is filled.

Now he makes his way to the entrance of the hole, where he has fastened a small cord, which is attached to the larger rope and serves to draw it toward him. If all goes well his task becomes comparatively simple, and he mounts his bamboo perch with tolerable ease; but, should the cord have played him false, and broken, then there remains but one thing for him to do. He must leap for the larger rope; leap straight out into space, over all those thundering, boiling waters, through those ever-flitting swarms of birds to catch, if he can, that small dangling thing on which his life depends. It speaks volumes for the nerve and training of these daring men that the leap is usually successful.

When he arrives, at last, in safety at the top, his gleanings are so pitifully small, his risk has been so great, that the price of twice their weight in silver, which is what the wealthy Chinese give for the most perfect nests, seems but paltry pay. Even this, however, is denied to the poor plucker. There are middlemen, and other men, more than can be told, all waiting for, all getting their portion of the price, until the brave man who has so risked his life to procure the coveted dainty, hardly receives a tenth part of the money which is finally paid for it.

S. L. CLAYES.

EL CARPINTERO.

FOR the California woodpecker (*Melanerpes formicivorus bairdi*), I prefer the good old Spanish name, *El Carpintero*, the carpenter. It is a most appropriate name, for a better carpenter never struck chisel into wood. He does no work by measured rule, line or compas, but with a true workman's eye, and with no other tools than a chisel and mallet combined in one instrument he constructs his dwellings, forms his storehouse and earns his daily bread. It may be that, like most others of the woodpecker family, he is degenerating into a fly-catcher, but he has not got nearly so far down the grade as many of his congeners. True it is that he will arise from some branch of his favorite oak or pine, or from a favored roosting place on a fence post, and after a short flight, ending in a somewhat awkward flap, capture a festive fly and return to his old perch with as careless an I-told-you-I-could-do-it-if-I-wanted-to air as the veriest old fly-catcher of them all. And after all, are the woodpeckers really degenerating into fly-catchers, or were their ancestors fly-catchers that accidentally discovered the juicy succulence of the wood-boring insect, and so developed into a higher form? But then again, are the *Picidæ* really a higher form than the *Tyrannidæ*, or *vice versa?* I give it up.

But to return to El Carpintero and to his carpentering. How did he ever discover the fact that an acorn, thrust into a hole in the bark or decayed wood of a tree, would after many days yield up a large, fat, white worm that would gladden the heart and fill the belly of the most fastidious woodpecker in all this great arboreal world? That is what I want to know. Certainly the fact was duly figured out in the great unwritten past of his race. It is probably inherited memory now that causes him to store up the bitter nuts in safe repositories, dug with much labor in the family tree, knowing that a sure reward awaits his foresight. It is no credit to the present generations to do this, but the original ancestor that cyphered this problem out must have had a very high forehead.

Speaking of ancestors naturally suggests the idea of the family tree. Here you have a family, every member of which has a magnificent specimen of this peculiar kind of tree, and yet they cannot trace their genealogy back worth a cent. Although this family is so careless about its genealogical record as to leave it written on such perishable material as a rotten oak or pine, and never to grave it in imperishable marble, granite or metal, yet I have the most implicit faith in the purity and blueness of its blood from a careful examination of its family tree. This tree is usually an oak or pine, though others are at times made use of. A large white oak, however, with thick bark, and, I think, indigenous to California, is the favorite. Next to this comes the *Pinus sabinianæ*, commonly called Digger pine or nut pine. In the bark of these and in the wood of their decaying branches El Carpentero displays his workmanship. He there builds his home, rears his family and stores up his future grub—literally and figuratively. When the acorn ripens his season of active work begins. Without any measuring or laying out of circles, or the taking of diameters with callipers, he smoothly and artistically chisels out a hole, goes after an acorn, pushes it in butt end foremost, and carefully drives it home with a deliberate and workmanlike air. Is the acorn a good fit? You can wager your boots it is, every time. There is no laying down the acorn to enlarge the receptacle here, nor the necessary choosing of a larger one to replace a misfit. Not much! The nut that is brought just fits snugly and comfortably every time, no more, no less. And so El Carpintero goes on, carefully intent upon his work, until by the aid of his fellows every available spot upon the tree is studded with the evidences of his toil, and no more room is left for another acorn.

At times, if he is working in thick, soft bark, or decayed wood, he will dig his hole deep enough to hold two acorns, and, right here, he gets fooled occasionally. Isn't it Mark Twain who causes one of his characters to relate a story about a California jay trying to fill an old deserted miner's cabin with acorns, pushed through a knothole in the board roof? Well, no matter who told it, it is a good story, and our woodpecker sometimes unwittingly imitates the jay in question. In boring his hole he sometimes pierces through into a hollow, and he will try most industriously to fill that hole with acorns. In the slang of the day, he soon "tumbles to the racket," however, and as acorn after acorn disappears into this most unaccountable hole, he becomes suspicious, and finally certain that there is something not just right about it, and proceeds to "block the game." How does he do this? In the simplest manner possible. He simply goes and gets a nut a size larger, and drives it into the hole as far as it will go and leaves it there. I have never seen this fact noted by any other observer, but I saw the whole performance one afternoon when out shooting doves.

I never shot but one dove in my life, and will never knowingly shoot another, but when some of my friends come along and say, "Jump into our wagon, Doc, and go shooting with us this afternoon," I take my gun as an excuse and go with them to enjoy an afternoon in the woods and fields. On such an occasion as this I had taken a seat on a fallen, moss-covered branch in the shade of a large oak, when I observed El Carpintero at work over my head. He was just driving in an acorn when I first saw him, the blows of his beak attracting my attention. He drove it in pretty deeply, and with the last blow his head went in after it to such a depth and so suddenly as to show me that the nut must have dropped into the hollow of the branch on which he was at work. As a Scotchman would say he "keeked" into the empty hole for a moment with a comical air, and then with a disappointed *quee-cho, quee-cho*, flew after another acorn. This he did nine different times, and then it was that he seemed to "get on to" the game. He "keeked" into the hole several times, pushed his head in as far as it would go, looked at the hole from all sides, and then went off and procured a large acorn and drove it about two-thirds its length into the tree. Then with a seemingly triumphant *quee-cho* he flew to an adjacent branch and took a well-earned rest.

Quite a large number of the birds make the family tree their home, and dwell together in amity, always keeping a keen lookout for the family good. When the season advances into our so-called winter, and acorns get somewhat scarce and hard to find, a marauding gray squirrel occasionally attempts to levy tribute on El Carpentero's store. It is seldom that he succeeds without attracting the notice of some one of the lawful owners, and then ensues a lively battle. With a loud warning cry El Carpintero calls his companions, and at once flies to the rescue of the jealously guarded grub. The squirrel dodges the attack, in the meantime attempting to extract an acorn; but pretty soon he receives a jab from some sharp beak that puts him to ignominious flight. After the skirmish is over the birds carefully examine their store, and give utterance to many an exulting *quee-cho* at the success of their defense.

El Carpintero is a handsome bird, with very many interesting traits to reveal to the loving and careful observer. He is a very kind and assiduous parent, ever ready to give battle in defense of his young. He has not many enemies, fortunately, outside of that needless destroyer, the small boy, but now and then a dastardly, thieving California jay attempts to rifle the nest. He scarcely ever succeeds, as he stands in too much awe of the formidable weapon carried by our friend, and of his well-known disposition to use it.

El Carpintero is accused by our naturalists of the crime of apple eating. It may be so, but I do not believe it. I believe him to be a strictly insectivorous bird. He does attack apples, without doubt, but only to extract the larvæ of the codlin moth that lurk within. I do not believe he ever stuck his beak into a sound apple in his life, nor ever will. And now I will close this already too long letter by again inquiring how did his ancestors acquire the knowledge that by storing up a supply of acorns they were storing up a future stock of grub?

CALIFORNIA. AREFAR.

NOTES ON THE WOODRAT.—*Editor Forest and Stream:* I see a short article in FOREST AND STREAM of Dec. 19, giving some interesting information concerning the mound-building rat. This calls to my mind an incident which occurred in April, in 1870, in Gilroy, Cal. I was clearing a piece of willow land and saw several mounds, such as Mr. J. C. Van Hook describes. When I first saw them I did not know what they were, and for our convenience brush was piled upon them and the whole set on fire. When the fire was well kindled in one of these heaps I saw a small animal escape from the burning mass; it seemed to be hampered in some way and was easily overtaken and killed. On examination I found it to be what was locally called there a "woodrat," and the cause of her easy capture was that she was carrying two young ones with her. The young had not got their eyes open. The singular part of the story is to come, *i. e.*, the manner in which the mother rat was carrying her young. This rat had but two teats, and they were in the same position as those of a mare. After I had knocked her in the head with a stick I rolled her over and found the two baby rats, each with a teat in its mouth, holding on firmly, with its little body drawn up in as compact a ball as it could get. This rat was about the size of a large house rat, and if my memory serves me rightly, she was rather lighter colored.—WATSON BISHOP (Kentville, N. S.).

AN ALBINO HAIRY WOODPECKER.—We have receutly received from Mr. J. Montgomery, Jr., of Owensville, Ind., what appears to be an almost perfect albino hairy woodpecker (*Dryobates villosus*). The tail is smoky gray and one or two quills on either wing are normal in color, but except for these feathers it is everywhere pure white.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Four Azara's opossums (*Didelphys azaræ*), two badgers (*Taxidea americana*), two white-lipped peccaries (*Dicotyles labiatus*), two Tovi parrakeets (*Brotogerys tovi*), one undulated grass parrakeet (*Melopsittacus undulatus*), two gray-headed parrakeets (*Agapornis cana*), two Pennant's parrakeets (*Platycercus*

pennanti), one European quail (*Coturnix communis*), one black bullbut (*Pycnonotus pygæus*), one king snake (*Ophibolus getulus*), one common black snake (*Bascanion constrictor*), one garter snake (*Eutænia sirtalis*) and one scarlet snake (*Cemophora coccinea*). Presented—One whistling swan (*Cygnus americanus*), one specialled owl (*Syrnium perspicillatum*), one duck hawk (*Falco communis*), two alligators (*Alligator mississippiensis*), three red-bellied terrapins (*Pseudemys rugosa*), one horse snake (*Chilomeniscus ephippicus*), one siren (*Siren lacertina*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

COLT 12, July 25.
COLT 10 and 12, Oct. 24.
FOLSOM 10 and 12, Sept. 26.
FRANCOTTE 12, Dec. 12.
GREENER 12, Aug. 1.
GREENER 10, Sept. 12, Sept. 19.
HOLLIS 10, Nov. 7.
PARKER 10, hammer, June 6.
PARKER 12, hammerless, June 6.
REMINGTON 16, May 30.
REMINGTON 12, Dec. 5.
REMINGTON 10, Dec. 26.
SCOTT 10, Sept. 5.
L. C. SMITH 12, Oct. 10.
WINCHESTER 10 and 12, Oct. 3.

QUAIL IN ROANOKE AND WYTHE.

HAVING accepted an invitation from General T. J. Houston, formerly of Chester, Pa., now of Roanoke, Va., manager of the Crozer Steel and Iron Company's works near the latter place, to engage in a few days' quail shooting, I met the General and his friend Captain Davis, mechanical engineer of the works, in Washington. The Baltimore & Potomac train being behind time, it was one hour late when we steamed out of the station, our destination being Lynchburg, Va. The environments of railroad traveling in the wee sma' hours o' the night are not favorable to viewing the beauties of the country through which you are passing, and we were soon lulled into meditation on the personality of the trio of hunters. The General is 6ft. 3in., commanding, graceful and dignified, educated and gentlemanly, wealthy and liberal, as a host the peer of any one; we could not but feel that for the following week we were to be in the hands of one who would care for our wants and comforts. Captain Davis was a Union soldier in the late unpleasantness; he is constructed on the spare model, intelligent, reticent and the possessor of a gentlemanly deportment that captivates all with whom he comes in contact. The third of the company is known as the Doctor. Nature has been lavish in dispensing adipose material over his body, which sadly interferes with his suppleness; he was a surgeon in the army during 'de wah,' and he is rheumatic, grizzled, and looked careworn, appearing untrained for the task of clambering over the Alleghenies during the following week; and such proved to be the case, as twelve blisters on his feet testify to his tenderfoot condition.

The officers of the train made every effort to regain the lost time, but one hour behind schedule time landed us in Lynchburg, where we had the mortification of seeing the Roanoke train pull out of the depot just as we came to a standstill. Two minutes halt would have been sufficient time to enable us with others to have boarded the train, but we were left to admire the beauties of that ancient town for eight mortal hours. We spent some of the time interviewing Station Master Fairfax, and in pointing out to him the great and irremediable injury he had done to us, and in telegraphing to the superintendent of the road for permission to board a freight train, but that worthy being absent from headquarters we could not obtain the desired permit.

Being Pennsylvanians the Lynchburgers looked upon us with suspicion, believing that we were Mahoneites, and they were not disposed to extend unto us the usual hospitality extend to strangers by Virginians; but when we were introduced as near relations of the late lamented Col. David F. Houston, all fears of Mahoneism were dissipated and we were extended a cordial greeting to the sacred soil. At last we were at Roanoke.

Morning came all too soon, yet we were ere long seated around the bountiful board discussing the relative merits of the good things before us. Here the General unfolded the programme, or rather orders of the day. He and Capt. Davis would inspect the new furnace with the view of releasing the contractor, while I, guided by a tonsorial artist known as Mose, was to spend the day in search of the "speckled beauties" of the field. You can imagine I felt somewhat anxious to know what manner of man this was who was to be my guide for the day, and I may as well introduce the reader to him now, as I saw him at that time, and unfold his character as it subsequently developed itself to me in our peregrinations. His name was Moses Johnson, but he was universally known throughout that region as Mose the barber. He is a dark mulatto of good physique, surpassing foxhounds in endurance. As a guide he attends to his duties and is always in the advance, keeps the dogs well in by means of his whistle, and being a good snap shot he succeeds in getting in about five shots to your one. 'Tis true, you can impress Mose with the fact that his place is in the rear, but then your head is in danger from his gun, for he is so constituted that he must shoot at everything moving of the game kind, whether it be dead or alive. Should you resolve to hunt apart, the first thing you hear is Mose's whistle, and you have the knowledge that your dog is speeding in his direction, especially if the dog belongs in the region round about Roanoke, as all the canines know him. But for those shooters who desire to make a big bag, Mose is a valuable guide.

Soon we are at our destination, and with loaded guns proceed in the direction of the mountains. A half-mile walk and Dan comes to a stand on a covey of birds. Mose suggests that I flush the birds, but I inform him that that is his duty. So with a rock the birds are flushed; two fell to my gun, and Mose claims to have killed one; but ere we had secured all the owner of the property put in an appearance and expressed a desire that we depart thence, but in sympathy for me, a stranger in a strange land, he ventured the information that pheasants and wild turkeys were to be found up a mountain ravine in close proximity to us. Full of hope we commenced the ascent, expecting to be greeted with enravishing sights from the mountain top, and after climbing over rocks and logs, resting every hundred yards, we finally gain the summit, but no soul-enchanting sight met our view, only mountain peaks as dreary as the one upon which we stood. When half way up Dan, ranging on the mountain side, started a pheasant, and in a vain attempt to reach the opposite mountain it came within range and fell to our guns. Mose, true to his impulses, had also discharged his gun in such close proximity to my head that, although a military man, I was startled. Two other pheasants out of range and a woodcock which sought refuge in an impenetrable brake were all the game we saw on the mountain.

Retracing our steps we sought the lowlands, determined to devote our energies to hunting quail on the pastures. We were soon in cultivated fields, and ere long Dan flushes a covey of birds, out of which we each secured two at the first fire. The birds were not in the least prejudiced against the mountains, for with one accord they halted not until well up a diminutive Chimborazo. But flushed with bright anticipations we essayed to follow. I secured another bird, and had the satisfaction (?) of seeing Dan flush and Mose shoot at a half dozen more with negative results.

On returning to the pastures and meadows we began to feel the necessity of food. After visiting several farmhouses we finally obtained lunch. While enjoying our repast the proprietor of the ranch entered into conversation with me, and finding I was a native of Lancaster county, Pa., and acquainted with relatives of his in that locality, and could give him all desired information regarding them, although he was opposed to shooting, he kindly gave me all information desired regarding the haunts of the birds and permission to shoot over quite an extended acreage in the direction of the railroad station, where we desired to board the inbound evening train. We secured quite a respectable bag before we reached the station; soon we were on board, and in due time reached Roanoke.

The next morning at half-past four the General, Capt. Davis, the irrepressible Mose and myself, with Ponto, Don and Dan, embarked for Pulaski. Ponto, a grandson of old Bismark, is the best setter dog I ever shot over. He was kindly loaned to us by my cousin, Capt. Geo. Houston, a brother of the General. We had expected that the Captain would be one of our party, but pressing business engagements prevented him. At Pulaski we embarked on the Cripple Creek extension and landed at Rich Mountain. Here we were greeted by Capt. Bibb and Mr. Body, who did all in their power to make our visit pleasant for us.

This day by order of the General, Captain Davis, Mose and myself constituted a hunting party, while he and Mr. Body were attending to business. We had hard tramping and mountain climbing to get upon the tablelands where the birds were to be sought; but I had the satisfaction of having the Captain along with whom to divide Mose's inattention. By means of his whistle he kept the dogs well in hand and he certainly had good shooting. Birds were plentiful and by marking down Mose's coveys we managed to have occasional shots. The afternoon of this day Mose got in the line of flight of a covey of birds the Captain was firing into and received a shower of No. 8 shot, which impressed him with the extended range of chokebores.

Dr. Butler, a true representative of the Southern gentleman, an ex-Confederate surgeon, and now surgeon to the mines, joined us during the day, and with genuine hospitality, placed his horses and dogs at our disposal. He remained with us until too dark to shoot, and then piloted us in the homeward direction. We enjoyed his company very much, the time being spent in discussing the Virginia campaigns during the late war. Can it be that these men sought to take each others' lives a few years since, and now are vieing with each other in their endeavor to entertain and extend all of the amenities of refined and cultured society? Yes, it is true, the old soldiers of the late war bear no malice toward each other; verily reconstruction is progressing.

It was quite dark and we were weary when we returned to the commissary, but Mr. Johnson, the gentlemanly superintendent, had anticipated our wants and a warm supper was awaiting us, and soon we were seated around the board.

After a good night's rest we were up and soon ready for the field, even before we could see to shoot. As the General had business at Ivanhoe to transact and could not be with us, Capt. Davis and I preferred to hunt by ourselves, taking Don, Dan and Queen, a pointer Gyp. We had a very pleasant time and secured good bags, Mose, after a lecture by the General, hunted very successfully by himself.

The next day, with many thanks to the General for his kindness and with a promise to come again, we boarded the train for the North. As we passed through Culpepper, Orange, Manasses and other battlefields, we were carried back in memory to the scenes enacted there nearly a third of a century since, and although I have often thought I would like to visit those scenes, when there I involuntarily shut my eyes to obscure the sights memory presented. I have no desire to recall the horrors of those times.

Altogether we had a most enjoyable time, all with whom we came in contact extended unto us genuine hospitality and endeavored to make our stay among them pleasurable. We are especially under obligation to Messrs. Sproul and Hodgson of Roanoke for kind attentions. Quail are very plentiful in that region, but our visit was too soon in the season to find full grown birds.

I made a mistake in taking a 10-bore full chokebored gun. What you want early in the season is a 16-bore, right barrel cylinder and left barrel modified choke; later the close-shooting gun might be desirable. GROUSE.

THE "FOREST AND STREAM" TESTS.

Editor Forest and Stream:

"She'll kill a robin ten rod every time," was in my boyhood the accepted formula in New England to denote the properties of a good shotgun. Of course she wouldn't and she couldn't and she didn't; but the owners, I think, really believed what they said. I did then.

I recall these remembrances in consequence of looking over your shotgun tests. I am glad your range is a permanent institution, for I regard it as a great moral agent. People within range of that range will not henceforth be able to tell such unmerciful lies about their guns without being invited to test their performance at Claremont.

Now let there be the merry sound of some of these shotguns advertised to kill at from 75 to 100yds., and let us see a few charges of buckshot fired on that range. People talk of killing deer at 80yds. quite as a matter of course, but I never saw a shotgun that wouldn't scatter its charge of buckshot over a span of 5 or 6ft. at least in 50yds. or less. Did you? KELPIE.

GAME BIRDS OF THE PLAINS.

LAST spring, as I reported through the columns of FOREST AND STREAM the arrival and departure of the ducks and geese, I thought that careful observation for the year would reveal the presence of many more species of game birds, especially of the Limicolæ, than the average sportsman is accustomed to credit to the recently settled slope that extends from the foothills of Colorado to the Missouri River. All the species named below have been seen by me or carefully studied by those who are perfectly familiar with Coues and Ridgway. My observations commenced on Feb. 25, when the geese put in an appearance, and closed on Dec. 26, when I saw a small flock of teal on a pond near LaSalle, Colorado. The list is as follows:

Anas boschas Linn.—Mallard.
A. discors Linn.—Blue-winged teal.
A. carolinensis Gmel.—Green-winged teal.
A. cyanoptera Vieill.—Cinnamon teal.
A. strepera Linn.—Gadwall.
A. americana Gmel.—Baldpate, widgeon.
Spatula clypeata Linn.—Shoveler, spoonbill.
Dafila acuta Linn.—Pintail, sprigtail.
Aythya americana Eyt.—Redhead.
A. vallisneria Wils.—Canvasback.
A. marila nearctica Stejn.—Scaup duck.
Glaucionetta clangula americana Bonap.—Golden-eye.
Charitonetta albeola Linn.—Bufflehead, butterball.
Histrionicus histrionicus Linn.—Harlequin duck.
Oidemia americana Sw. and Rich.—American scoter.
Erismatura rubida Wils.—Ruddy duck.
Chen cærulescens Linn.—Blue goose.
C. hyperborea Pall.— Black-winged brant, lesser snow goose.
Anser albifrons gambeli Hartl.—White-fronted goose, speckled brant.
Branta canadensis Linn.—Canada goose.
B. c. hutchinsii Sw. and Rich.—Hutchins's goose.
Olor buccinator Rich.—Trumpeter swan.
Fulica americana Gmel.—Coot.
Phalaropus lobatus Linn.—Northern phalarope.
P. tricolor Vieill.—Wilson's phalarope.
Recurvirostra americana Gmel.—Avocet.
Gallinago delicata Ord.—Wilson's snipe, jack snipe.
Macrorhamphus scolopaceus Say.—Long-billed dowitcher.
Tringa maculata Vieill.—Pectoral sandpiper, little snipe.
T. minutilla Vieill.—Least sandpiper.
Ereunetes pusillus Linn.—Semipalmated sandpiper.
Calidris arenaria Linn.—Sanderling.
Limosa fedoa Linn.—Marbled godwit.
Totanus melanoleucus Gmel.—Greater yellowlegs.
T. flavipes Gmel.—Yellowlegs.
T. solitarius Wils.—Solitary sandpiper.
Symphemia semipalmata inornata Brews.—Western willet.
Bartramia longicauda Bechst. — Bartramian sandpiper.
Numenius longirostris Wils.—Long-billed curlew.
N. hudsonicus Lath.—Hudsonian curlew.
N. borealis Forst.—Eskimo curlew.
Charadrius squatarola Linn.—Black-bellied plover.
C. dominicus Müll.—Golden plover.
Ægialitis vocifera Linn.—Killdeer.
Æ. montana Towns.—Mountain plover.
Æ. semipalmata Bonap.—Semipalmated plover.
Colinus virginianus Linn.—Quail.
Tympanuchus americanus Reich.—Prairie chicken.
Pediocætes phasianellus campestris Ridg.—Sharp-tailed grouse.
Zenaidura macroura —Mourning dove.

It is not claimed that this list contains all the game birds and allied species of this section, but other species must be rare visitants. The mallard, blue-winged teal and gadwall breed in the lake region of Nebraska. The common teal which I saw was a straggler on the lake near Greeley, Colorado, and the harlequin duck came from the same locality. On these eastern Colorado ponds ducks feed principally on a species of *utricularia*. Denver sportsmen report very poor duck shooting this fall, and claim that the flight went east of the State. This accounts for the excellent shooting in Nebraska. The Colorado waters have been visited by more than the usual number of redheads and canvasbacks, but by very few teal and mallards; while in Nebraska the reverse has been true.

The goose flight has been very light; so light, in fact, that I think they must all have gone over in the night. One small flock of Canadas made a long stay this fall, but it sailed southward on Dec. 21. This scarcity of geese has been noted throughout the entire region west of the Missouri.

Our jacksnipe is a variable quantity. This season he has done remarkably well, but he may disappoint all our hopes for 1890. I have often wondered at the absence of snipe from pools and marshes that seem especially designed for them. It seems as though this soil, sandy and somewhat alkaline, is not a congenial home for the worms upon which the jacksnipe thrive. But let the soil about some pool be cultivated for a year or two, or let cattle frequent the spot and by their droppings change the character of the soil, not only are jacksnipe to be found, but dowitchers, sandpipers, yellowlegs and plovers make it their stamping ground.

The sanderling, shot in September, is a very rare visitor. So is the mountain plover, which I obtained in August on the upper Wood River, Nebraska.

Sharp-tailed grouse (the prairie variety) are becoming yearly more scarce. Except in very cold weather they do not come into the settled portions of the State. At present they are found in the northern and western counties of the State and in adjacent counties of Dakota and Wyoming. The mourning dove here, as throughout the entire West, is regarded as a game bird. July is the month for it, and from its ubiquitous habits it is found not only in the timber but by roadsides, in sunflower patches and wherever a pool or brook affords an opportunity for a bath.

I have not mentioned the meadow lark, which here is the principal ingredient of summer pot-pies. I cannot look upon it as a game bird, but it is the target upon which every small boy tries his gun, and it is shot at all seasons of the year. It is an outrage that men who call themselves sportsmen allow this wanton butchery of small birds, but until there is a radical change in public sentiment such a state of affairs cannot be prevented.

This naturally leads to a discussion of sportsmen's clubs, and apart from the genial fellowship which they foster, of the practical good which they may effect in the preservation of game. It is a lamentable fact that the West, the far West I mean, is destitute of proper sportsmen's clubs. We have dog clubs that make a specialty of coursing, and gun clubs whose members devote themselves to the trap, but these do not reach the point. Last week I visited Denver, and was surprised to find in so enterprising a city, where every other man is expert with rifle, rod or gun, no organization or club room where the gentlemen, who spend months each year in the finest hunting fields of the world, can meet to recount their adventures and profit by each other's experiences. To find a brother sportsman you must call at his house or office.

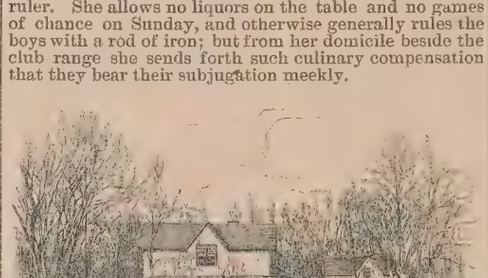
It is senseless to believe that the wanton destruction of large game can be prevented without the united action of those most interested in its preservation. The leverage must be applied *en masse*, and not individually. I fairly boiled at some of the tales of slaughter of elk, deer and sheep, and, though I made allowance for exaggeration, I could not pardon the spirit that lay back of the story. The sentiment prevails that if one man does not kill all the game he can another will, and what the white man cannot corral the red man will destroy, and so the rivalry can end in nothing short of extermination. This begins to read like a tirade, but there are noble exceptions, and they are to-day, if they can become acquainted with each other, willing to unite to enforce legitimate hunting in the Rockies, and I hope that before another new year the initiative will be taken and a new era will have opened in the hunting annals of the West.

KEARNEY, Neb., Jan. 1. SHOSHONE.

CHICAGO AND THE WEST.

THE BLACKHAWK CLUB OF LAKE KOSHKONONG.

IN 1836 the unfortunate chieftain, Blackhawk, led north through Wisconsin the inglorious pursuers who figured on one side in that most inglorious "war." He passed far above Lake Koshkonong and was captured, we are told, near where Portage now stands. But Blackhawk formerly lived on beautiful Lake Koshkonong, and even to-day there remain traces of his residence there. The island formed by Rock River, at the head of the lake, is known as Blackhawk Island. Over on the big bluff, a mile from there, the wandering hunter can still see the odd knobby little hills, thrown up by the squaws who labored in Blackhawk's cornfield, and he can easily find old settlers who can remember seeing the cornstalks still standing in these hills. All over that great and beautiful bluff, which looks out over as fair an inland picture as any in a thousand miles of travel, young trees have now grown up thick and strong. Yet the settlers can remember when all that slope was cleared, save for a few great oaks, and when all its surface was covered with the curious mounds of the forgotten Mound-builders and the later groves of the Indians. These mounds exist to-day, and to-day you may see upon the highest point of the great bluff the old signal mound, which in days before history flashed its bale-fires in the great signal system running north and south across the country. To-day, were the timber cleared from all the eminences, white men could do as former possessors of this country did and send a message, fire answering to fire, and pillar of smoke speaking to other pillar, from the shore of Lake Superior far down the Illinois River and perhaps nearly to the Ohio. Blackhawk may have used this chain of signals, and doubtless did use part of it. The "Blackhawk trail" still runs over these hills, faint, but legible as when Gen. Atkinson wound up it to found Fort Atkinson, which exists to-day, a sleepy and contented village, unused to war's alarms. You get off here when you take the C. & N. W., for the Blackhawk Club of Lake Koshkonong. For it is matter of fact and matter of course that there is a shooting club on Koshkonong, and that its name is the Blackhawk Club.



The writer was sent up to this club on the investigating trip, through the courtesy of Mr. John L. Stockton of this city, one of the members, to whose pains and foresight much of the pleasure of the visit was due. This was on Nov. 23, and the shooting season was officially declared closed and the club house abandoned for the winter. Nevertheless a telegram or two mitigated matters, and I was met at 10 P. M. by Mr. W. Y. Wentworth, the superintendent of the club, who on the following morning gave me a seat in his buggy for the frosty ride of six or eight miles down to the club house.

Our road for the greater part of the distance lay along the Rock River, which is here a very amiable pleasant stream and, thanks to the long efforts of Mr. Wentworth, who is game warden of the southern district of Wisconsin, also a very good fishing stream. So delightful a trip does it offer to the canoeist and angler that I cannot help commending it for a run, beginning at Ft. Atkinson, passing through Lake Koskonong, and ending at the Mississippi near Rock Island. This stream was used as one of the water trails between the Great Lakes and the Mississippi in the old Indian and fur trade days. Let summer tourists not forget it. It is a beautiful stream and it has fish in it, in spite of the foolish Wisconsin law which holds back the construction of the Wisconsin fishways until after the Illinois fishways have been put in. This is a sisterly sort of law, or more properly, an old woman sort of a law. There has been no run of fish up Rock River for years, by reason of the Illinois and Wisconsin dams, among which are the Indian Ford, Janesville, Monterey, Beloit, Rockton and Rockford dams. There are eight in all. Catfish are no longer taken in that stream near Koshkonong. Its supply of bass and pickerel comes from prolific Koshkonong, and the rapacious pot-fishermen are draining at that source as hard as they can. Last winter fifty tons, mostly game fish, were taken through the ice by market-fishers. Lake Koshkonong is four miles by eight at most, and averages not 8ft. in depth. Yet the wise men who live upon its shores, men born with the joint butcher-miser instinct, tell us placidly to-day that this does not affect the fish supply, and that winter fishing will not diminish it. Such rot is not good nonsense. Look at the story of great Winnebago. Eighty barrels of fish shipped per day at Oshkosh alone. They don't do that now, even with miles of illegal twine. To-day the Winnebago robbers are beginning to squeal. Later on, the Koshkonong robbers will also snivel and cry out that the poor man has no show. The Koskonong poor man needs some one to think for him, and to anticipate his future whine. To-day he is eating his own cake and everybody's else too.

We counted eight shanties and one big cabin boat as we drove on down to the club house. In each of these were two or three down-trodden market-fishers and hunters waiting for the lake to freeze. These folks are called "rats" by the sportsmen of the lake. They made a living formerly by legal or illegal "floating" of canvasbacks, legal or illegal netting of fish, and a side line of rat trapping. Mr. Wentworth has broken up their "floating" and netting, and to-day they must restrict themselves to weeping for the old days, to fishing through the ice, which is idiotically legal, and to plain rat catching. Poor, poor unfortunates, born too tired to do an honest day's work! Earth has no more pitiable a creature. For their comfort it may be said, however, that the numerous rat houses about Koshkonong this fall bespeak a crop that would delight the soul of a fur trader. We trust there will be no further violation of "rat" etiquette in the premature tearing down the houses and spearing the muskrats, of which an over-anxious "rat" was lately guilty, much to the horror of his associates. There should be honor among these honorable men.

We found the big and comfortable club house standing just upon the bank of the river, whose edge was now some thirty yards from the front stoop. The river is now lower than it has been for twenty years. In one springtime the water rose four feet deep over the club house floor; so that the members lived upstairs and went to bed out of their boats.

Mr. Wentworth's son was within, and he had a fire started. We passed through the house, finding it to have eleven good sleeping apartments, while the down floor held the usual gun room, sitting room, dining room, etc., and a large and very well furnished kitchen. In the latter department Mrs. Wentworth, the stewardess, is ruler. She allows no liquors on the table and no games of chance on Sunday, and otherwise generally rules the boys with a rod of iron; but from her domicile beside the club range she sends forth such culinary compensation that they bear their subjugation meekly.

BLACKHAWK CLUB HOUSE, LAKE KOSHKONONG.

Through the house there passes a stream of living water from the great artesian well, 330ft. deep, which the club had sunk to assure a good water supply. This well also throws a stream into the great fountain-tank in the front yard. In the pool thus formed, holding several hundred barrels of nearly ice cold water, the members keep their fish alive as in a live-box. There were twenty or thirty fish in this pool that had been there for several weeks. This is the best fish box yet on record, and I shall later testify to the excellency of its product.

There is a good barn on the place, and there are two boat houses, one holding the big sail boat belonging to some of the members, the other being devoted to the hunting boats. Under tarpaulin outside was the sail-boat belonging to the sons of some of the members. The wreck of a steam launch held a flower bed, and all about and on the water front were either remnants of boats, or boats in actual use. There were some live-boxes in the water near the boat landing, and Mr. Wentworth, Jr. had some rods set from the end of one of the boats. As we sat by the stove and talked we could watch the rods through the window, and in this way we caught a perch and three pickerel, one of which weighed four pounds. The river at this point is not very wide, but low as the water was, we found it 10 or 12ft. in depth.

The club house is up the river a little way from the main lake, but the shore of the latter sweeps around behind the house, and a few steps through the woods bring one to it. The club owns 50 acres on the island, and controls the river and lake front clear around on both sides the point, making about 387 acres in all. Steps are now being taken to get possession of additional shore territory up to and including the point further up the shore line behind the club house. It is desirable also that the club should join upon the other side with what is known as the Peck preserve. This latter amounts in all to something like 500 acres, and runs out well on the flat that lies opposite the club house across the little island. If this were accomplished, there would be a continuous preserved strip clear about the best part of the lake, and controlled by sportsmen whose interests are practically identical. In the matter of executive protective measures it can not be said that the Blackhawk men have been very active or earnest. They once hired a patrol for the river mouth point for a while, but for work of this sort Koshkonong Place contributed $50, much more in proportion. The men on the bluff have always been very active and efficient in protective work, both in and out of the Legislature, and they are the best of neighbors for the Blackhawks.

In the boat house we found the whole theory and history of duck shooting on Koshkonong. It should be remembered that the chief object of pursuit here is the canvasback duck, and therefore we should expect to find the greatest ingenuity devoted to machinery for its capture. Such precisely is the case, and the result is apparent in a boat, or indeed several boats, quite distinctive and different from any we have yet found among our inland duck shooters.

The old way of canvasback shooting in Koshkonong was a very restricted one. A large fleet of decoys, perhaps 200 or 300, was put out on a feed bed, well out in the shallow lake. The hunter then withdrew his boat to the shore and waited until he saw a large enough number of canvasbacks alight among the decoys and go to firing. His boat was a short and square-sterned skiff, so arranged that it sank pretty well down in the water. The hunter lay full length upon his back in the boat, with his feet to the bow. He propelled the boat with a short sculling paddle, which he worked with his right hand passed across his chest. The hole for the sculling oar was directly above and behind the shooter's left shoulder. A peg in the right hand side of the boat served as a rest for the gun, whose stock lay convenient to the shooter's shoulder. Sometimes an extra gun lay in the bottom of the boat.

With his eyes peering just above the edge of the boat, the concealed hunter carefully and silently propelled his engine of death in among the feeding ducks. Very often he got within 20, 15, even 10yds.; for the canvasback, wary as it is in many ways, has a large streak of gullability in its nature. When in the thickest of the flock, the hunter sat upright in the boat and discharged his gun or guns. In this way numbers of market-shooters were always hammering away at the ducks. Mr. Duane Starin, one of the most successful shooters of the lake, who came over to his own shooting house on the lake the day we were there, told me that he used formerly to kill daily fifty canvasbacks—just as many as his little float would hold. It was this same float of his that I saw in Blackhawk boat house. Mr. Starin wished to see the old law permitting float shooting restored, and called our attention to the fact that, although the number of canvasbacks seemed this fall as great as ever, no one could make any bags. Mr. Starin will yet live to see the wisdom of this law, and will realize that it is not all-important that anybody should make large bags. Far more modern, thoughtful and consistent with the best spirit of this day is the utterance of Mr. G. E. Gordon, quoted in another column: "I wish to make it as hard as possible for any one to kill a canvasback duck."

I should not, however, pass mention of this vicinity without fuller mention of Duane Starin, who is a very well-known figure about the lake. Mr. Starin has had the misfortune to lose both legs below the knee, and walks upon his knees, with the lower portion of the limbs incased in leather boxes. He uses a short pair of crutches, and to any friend is simply a stalwart, hardy and rugged-looking man. He is the best duck hunter about the lake, and is also a formidable antagonist at the trap. Due to him are many of the ideas on shooting used about the lake. It was Ira Bingham who first used the Koshkonong "float," but Duane Starin was the inventor of the hardly less destructive "float boat" which was and is so largely used in this locality. Mr. Starin laid aside his float when the law commanded it. Armed with powerful field glasses which enabled them to detect at a distance the approach of a warden or any other intruder, numbers of less scrupulous shooters persisted until within the past season. I shall speak of the arrest of the chief offender in this line ine in a later column, devoted to a look at the game question as presented to me by the only intelligent and effective game warden it was ever my fortune to meet—Mr. W. Y. Wentworth, so often mentioned before.

The law which was passed two years ago forbade shooting at wildfowl "beyond the line of natural grass or rushes then and there projecting above the water," that is about the wording. Of course this law could be stretched a great deal, but it did break up the shooting on the open water feeding ground. The blinds, pushed as far out as possible, soon became points of education for the ducks. Even the floating "Koshkonong blind," constructed of heavy 2x4 stuff in a frame, into which the boat could be run, and consisting of a wire net stuck full of rushes, the whole floating and easily towed, grew ineffective. Canvasbacks, all the deep-water ducks, and even the mallards, gathered in a merry body safe out in the middle of the lake. Now became manifest the beauties of the "flat boat," invented before this by Mr. Starin, and found so effective that he has killed sixty canvasbacks in a day from one of them. It was Mr. Starin who built most of the flat boats now in use by the Blackhawks.

The Koshkonong "flat boat" is nearly of the shape of a pumpkin seed. It is about 16ft. long and 6ft. wide over all and is built on the battery or sinkboat plan. In the center of the boat and projecting below its bottom and under the waterline is a long pit in which the shooter lies. This is one foot deep to the top of its slight coaming and just wide enough for easy position to the shooter. The "wings" of the boat stretch down and out from the top of the pit, running obliquely till their edges just lie awash in the water. The wings have a top and bottom to them, and near the center of the boat they are several inches apart, permitting the stowing on either side of the shooter of a number of small articles. The wings are not detachable or hung on hinges, but the whole boat, broad and bulky as it is, is stiff and solid, all of pine. To repeat, it exactly resembles a mammoth pumpkin seed, with a hole cut through the median line. Were it not for the pit, which projects below the bottom like an ash pan, the whole boat would lie like a pancake directly upon the top of the water. As it is, the boat can easily be towed about and does not pull very hard.

In using the flat boat, the shooter puts out his decoys—by means of another boat, which he hides or has taken away by a companion. The flat boat is merely used as a blind, and the decoys are arranged about it as the weather and wind dictate. No grass is used about the boat. The dead color of the boat and its half-submersion in the water make it impossible to distinguish it at any distance. I have had shooters tell me that a flat boat properly ballasted can not be seen over sixty yards or so by any one, especially if there is the slightest wash to the water. The deadliness of such a device is well known to all Eastern shooters. The cost of a full-sized flat boat is $65. The pit is usually made of tin, or covered with tin or sheet-iron, the edges of the latter coming up and lying on the top of the wings in the best models, thus insuring dryness.

Another pure Koshkonong type is the "Monitor," and this is the boat in general use. It is about 15ft. or so in length and 3ft. wide, and is a modified "flat boat," intended for rowing. The sides of its "wings" are but a few inches apart, and sits close down in the water, its contour exactly resembling that of the famous war ship model, from which it takes its name. The boat is propelled by oars, the rower sitting in a cockpit, about which he can elevate a canvas extension, full length of the cockpit, in case of a high sea or a cutting wind. This boat is just a little Monitor, with a cockpit instead of tur-

rets. The first "Monitor" on Koshkonong was built by one Van Gieson. In it the oval was irregular, the swell of the lines being broader at the stern, and the boat running small-end first. In the present model, which is also lighter and trimmer, the ends are both alike. The boat is flat on the bottom, and is cased with tin or copper as a protection against ice. In a few specimens the decking, or top of the "wing," is made of heavy canvas instead of wood, but this is not favored. In the old Van Gieson boat the rowlocks were not good; they were clumsy and caught in the grass. In the modern boat the rowlocks are simplicity itself, and yet very effective. They simply consist of a length of gas pipe, something over a foot of which is dropped into a bored block to hold it firmly. The stem of the oarlock is dropped right into the end of the hollow pipe, and is kept from creaking by a washer of rubber. This is the simplest form of rowlock, and in passing through rushes or grass it can, without any trouble, be lifted out of the socket, leaving the bare skin of the boat to glide along with little friction. This is a very clever device. Indeed, the whole get-up of the Monitor is clever, and it is a mighty good boat for shooting in light cover. It is usually run into one of the portable blinds hastily described above. The cover close to the edge of the legal limit on Koshkonong is very light. The beauty of this boat is that it is suited to its environments. Indeed, it was evolved from them. One Pahaska, of Fort Atkinson, builds most of the Monitors used by the club.

There are forty-three boats now owned by the club, among which are several different styles, although the above are the interesting ones. There was a light cockle shell of a varnished canoe, capable of being carried under the arm, belonging, I believe, to a son of Mr. Geo. W. Peck, the Milwaukee *Sun* man, who is a member of the club. Mr. Peck will be remembered as the author of the "Bad Boy" papers. There was also a long, double-ended boat, flat-bottomed, heavy and sharp, practically the same as the lodging batteau of the North, and a model copied in lighter and shorter form in the Tolleston marsh boat. Then there were just plain boats, snub-nosed or otherwise. I have spoken in a previous number of the Nee-pee-nauk boat, smooth skin, made of strips nailed one on top of the other. Here on the Rock River I saw Duane Starin using a wide and open fishing boat, made of built up strips just in that way. That was the boat we used when we went out after the wild celery seed.

Blackhawk Club is fifteen years of age. Its membership was at first limited to 25. It is now limited to 50. The membership fee is $100 and the annual dues are $10. Mr. Wentworth has been superintendent of the club for eleven years, and has seen it grow to its present proportions. When he went into his place there were but seven boats owned in the club. As above stated, there are now 43. The club house of to-day is also a material improvement over the old form it had.

This club is a steady and conservative one. It has always been counted a hard one to get into. Since the passage of the rigid wildfowl laws in Wisconsin, the shooting has of course been curtailed. Let not the hearts of the shooters be troubled, however. The wild celery of Koshkonong will not lose its power to charm, and the future will show the grand game of that lake again so plentiful that any self-respecting hunter can by hard work kill all he ought to have. It is time the ducks were given a chance. This is their innings.

Mention of this club and of the Koshkonong region could, of course, be closed here. There is, however, too much of interest in that locality to pass without mention, and I shall beg to add some notes upon the game, etc., of that lake and vicinity in next week's paper, and also to present what seems to me some very interesting facts upon the game warden question as learned direct from Warden Wentworth. Following is the membership of the Blackhawk Club:

President, E. M. Johnson, of Whitewater: Vice-President, A. J. Gaston, of Beloit; Secretary and Treasurer, B. Bulkley, of Whitewater. Members: John W. Parmelee, R. A. Peters, Geo. W. Esterly, F. G. Bigelow, C. S. Jackman, Col. L. A. Harris, Judge Thos. A. Logan ("Gloan"), Benj. Robinson, Lawrence Pike, J. A. Partridge, O. P. Posey, B. Bulkley, F. W. Tratt, Thomas J. Stephens, Phil. Trautman, Edmund B. Sears, Dan'l Bullock, A. W. Keeney, A. J. Gaston, F. H. Starkweather, John L. Stockton, W. J. Doolittle, Edward A. Austin, B. M. Frers, A. D. Forbes, M. V. Doyle, D. W. Miller, C. A. Still, H. B. Allen, N. L. James, Frank R. Cheney, J. B. Doe, Jr., Wm. A. Talcott, S. S. Kimball, L. W. Flershem, Chas. F. Allen, E. M. Johnson, Geo. W. Peck, Louis Auer, Geo. B. Hawley, How. S. Salisbury, W. B. Keep (Gen'l Att'y C. & N. W. Ry.), M. Hughitt, Jr. (Div. Fgt. Agt. C. & N. W. Ry.), E. W. Herrick, Chas. McAvoy, Geo. R. Grant, Geo. B. Hawthorne. E. HOUGH.

CHICAGO, Jan. 6.—In the death of Judge J. C. Knickerbocker, which occurred yesterday from a sudden stroke of paralysis, the world lost not only an able attorney and accomplished jurist, but also a thorough and generous hearted sportsman. Judge Knickerbocker was a member of the Tolleston and Nee-pee-nauk clubs, and was one of the most enthusiastic and successful sportsmen of this city. His start in life here was a modest one, but never in his later days of success did he forget the lessons in charity his youth had taught him, and he was always kind and thoughtful, as well as rigorously just. This city and the whole guild of sportsmen could ill afford the loss of such a man.

Jan. 7.—Our winter still holds off. The season is remarkable. On last Sunday I was walking along the lake front and saw a boy rolling up some lines. On inquiry, he told me the perch had been biting freely along the wharf all the morning. That was Jan. 5. The lake was altogether open. On the day before, at the Grand Calumet Heights club house, Dr. Harlan, Mr. Wilde and Mr. Bird put out a few decoys in the lake in front of the house and got nine ducks. They say they ought to have killed twenty. The funny part of this is, that none of the party can tell what kind of ducks it was they killed. They say the birds were about as big as mallards, looked like black mallards (dusky duck), and were as good eating as any mallard. That is all they know about it, and they are unable to produce even the head of one of the birds in question.

Mak-saw-ba marsh had more mallards on it last Thursday than at any time for two years. That was Jan. 3, and usually at that time the whole country is frozen tight and the thermometer is at 20° below. A pusher at the club killed 10 mallards the other day and ran out of shells. Another party saw about 500 mallards last Sunday up Eagle Island way. Good shooting could now be had by any enterprising man on Mak-saw-ba marsh if he would work up as far as Hailstorm and Winchell's Lake. Mr. C. D. Gammon was lately down at Cumberland marsh, and reports mallards plenty there also. This is a state of affairs that strikes everybody as being singular in the extreme. To-day, Jan. 7, the temperature is hardly below freezing.

Writing to his friend Mr. Loyd, of this city, Mr. C. W. Parent, of Marshall, Md., in a recent letter, says: "I have had a great deal of good shooting here this fall, as every Saturday was spent hunting quail. My last three trips I killed 48, 53, 61, and that, too, on one farm, which will give you some idea of the number of quail in this section. I have a splendid dog I got from the Deal Beach Club grounds, Long Branch, N. J., and I have had good success in breaking him. I have not got him so that he will take a target out and tack it up for me as yet, like Grouse."

Grand Calumet Heights Club had a business meeting Thursday evening and discussed the question whether to buy or to lease a plot of ground. The owner will not sell, except with a reservation to the deed which robs the club of all profit by way of increasing value of the property. The matter was laid over till next Wednesday.

E. HOUGH.

WEIGHT OF GROUSE.

Editor Forest and Stream:

Notes in your issues of Dec. 12 and 19, also "Notliks" in issue Jan. 2, has called my attention to weight of ruffed grouse. Have handled grouse for the market for the past ten years and spend a few days each season for recreation in hunting them. Have noticed as "Notliks" says that the weight "varies from year to year according to circumstances, food, weather, etc." The past two seasons having very open weather, little or no snow during the months of October, November and December, the grouse are found in the neighborhood of grain fields, especially those of buckwheat, where they find a quantity of easily procured rich feed. The weights this season with us have averaged unusually heavy, partly owing to the lateness in gathering the buckwheat crop. We purchased of A. P. LaPlant, a market-hunter of this place, among other birds, a cock grouse that weighed 30 plump ounces; it was a very large bird and from appearances a very old one. Its crop contained no unusual amount of food and was not distended as were many at times that we bought. Have had grouse brought in, their crops being so filled with buckwheat that you would imagine they were fed in a poultry yard with tame fowl. Others not in the neighborhood of grain fields had fed on the young and tender shoots of clover leaves, and one bird had at least a pint of wintergreen berries in its crop, showing they accustomed themselves to their surroundings and fed on whatever was in that neighborhood that pleased them best. On my shooting trip this season where I found a buckwheat stubble adjoining timber or brush lots so sure was I to find grouse if they were in that locality, and it took mighty quick work to bring one to bag, being strong and quick on the wing from well filled crops twice each day. For a table bird the grouse that feeds on buckwheat cannot be beaten.

TOWANDA, Pa. SUS. Q. HANNAH.

MISSISSIPPI NOTES.

Editor Forest and Stream:

Find inclosed a rose pulled to-day from bush in open air, where they have been blooming all winter. Up to date we have had no cold weather. The mercury stands from 65° to 75° almost every day. Had no frost throughout the entire month of December. Have not seen a duck this winter. Quail are abundant, but the weather has been so warm that very little shooting has been done. During last summer there were more squirrels here than ever before, and everybody turned out to shoot them. The fusilade in the woods sounded like a lively skirmish. The deer and turkeys have almost disappeared from this vicinity. A nephew of mine killed a very large gobbler a few days ago while out bird shooting, the only one I have seen here within a year. This old fellow was run into and flushed by the dogs, and tumbled by the boy with a close overhead shot, and brought home with mighty exultation. A son who has just returned from a trip through Texas, Mexico and to the Pacific, had some splendid sport after game of all kinds, from a quail to a cougar.

In consequence of the extremely warm weather I have shot very little this season. We have had very little rain and the winter has been Arcadian. I would like to live in a climate where it was never any colder than it is here to-day, with the mercury at 70°, and the birds singing as if 'twere May. I am sitting at an open window as I pen these lines, but we may catch it yet later on.

Since I saw you last in New York, four years ago to-day, I have gained in avoirdupois, and when afield I generally throw down two or three panels of worm fence every time I have to climb over one, and get awful hot if it is a warm day. GUYON.

CORINTH, Miss., Jan. 10.

SPORTSMEN AND LANDOWNERS.—We find in a late number of the Monticello (Fla.) *Tribune* this note, which is worth attention, for it points to one solution of the sportsman vs. landowner problem: "Messrs. Harned, Heston and Hoey, while out hunting a few days ago, pulled a fine calf out of a branch near D. H. Bryan's plantation on the Thomasville road. It was badly mired, and but for this fortunate discovery would soon have perished. Mr. Hoey, who still claims to be somewhat of an invalid (though we think our fair country has entirely cured him), did not do any pulling, but just bossed the job. He claims that Britt, the driver, tugged for him, and did the biggest part of it, too. Twice this same party have put out fence fires by the roadside. Surely if all shooting parties will act in this humane and considerate way, our farmers will invite their visits rather than post their lands." Mr. Hoey is a guest of the St. Elmo, noticed last week in our Florida number.

MEGANTIC CLUB'S DINNER.—The annual dinner of the Megantic Fish and Game Club, will be held at Young's Hotel, in Boston, on Jan. 28.

MAINE BIG GAME.

THE season on big game in Maine has closed, Jan. 1 being the end of the open term, and it is hoped that all hunting has been stopped. It is well understood that crusting and poaching is indulged in to some extent, but that there is a decided growth of better feeling and respect for the game and fish laws, is also equally well understood. The number of moose killed has been small. Among the late reports are accounts of a big black moose killed in the neighborhood of Austin Stream in Somerset county. This stream flows into the Kennebec above Bingham. The moose is said to have stood 6½ft. high and to have weighed 1,000lbs. The story also goes that he had treed several lumbermen and hunters and driven the hunters out of the woods. Later Lawrence Hayden, and Milton Merrill of Madison and Joseph Baker of Skowhegan, were in the woods on Austin Stream, hunting for caribou, when Hayden came upon the big moose. He says the huge beast immediately charged upon him. Hayden says that he looked like a great land slide from the side of Old Bunnside mountain, but that he stood his ground. He let the moose come up to within a couple of rods, when springing aside he had a chance for a shot at his shoulder, and put a ball through the shoulder blade and through his lungs. Still the moose kept on his feet, and showed fight, though evidently his shoulder was disabled by the shoot so that he could neither run nor advance. But this gave Hayden time for another shot, after which the moose fell, but with awful struggles and bellowings that startled Hayden's companions, who were nearly two miles away. His hide was split sufficiently to roll out his entrails. Then by considerable brushing, a road was made so that it was possible to drive a pair of horses to the spot, and he was toted to Skowhegan, where his skin is in the hands of a taxidermist. His age was estimated to have been 10 years.

Another moose hunting story comes from Charleston, Maine. Mr. Elbridge Lord has been in the woods after caribou and deer, and has lately returned. He started one morning from camp, on a moose trail in the snow, which laid some six inches deep on the ground. Toward noon it began to rain, and the snow to disappear. He succeeded in capturing the moose toward nightfall, after following him some 10 or 12 miles. But the rain had obliterated all his tracks, and the hunter was completely lost with night coming on. He succeeded in starting a fire with about his last match, and by this means he managed to keep himself alive, and with the aid of broiled moose steak. The weather turned so cold that the hunter dared not lie down, but stood upright all night, leaning against a tree. At daylight he started to find his way out of the woods. After traveling nearly all day, he was enabled by the aid of engine whistles to start in the right direction and came out to the settlement. He has since found that his wanderings were all within a compass of a few miles.

A Straton, Me., dispatch to the Boston *Herald*, the other day says that Dr. Heber Bishop of Boston, Secretary of the Megantic Fish and Game Club, has shot an enormous moose. Mr. W. B. Hastings, of the same city, was hunting with Mr. Bishop. They were in the Kibby Valley, on the Maine side of the club's territory. W. E. Latty, of the Three Lakes, was guiding Dr. Bishop, and Winn Emery, of Eustis, was with Mr. Hastings. They all came upon a moose yard about three miles from the Moose River camp, and soon after they came upon two moose, a bull and a cow. The cow was immediately shot dead by Mr. Hastings, the more is the pity. She was evidently a three-year-old and would have produced calves in the spring. Right here let me say, in the interest of the game in the future, that both Mr. Hastings and Dr. Bishop ought to be ashamed of their hunting. The moose are going fast enough at the very best. It is a pity that the Maine Commissioners' proposed law is not in force, making a fine of $1,000 and imprisonment for killing a cow moose at any time. I have spoken plainly because I am interested in the future of moose in Maine, that State is about the last ditch that these noble game animals are being driven into, and to kill a cow moose at any time should be made a crime by statute, and the sooner the better.

The bull moose got away for the time, though followed by the Doctor and his guide. The story goes that he was fatally wounded by the Doctor before he started, though still able to make through the woods with a terrible crashing. He was easily followed by his tracks and the blood on the snow. They came in sight of him three times, long enough each time for the Doctor to get a shot, and each shot took effect, but the mighty giant of the forest did not fall till the fourth bullet had been put into his body. Even at the last shot he was plucky and turned and faced the Doctor, though his wounds had told upon his strength to the extent that he could go no further. The bull moose was eight years old and weighed 1,100lbs. The cow weighed 800lbs.

Deer shooting in Maine has been excellent, especially since the snow has become a fixture. Eight have been killed in one town this season, the town of Carthage, in the vicinity of Weld, in Franklin county. Other towns, more remote, have doubtless done better, but this record is a good one, especially when it is considered that in the days before game protection to have seen a deer in Carthage would have been the wonder of the whole town. The Maine sportsmen who have killed deer in that State this fall could be numbered in hundreds, but sportsmen from other States have not fared so well.

Bear are also plenty in Maine this year. Capt. Jason Crowley has recently killed one at Indian River, the skin of which was 8ft. long. The meat, when ready for shipment weighed 400lbs. The bear was trailed in the light snow by the Captain till shot. SPECIAL.

ST. LOUIS, Mo., Jan. 11.—The webfeet have made their appearance in fair numbers, and several moderate bags are reported. A telegram was received yesterday from the superintendent of the Dardenne Club, in St. Charles county, reporting a good flight of ducks. A party of the members left last night for the club house. A report was current in shooting circles to-day, that large numbers of ducks and geese could be seen about 75 miles north of this city in the Mississippi River. The geese in particular are said to be very plentiful, in fact they have been there all winter. A Mr. Russell from this city a few days ago brought home four which he bagged with a .32 Colt's repeater. He shot one while about 100 were sitting unconcerned on a sandbar in the river, dropping the other three before they got out of range.—UNSER FRITZ.

WYOMING BIG GAME.

Editor Forest and Stream:

I have just received the following letter from a friend who is foreman on one of the big ranches in Wyoming, in regard to the game in that Territory. He says: "There are two houses in Casper that buy all the horns they can and dress them and ship them East. I have a pair of elk horns that I will have dressed and shipped to you. There are many hunters here from the East who want horns and such things to take back with them. There have been several here from Europe. As to the game, there are plenty of deer and antelope and a few elk. Elk pretty scarce. I have seen but four this winter. There are some about fifty miles west on the Big Horn Mountains, and a few buffalo on the Red Mountain and some bear, but the country is so full of hunters that I think game will be scarce by next fall. As to deer and antelope, there are more antelope here than sheep in Barton county. I think there are a thousand in one drove near here; but they are being killed by the carload. Although it is against the law to ship them out of here, they are boxed and shipped by the hundred. Winchesters, .45-70, are used here chiefly. If you come here to hunt next fall I will do everything I can for you."

How is that for a chapter to add to the story of big game destruction? R. W. A.

GOLDEN CITY, Mo.

AIMING THE SHOTGUN.

Editor Forest and Stream:

The late articles in your paper on "Aiming with the Shotgun" are interesting and well worth the attention of those who do not always kill their bird.

Mr. J. J. Meyrick, in the Jan. 2 number, says some very sensible things. My own observation is that the best shots with the shotguns do very little snap shooting, but aim in the proper sense of the term, *i. e.*, they see the relative position of the barrels of the gun with the bird.

The small, inconspicuous sight that is on most shotguns helps very little in aiming, but a large white sight, such as I have devised, is a material help. The shooter's chief attention should be always on the bird, and when aiming the barrels should be seen under the bird, and if a cross-shot, in the direction of the bird's flight.

In choosing a gun it is well to get one having as straight a stock as can be used comfortably, for the shooter should do his aiming well above the barrels. Many people think that they cover the bird with the sight, or if holding ahead have the sight as high as the bird. This is difficult to do and very few do it. Furthermore, it is the wrong way to shoot. Particularly in live bird shooting, the breech of the gun should be much below the line of sight, so that a good view of the barrels can be had, or if not the result is under-shooting. WILLIAM LYMAN.

SEDGWICK, Kan., Jan. 8.—Will you kindly mail me a copy of by-laws suitable for the formation of a gun club? The game in this section is being mercilessly slain by market-hunters, and it is with a view to game protection that we wish to take steps toward the organization of a club. Quail are numerous, and if not hunted out of season will make fine shooting next year. Duck shooting has been finer this season than for several years previous. But few geese have been killed, as these birds have not appeared in their usual numbers. Some small flocks, however, have taken up temporary quarters in this locality, and on the morning of Dec. 31 Mr. B. F. Wright, of this place, and myself, brought down six fine birds, victims of our decoys.—H. W. C. [We mail by-laws, which, however, are of a club apparently more interested in trap-shooting than game protection. Secretaries of game protective societies are invited to send us copies of their club books for distribution in cases like this.]

MOOSE AND TRAIN COLLIDE.—Windsor, Nova Scotia, Jan. 3.—The W. & A. R. train going east Tuesday night struck a moose on the Mountain road, near Lawrencetown, breaking his leg. The train was stopped, the moose killed and taken to Halifax, where it was disposed of. A large herd was seen in the same neighborhood about two weeks ago. Engineers on the W. & A. speak of the moosecatcher of an engine instead of the cowcatcher.

ADIRONDACK DEER.—A bill has been prepared by Secretary John D. Collins, of the Utica Fish and Game Protective Association, to make the deer season Aug. 15 to Nov. 15, with hounding during month of September only. The full text of the bill will be given in our next issue.

"LOCKED ANTLERS."—We have a note from Mr. H. Loring, of Kankakee, Ill., which will be published next week, in which he explains that the Michigan deer, mentioned in a recent item, were killed in the last of October and the first of November.

GAME PROTECTIVE SOCIETIES.

MASSACHUSETTS ASSOCIATION.

THE Massachusetts Fish and Game Protective Association held its corporate annual meeting Jan. 8, in Boston, and 94 members sat down at the tables of the Thorndike, and as invited guest Prof. Watson of Bussey Institute. Five applications for membership were presented, and John M. Call, Jr., and John L. McIntosh, proposed at the last meeting, were elected members. The past year has been the most prosperous the Association has ever seen. The membership now numbers over 300, not from one locality, but from almost every portion of Massachusetts, there being a few from other States also. The finances are in most excellent condition, the treasurer having a balance left over of more than $700, and the fund committee has also $250 deposited in a savings bank to the credit of the Association.

With such an excellent showing, the meeting was an unusually happy one; and the members were greatly encouraged for the success of the various works now in hand, and ready for a new undertaking which it was known would be presented at this meeting.

The following officers were elected for the year: President, Edward A. Samuels; Vice-Presidents, Charles L. Woodbury, Hollis Hunnewell, Augustus Hemenway, Walter M. Brackett, John T. Stetson, Warren Hopgood, Benjamin C. Clark; Treasurer, Frederick R. Shattuck; Secretary, Richard O. Harding; Librarian, John Fottler, Jr.; Executive Committee—John P. Woodbury, Samuel Hanson, H. H. Kimball, Henry C. Litchfield, Charles G. Gibson, H. A. Mansfield, Ivers W. Adams, Edward E. Hardy, John N. Roberts, Edward E. Small, Heber Bishop, Horace P. Tobey; Membership Committee—Henry J. Thayer, Edward T. Barker, Waldron Bates. Fund Committee—Benjamin C. Clark, Samuel Hanson, Daniel T. Curtis. The retiring secretary, A. W. Robinson, was elected an honoary member.

The following committee report was read:

Your committee appointed at the November meeting of the Association to consider "What policy, measures and action may, in the opinion of the committee, best secure the welfare of our Association" respectfully offer the following report:

The present work of the Association is mainly in three directions:

First—The publication and distribution of yearly amended copies of the Game and Fishery Laws.

Second—The investigation of such cases of violation of these laws as are brought to our notice, and the reformation or prosecution of the offenders.

Third—Appearance before legislative committees at hearings on proposed changes of these laws, opposing those we believe to be wrong and advocating those we think to be needed.

In all these directions the work should be continued; in the first we alone attempt it; in the second the State Commissioners now have power to act, but as so many cases are continually brought to our attention and it is often inconvenient or even impossible to refer them to the Commissioners it seems best to continue as in the past. In both these directions the present work of the Association need not be enlarged to any great extent. In the third, we should also continue as in the past; our existing laws are by no means perfect and there are constant efforts to make them even worse. But in this connection there is a large field of work which we have never as yet touched.

Our State Commission should have at its disposal an annual appropriation at least four times as large as at present, and this increased amount should be mainly expended in just one way. If there is any one thing in our line that we have learned by experience it is that the artificial propagation of trout and the re-stocking of worn out streams with them can be successfully accomplished. The trouble in Massachusetts is that it is attempted to such a limited extent. Under their present appropriations our Commissioners can do almost nothing towards restocking with trout, or other valuable fish, or towards preventing their illegitimate destruction, and the facilities for hatching and rearing are altogether too small. Further than urging suitable legislation it is not desirable, we believe, for our Association to enter this field, preferring to leave this matter entirely in the hands of the State officials, who are the proper persons to efficiently and economically accomplish the work, but your committee does recommend that an earnest effort should be made by the Association in favor of an increased appropriation.

The practicability of enlarging the scope of our organization by embarking in the venture of a club house, or of a preserve for the propagation of game has been carefully considered, but your committee do not deem it advisable under our present charter to entertain either propositions, believing that the former would be too great an expense at the present time and the latter might subject the Association to much adverse criticism.

The committee earnestly recommend to your notice and action the subject of introducing various species of game, having, after much deliberation, thought and correspondence been convinced that it can be accomplished in a practical manner and that work in this direction will be repaid by substantial results and lasting honor to our Association. In regard to subjects we have many varieties of game to choose from, but with due reference to ease in procuring and smaller cost, we believe the most promising ventures to be such varieties as pinnated grouse, sharptail grouse, Western quail and, if it can be done without too great expense, the wild turkey. This latter bird, wherever it has formely been abundant, can probably be successfully reintroduced if trapping can be prevented, and so general is the sentiment now throughout the State against all kinds of trapping and snaring that we believe the experiment well worth our money and time. The reward, if we are sucessful, is worth the risk. Other species might be enumerated, such as California quail (mountain and valley) and Messina quail. Suitable legislation to protect these new birds will be necessary, but can doubtless be easily obtained, and the question of setting out varieties of food for game birds, which we believe to be feasible, can also be acted on in the same connection.

Now this work to be successful should be undertaken in a careful manner and on a generous scale; there is no use in doing a little or in acting spasmodically, nor can we at the best expect any great returns until after several years of effort. At the least a thousand dollars per annum will be needed. The treasury of our Association can afford a part of this; we trust to the well known generosity of our members to supply the rest by private subscription.

Your committee therefore recommend that the Board of Management appoint a special committee on this subject with full powers of action, and that they be authorized to call upon the Treasurer for funds for such purpose to the extent of $350 per annum for the next two years.

The report was the occasion of much discussion; it was unanimously voted that it be accepted, and that the Board of Management appoint a committee to carry out its provisions in regard to the introduction of game and useful plants.

The appropriation of $350 per annum was voted, and a subscription list passed round, which was very generously signed, it being found at the adjoinment that no less than $520 had been guaranteed, which with the $350 voted by the Association made the handsome sum of $870, with many hearty friends of the Association to hear from.

After business of the evening was disposed of President Samuels introduced Prof. Watson, professor of Arboriculture and Horticulture at the Bussey Institute, who gave a very interesting discourse upon trees, shrubs and plants useful to our different varieties of game both for food and protection, instancing many species especially favored by partridges and quail as noticed in the extensive grounds of the Institute. HUB.

BLACK RIVER ASSOCIATION.

The Black River Fish and Game Protective Association held its annual meeting at Holland Patent, N. Y., Jan. 8. There was a large attendance and much interest was manifested.

Secretary W. E. Wolcott, of Utica, presented his annal report, which showed that "Although the Association is only one year old, it has made a record and established a reputation of which it may justly feel proud. Organized Dec. 8, 1888, with a score or thercabouts of charter members, it gained ground rapidly, and before spring had an active membership of over sixty. Composed of gentlemen interested in the protection of fish and game in the counties of Oneida and Herkimer, and more especially that portion of the North Woods embracing the headwaters of Black River, the Association immediately began a work which, it is hoped, in a few years will bear fruit in the district to which attention was devoted; 35,000 fry of the brook trout, 35,000 salmon and 14,000 German or brown trout have been put out in North and South lakes, and in streams in Trenton, Remsen and Forestport. Appreciating the need of a change in the game laws to insure the preservation of deer, partridges and woodcock, the Association adopted a resolution asking ing the representatives in the Legislature from this county to endeavor to have the laws amended so as to make the open season for deer begin Sept. 15 and close Dec. 1, and the open season for partridges and woodcock open Sept. 15 and close Nov. 1. A bill was prepared providing for these changes, but it shared the fate common to nearly all proposed game law amendments last year. The influence of the Association was felt in shaping game law legislation at the recent session of the board of supervitors of this county, and in securing the passage of salutary laws relating to fish and game. Other steps in this direction are needed, and it is to be hoped that the present Legislature will see the wisdom of shortening the season for hounding deer. Recognizing that the protection and preservation of the forests of the State are both desirable and imperative, the association inaugurated a movement early in March which was everywhere heartily commended and indorsed. Petitions were prepared asking the Legislature to enact such laws as would result in restoring to the commonwealth the Adirondack woodlands now held by individuals, clubs and corporations, and preserving the wilderness for the benefit and enjoyment of the whole people. These petitions were widely circulated throughout the State, and nearly every person to whom they were shown signed them gladly, expressing the warmest sympathy with the movement. Of the 150 petition headings used and sent away by your secretary, all but about 50 were returned, and attached to them were 2,000 signatures. Of the names received Utica furnished 567, Rome 158, Waterville 149, Forestport 32, Remsen 98, Trenton 38, Holland Patent 53, Marcy 31, Clinton 97, Whitesboro 52, New York Mills 56, Oneida 39, Brookfield 105, Richfield Springs 165, Ilion 87, Oswego 25, Buffalo 72, New York 49, and other places a goodly number. Most of the petitions not returned to the association were forwarded direct to Albany. The State Forestry Commission, with whom the association was in correspondence in relation to the matter, heartily seconded our efforts and obtained many signatures, of which they made effective use. The petitions returned to the association contained the names of many of the most prominent citizens in the places named. These signatures were forwarded to Assemblymen A. B. Baker, in May, but as the latter could not then use them to advantage they were subsequently returned to the association, and can be presented at this session of the Legislature, together with others. It is evident that public sentiment is ripe for legislation on this subject, and it is believed if the question of Adirondack protection were submitted to a popular vote the expression would be overwhelmingly in its favor. The association has made a wise move, and should follow it up."

The following officers were elected for the ensuing year: President, H. A. Pride, Holland Patent; Vice-President, Fred B. Spriggs, Utica; Secretary, W. E. Wolcott, Utica; Treasurer, George G. Chassell, Holland Patent. Directors, S. R. Fuller, W. L. Fowler, George G. Chasell, Holland Pateut; Friend Bristol, Bion H. Kent, Remsen; Frank C. Wolcott, Trenton; F. X. Salzman, Forestport. A committee, consisting of Messrs. F. B. Spriggs, I. C. McIntosh and F. Bristol, was appointed to draft a bill to send to Albany providing for the purchase by the State of forest lands in the Adirondacks. A resolution was adopted by the board of directors, "That the sense and feeling of this association is that the whole of the month of August should be struck out of the open season for killing deer; and further, that hounding should not be lawful until the 15th day of September. In support of this resolution, the board submits the following facts, namely: That of the thirteen States and Territories east of the Rocky Mountains, and the two principal provinces of Canada, New York is the only one which allows the killing of deer in August and prohibits killing them in November."

NEW YORK ASSOCIATION.

Hon. Robt. B. Roosevelt gave a very handsome dinner to the New York Association for the Protection of Game at his residence on Fifth avenue. Afterward the Association proceeded to the election of officers, this being the 45th annual meeting. The following were elected: President, Hon. Robt. B. Roosevelt; Vice-President, Col. Alfred Wagstaff; Secretary and Treasurer, Thos. N. Cuthbert; Counsel, Thos. N. Cuthbert. Executive Committee, in addition to the above officers, Chas. F. Imbrie, H. N. Munn, Robt. Lawrence. The Association is in a flourishing condition in membership and financially; and it has made arrangements for a more vigorous policy the coming year.

Fish Commissioner Blackford gave a detailed account of the difficulty the wardens had to bring suits to trial, the District Attorney's office being so overcrowded with work that it is practically impossible to bring the cases to trial. It was strongly urged that a special warden for this city be appointed.

TO RECORD TIME'S FLIGHT.

WE have received from the Union Metallic Cartridge Co. their calendar for 1890. It is a copy of the well-known painting, "The French in Algiers," by Eugene Girardet, the scene picturing a band of French troops bursting their way into the enemy's stronghold, with their carbines loaded, it is to be inferred, with U. M. C. shells.

The Winchester Repeating Arms Co. send us their calendar, which as usual is in design suggestive of the sportsman's use of their rifles for various species of game, from moose to wild turkeys.

The enterprising Spratts Patent have published a calendar which has twelve hunting scenes, most of them in the olden time, in which various breeds of game dogs are shown in pursuit of their game.

AFTER BREAKFAST.—You may take the most elegant and complete vestibule train ever constructed, leaving Chicago daily at 10:15 A. M., via the Chicago and Atlantic Railway. The magnificent trains offer unsurpassed accommodations for all classes of travel for New York, Boston and Eastern cities. Pullman dining cars are a feature of this new departure, and run through in either direction between Chicago and New York. Instead of exacting extra charges for fast time and the peerless accommodations proffered, the Chicago and Atlantic through its own agencies and those of connecting lines quotes fares to Eastern cities from $1.50 to $3.00 less than is charged by other routes. Consult your local ticket agent on this important item, or for maps, folders and time cards giving full information of the Chicago and Atlantic, New York and Chicago Vestibuled Limited carrying all classes of passengers. Address for prompt reply F. C. DONALD, General Passenger Agent, Chicago. Inclose two green stamps for an amusing, novel and paradoxically ingenious toy. A harmless, fireless, powderless, everlasting fire cracker.—*Adv.*

Sea and River Fishing.

NEW ENGLAND TROUT AND SALMON CLUB.

NESTLING at the foot of the southernmost range of the Green Mountains of Vermont, miles away from human habitation and deep in the forests of the southern portion of the old town of Marlborough, lies a small and beautiful lake of crystal water. From the earliest times tradition tells of the trout in this lake. A favorite tale of the elderly people of this ancient burg is, that during the years following the first settlement of this section it was a common occurrence for a farmer to go to the lake, taking with him an ordinary cart, drawn by a sturdy yoke of oxen, and at the close of the day return to his home with the body of his cart full of trout, as fine as human eye ever gazed upon. However much of truth there may be in the story, it is well established that Lake Marlborough is a natural breeding ground for trout, and has been so as long as the memory of man can tell. Many are the fine strings of beauties that bear testimony to this fact; and the catches of trout taken in these waters which have graced the table at a convivial gathering of the followers of Izaak Walton have given rise to the tradition that Marlborough trout for peculiar delicacy of flavor surpass those of any other locality. So limpid and clear are the waters that at a depth of 20ft. fish may be seen lying upon the clear gravel of the bottom or darting away at the approach of the intruder.

It is not strange, therefore, in these days when good fishing can only be had by a long and tedious excursion to the wilderness and a denial of every comfort of civilization, that steps were taken to preserve this most remarkable fishing ground from the ruthless hand of the pot-fisher and other thoughtless specimens of humanity, whose only apparent mission upon earth is to kill and destroy. Then, too, the anticipation of the action of the Canadian Government in increasing the rentals of the public waters leased by fishing clubs, many of whose members are scattered throughout New England, and the consequent appreciation in value of suitable waters easily accessible, made more apparent the desirability of intelligent control and regulation by true sportsmen of such a natural fishing ground as this.

In the spring of 1889 a few gentlemen who love and appreciate good fishing and who had long cherished the idea of a private ownership of this water, which had afforded them so many days of first-class sport, took decided action in regard to it by the formation of the New England Trout and Salmon Club. The purpose of this organization was the purchase and control of Lake Marlborough, and the breeding and propagation of trout and salmon in its waters, and also the building of a club house, stables, hatcheries and artificial ponds and other incidentals to a sportsmen's club. Through the friendly aid of Lieut.-Gov. Fuller, who also became a member of the club, a charter was obtained from the Legislature of the State providing for a club of one hundred members, and authorizing the holding of lands and other property incidental to its purposes. The charter members of the club were from all parts of New England and New York State. In Boston, New York, Worcester, Hartford and

other cities was made up a congenial list of kindred spirits. The president is Col. Geo. W. Hooker, a genial yet dignified gentleman, whose popularity in Vermont and wide acquaintance in other States, and especially among politicians, is said to have given rise to the story which a certain resident of Vermont tells. The story is that once upon being introduced to a prominent citizen of a Western community, as a gentleman from Vermont, the aforesaid Western citizen remarked: "Vermont, oh yes, that's where Col. Hooker lives." The vice-president is Lieut.-Gov. Levi K. Fuller, of the Estey Organ Co. The directors are Geo. S. Dowley, the well-known banker; E. S. Bowen, a prominent physician; J. L. Martin, a leading lawyer of the State; Chas. B. Hopkins, a New Hampshire paper manufacturer; J. B. Reynolds, a shoe manufacturer of Orange, Mass.; F. L. Houghton, of Boston, and W. S. Moore, treasurer, and C. H. Pratt, secretary. Both the last named gentlemen are of Brattleboro, which is the shire town of the county in which the club's property is situated, and a most beautiful village it is, too.

To reach Lake Marlborough one must pass through Brattleboro, but no admirers of nature will ever regret the time spent here. It is a place of unsurpassed natural beauty, celebrated the country over as such, and for generations has been famous in song and story. Allusions to it are scattered thick through American literature. Its charms have always made it a favorite summer resort. It is in the southeast corner of the State, on the Connecticut River, and on one of the prominent lines of railroads connecting New England and the city of New York with Quebec, Montreal and the West. "Situated in the heart of New England and built on a succession of natural terraces, with an environment of green hills, the town is certainly one of the most beautiful between Long Island Sound and the Canadian frontier. It is not at all surprising that the pilgrims from the Massachusetts colony made their first settlement in Vermont near the site of the village of Brattleboro as early as 1724. The wonder is that they did not come here at a much earlier date. There are scores of pleasant drives in the vicinity, and new trips may be enjoyed for weeks over roads winding along the banks of the Connecticut and its tributaries and through groves and over hilltops, each drive having distinctive features of interest and beauty. The village thoroughfares are lined with spreading trees, which form continuous arches of green overhead. The homes of the people show tidy and tasteful surroundings, trim hedges, velvety lawns and beds of flowers seen on every hand. A stroll through the winding avenues of the place discloses as lovely landscapes as can be seen in any English country lane or hamlet. Now and then, through parted boughs, vistas of placid water courses and valleys green are observed by the stroller. The hotel accommodations are very good.

Leaving Brattleboro by one of its most beautiful drives in an hour's time, during which all traces of human habitation are left behind, the road through the woods leading to the club's property is reached. Two miles and a half from the highway, through the woods, the club purchased a strip of land two rods wide and built and fenced in a sustantial roadway to its possessions. Here are several hundred acres of land to which the club holds the title, including the land beneath the lake and a strip many rods wide around it, and a thirty-acre piot most favorably situated on which stand the buildings of the club. This land was purchased of the descendants, in some instances, of the original grantees, who received their titles from Lord Marlborough, to whom belonged this whole section in the time of King George. Passing out of the long drive through the woods and on to a slight rise, the lake in all its beauty flashes suddenly into view in a most charming vista. Surrounded by wooded uplands reaching down to the clean gravelly shores, it lies before the visitor a veritable fisherman's paradise. The club buildings, keeper's house, stables, hatcheries, rearing ponds, etc., are tastefully arranged upon the thirty-acre plot, which is on the north side of the lake. No marshes or low lands surround it. The breeding of trout has already begun on a very considerable scale, and 100,000 of the strongest and liveliest yearlings that it has been our privilege to examine are already sporting themselves in the rearing ponds. Fifty thousand landlocked salmon of the same age are occupants of another of the rearing ponds.

The club house will be a model in its appointments, and will be kept ready for members at all times during the season. A telephone brings instant communication with Brattleboro and the telegraph stations. So, while located miles away from the town and to all intents as far away in the woods as one would be by a long journey to Maine, the fisherman can at all times maintain communication with his friends or business.

Six artificial ponds for rearing purpose have been built and others are in process of construction. These are abundantly supplied with running water from springs. The hatchery which has been in process of erection the past season has just been completed, and is a model in its way. It is said by experts to be as fine as any in the United States. The club has been fortunate in securing the services of Loren W. Green, a nephew of the famous Seth Green, for twelve years superintendent of the U. S. hatchery in California, to aid them in preparing the designs for the building and its interior fittings. The building has a hatching capacity of two and a half million eggs, and is convenient to the lake and the keeper's lodge, and about sixty rods from the club house site. The great feature is the peculiarly fine water, not alone for the hatchery, but the lake itself is a grand body of the purest spring water. It is believed that the club is especially favored in this respect, for with pure cold spring water the problem of successful rearing of trout is a comparatively simple one when in the hands of experienced persons. The building which contains the hatchery troughs, filters, feed boxes, etc., is of tasteful design and neat appearance, and is of ample dimensions and two stories high. The water supply enters the filtering tank in the top of the building, and is very abundant. Flowing from the filtering tank, which has a capacity of ten barrels, it passes into the feed box on the second floor and thence into the hatching troughs, which aggregate 120ft. in length. These troughs are of best pine, 18in. broad and 6in. deep, thoroughly coated with asphalt. The whole system, presenting the appearance of a terrace of troughs, extending the entire width of the building.

The hatching trays which set into the troughs are 5in. deep, made of wire eight meshes to the inch and thoroughly coated with asphalt paint, while about the top is a rim of wood, conveniently arranged to lift the tray to permit of a careful examination of the spawn, for the removal of dead eggs or other purposes. These trays are set in the trough so as to be entirely submerged and the spawn will receive the constant action of flowing water, without being washed away. Rearing boxes to receive the fry are provided in suitable numbers for the capacity of the hatchery. The hatchery has recently received from various sources about 100,000 trout and 40,000 land locked salmon spawn. These with other large additions, soon expected to arrive, are under the care of Mr. Green, who expresses himself as greatly pleased with the location and the possibilities of the club. It is doubtless true that there is much in the future of the club. With the 150,000 already in its rearing ponds, the 100 two-year-old breeders and the 250,000 spawn now being hatched, it has a very encouraging outlook.

Though purely a sportsman's affair, this club is in the hands of men whose business ability is quite equal to their enthusiasm, and who will accomplish their ends and make their grounds the favorite resort of true sportsmen. E. S. B.

BRATTLEBORO, Vt., January, 1890.

TEXAS BASS IN CHRISTMAS WEEK.

Editor Forest and Stream:

I have a son at Cornell who is rather an enthusiastic hunter and fisher, and almost every letter he writes he asks if I have been hunting any, and then he wants a full account of the whole matter, and so I have concluded that if I have to give him the account I might as well tell your readers about it too, which can easily be done by manifolding my account and sending you one copy to be used or consigned to the waste basket as to you may seem best.

It is not often even in this genial clime that thoughts of a fishing trip attack one here during Christmas week. The disease seems to require spring weather to fully develop it, and bring out the attendant symptoms, of rod and reel, fish basket and lunch basket, and the inevitable discussions about place, time and preparation. But so it is this year; we have now (Dec. 29) roses in bloom, and on Christmas morning I picked and sent a large bouquet to a friend in New York State; and for weeks we have no fires, and have slept with our windows open; and so the piscatorial fever has begun already to attack some of our citizens, being as yet, however, rather sporadic than epidemic.

Only a few days ago I heard that a friend had been down to Black's Bayou, about fifteen miles below our city, and had caught twelve fine black bass, besides perch, and then and there I resolved to spend at least one day of Christmas week in the same way. He had caught one bass, which after it was cleaned, weighed 4lbs.; and I thought some such luck might happen to me, or some one of the party that went with me, should I be able to get up a party. Then too, late in the fall I had bought a new outfit, which I had never used, including a new multiplying reel and oil silk line that I thought would hold any thing, and a lot of long-shanked gutted Carlisle hooks, sharp as a needle, and I wanted to try them, and feel a large bass at the end of my 10oz. rod, and thwart his frantic efforts to escape, and at last land him safe and sound.

I had never been to Black's Bayou, but I could find it, so after a bank meeting of our National Bank I proposed to the president that we should strike out early Friday morning for Black Bayou and see what we could do in the way of capturing the bass, agreeing with him that if he would see to getting the bait I would get the team, and we would try to get off by daylight.

This being settled, I met Ed. L., the genial and enthusiastic fisherman, home from Eagle Pass for the holidays, and suggested that he should join the list for the morrow, to which he made reply, "If I can just get Bill D. to go, I will." To stimulate his imagination I told him with embellishment of the fishermen, covered with the glory of the 5lbs. bass, and then I thought I had fixed my hook into him and would surely drag him, too, to the fishing grounds, for I knew that the Right Honorable W. L. D. was as fond of fishing as he was of going to the Legislature, and as fond of Ed L. as he was of fishing, and that he had a buckboard and a handsome mare equal to her 2.40. So I concluded that we would have a nice party, and went home to prepare rod and gun, for sometimes there are fine mallards to be had on the ponds on the way.

My old pointer Dash watched all the preparations with interest, and I am certain if I had gone to the barn and put my gun and tackle in my buckboard that there he would have camped for the night, to be on hand for the early start in the morning. It was not in the programme, however, that he should go, as we were not going hunting, but fishing, and he has a strong desire to assist in the fishing business, and more than once I have had him jump in the pool I was fishing in to explore it to see if he could catch any fish or help in any way; and notwithstanding my scoldings, I have no doubt that he has often thought that he had helped me very much.

At six the next morning behold the two solitary fishermen, as they loom up through a fog dense enough to be cut with a knife, and by the struggling watery light of the street lamps are seen wending their way down the dim lane, which melts into obscurity a few yards away, and hardly resembles a street in that dense fog. They travel, however, at a lively gait, for they have a good horse, and soon are out in the open country, cutting their way through the fog almost as a steamer plows her way through the briny deep, with the spray of the morning settling on beard and hats and clothing, until they drip with moisture. We reach the fishing ground about half-past eight, and land in a bayou from 4 to 10ft. deep, about half a mile long and narrowing at each end to a thread, but for the most of the distance 25 or 30yds. wide. We prepared our rods and threw in, but for some time we didn't get a nibble, and there was about that time one huge disgusted banker in that crowd of two. By and by, however, as your correspondent went further down, and industriously coaxed the denizens with wriggling earthworms (our fish have the most supreme contempt for flies and artificial follies of the educated fish of Northern waters), I had fine strikes, and hooked what I was sure was a 5lb. fish. Then we tried conclusions with each other a while, he to escape, I to land him; and at last, after he had exhausted himself, I towed him to the shore and lifted him out, a fine game clear water blue catfish, of about 5lb. weight. These fish are considered very fine table fish; and much encouraged, I baited and threw in again, and was rewarded by several perch, then a black bass of a pound, then another fine blue cat which weighed about 8lbs. and tried my tackle and skill, and that I was not able to land at all, but had to call in the help of a darky, who was watching me play him. He went down to the water's edge, and after he was completely fagged, hooked his finger in his gills and so landed it. My banker friend, however, was still in the suds. He hadn't had a nibble.

About this time I heard a "hello" from the hillside, and looking back there were my Eagle Pass and Legislative friend and the fine mare bearing down upon the live-oak tree that spread its green arms over our buggy, and very soon they were ready for the fray. I continued to have fair success, and caught several fine bass with small perch hooked in the tail and thrown in alive. If there is anything a bass likes it is one of those little yellow fellows, just large enough to slip easily into his huge mouth. Ed. L. and Hon. D. took the other side of the bayou, and then the fun increased. L. is a fine fisherman, learned in all the varieties, and knows the habits of all the finny tribe, and has angled all the way from Mexico to Montana (I had almost said Maine), and he generally can give any man odds and get more fish than any body. My partner had retired for a time with a headache, and sought relief from it by taking a short nap in the shade of our live-oak, so that for a while I held the fort alone on the east side, while L. and D. took the west side. I know they had the best of it in position, because Ed. bragged, when the day's fishing was over and we had assembled to eat a 3 o'clock dinner, that he was not sunburned as much as P. was, which was true, as he had his back to it and I my face. After Mr. E. had had his nap, I exchanged rods and tackle with him, that he might try mine, and he sat down at a place where the perch were biting finely, and from that time on the way he laid them out was a caution to little fishes. The air was white with shiners, not the smallest one would he fail to secure, and from him from thenceforward I secured all my bait in live minnows. Representative D. was capturing the small fry on the other side too, and L. was running two lines, catching perch and bait with one and bass with the other. Once he had to call to D. to help him land one, having struck a fine bass with his perch hook, and fearing a loss should he try to land him without assistance. Every now and then I would hail him with a triumphant "Got him again, Ed. Look here," and I would hold up a fine bass. "Here is his match," he would reply after a struggle with his catch, holding up his fish to view on the other bank.

And so we fished the length of the stream, until I began to feel that my inner man was remonstrating vigorously for replenishment, and even bass fishing had to yield to the more pressing demand. So we sought the shadow of the green-leafed live-oak, and baskets being unpacked, and ale opened, we began the most welcome task of satisfying a sharp appetite. L. and D. were a little slow in getting in from the other side, and before they arrived all that delicious cabbage and pickles put up by Mrs. B. and brought by the banker, had gone, gone, gone; with not a fragment to tell the tale. But with the Kentucky sausages and ham that D. was bragging on (sent him as a Christmas present all the way from "Kaintuk"), the second relief fared well.

When we compared strings B. and myself had ten fine bass, and the two catfish. D. and L. had ten bass and some fine perch. We had also a lot of perch, etc. Caught the largest bass, and I caught one the most of any of them; I caught nine, L. eight, D. two, B. one.

"That fish," said L., holding up the large bass he had caught, reflectively, "that fish will weigh about 4lbs." "And this," I said, holding up my largest. "will weigh 2½lbs." Then it was agreed that we should not clean these two, but weigh them at a neighbor's house on the way home; but the rest of the large fish we cleaned, that they might keep well. L.'s fish did weigh 4lbs. and mine 3lbs. upon the scales, and the rest we caught would have averaged, we estimated, nearly 2lbs.

The beginning of the end of this pleasant outing came when at our respective homes we sat down the next morning to a breakfast of nicely fried bass, but for me, at least, the culmination was at noon, when I sat down to that three-pound bass, nicely baked, with a mustard dressing and fresh lettuce, and the et ceteras of a dinner. If you have never tried it, all I have to say is just try it once and you will never fail to have your largest bass stuffed and baked for dinner. TEXAS.

VICTORIA, Texas, Dec. 29.

NORTH CAROLINA ANGLING.—Fly-fishing is a thing entirely unknown in this section, although we have in our waters "rock" and "welchmen," the former of which, I believe, is known among anglers as "striped bass" and the latter as "black bass." We likewise have perch, both white and speckled. These fish may be found in almost every one of our rivers. Hook and line fishing around Nag's Head is at times unsurpassed anywhere in this country. This is the name given to that portion of the narrow strip lying between the ocean and Roanoke Sound. There you may find sheepshead, white perch, logfish, spots, rock and others, while at the inlet, only a few miles from the hotel, you can get very fine bluefish trolling. About two miles to the north of the hotel the beach widens. At Nag's Head it is only about half a mile wide; two miles to the northward it is more than a mile wide. At this point, about midway between the Sound and the ocean, is a small fresh-water lake with no outlet, that abounds with all kinds of fresh-water fish. In this lake those who frequent Nag's Head in the summer do most of their fishing. The lake is about two miles in circumference, is beautifully situated, and one never fails to enjoy a day's fishing on it.—W. J. G. (Elizabeth City, N. C.).

OUR FLORIDA NUMBER.—*Editor Forest and Stream:* Your Florida number is by all odds the best of its kind yet issued by any sportsman's paper, and from an angler's point of view leaves nothing to be desired. In all departments it forcibly shows to what perfection a periodical of its class can be brought, when by the quality of its reading matter so many contributors of actual experience can be attracted to its columns.—BIG REEL (East Orange, N. J.).

FLORIDA FISHING.

Editor Forest and Stream:

In reply to your inquiry regarding the winter habitat of the tarpon I can only say that I cannot furnish information of a reliable character. It is a warm-water fish, and when the in-shore water becomes chilled it is probable that it seeks off-shore water or the edge of the Gulf Stream, to return when the water in the streams and lagoons is heated by the sun of lengthening days. Much has yet to be learned regarding the winter home of the tarpon and its spawning grounds. At an early day I expect to make a marooning trip around the peninsula to Bay of Biscayne, and shall endeavor to collect information regarding the home of the tarpon during December, January and February.

By the bye, my friend, Senator Quay, should be credited with the capture of the first tarpon with rod and reel in Charlotte Harbor. On his return to Jacksonville he exhibited the head of the fish and was so elated by the capture that he presented me with the rod, reel and line used on the occasion; and I have treasured them as a memento of the first capture of a silver king by the use of a rod and reel.

Grouper fishing is exciting sport and seldom engaged in by visitors to Florida. At almost any point along the Gulf coast, where the water is from two to six fathoms in depth with a rocky bottom, this excellent fish can be captured in great numbers. Off the Anclote Keys and on the easterly side of Egmont Key this exciting sport can be enjoyed.

A notable fishing resort has, to a great extent, been overlooked. I refer to Lake North, south of Jupiter Inlet, on the eastern coast of Florida. During the winter months bluefish from 2 to 7lbs. are found in the lake in countless numbers. They will eagerly appropriate a squid or other movable bait. Fly-fishing can be enjoyed in the capture of cavalli and sea trout. If the sea is calm (which is usually the case) fishermen can pass out of the inlet of Lake North, and capture sea fish on the reefs off, but near, the shore.

Anglers visiting Florida should carry with them a 10 to 12oz. fly-rod, 12ft. long, with a supply of large flies. If they intend engaging in the capture of ravallia the hooks should be snooded on fine steel wire, or else flies and fish will be lost, and language unworthy of a fisherman indulged in. As a rule the hooks upon which flies are mounted are too light for Florida fishing. The best flies that I have found are the small spoon-fly baits made by Hall & Co., of Grand Rapids, Mich. The feather portion is large and gaudy, the spoons small, and the hooks of large size and of extra quality. The smallest baits, No. ½, 1, 1½ and 2 are best adapted to fly-fishing in Florida. In using the artificial fly in salt-water fishing in Florida it should be allowed to sink a short distance beneath the surface before an effort is made to bring it home. I would advise intending fly-fishermen to use a heavy fly-rod, a large reel and at least from 50 to 100yds. of line. I prefer a 12oz. split-bamboo rod 12ft. long, the finest Cuttyhunk line and an Abbey & Imbrie quadruple multiplying reel. Such an outfit is necessary to capture cavalli and ravallia ranging from 10 to 20lbs., and channel bass weighing from 5 to 30lbs. AL FRESCO.

ANGLING NOTES.

THE time is rapidly approaching when fishermen will begin to think about next season's trout fishing, and many will need a new rod. This to an outsider may seem to be a very small matter; but to the angler, particularly if a fly-fisherman, it is a very serious affair, second to none, unless possibly selecting a gun. If he is a beginner, he will probably ask the advice of some angling friend, who will tell him to get a cheap machine-made rod, as he will smash it the first time he uses it; but we think this is a mistake, for cheap rods are not as pleasant to cast with as good hand-made rods, and if properly instructed there is no reason why a beginner should break his rod if it is a good one. A hand-made rod of either section bamboo or wood will be much better for him, and he will naturally take a certain amount of pride in it.

The question whether to get a wood or a split-bamboo rod must be left somewhat to his pocketbook. Each style has its ardent admirers. An old angler's advice is not to get a cheap split-bamboo. A good, well-made wood rod, hand-made throughout, can be bought for about $12 to $15, while the same grade of section bamboo will cost not less than $20.

Having made up his mind which of the above to buy, the next thing is the weight and length. Formerly the average rod was about 12ft. long, weak in the back, so that the tip could be made to touch the butt, and weighed at least 10 or 11oz. These rods were slow in their action, hard for a beginner to handle, and a decent-sized fish would go under the boat or into the treetops or anywhere else he liked; the angler was powerless to prevent it. The modern style of rod is built on different principles; seldom over 10 or at the outside 11ft. long, weighing from 5 to 9oz., and rather stiff in its action. With a rod of this kind the angler has some control over his fish, neither does he require an hour of the best part of the day to kill his victim when hooked.

If the angler must content himself with one rod, let it be about 10ft. long, weighing about 7oz., unless he fishes mostly in Maine or Canada, when he should select one of 10ft. 6in. length and weighing as near 8oz. as possible; that will also answer better for black bass fishing. If he can afford a perfect outfit, we would suggest a rod 8ft. 6in. long for the pool-fishing, this need not weigh over 5oz; one of 10ft., 7oz. and one of 11ft., 9oz., for land-locked salmon, bass and big trout. Of course the unbelieving outsider, should he by accident read this article, will say: "What rubbish! Any boy with a stick and a string will beat your fancy fisherman out of sight." But this old saw is all bosh. After thirty years of experience in fly-fishing the writer can say that he has never yet met this wonderful boy. People lose sight of the true facts, which are these: No amount of good tackle will make up for a want of knowledge, but neither will fine tackle make a good angler fish the worse. To kill trout or black bass on the fly in much-fished waters requires experience and skill, and a thorough acquaintance with the stream is half the battle.

It is of the greatest importance in selecting a line that it should be of a size and weight in proportion to the rod. Many an angler has had trouble in casting and blamed the rod, when it was because the line was too light or heavy, generally the former. A line too light curls back with every breath of wind and it is impossible to cast it straight and true. We should say a No. 5 is about right for the rods weighing from 5 to 7oz., and a No. 4 for the heavier rods.

Prof. J. S. C. Wells, of Columbia College, and a member of the Oritani Snowshoe Club, has just returned from a three weeks' trip to the Megantic Club in Maine. He was not after trout this time, but was in hope of finding caribou. The snow was heavy and his snowshoe practice was put to practical use. Unfortunately a crust prevented any attempt at still-hunting; it would break with a loud, crunching noise at every step. Tracks of deer were plentiful, but only one caribou track was seen. The weather was as bad as it is here. One day the mercury would drop below zero and the next it would rain.

Fresh bluefish have been very plentiful this winter in our markets. This is an unusual occurrence, and goes to show how easily fish are affected by the weather. The first cold snap will probably send them to deep water.

CANADIAN SALMON LEASES.

THE auction sale of salmon rivers, at Quebec, Thursday and Friday, resulted in better prices than have heretofore been paid for fishing privileges. Anglers from the States were there in force, and as will be seen by the list, they secured their share of the waters. The leases are to run for ten years. Purchasers and prices, which represent the yearly rental, were as follows, for such waters as were actually offered for public competition:

Rivers (North Shore).

Murray—D. C. Thompson, $60.
Laval—C. W. Phillips, $81.
Trinity—J. D. Gilmour, $180.
Moisic (upper part)—W. O. Rogers, $405.
Little Saguenay—N. P. Rogers, $405.
St. John (Chicoutimi)—Senator Price, $180.
A Mars— * * $305.
Sainte Marguerite (West Branch)—St. Marguerite Club, $355.
Sainte Marguerite (North Branch)—W. M. Brackett, Boston, $85.
Sainte Marguerite (from the head of tidal water to the confluent of the two branches)—St. Marguerite Club, $55.
Little Trinity—Edson Fitch, $45.
Little Bergeron St. Marguerite—W. E. Russell, $80.
Aux Rats— * * $50.
Little Bergeronnes— * * $85.
Margaret and tributaries—Judge Dugas, $260.
Manitou—Mr. Creighton, Montreal, $55.
St. John and tributaries (North Shore)—H. W. de Forest, $550.
Mingan—Dr. F. W. Campbell, Montreal, $425.
Romaine—E. Charles Fitch, Waltham, Mass., and Clarence M. Roof, New York, $1,000.
Magpie—T. W. Abbott, Montreal, $55.
Corneille—T. P. Bacon, Montreal, $95.
Nabisippi—Judge Dugas, $25.
Washeecootai—J. G. A. Creighton, $210.
Olomomasheebou—Capt. Jonas, $170.
Etamamiou—J. G. A. Creighton, $55.
Saint Augustin and tributaries—S. C. Campbell, Montreal, $75.
Saint Paul and Little Esquimau—Alphonse Letellier, Quebec, $50.

South Shore.

Ristigouche—First part, not sold; second part, Ristigouche Club, $250; third part, Ristigouche Club, $205; fourth part, not sold; fifth part, Mr. Robinson, Montreal, $105.
Patapedia—Restigouche Club, $100.
Nouvelle—Mr. Ward, New York, $105.
Little Cascapedia—Mr. Ramsay and Dr. Campbell, $255.
Bonaventure—Mr. Thorne, St. Johns, N. B., $1,250.
Little Pabos—Louis Cabot, Boston, $455.
Saint John (Gaspé)—Richard Turner, Quebec, $600.
Dartmouth—Henry P. Wells, New York, $505.
York—Mr. Murdock, Chicago, $555.
Cap-Chat— * * Chicago, $100.
Matane—H. B. de Forest, $105.

Lakes.

Point Jerome—D. C. Thompson, Quebec, $5.
Charles, Russell, Islands and Dawson—Marguerite Salmon Club, $65.
Charles (Township Falardeau)—Mr. Pelletier, Quebec, $20.
Des Passes, etc., and tributary waters—A. L. Light, Quebec, $51.
Grand Batiscan and river of Lake Batiscan, lakes connected—A. L. Light, $120.
Bon Lac—Archer Gingras, Quebec, $11.
John, Croche and Robert and other small lakes withdrawn at $30.
A La Croix—A. L. Light, $101.
Clair (Canton LaSalle)—Withdrawn at $25.
Mékinac—Withdrawn at $125.
Clair (Canton Alton)—W. & P. Greenough, Boston, $15.
Pearl—A. L. Light, $35.
Black River—A. L. Light, $75.
Des Commissaires—U. S. Consul Downs, Quebec, $20.
Pemetchougan—Mr. Lapointe, $25.
A François—Withdrawn at $5.
James, Judge, Chauncey, Brewer, Half Moon, Parcher, Green and Burnt—Withdrawn at $20.
Laurent, "des Iles"—Withdrawn at $30.
Aux Brochets—B. Scott, Roberval, $6.
Au Sable, Montague brûlée—L. E. Panneton, Three Rivers, $1.
Clair (Champlain)—Withdrawn at $25.
Long, Henri, Kashonia (Canton Kenogami)—S. Dumars, M.P.P., $11.
Saint Ann (Grand and Little), Township Chapais—Withdrawn at $20.

Lakes Edward and Kiskisink were resold privately to the Lake St. John Railway Co. for $200 rental. At private sale the Stadacona Fish and Game Club, of Quebec, secured Lake Aurognons and its river for $100; Les Laurentides Club secured Lakes Long, des Iles, Verte; the Shawemgan Club took Lakes Brodeur and Pezagonka; the Metabachouan Club secured their waters for $150.

We have heard some complaint at the course of Crown Lands officials in withdrawing from public sale waters advertised. It is contended that the sale throughout should have been open to public competition.

NATIONAL ROD AND REEL ASSOCIATION.—New York, Jan. 11.—*Editor Forest and Stream:* The annual meeting of the National Rod and Reel Association for the election of officers, etc., called for Dec. 14, was postponed on account of bad weather, and will now be held at the laboratory of Mr. E. G. Blackford, in Fulton Market, on Saturday, Jan. 18, at 2 P. M. Business of importance will be transacted and a full attendance is solicited.—G. POEY, Secretary *pro tem.*

FISHING IN FLORIDA WATERS.—Anglers who intend visiting Florida this coming winter will find it to their advantage to inspect the superior tackle for tarpon and other fishes, manufactured by Thomas J. Conroy, 65 Fulton street, New York.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Fisheulture.

OUR ANNUAL LIST OF COMMISSIONERS.

NEXT week will be published the FOREST AND STREAM'S annual list of the Fish Commissioners of all the States revised up to date. The list will be supplemented by a very full review of the work of the several Commissioners. The information has been obtained by extensive correspondence, and is fuller and more complete than has ever before been brought together in a single number.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 13 to 18, 1890.—First Annual Dog Show of the Georgia Pet Stock and Bench Show Association, at Augusta, Ga. A. H. Vonderleith, Secretary.
Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 11 to 14, 1890.—Fourteenth Annual Show of the Westminster Kennel Club. American Institute Building, New York. James Mortimer Superintendent.
Feb. 19 to 22, 1890.—Second Annual Dog Show of the Mascoutah Kennel Club, Chicago, Ill.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 15 to 18 1890.—Show of the Buffalo Kennel Club, Buffalo, N. Y. A. W. Smith, Secretary.

FIELD TRIALS.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 312 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.
Feb. —, 1890.—Meet of the Brunswick Fur Club, New Meadows, Me.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

"ANOTHER PHASE OF COURSING."

CHICAGO, Ill., Dec. 29.—*Editor Forest and Stream:* I beg space for a few words suggested by the editorial entitled "Another Phase of Coursing," which appeared in the issue of Dec. 26. Some of the inferences therein drawn seem to me hardly just to a number of men who are friends of mine, or to a form of sport, which at this time is not perfectly understood in all parts of this country.

We may not doubt the accuracy of Mr. Graydon Johnston's description of the scenes of a British box meet. I have never attended such a meet. I have, however, attended meets of the "company in the West" to which allusion is made, and I can say unqualifiedly that they furnished no similarity, nor any indication of future similarity to such scenes as those of the British box meet. I know you wrong those Western men when you dream that, for money or for anything else, they would allow their enterprise to drift into any phase so low as that. Moreover, you wrong this whole country of America if you fail to distinguish the difference between it and Great Britain. At least we can speak for the West when we say that our people are not of the sort described as attending the British box meets. The conditions are not the same here as there. Therefore, it is altogether too hasty and long-ranged a logic to say that "this (Western) mode, if pushed to the front, will almost certainly be marked by the objectionable features that disgrace the 'box coursing meetings' of Great Britain."

To be sure, if we damn such an enterprise out of hand, we may drive it away from the better ranks of sportsmanship; but if we meet it frankly and fairly, giving it all the consideration it deserves, we may make of it one more worthy sporting feature of the year. FOREST AND STREAM has accepted and indorsed the Eastern Coursing Club, even after all the arrests and interferences and squabbles which have marked its brief career. Why not indorse the National Association, which has, I take it, ever after its first hurried and imperfect meeting, given on each occasion a cleaner, prettier and more sportsmanlike exhibition of coursing than the E. C. C. has done? The E. C. C. does not practice open coursing. The repugnant feature of inclosed coursing lies in the trapping and turning down of the hares—in the putting in jeopardy of life and liberty for a second time a wild animal that has once been reduced to possession. For the rest, the E. C. C. will kill three hares to the National Association's one, even if the latter did not run the greyhounds muzzled, as they always do. If I were a jack rabbit, I would far rather be coursed a half mile over ground I knew, pursued by muzzled dogs, and knowing just where safety lay, than to be coursed for perhaps five miles in the open with no certain escape before me, or than to be turned out of a corral into country I had never seen before, and coursed for my life while I was trying to explore the country. When we come right down to facts and reason, the method of coursing employed by the Eastern Coursing Club is the most nearly barbarous, inhuman and unsportsmanlike of any, except the pure rabbit-baiting sort. I do not wish to be thought as stigmatizing the Eastern meet, or as calling it unsportmanlike. There is no quarrel with the Eastern club, and no quarrel of the West with the East. All I want to know is why, if the paper supports the sportsmanlike Eastern meet—and I wish to call it so—it should not support the yet more purely sportsmanlike Western meet? And why should the really less humane and sportsmanlike meet be chosen by FOREST AND STREAM for a pure and spotless future, while an enterprise which has been conducted with the most exceptional care, by a number of men whom I know to be big-hearted and lovable sportsmen, is selected for a future history similar to that of British box meets? There is no apparent answer for this unless in the reply that "history repeats itself." But history doesn't repeat itself in different countries. This is America. We have straightened out a good many things in this country that were badly mixed in Great Britain. This is America. The men handling this Western enterprise are Americans. These men are friends of mine. I have ridden many a day on the prairies with them, and know them. What hurts them hurts me; and I do not think it right or fair for me to be silent under statements which might produce on certain misinformed minds the idea that the Western Association is a scheme much like the Hempstead rabbit coursing nuisance, or at least, liable to develop into some such form. Nothing could really be wider of the fact than that. We will see the Eastern Coursing Club become gamblers and rabbit baiters just as soon as the National Association. I am not worried at the prospect in either case, but I am looking hard at the facts in the matter, and the inferences we may properly draw from the facts.

Let us set aside all question of cruelty or inhumanity in the method of conducting the meets. The editorial in question does not touch upon that, and I would like to join issue with it in perfect fairness, and not with any evasion or trickery. The two charges actually made are (1st), that "the

purpose (of the Western meet) is purely speculative," and (2d) "that the crowds must be attracted not by any such taste for sport as impels the devotee of open coursing, but by the opportunities the races give for betting."

I do not see how the first objection is any more valid a one than can be urged against any of our sporting goods dealers. They are in business for money. Yet we do not bar them from the ranks of good sportsmanship. We leave individual merit to decide that, and so we should do here. But even if this objection were valid against the projectors of this enterprise, and even were it the case—as certainly it is not—that these men had "nothing of the love of sport impelling them," there would be serious injustice in making the charge. Even if these men were not sportsmen and therefore entitled to our fellowship and kindness, the force of this first objection lies against them, and not against the people who attend their meets. It is in these people, in the crowds of spectators, that the spirit of inclosed coursing lies. It is against them, and against that spirit that we should direct the argument. I do not believe, therefore, that the first objection, *i. e.*, that of mercenary motives, cuts any logical figure in this case.

As to the second charge, that these meets must be supported by betting men, and not by men who go out simply to see the dogs chase the rabbit. If there be any validity in that I confess I am unable to see why it does not lie against the Eastern Coursing Club as much as against the National Association. But I do not believe it has validity either in the one case or the other. We will never be able to entirely prevent a man's making an occasional wager on a sporting event. It is the very element of chance that makes sport sport. We rebel at a sure thing, even in fishing or shooting. There is a wager in every little sweepstakes reported in the Trap columns of this paper. Why do we not decry that? But let all that go, and let us stick yet closer to the text, which is that the inclosed meets will come to be fostered solely or chiefly by gambling men. Now, we have no right in justice to simply assume this. We should show some reason for such an assertion. I would like to inquire what reason has so far shown itself?

I presume there was as much betting at the meet of the E. C. C. as there was at any meet of the National Association. But, since this is a mere assumption on my part, and since we should not go on mere assumptions, let me stick closer yet to the safe reasoning ground of facts. Let us compare pure open coursing and pure inclosed coursing, on a betting basis and in the light of facts actually seen in this country.

It was my fortune to attend all the open meets of the American Coursing Club, at Great Bend, Kas. I did not see very much betting there. It didn't worry anybody. There was no noise nor confusion resulting from it, I should say. Bear in mind that this is America. We didn't have any howling mob of book-makers, dressed in "strange fantastic costumes," at Great Bend. And yet, do you know, I believe that on the whole, there was rather more betting at Great Bend open meet than at St. Louis inclosed meet, which latter I also saw and watched closely. I am ready to say, emphatically, that that good-natured and well-dressed St. Louis crowd came out not to gamble, but to see those dogs chase the rabbit. I don't think our lives or morals would be in danger in either crowd. By what right of reason, logic, argument, or indeed of good justice, are we, therefore, to predict good from the meet that has the more betting, and evil from the one that has the less?

If the editorial alluded to was written in a spirit of pure prophecy, I confess myself unable to cope with it; but if these things are to be governed by fair reasoning and good logic, it certainly can be coped with. If I should take on the veil of prophecy, I should dare say that, if ever we are to be cursed in this country with the moral plague of "box coursing" meets (which we are not) the plague will be just as apt to be the outgrowth of the Eastern Coursing Club or others like it, as of this "company in the West" whose real methods and intentions seem so poorly understood. For my prophecy I should have for foundation the axiom that like causes produce like results. Shall I be thought rude if I beg to say that I am not able to see where our editor has the premises for either his argument or his prophecy? In a conclusion bearing so keenly upon what might at least be fostered and befriended, and nursed up and encouraged into a new and worthy form of American sport, it would certainly appear better to have both of the premises located in America, and not the minor premise in this country, and the major in Great Britain, clear across an ocean of difference, and leagues wide of our actual facts.

I have always found this paper fair and just, and open to the voice of any one who sought to be just and fair. I do not wish to be thought wise, or learned, or even "smart." I do not claim to have all of the facts, but only a part of them. All I seek is justice and fairness. Therefore, I am confident that what I have written—unwelcome, at least, as it might naturally be thought to be, and perhaps a trifle presumptuous—will be given a place in the columns so long kept clean for truth and justice. I feel confident also that fair and temperate talk from our Western friends will be given place. And I sincerely hope that they will so bepester our editor with good-natured facts, and with clean and gentlemanly coursing meets, that in the end he will be obliged to reconsider his position—taken, in justice to him we should remember, very early in the day of inclosed coursing in this country—or until he will be obliged, at least, to place the coursing of our Western club on a level with that of the Eastern Coursing Club, both as regards its present form and as regards its probable future development in genuine sportsmanlike features.

I insist that nothing herein be twisted or construed as implying the least prejudice against the Eastern Coursing Club, whose growth our Western men all watch with friendly pleasure. I should hail that, as I should the Western club, as one more worthy sporting feature, and the more the merrier. There is no close communion in sportsmanship. There is no East nor West in sportsmanship, if it all be governed by fairness. But I insist that the friendship and charity we extend to the East be extended to the West; and I fear much that we shall indeed ere long have an East and a West, if we have so sharp writing as that of this well-meant but biting editorial, which I honestly believe to be unjust to a number of hearty good sportsmen, unjust to a clean and legitimate form of sport, and moreover, unjust to that spirit of liberty and fairness which prevails in this country more than it does or ever can in that Great Britain upon whose customs we are asked to model estimates of ours.

E. HOUGH.

Editor Forest and Stream:

Coursing in this country is, of course, in its infancy, and although four successful meetings have been held on the Kansas prairies, where there are no obstacles to interfere with the running, either in the form of an over-zealous society for preventing harmless sport or by a lack of good-running rabbits, the number of those who are interested who can attend the meetings is naturally very limited; and means must be devised by which the sport can be provided for those who are equally interested, but unable to leave for a two weeks' vacation, and which must necessarily be attended with considerable expense.

In order to bring about these results the National Coursing Association of Hutchinson, Kan., was organized, the object being to arrange a series of meetings in inclosed grounds in the large cities East and South. There would necessarily be considerable outlay of time and money to so perfect plans that an enterprise of this kind could be carried on successfully, and it could not be expected that any one with his senses intact would undertake to present to the public a full free exhibition; and it is only good common sense to think that fair return would be expected for the investment, and not in the least reflect on the managers as gamblers or to even have a suggestion of their being other than high toned gentlemen sportsmen. And in the three meetings that have been given under the management of the Association no improper conduct has been tolerated and no gambling encouraged; and, furthermore, there has never been a dollar made, but on the other hand, a loss has been sustained at every meeting.

It was understood that no gambling or book-making should be allowed in connection with the meetings, and that the sport should be given in its purity, and perfectly fair and honest contests rigidly upheld. Local dogs alone competed for the prizes in the Eastern cities, and points were accurately counted in every course.

That the exhibitions may yet be controlled by dishonorable parties we will admit, and then be run in the interest of the pool sellers; but to say that this was and is the object with those who have the management in hand is a little beyond the privilege of any journal, for reflection is cast on the motives of those interested; and if the individual who wrote the editorial in your very worthy journal could suggest a method that appears to him the proper way of popularizing coursing the Association will gladly listen, and if practical follow the advice, for the true motive has been thus far to bring their sport before the public with all its beauty and without loss. Surely it would be pleasant to work in connection with local clubs as suggested in the reports of the fall meetings, but this can be done only after showing them the interest that it at once stimulates in those who see the running.

There have endless difficulties arisen in organizing the American Coursing Club, even though it was and has been simply a private gentleman's club. One wanted to be this and another that, and all wanted to win or there was foul play somewhere. Another wanted to be considered the main organizer and so stated it all over the country. Jealousy and back-biting and selfishness have nearly broken up the club, and it will in time have to be reorganized, and this, too, a private club with no expectations of ever being more than self-sustaining. It is perfectly proper to ask and expect those who enjoy the entertainment to contribute a small sum for the privilege and for those who meet the expences and perform the labor to receive remuneration for the same. It would be a peculiar philanthropist indeed who would give all his time and pay the expenses of a coursing meeting for the benefit of the public. Coursing is a pleasant pastime and pleases the masses, and in time coursing meets will become as numerous as horse races, and we hope and pray that they may be kept pure and free from any suspicion of jockeying or jobbing, and this will certainly be the case as long as the writer takes an active part in the management.

G. IRWIN ROYCE.

INTER-STATE FIELD TRIALS.

[Special to Forest and Stream.]

LAFAYETTE, La., Jan. 13.—The first meeting of the Inter-State Field Trial Club began here to-day with 10 entries in the Members' Stake, 19 in the Derby and 25 in the All-Aged Stake. The judges are A. R. Starr, Judge Clegg and N. D. Wallace. There is a large and enthusiastic crowd present with quite a number of the best professional handlers. Among them are Rose, Titus, Stephenson, Avent, McCargo, Short and others. The birds are too plentiful and cover too thick to show off a high-class dog to the best advantage. In the first heat run there were eight bevies found. The weather is all that could be asked for to-day.

In the Members' Stake Omer Villere's pointer bitch Lillie Talbot beat R. M. Hutchins's pointer Spring, in a long and poor heat. F. F. Myles's setter Ben Hur beat Omer Villere's setter Ten, having a decided advantage in nearly all qualities. F. F. Myles's setter Bob McCargo beat R. W. Foster's setter Capt. Bethel T., both showing up badly. N. D. Wallace's setter Bang and J. K. Renaud's setter Ned White ran one hour, found three bevies, made one point, quite a number of flushes and chases, and were ordered up for want of merit—a just decision. F. F. Myles's setter Dimple beat Judge J. M. Thompson's setter Mark Twain in a close heat, but Dimple clearly had the advantage. This ended the first series. Ben Hur beat Lillie Talbot in a long heat that might have been decided in his favor much sooner. This ended the day's running with only three dogs left in for first, all belonging to Mr. F. F. Myles.

THE DERBY.

Out of 40 nominations in the Derby there were 19 filled, and they were drawn to run as follows:

F. F. V. (J. R. Purcell), liver and white pointer bitch (Flockfinder—Ion),
against
SIMONIDES (Rose & Madison), black, white and tan English setter dog (Gath's Hope—Gladys).

HOPE'S RAY (D. E. Rose), black, white and tan English setter dog (Gath's Hope—Lady May),
against
BANG (N. D. Wallace), black, white and tan English setter dog (Mark Twain—Lena R.).

TRANSIT (Thomas Blythe), liver and white pointer bitch (Beppo III.—Lass of Bow),
against
LILLIE TALBOT (Omer Villere), liver and white pointer bitch (imported).

NED WHITE (J. K. Renaud), white and ticked English setter dog (Mark Twain—Lena R.).
against
ANNIE F. (Memphis & Avent Kennels), black and white English setter bitch (Roderigo—Juno A.).

DAD WILSON'S BOY (J. Shelley Hudson), black, white and tan English setter dog (Dad Wilson—Dolly S.),
against
FLAKE OF FLOCKFINDER, JR., (J. R. Purcell), liver and white pointer dog (Don—Lady Spotswood).

DAD WILSON, JR. (J. Shelley Hudson), black, white and tan English setter dog (Dad Wilson—Lit),
against
HARRY C. (Memphis & Avent Kennels), black and white English setter dog (Roderigo—Countess House).

HEINIKEN (J. R. Purcell), liver and white pointer dog (Flockfinder—Ion),
against
FRED GATES (Hamilton & Jackson), black, white and tan English setter dog (Bob Gates—Lilly B.).

DAISY GIRL (G. R. Howse), black, white and tan English setter bitch (Count Paris—Nellie Cambridge),
against
ROYAL C. (Memphis & Avent Kennels), black, white and tan English setter dog (Roderigo—Countess House).

TRIBULATION (B. M. Stephenson), liver and white pointer dog (Beppo III.—Lass of Bow),
against
ROWDY ROD (Memphis & Avent Kennels), black and white English setter dog (Roderigo—Juno A.).

ROY WILSON (R. W. Wehrle), black, white and tan English setter dog (San Roy, Jr.—Roberta II.), *a bye.*

THE ALL-AGED SETTER STAKE.

There were thirty-two nominations for the All-Aged Stake, twenty-five of which filled. They were drawn to run as follows:

FRED GATES (Hamilton and Jackson), black, white and tan English setter dog (Bob Gates—Lilly B.),
against
DON'S DON (J. R. Purcell), liver and white pointer dog Don—Lady).

ROY WILSON (R. W. Wehrle), black, white and tan English setter dog (San Roy, Jr.—Roberta II.),
against
F. F. V. (J. R. Purcell), liver and white pointer bitch (Flockfinder—Ion).

STUBBLE (J. D. Sperry), black, white and tan Gordon setter dog (Malcolm—Dream II.),
against
BEN HUR (F. F. Myles), black, white and tan English setter dog (Paul Gladstone—Lottie).

TENNESSEE BOB (West Tennessee Kennels), black, white and tan English setter dog (Fred W.—Ida.),
against
CHANCE (Memphis & Avent Kennels), black and white English setter dog (Roderigo—Bo Peep).

DAISY'S HOPE (A. M. Young), orange and white setter bitch (Gath's Hope—Daisy F.),
against
BEPPO III. (Graphic Kennels), liver and white pointer dog (Priam—Meally).

HEINIKEN (J. R. Purcell), liver and white pointer bitch (Flockfinder—Ion),
against
TRANSIT (Thomas Blythe), liver and white pointer bitch (Beppo III.—Lass of Bow).

CAPT. BETHEL (R. W. Foster), white and black setter dog (Gordon—Blanche),
against
FLAKE OF FLOCKFINDER, JR. (J. R. Purcell) liver and white pointer bitch (Don—Lady Spotswood).

TENNESSEE CHARLEY (West Tennessee Kennels), black, white and tan English setter dog (Fred W.—Ida),
against
ROWDY ROD (Memphis & Avent Kennels), black and white English setter dog (Roderigo—Juno A.).

CORSAIR (West Tennessee Kennels), black, white and tan English setter dog (Dan Gladstone—Haidee),
against
SPRING (R. M. Hutchings), liver and white pointer dog (Mainspring—Curfew).

DAD WILSON, JR. (J. Shelly Hudson), black, white and tan English setter dog (Dad Wilson—Lit),
against
LADY ZEAL (John E. Gill), liver and white pointer bitch (Croxteth—Amine).

TOLEDO BLADE (J. D. Dager), black, white and tan English setter dog (Roderigo—Lillian),
against
JOY OF PRINCE WILLIAM (J. R. Purcell), liver and white pointer bitch (Flockfinder—Ion).

DIMPLE (F. F. Myles), black, white and tan setter bitch (Gordon—Blanche),
against
GALENA (J. E. Gill), liver and white pointer bitch (Trinket's Bang—Cremorne).

BLOOMO II. (Graphic Kennels), liver and white pointer bitch (Lad of Bow—Bloomo), *a bye.*

LAFAYETTE, La., Jan. 14.—It was stormy and rather disagreeable at times to-day for good work. The grounds were somewhat better than yesterday. While the Derby was running, under the same judges, new judges were selected to finish the Members' Stake, which resulted as follows: Ben Hur beat Bob McCargo. Ben Hur beat Dimple and won first money. Dimple beat Lillie Talbott and won second. Lillie Talbott was placed third. First and second prize winners are both English setters, and belong to F. F. Myles.

THE DERBY: Simonides beat F. F. V. in a closely contested heat. Hope's Ray beat Bang, both dogs about equal in natural qualities. Bang would not back. Transit beat Lillie Talbott. Lillie had a decided advantage in work on game and would have won if she had not broke shot and chased. Annie F. beat Ned White, outclassing him in nearly every respect. Dad Wilson's Boy and Flake of Flockfinder were run two hours without making a single point, Flock making two chases. Both dogs were ordered up for want of merit. Dad Wilson, Jr., and Harry C. ran a close heat for one hour and fifteen minutes, both doing very high class work; decidedly the best heat run during the trial. They will be put down again to-morrow morning.

EASTERN FIELD TRIALS CLUB MEETING.

THERE was no quorum present at the adjourned annual meeting of the Eastern Field Trials Club on Tuesday last, and the meeting was adjourned to Tuesday, Feb. 11, at the American Institute building. A full attendance is requested, as business of importance is to be transacted. All members who cannot be present should send their proxies to the secretary, Mr. W. A. Coster, Saratoga Springs, N. Y.

After the adjournment there was a meeting of the Board of Governors, President Donner in the chair. The members present were Messrs. Donner, Hitchcock, Dexter, Breese, Thayer, Lorillard, Duryea and Coster. The minutes of the previous meeting were read and approved. The committee on rules reported progress and were given further time. The committee on grounds also reported progress, and Mr F. R. Hitchcock was appointed to make arrangements for the use of suitable grounds for the club, and he will depar for the South on Thursday—to-day—for the purpose. The report of the treasurer showed a balance to the credit of the club of $1,597.46. Mr. E. W. Durkee, New York, was elected a member, and the resignations of Messrs. J. E. Thayer, E. R. Wharton, Arthur M. Hunter, J. G. Heckscher and Geo. B. Raymond were accepted. The secretary was instructed to notify all delinquents that unless their dues were paid by Feb. 11 their names would be dropped from the roll.

THE BEAGLE CLUB.—Winsted, Conn., Jan. 13.—All persons interested in the keeping or breeding of beagles are cordially invited to apply for admission to membership in this club. Our dues are but $2 a year. Copies of the constitution and by-laws, and also the standard may be had by addressing Frank D. Hallett, Secretary.

THE APOLLO STAKES.—New York, Jan. 14.—*Editor Forest and Stream:* Owing to the Albany Kennel Club not having a show this year, the Apollo stakes have been transferred to be judged at Rochester.—H. P. FROTHINGHAM, Sec'y and Treas.

DOGS OF THE DAY.

MR. J. A. LONG, of St. Louis, who has during the past six years purchased some choicely-bred collies from English breeders, has just secured a very important addition to his kennel in the bitch Matchless. When in England, in November, 1884, I saw Matchless at Mr. Boddington's kennels. She was then eight months old, and I did not see a better bitch during the three weeks I spent there. Mr. Boddington said he thought he would win with her at the Birmingham show, then only two weeks off, and it was no surprise to me that he did, and to hear that Mr. Pirie, of London, had claimed her at her catalogue price of £100. Very unfortunately she caught distemper, and this was followed by chorea, which put a stop to her show career. She was bred to Eclipse, and after Mr. Pirie had given away the runt of the litter the diseases of puppyhood carried off all but one of the remainder, I believe. The runt turned out well, and as Pitch Dark created quite a sensation when she was shown at the Crystal Palace. She soon went off, however, and was consigned to the ranks of the brood bitches, being eventually purchased by the Chestnut Hill Kennels, where she now is. I believe she came over in whelp to Caractacus, but I am trusting to memory in saying so.

Matchless is by Rutland out of Bess, and she out of Nesta, the greatest of that great trio of brood bitches—champion Lorna Doone, Nesta and Floss—that came from the union of Duncan and Bess. The pedigree of Bess we know, and it is only another illustration of the wonderful excellence of the Carlyle blood in the female line, but Duncan is a blank. I have seen it stated somewhere or another that a stolen service figured in his case and that put a stop to the publication of any pedigree. As I am interested in this strain I have often threatened to myself to write to Mr. Wheeler, of Birmingham, who bred Bess to Duncan, but I suppose I will procrastinate till Mr. Wheeler or I will be beyond the reach of the letter carrier.

Mr. Long had Matchless bred to Eclipse before she sailed, in hopes of getting another Pitch Dark, but I would rather have tried Sefton for a Metchley Wonder, as it was out of a bitch bred very similar to her that Mr. Megson's crack came—Minnie, by Loafer out of Catrine (one of the Bess family).

A question was propounded to me the other day which is of interest to exhibitors and clubs. It was this: "The ——— Club is not going to hold a show here this year, and some of the dog owners want to get up a club that will hold a show. We want to hold it under A. K. C. rules and would like to know whether we can do so, and what we ought to do to become a member of the A. K. C." My advice was to communicate with the local club and get from it a statement that it would not hold a show. Then organize a club, and with the application to the A. K. C. for membership file the letter from the other club.

The A. K. C. very properly declined to elect another club in San Francisco without hearing from the original member as to whether it had any objection to make. It will be noted, however, that the A. K. C. did not positively decline to do so, it did not at once say, "No, we cannot do so, we have a member there already." By its action it admitted that two clubs might be elected from the same city providing there was no objection made against such a course. This was a very proper view to take I thought, and following up the same line it would seem to me that the A. K. C. delegates in taking action upon such a case as I have stated would give due weight to the present member declining to hold a show. The object of the A. K. C. is to encourage shows, and it would not be doing so if it stuck to a non-showing member and kept out a club willing to get up an exhibition.

It is right in this connection that my idea of recognizing shows without electing a club to membership would be so beneficial. I am no advocate and never have been of this universal election to membership in the A. K. C., though voting for such elections as the only method of getting shows recognized and thus benefitting exhibitors. It is not so easy to formulate a rule that would cover the ground completely and satisfactorily. One great stumbling block in the way of the A. K. C. has been the framing of badly prepared rules and without a proper knowledge of the scope they cover. When a rule is passed by the A. K. C., or by any club, it should be framed carefully and passed understandingly, so as to avoid the necessity of rescinding or amending it within a month or two.

The poll of membership of the A. K. C. is full of practically dead clubs, and it was a pity that old rule was done away with which provided for the dropping of clubs which did not hold a show within a certain limit of time. Quite a number of these will probably drop out when called upon to pay their 1890 assessments. I believe the point of a quorum was raised a year ago, and the chair decided a majority was required. With such a membership as the A. K. C. now has, a majority is out of the question, so I suppose the whole business of the club is illegal if it comes to a hair-splitting technicality. But I am not of that way of thinking at all.

Speaking of illegality reminds me of Mr. Peshall's having pointed out that the passing of the amendments to the dog show rules by the executive committee at its last meeting was illegal. The charge is correct. However, in looking over the *Kennel Gazette* for January last, I found in it the report of a meeting held on Dec. 8, at which a number of amendments were made to the dog show rules. The status of this meeting was thus defined, as soon as the minutes of the previous quarterly meeting of the executive committee and the treasurer's report had been read:

"The President—I should have stated, in calling this meeting to order, that through inadvertence in the call for this meeting it was stated to be the regular annual meeting. This confusion arose from the fact that the 6th of December has usually been our red-letter day, and has been the important meeting of the year. This should have been called as the regular quarterly meeting."

Mr. Peshall was called upon for an explanation of my oversight in connection with the illegal business of last December, and I plead guilty with a petition for clemency on the score of Rule XIX. of the constitution having been enacted while I was not a member of the executive committee. It will now be in order for Mr. Peshall to explain how it was that within a short time of his assisting in passing Rule XIX. he assisted in passing amendments in violation of that rule.

The Westminster Kennel Club has done the handsome thing by the Spaniel Club. The latter had to give $25 to the Westminster Kennel Club for having adopted "Classification No. 1" and appointing an approved judge, but at the late meeting of the Spaniel Club committee, at which the payment of the $25 was approved, it was suggested that the W. K. C. might possibly donate the $25 to the challenge cup fund. Mr. A. C. Wilmerding interviewed Mr. Thomas H. Terry on the subject, and the latter gentleman has notified the Spaniel Club secretary that the W. K. C. will do as requested.

The Spaniel Club, though the oldest of the specialty clubs in the country, is not a wealthy affair; but, considering the amount received from dues, the work done by the club deserves every commendation. It will be a bit of uphill pushing to get funds for a cup, and even when that is done, just as hard work is still ahead in deciding the destination of the cup. The club takes care of all varieties of sporting spaniels, and wishes to offer a cup on conditions which will be satisfactory to all members. Irish water spaniels and Clumber spaniels are not in the running, and that leaves field spaniels and cockers with about equal claims. The desire of the club committee is to have two cups, for spaniels over and under 28lbs.; but the trouble will be to place the first of these cups.

Mr. F. R. Hitchcock is stated to have given up his pointers in order to make room for English setters. If that is the case, it is rather a facer for the short-coated division, as we must conclude that Mr. Hitchcock arrived at his determination after witnessing the season's field trials. As I am neither a setter nor a pointer man, I am not taking sides, but simply stating what he who runs may read. The course taken by Mr. Hitchcock has been followed by that staunch supporter of the "red dogs," Mr. Charles T. Thompson, of Philadelphia, who has disposed of Desmond II. and the champion bitches Mollie Bawn and Nellie to the Item Kennels, of Bethlehem, Pa. It is Mr. Thompson's intention, I believe, to try the English setters; but this information I get second-hand, though from an usually reliable source.

The Item Kennels will make a good showing this year, and money is not being spared in the purchasing of dogs the proprietors take a fancy to. I am betraying no secret, although it is not very widely known, when I say that Mr. Weiss and Mr. Charles Pharo are the Item Kennels. The former gentleman is the financial man and Mr. Pharo the working partner. I do not want that sentence to be misunderstood and connected with the old story of money and experience, for Mr. Weiss is anything but lacking in experience, but he has plenty of more important business to attend to than the immediate management of the kennels, and in Mr. Pharo he has a most enthusiastic fancier, and one who has shown good judgment in selecting dogs to fill the kennel. I am only waiting to receive word that the new kennels at Bethlehem are ready for the inspection of visitors when I will make a trip to the home of Pharo's host, at the head of which, I suppose it is no error to say, comes Sir Tatton.

Men may come and men may go, but shows go on for ever. Every one must remember the prize-sweeping kennel of English, Irish and Gordon setters and pointers Mr. A. H. Moore, of Philadelphia, had eight years ago. Thunder, Berkley, Leo II., Bob, Donald, etc. Well, I should not be at all surprised to see Mr. Moore's name once more figuring in the catalogues. He has recently purchased a large farm at Colmar, on the Doylestown branch of the North Pennsylvania Railroad, and about an hour's ride from the city. This he has named Cloverdell Stock Farm. He has there a splendid collection of trotting stock, headed by Mambrino Dudley, which he bought at the Secretary of the Navy's sale of the Marshland stud. Mr. Moore gave $8,000 for this horse and at that price I believe he was the cheapest trotting sire sold last year, for as prices go now $25,000 would be a low figure for him. But I did not start out to write horse, nor will your dog readers thank me much, I fear, for adding that at Cloverdell the collection of trotting mares would be hard to duplicate anywhere. Then there is chewing the cud in the spacious barn the best herd of Jerseys in the country. This paragraph is getting very mush-like, with the business part all at one end, and here it is. When at Cloverdell on Monday I saw a range of kennels. Now, Mr. Moore doesn't build kennels simply to look at; those kennels will be occupied, and when Mr. Moore gets through giving from $2,000 to $5,000 for brood mares and $1,000 to $2,000 for Jerseys we will hear of dogs at Cloverdell, and the lights of Cloverdell will not be hid under a bushel, but assisting in beautifying Spratts benching.

The Squire is not to leave England till Feb. 1. Such is the advertisement in the English papers. That seems to be drawing it very fine if there is any intention of showing him at New York, for he is not likely to arrive before Feb. 10, and may not be here until the judging at New York is over. The explanation may probably be that Mr. Harrison does not want The Squire to interfere with Maney Trefoil qualifying at New York for the challenge class. I saw him on New Year's day, and he was looking better than any thing at Chestnut Hill Kennels, and that was saying a good deal, for Mr. Jarrett somehow never has a dog out of condition, barring the necessary out of coat. This has been a particularly hard winter on coat growing, but Maney Trefoil is, if anything, in better coat than when he came from England. I didn't see the new entry of youngsters, and if I had it would be a breach of good manners to say anything. I was invited to go, but as both Jarrett and I had the grip I declined, and we sat by the stove and talked dog while not otherwise engaged with our snochterdichters. J. W.

THE POINTER CLUB.

NEW YORK, Jan. 6.—*Editor Forest and Stream:* The postponed meeting of the Executive Board of the Pointer Club of America was held at 44 Broadway, New York, Jan. 6. Meeting called to order at 2 P. M. by President Wise. Present, Messrs. Wise, Hitchcock, Anthony, Heath, Swain, Arnold and La Rue. Report of treasurer, showing receipts $314.34, expenditures $17.60, balance cash on hand $296.74, was presented and adopted. Resignation of G. W. Lovell was read and accepted. Applications for membership received from Westminster Kennel Club and Hempstead Farm Co. They were duly elected by ballot.

The following distribution of special prizes was agreed upon:

Boston Show, 1890.—Pointer Club Produce Stakes, $50 cash, for pointer puppies whelped on and after Jan. 1, 1889. Blanks will be furnished by the secretary upon application. Entries close at the same time as the regular entries of said show. Open to all. $10 for best pointer dog; $10 for best pointer bitch that has been placed or won a heat at any field trial run in America. Open to members.

Chicago Show, 1890.—$10 for best pointer dog or bitch exhibited and owned by a member of the Pointer Club. American Field Pointer Cup (value $100), under the rules governing same. Open to all.

New York Show, 1890.—$10 for best pointer stud dog shown with two of his get, the latter to be not over 3yrs. of age, and not necessarily owned by one person. $10 for best brood bitch shown with two of her progeny (same conditions as stud dog prize). GEO. W. LA RUE, Sec. and Treas.

NOT REGISTERED.—Clinton, Mass., June 7.—*Editor Forest and Stream:* Kindly inform me what the register number of my Gordon setter Rab II. is. He was winner in puppy class, Boston, '89, second prize; Worcester, '89, third. Sire, Rab; dam, Nora (A.K.R. 5009). Probably as the property of Mr. Buchan, the breeder.—G. W. LANGDON. [Rab II., as well as a number of other dogs shown at the Worcester show, are not registered. The Secretary of the A. K. C. should attend to this.]

A LARGE ST. BERNARD PUPPY.—Mr. Geo. S. Taylor, of Portland, Oregon, writes that he has a St. Bernard puppy that weighed 121lbs. when seven months old.

A TRAGEDY OF THE FIRST SNOW.

IT happened sixteen years ago, yet the whole stands out in memory clear as an event of yesterday. I stand in the doorway of what in summer is a kitchen, a woodshed in winter. It is early November, and early morning. At dusk the evening before it began to snow in a damp, chill air. Now the air is dry, almost balmy. Not a cloud is floating. From end to end the deep, narrow valley is vaulted with the brightest blue (whenever I meet the phrase, "Heavens own blue," I think of that morning sky). The ground is white, covered to the depth of several inches, soft and immaculate. There is no glare, yet the eye tires while it roams afield, and it finds no relief when it turns to the sun-bathed blue above.

I was about to return to the breakfast table when I detected the bay of hounds, two—three. They were approaching, far up the western slope. For a few minutes they mouthed their perplexity in a piece of woods on the southeast. At length the tangle was left behind, and with a loud bay of triumph the leader burst into the clearing. He was closely followed by another, and ten or fifteen rods in the rear a third hound, fat and lazy, came floundering along. They tumbled over the heavy log fence. They skirted the wood across one broad field, and then went plunging through the fringe where the forest hung lower down the slope.

The hounds had disappeared from view, but their short, impatient yelps betokened a freshening scent. They were now slowely making their way down the slope in the woods on the north of the clearing. Again I was on the point of turning to go in to breakfast when I perceived a large red fox emerging from the woods. He trotted out into the field a little way, and paused in a listening attitude. An instant later he made for a great flat rock, ran around it and then sprang upon it, ran around the margin and leaped off. He then trotted diagonally up the hill to a large chestnut tree, made another circle and again leaped. It is easy to account for the slow progess of the hounds in the timber. His foxship now leisurely crossed the field to a clump of bushes, pausing every few seconds to listen. After maneuvering among the bushes he set up the hill along the fence for a few rods, crossed into the adjoining field and came down on the other side almost to the clump. He then crossed the second field to a deep, oval-shaped depression, where he disappeared. Sumac and larger trees abounded in the depression, and the fox remained there some time. I fancied that I knew what he was doing. Finally he emerged at the lower end and trotted up hill, around the margin of the pit. He circled about an oak just above it, took the usual leap and came down almost to the point where he had entered the pit. He then struck a bee-line across fields for the woods, and entered them forty rods above where he came out. He had doubled on the hounds and was off for his den, but before going he had cut them out a nice bit of work. It was a beautiful performance.

Brute against brute, vulpine cunning had triumphed; but at this stage another actor appeared. Soon after the fox went back into the woods the dogs emerged on his trail below. At the same time a man approached it. He allowed the two foremost to pass before advancing to the trail, but seized the third hound, snapped a leash on him and hastily led him up the hill. Arriving at the trail he set the dog free. The latter with a savage yelp of delight bounded into the woods. The man shouted to a companion, seated in a wagon in the road below. Thereupon the latter whipped up his horses. I understood the significance of this act. A half mile above the clearing extended to the brow of the ridge, and in all probability the fox would essay to cross these fields. It was the design of the man with the team to intercept him. I saw him tie his horses at roadside, lift his gun out of the wagon, go across the fields and take a stand in a fence corner. I watched him until my eyes ached. At last I saw a puff of smoke, and heard a rifle crack. I thought that I discovered a dark object lying in the snow up the hillside. The man advanced and raised it up, and then I knew that reynard was dead. B. F. HENLEY.

NEW YORK DOG SHOW.

NEW YORK, Jan. 10.—*Editor Forest and Stream:* The following railway, steamship and express companies have replied favorably to our application regarding the carriage of dogs for exhibition at our coming show:

The Adams, American, Wells, Fargo & Co., United States, Long Island and New York & Boston Express Companies will return dogs free on which their usual rates have been prepaid one way.

The Stonington Line will return dogs free.

The New York, New Haven & Hartford, the Long Island, New York & Northern, New York, Ontario & Western and Delaware, Lackawana & Western Railway Companies will carry dogs free when accompanied by their owners or caretakers. The N. Y. C. & H. R. and the Pennsylvania Railway Companies will carry three dogs free.

Other railway companies to be heard from.

JAS. MORTIMER, Supt.

GORDONS AT NEW YORK.—New York, Jan. 13.—*Editor Forest and Stream:* Some lovers of the Gordon setter intend to provide a competent man at the New York show to look, especially and only, after the comfort and safety of the Gordon setters on exhibition there. This man will be in addition to the regular care furnished by the superintendent of the show. The same persons hereby offer cash prizes to the amount of $40, viz., $10 each for the Gordon setter bitch and dog winning second in the open class, $5 each for the best Gordon setter dog and bitch winning third in the open class, $5 each for the best Gordon setter dog and bitch puppy. This, with the prizes offered by the Westminster Kennel Club and Dr. John H. Meyer, makes $315 in all ($250 of which is cash) offered at the New York show in the various Gordon classes, and should draw out a fine exhibit of our beautiful setter. Entries close Jan. 27.—GORDON SETTER.

GORDON SETTER CLUB.—Baltimore, Md., Jan. 11.—*Editor Forest and Stream:* Please publish the following request. This is to give notice that a general meeting of the American Gordon Setter Club will be held at the New York show, Feb. 12, at 8 P. M., by request of ten members to the president, and which he has granted.—I. T. NORRIS, Sec'y A. G. S. C. *Editor Forest and Stream:* A petition requesting a meeting to be called at the New York show Feb. 12, 1890, has been forwarded to the president, Mr. Malcolm, bearing the signatures of thirteen (13) members. All members are urgently requested to be present, as business of importance will be brought before the meeting.—A MEMBER.

SPECIAL PRIZES AT NEW YORK.—In addition to the special prizes noted elsewhere, that will be offered at the New York dog show, the Beagle Club will give a suitable collar each to the best beagle dog and bitch owned by a member of the club. The American Pet Dog Club offers a silver cup for the best pug dog, also one for the best pug bitch in the open classes. Open to members only. A silver cup, value $25, is offered for the best couple of deerhounds in the open classes owned by one exhibitor. The pug breeder's challenge cup, offered by Dr. M. H. Cryer, will also be competed for. Other valuable specials are promised that will be duly announced.

MR. F. R. HITCHCOCK has been invited to judge pointers at the Rochester show.

SPANIEL CLUB SWEEPSTAKES.—The sweepstakes of the Spaniel Club of America for 1890 will be decided at the New York show. Sweepstakes for field spaniels whelped in 1889, entry $3 each, with $10 added by the club. Forty per cent. to winner, 30 per cent. to breeder of winner, 20 per cent. to second and 10 per cent. to third. Sweepstakes for cocker spaniels the same. All entries to be made with the treasurer of the Spaniel Club, Mr. William West, 110 North Second street, Philadelphia, Pa., by Jan. 27. All must be entered in their regular classes at the show.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Charmer. By C I. Blackford, Bellefonte, Pa., for black, white and tan beagle bitch, whelped April 30, 1889, by Rock II. (Rustler—Vic) out of Topsy (Ring—Bell).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Belle Randolph—Spot Dash. Fleet View & Reading Pointer Kennels' (Lynn and Reading, Mass.) pointer bitch Belle Randolph (Sam—Juno III.) to their Spot Dash (Sir Philip Sydney—Topsy), Jan. 5.

Beauty—Spot Dash. O. J. Stoddard's (Lynn, Mass.) pointer bitch Beauty (Bonnie—Bess) to Fleet View & Reading Pointer Kennels' Spot Dash (Sir Philip Sydney—Topsy), Dec. 11.

Taffy—Duke of Vernon. L. Gardner's (Mt. Vernon, N.Y.) pointer bitch Taffy (imported Pilate—Fairy II.) to his Duke of Vernon (Glendale—Spotless), Jan. 7.

Nellie Belton—Jerry. Forest Kennels' (Groton, N. Y.) English setter bitch Nellie Belton (Warwick Albert—Princess Belton) to D. Francis's Jerry (Rex Gladstone—Mina), Jan. 1.

Galatea—Rogers. W. Tallman's (New York) English setter bitch Galatea (Mack B.—Chica) to L. Gardner's Roger (Count Noble—Queen Meg), Dec. 30.

Princess Newton—Black Prince. Richards & Tatham's (New York) spaniel bitch Princess Newton (Newton Abbot Lord—Lady Princess) to A. C. Wilmerding's champion Black Prince, Dec. 29.

Chloe—Obo II. R. S. Smellie's (Toronto, Can.) spaniel bitch Chloe to J. P. Willey's champion Obo II., Jan. 11.

Sis F.—Obo II. Henry Hasbrouck's (Poughkeepsie, N. Y.) cocker spaniel bitch Sis F. to J. P. Willey's champion Obo II., November, 1889.

Shino—Jersey. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel bitch champion Shina (champion Obo II.—Blackie III.) to his Jersey (champion Obo II.—Darkie), December, 1889.

Miss Ginger—Jersey. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel bitch Miss Ginger (champion Obo II.—Blackie III.) to his Jersey (champion Obo II.—Darkie), December, 1889.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Velda W. F. M. Shelley's (Sheridan, N. Y.) beagle bitch Velda W. (Cameron's Racket—Pussie), Nov. 2, seven (three dogs), by his Speculation (Ringwood—imported Fanny).

Say. Fleet View & Reading Pointer Kennels' (Lynn and Reading, Mass.) pointer bitch Say (imported Bang—Belle Rita), Nov. 25, eight (four dogs), by their Spot Dash (Sir Philip Sydney—Topsy).

Duchess of Heathfield. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Recluse), Jan. 3, seven (three dogs), by E. H. Moore's Ben Lomond).

Marcella Gladstone. F. M. Shelley's (Sheridan, N. Y.) English setter bitch Marcella Gladstone (Gladstone's Mark—Chautauqua Belle), Jan. 6, eight (seven dogs), by his Chautauqua King (Knight of Snowden—Lady Brighton).

Hazel Obo. Wm. Barnes's (Manayunk, Pa.) cocker spaniel bitch Hazel Obo. Dec. 19, four (three dogs), by A. C. Wilmerding's champion Doc; three black dogs, one red bitch.

Lady Dido. W. D. Reid's (Elmira, N. Y.) Yorkshire terrier bitch Lady Dido (Prince—Flora), Jan. 2, three (one dog), by P. H. Coombs's Bradford Barry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Sancho. White and liver pointer dog, age not given, by Hector out of Old Lou, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to Mr. Chaffin, Boston, Mass.

Dash and Sir Hector. White and liver pointer dogs, whelped May 11, 1887, by Hector out of Say, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to S. O. Warren, Boston, Mass.

Tiny White. Liver and white pointer dog, whelped October, 1887, by Tammany out of Juno II., by F. R. Hitchcock, New York, to Hempstead Farm Kennels, Hempstead, N. Y.

Stella. Liver and white pointer bitch, 2yrs. old, by Naso of Kippen out of Borki, by F. R. Hitchcock, New York, to Hempstead Farm Hennels, Hempstead, N. Y.

Woolton Game. Liver and white pointer bitch, 2yrs. old, by Gough out of Larkspur, by F. R. Hitchcock, New York, to Hempstead Farm Kennels, Hempstead, N. Y.

Duke of Hessen. Liver and white pointer dog, 4½yrs. old, by Luck of Hessen out of Blarney, by F. R. Hitchcock, New York, to Hempstead Farm Kennels, Hempstead, N. Y.

Flirt. Liver and white pointer bitch, whelped April, 1888, by Mainspring out of Merry Lass, by O. W. Donner, Boston, Mass., to A. Morton, New York.

Sam C. Lemon and white English setter dog, whelped May 8, 1888, by King Noble out of Cricket, by J. I. Case, Jr., Racine, Wis., to H. C. Glover, New York.

Annie F. Black and white English setter bitch, whelped Jan. 6, 1888, by Roderigo out of Juno A., by Memphis & Avent Kennels, Memphis, Tenn., to F. R. Hitchcock, New York.

Princess Newton. Black and tan spaniel bitch, age not given, by Newton Abbot Lord out of Lady Princess, by A. C. Wilmerding, New York, to Richards & Tatham, same place.

Walkill Bess. Black cocker spaniel bitch, whelped June, 1886, by Walkill Silk out of Walkill Blanche, by Theo. J. Hock, Rome, N. Y., to F. P. Jobes, Honeoye Falls, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. R. G., Ellicott City.—Distemper takes various forms, and when an animal is very much run down sores and abscesses are liable to appear. Give a 2-grain pill of the citrate of iron and quinine three times daily concealed in a morsel of meat. Give a teaspoon of syrup of buckthorn each morning. Put 5 drops of Fowler's solution of arsenic in the food each day. Exercise regularly and do not feed much meat.

T. S., Brooklyn.—I have a hound that is troubled with a dry cough; he keeps continually coughing, but brings nothing up. He has been that way for about three weeks. He is about 7 years old. Ans.

℞ Creasote	gtt. xii
Glycerin	ʒi

Mix. Fit. capsules, No. 6

Sig. One three times daily, hidden in a morsel of meat. Give 5grs. quinine night and morning for a week.

F. R. B.—My Irish setter, medium size, has tapeworm. He has passed portions, lyd. and 1½yds. on two occasions; but the head still remains in him. He has always been fed on meal and milk. Has a ravenous appetite, but is very thin. Ans. Purge the dog with large dose (2 tablespoons) castor oil. Feed only milk for 24 hours prior to giving vermifuge. Give capsule of oleoresin of filix mas, 10 drops in capsule, repeat in two hours, and follow this in a few hours with a second purge. Powdered areca nut, 60grs., may be substituted. It should be given in large pill.

A. L. R., Gt. Barrington.—I have an English setter 2½ years old. About nine months ago he commenced to have fits, sometimes has four or five a day, and then goes from one week to six or seven without having any. He always has them in the morning, and falls down, struggles, froths at the mouth, and when he gets up appears dizzy; does not try to run away. Is stupid for a day or two and then seems as well as ever. He is in good condition, is smart and hunted well, except just after a fit. Do you think there is any hope of his getting over it? If so what can I do for him? I feed him on corn meal mush and milk and scraps from the table. Ans. Keep bowels open with syrup of buckthorn, one teaspoon each day. Give 2gr. pill of citrate of iron and strychnine three times daily. Put 5 drops of Fowler's solution in the food. Exercise regularly.

V. B. M.—1. I have a setter dog about 2yrs. old that now and then is subject to a wheezing cough. A dose of castor oil generally relieves him, but it—the cough—comes back in about six weeks. Can you give me a better remedy than the oil? 2. Are animal oils, such as lard and sperm, as good for gun oiling purposes as mineral oils, such as vaseline and cosmoline. Do the animal oils possess properties injurious to guns. Ans. 1.

℞ Creasote	5ss.
Glycerine	ʒii.
Spts. Frumenti	ʒii.

Mix. Sig. Teaspoon in wine glass of water three times daily. Ans. 2. No. Fine machine oil is a lard product. Vaseline is commended because of its handy shape and general accessibility.

MOPANG, Providence, R. I.—A six-months-old pointer has symptoms of the mange. Some time ago a spot about the size of a 10-cent piece appeared over each eye. The hair fell off and the flesh was much inflamed and swollen. Previous to this the pup was taken frequently with vomiting. Thought it might have been caused by his shedding teeth, but since the spots came he has been taken in the same way twice. I treated as follows: Washed spots in carbolic soap and applied an ointment called carbolated petroleum. Spots continue to grow larger, but are not as irritable. Have fed three times daily and given fair amount of exercise. Have also given sulphur and lard. Pup is rather fat, but in excellent spirits. Ans. Syrup of buckthorn, teaspoon each morning for three days; 2-grain quinine pill morning and evening concealed in a bit of meat; 4 drops of Fowler's solution of arsenic twice daily in the food. Rub a little zinc oxide into the spots each day.

Rifle and Trap Shooting.

RANGE AND GALLERY.

PHILADELPHIA, Jan. 10.—The rifle match between Mrs. Kennedy ("Mexis") and Lieut. Geo. Coulson, Inspector of Rifle Practice of First Regt., N. G. P., for $50 a side, 100 targets, standard American, to be shot in 25m. each at 25yds., came off this evening. Lieut. Coulston won by 105 points. It is claimed that "Mexis" was somewhat indisposed, but as she was at the gallery practicing each evening preceding the match, there is not much in that excuse for defeat. Friends of both contestants were on hand early and fairly packed the gallery of D. Wray, 1402 Ridge avenue. The following well-known gentlemen were selected: Referee and stakeholder, Wm. Hildebrand Fitzgerald. Judge for "Mexis," W. W. Ulrich; scorer, W. Kennedy; timekeeper, Ed. Cole. Judge for Lieut. Coulston, J. F. Shonert; scorer, H. J. Mehard; timekeeper, J. J. Mountjoy. All preliminaries being settled, "Mexis" having won the choice took her position at firing point promptly at 4:05 P.M. Time was called and she fired her first shot.

First	5	minutes								29	shots.
Second	5	"								21	"
Third	5	"								18	"
Fourth	5	"								23	"
Last	2	"	33⅓s.							9—100	

"Mexis's" time was 22m. 33⅓s., deducting 2m. and 30s. for cleaning rifle four times, making actual time of shooting 100 shots 20m. 3⅓s. "Mexis" used a Stevens rifle and U. M. C. short .22cal. cartridges. No coaching or spotting of shots was allowed. The following is the lady's score in detail:

Target	1 to 10			7	7	10	9	6	7	9	10	9	10—84
	10 to 20			10	9	7	5	5	9	9	10	10	9—83
	20 to 30			9	8	7	7	9	8	9	6	9	6—78
	30 to 40			7	10	9	8	8	5	7	5	10	8—79
	40 to 50			10	5	6	6	6	8	10	7	7	8—73
	50 to 60			7	8	8	10	10	8	6	6	8	3—80
	60 to 70			8	5	8	8	7	6	6	9	10	10—77
	70 to 80			7	6	6	6	9	8	8	9	10	9—78
	80 to 90			9	9	8	8	8	7	7	9	8	10—83
	90 to 100			10	8	10	8	7	8	6	6	7	10—80—795

At 9:40 P. M. time was called and Lieut. Coulston fired his first shot, and at 10:03:20 he finished the 100 shots as follows:

First	5	minutes		29	shots.
Second	5	"		21	"
Third	5	"		20	"
Fourth	5	"		18	"
Last	3	"	29sec.	12—100	

Lieut. Coulston's time was 23min. 29sec.; he used the celebrated Wurfflein rifle and U. M. C. .22cal. short cartridge. Deducting 2min. from his time for resting and wiping the moisture from his glasses, made his actual time of shooting the 100 shoots 21min. and 29sec. Lieut. Coulston did not clean his rifle during the contest. The following is his score in detail:

Target	1 to 10			7	8	10	8	7	10	10	6	9	9—84
	10 to 20			9	8	8	10	8	9	10	8	8	9—87
	20 to 30			8	10	10	9	10	9	10	8	8	9—89
	30 to 40			7	10	10	10	8	10	10	8	10	9—92
	40 to 50			9	10	8	9	7	10	10	10	10	10—92
	50 to 60			9	9	10	8	9	10	10	9	9	9—92
	60 to 70			10	10	9	8	8	10	10	10	9	8—92
	70 to 80			10	9	8	8	8	10	9	9	10	10	91
	80 to 90			10	10	10	7	10	9	9	9	7	9—90
	90 to 100			9	7	10	9	10	7	10	9	10	10—91—900

An improved target box was used in this match—the invention of Theodore F. Shonert, Co. H, First Regiment Drum Corps. This box is made in substantial style, cased inside with steel and iron; the backplate is a heavy steel plate, such as is used by safe manufacturers. There is a hinge door, and a hole cut in the center of the door extends to the figure 7 on the Reduced Standard American Target. A ledge below the top of the door shows fixed pins, on which the target is placed. A neatly arranged drawer pulls out from the lower part of the box, to remove the accumulation of metal in a prolonged contest. The Improved Shonert Target Box is compact, substantial and a decided and admirable advance on any invention of the kind offered for consideration. Its merits are such that it deserves to receive general recognition. It is estimated by Mr. Shonert that in the course of ordinary shooting such a box will last for a considerable length of time before the renewal of the hinged front of the box will become necessary, while in the saving of lead alone it pays for itself.—SPRINGFIELD.

WILMINGTON, Del., Jan. 6.—Although the weather looked gloomy enough, it turned out very favorable for target shooting at Healdmoor Rifle Range, to-day. The light rains during the morning caused the spirits of local riflemen to lower rapidly, and their elongated faces betrayed their fear of disappointment in being deprived of their usual weekly out-door sport. But by noon the clouds thinned and produced a mellow, leaden light, which is just the thing a marksman likes to meet with. This lasted all of the afternoon and Healdmoor Rifle Range echoed with the sharp crack of the rifle until dark set in. Everybody was a little "out of tone" and no one seemed to get just the right "grip," but some fair scores were made in spite of the kicking each one wanted to give himself for an occasional wild shot. Following are the scores, Standard target off-hand:

Pistol Match, 50yds.

H Simpson	9	8	8	10	10	10	10	7	10	9—91
W H Johnson	10	9	10	9	8	6	6	8	8	8—85
W H Floyd	7	8	9	7	9	10	10	10	7	7—84
J Harvey	8	9	7	10	8	10	8	8	9	7—84
G Edwards	10	8	9	9	7	5	8	9	6	7—78
H Williams	10	7	8	9	6	7	10	7	5	7—76

Diamond State Match, 200yds.

J F McCafferty	10	9	7	9	8	10	10	5	6	8—82
J Scott	6	9	7	9	8	8	7	7	7	9—75
H Simpson	5	10	8	4	6	8	8	10	5	9—73
C Heinel, Sr.	8	6	5	4	6	6	10	7	9	5—66
A J Leitch (mil)	5	6	7	4	3	9	7	4	10	6—61
F James	7	9	6	4	7	8	5	8	6	8—65
H Edwards	5	7	7	3	6	8	7	6	7	8—64
C Smith (mil)	7	4	9	4	7	5	4	3	3	2—48
J Adams (mil.)	1	3	6	8	4	5	5	4	6	6—48

Military Match. Creedmoor Target, 200yds.

Sergt A J Leitch	4	4	4	4	3	5	4	5	5	4—41
Pvt J Adams	2	3	4	5	4	4	4	4	4	4—38
Corp C Smith	3	3	4	3	4	5	4	4	4	4—38
Sergt A Jackson	4	2	2	3	5	3	4	4	4	4—35

The Wilmington Pistol Club met for weekly practice at their gallery to-day. Several members were suffering from the grip, which interfered materially with the scores, or prevented them from shooting altogether. Following are the scores at 12½yds. Standard target, reduced in proportion from 50yds.:

H Simpson	10	8	10	10	8	9	10	7	10	10—92
J Naudain	10	10	9	8	10	6	7	10	8	8—86
W H Johnson	10	7	8	9	6	10	10	8	9	7—84
W Floyd	10	10	9	9	9	10	5	5	7	8—83
A J Leitch	9	8	6	10	8	9	7	9	8	7—81
H Garland	8	10	5	9	6	6	7	8	7	9—78
H Foster	9	8	7	9	9	7	6	7	5	10—77
H T Price	7	4	6	6	8	5	7	4	6	3—56

PHILADELPHIA, Jan. 9.—At the regular weekly meeting of the Gaiety Rifle and Pistol Club, held this evening at their headquarters, 818 South street, Mr. J. Reifsnyder was declared the winner of the gold medal, and Mr. T. A. Pointer won the silver medal. The Wurfflein gold badge was won by E. T. Travis, and T. A. Pointer took the silver medal, while Mr. J. A. Pollock, having no opposition, was entitled to the bronze medal. C. Beutelspacher was again the winner of the leather prize. The official scores on standard American targets (reduced), 30yds. rise, Wurfflein rifles, plain open sights, off-hand, is as follows:

First Class.

J J Mountjoy	10	10	10	9	10	10	10	10	8	10—97
E T Travis	8	10	9	10	8	9	10	9	10	10—93
G W Coulston	10	9	10	10	7	10	10	9	8	8—91
H J Mehard	6	8	10	10	8	10	10	9	10	10—91
A McManus	9	7	8	10	6	7	9	10	6	8—80
J Reifsnyder	9	7	5	6	10	6	6	9	6	6—70

Second Class.

T A Pointer	10	10	6	9	10	10	8	8	9	10—90
Miss R Hensinger	6	9	9	7	9	6	9	10	9	10—85
T F Shonert	10	8	10	8	10	10	10	5	6	7—84

SPRINGFIELD.

BOSTON, Jan. 11.—The Massachusetts Rifle Association held its weekly rifle shoot to-day with a good attendance of shoofers, and nine matches were shot, with some good results, though the weather conditions were very unfavorable. Next Tuesday evening this association will hold its annual meeting and dinner at the Thorndike. Following are the scores made to-day:

Champion off-hand Match—200yds.

W Charles	82	J B Fellows	81
J A Frye	79		

Record Off-hand Match—200yds.

J B Fellows	83	W Charles	76
J A Frye	76	S T George	70
F W Chester	51		

Record Rest Match.

H Severance	103	T Warren	88

Fifty-yards Pistol Match.

H Severance	82	F Bowman	87	W Hawley	60
J C Winter	39				

Victory Medal Match—200yds.

W Charles	78	A S Hunt	77	O Moore	75

Military Medal Match—200yds.

W M Foster	45	M Wilson	41	O Moore	40
F F Lowell	44	W Farmer	41	A S Hunt	39
G F Hall	42	A S Field	40	F D Martin	38
T Bond	42				

All-comers' Off-hand Match—200yds.

J A Frye	81	A Sharp	77	A S Hunt	69
S C Sydney	81	S Comey	75	O Moore	65
J C Mills	81	F W Chester	73	A N Mann	65
S T James	79				

All-comers' Rest Match—200yds.

J Francis	107	A H Ballard	98	J D Cutts	85
T Warren	107	O Moore	94	A L Stone	78
B G Barker	100	F Ames	86		

ST. LOUIS, Mo., Jan. 8.—This evening the initial shoot of the St. Louis Pistol Club's ninth tourney took place. The return to the old metal target seems to have stimulated renewed interest in the club's shoot, for the attendance was somewhat larger than it had been for several previous shoots. The ring of the old familiar bell appears to please the members, and there was considerable enthusiasm manifested. Mr. Alexander made the top score and he will hold the medal for the coming week. As a whole, the shooting was of a very high grade. All shooting is done at a 1¼in. bullseye, distance 12yds., possible in 10 shots 120. The scores:

G Alexander	12	12	11	12	12	11	12	12	11	12—117	
E Mohrstadt	12	11	11	12	11	11	12	12	12	12—116	
M Summerfield	11	12	12	12	12	11	12	11	12	11—116	
O Neuhaus	10	12	12	11	11	11	12	11	12	12—114	
W H Hettel	12	11	12	12	11	13	9	12	11	12—114	
J A Lee	12	12	12	12	11	12	10	10	11	12—114	
W Bauer	10	12	11	12	11	12	12	12	10	11—113

A E Bengel	12	11	10	11	11	11	12	12	10	10—110	

UNSER FRITZ.

SOMERVILLE, N. J., Jan. 4.—Co. H, of the 3d Regiment, N. G. N. J., formally opened its new rifle range here to-day. Governor Green, with his private secretary, R. S. Green, Jr.; Colonel John C. Owen, Assistant Inspector of Rifle Practice; Comptroller Anderson and Colonel John T. Van Cleef, of the Governor's staff, were present. Governor Green fired the first shot over the 100-yard range scoring a 3. On his second shot he scored a bullseye, and finished that range with a total of 20. The 200, 300 and 500-yard ranges respectively were then shot over, the Governor making good scores on each. The full scores made by Governor Green were as follows:

100 Yards.

Governor Green	3	5	4	4	4—20

200 Yards.

Governor Green	3	3	2	3	3—14

300 Yards.

Governor Green	3	2	4	3	4—16

500 Yards.

Governor Green	2	2	3	2	3—12

NEWARK, Jan. 10.—The standing of the clubs in the tournament of the United Rifle Clubs to date is as follows:

	Won	Lost	To shoot		Won	Lost	To shoot
Howard	11	0	11	Monroe	7	4	11
Excelsior	10	2	10	North Ward	5	7	10
Essex	1	8	13	Annie Oakley	4	8	10
Puritan	6	3	13	Newark	2	9	11
Lakeside	7	4	11	Sheppard	1	10	11
Oakland	6	5	11	Electric	0	12	10

DR. CARVER.—This famous rifle and trap-shot has been stricken down with pneumonia in London, Eng., and the attack has been so sudden and so severe that little hopes are entertained for his recovery. He had a congestive chill on Tuesday morning, but refused to stay indoors, although warned by his physician not to go out. He went to the Aquarium to superintend the arrangements to break 100,000 glass balls in ten days, the posters announcing that he would commence the feat on "January 8, at 10 A. M., and continue until the last ball had been broken." A second chill seized him while at the Aquarium, and he was soon so weak that he had to be taken home in a hack. Three hours afterward he became delirious, and an announcement was posted at the Aquarium that he was in a dying condition from pneumonia and that his contract to appear had been cancelled.

TORONTO, Jan. 7.—The Off-Hand Rifle Association clubs shot their second match of the year to-day with the following results, together with the number of matches won and lost by each team. Teams of 10 men, 10 shots each, at 100 and 200yds., possible 1,000 per team:

	Points.	Won.	Lost.		Points.	Won.	Lost.
Orillia	795	18	0	King City	721	10	8
Scarboro	778	16	2	Midland	625	6	12
Bradford	735	13	3	Alliston	592	3	15
Newton Brook	742	11	7	Point Edward		2	16
Aurora	731	10	8	Tottenham	517	1	17

CONLIN'S REVOLVER MATCH.—A revolver tournament is to begin at Conlin's Broadway gallery, New York city, on Jan. 15. The new French target is to be used. This target is placed at a distance of 33yds., and is 11¾in. diameter, with a bullseye corresponding to a silver dollar. It has been used with success at the Concours National de Tir, and at Vincennes at the last grand shooting festival. The best score made on the target was made by George Naude, of Paris, 56 out of a possible 60.

SAN FRANCISCO, Jan. 5.—To-day being the last opportunity the marksmen of the Third Regiment, N. G. C., had to practice for the Tobin trophy, which takes place on Sunday next, they were out in full force, and the range at Shell Mound Park, Berkeley, was crowded. The scores made in practice by the different companies have hitherto been guarded jealously from the public, so that each company was in almost complete ignorance of what the others were doing. It was conceded, however, that Company B of this city was doing splendid work, and stood a good chance of winning. Captain Kennedy and Lieut. Burns of B company have been indefatigable in their exertions to keep their men at work practicing, and the result of today's shoot shows that their labors were not in vain. In spite of the cold weather, which is not calculated to steady the nerves of riflemen, the scores were the best ever made by the company, and should the weather be as good next Sunday B's success is assured. The best scores in the practice were as follows: Captain Kennedy 38, Lieutenant Burns 39, Sergeant Mahone 41, Sergeant Prichard 40, Sergeant Brusher 37, Sergeant Oestrich 40, Private Nelson 44, Corporal Donahue 26, Corporal Baily 41, Sergeant Kennedy 41, Private Shea 43, Private Johnson 41, Private Grey 34, Private Kehrlein 42, Private Heath 43 Private Brown 46, Private Carroll 41, Sergeant-Major Middleton 43, Private Stettin 40. Company C of Oakland also turned out in full force and practiced as though they intend to give B a hard battle.

Harbor View was also well attended, and the first monthly shoots of the California Schutzen Club and Germania Rifle Club took place.

The California Schutzen Club competition resulted in the following scores: Champion class, A. Strecker, 425 rings; first class, G. H. Brown, 432 rings; second class, William Glendemann, 421 rings; third class, A. Burmeister, 378 rings; fourth class, H. Enge, 378 rings. These scores are exceptionally high.

In the Germania Rifle Club shoot the following scores were made: Champion class, George Helm, 412 rings; first class, H. A. Kurlfinka, 360 rings; second class, W. Glendemann, 403 rings; third class, H. Patt, 373 rings; fourth class, F. C. Miller, 345 rings.

The Gruetli Verein also held a shoot in which the following were the best scores: A. Rohwyler 390, J. C. Huguenin 376, J. Scheibli 325.

The Eintracht shooting section held its first shoot for 1890 at Harbor View, the prize winners being as follows: Champion medal, F. A. Kuhls, 432 rings; first class medal, H. Hagerup, 371 rings; second class medal, B. Overmuhle, 346 rings; third class medal, J. Blinner, 319 rings. Capt. Kuhle took the prize for the best shot, a 25-ring.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

AMERICAN SHOOTING ASSOCIATION DATES.

Feb. 12, 13, 14.—Birmingham, Ala.
Feb. 19, 20, 21.—New Orleans, La.
April 30, May 1, 2.—Columbus, O.
May 7, 8, 9.—St. Louis, Mo.
May 20, 21, 22.—Minneapolis, Minn.
May —.—Kansas City, Mo.
June 4, 5, 6.—Lafayette, Ind.

The Kansas City dates have not yet been determined, but they will probably be May 25, 26 and 27.

CHICAGO TRAP-SHOOTERS.

CHICAGO, Jan. 7.—There is quite a flutter in the trap-shooting world here at present, and although nobody is shooting very much, about everybody who can carry a gun is going to shoot a match with everybody else right away pretty quick. The coming trap shooting tour of the U. S. Cartridge Co. car seems to have started up the fever.

Mr. J. H. McGee, of Kansas City, will come up here some time in the latter part of this month and shoot a match with Mr. C. E. Felton, at 100 live birds, $100 a side, 16-gauge guns. If Mr. Felton wears his new yellow-topped boots he will paralyze Mr. McGee and beat him easy.

Some time about the end of the month, too, the tie will be shot off here between Messrs. Riley and Elliott, of Kansas City, and Messrs. Budd and Organ. These folks have been laying for each other a good while, and have now got on a match that will be interesting. We all hope the Kansas City boys will win—if they can kill more pigeons than the other fellows. This is at $100 and 100 birds a corner.

Mr. R. B. Organ-Wadsworth (that makes his name look as though he were an English lord) has agreed to shoot a match with Mr. W. W. McFarland at 100 birds for $100. No money posted yet, but this is he'd a go.

Mr. Organ-Wadsworth, assisted by Mr. Ben Dicks, has also contracted to wipe up the earth with Mr. Billy Mussey and Mr. G. W. Randall, at the Mak-saw-ba Club grounds, next Saturday—unless the latter gentlemen should wipe up the earth with the former. It is not yet determined.

Mr. Billy Mussey and Mr. Organ-Wadsworth and Messrs. E. I. and A. W. Reeves have also gone into an earth-wiping contract similar to the above, for some time in the near future.

Mr. W. W. McFarland and Dr. Ashley, of Austin suburb, are of the opinion that they can kill a good many more pigeons than Mr. Organ-Wadsworth and Mr. Billy Mussey. Dr. Ashley is sick just now, but when he gets well this match will be shot.

If Billy Mussey doesn't win some of his matches, the boys will have to give him a benefit. He and Mr. J. S. Orvis have been walking on each other's coats for quite a while, and the result is that they will have to shoot a match for $100 a side, some time in February, probably, when they both have got their nerve up.

I have not had full scores of the whole shoot at Lake George Club, on New Year's Day, but believe I have announced that Mr. Place beat Mr. Loyd, Mr. Dicks beat Mr. Place, and Mr. Loyd beat Mr. Hamline.

But the above list does not cover all of Chicago's ambition in the challenging line. Chicago will challenge the two Pan-American teams as they pass East through here at the close of their great tour, and will produce ten men who, until spring at least, will nourish the fond thought that they can kill more live birds, at 25 a corner, than the whole cardoad of experts, East and West combined. I like Chicago's nerve. If she does tackle the Pan-Americans, we will see some fur fly.

But I have kept the best news for the last. It is now an open secret of some days standing that the great, the unparalleled, the much-talked-of and mighty-little-materialized ten-men match between Kansas City and Chicago is really and actually going to be shot. Tell it not in Gath! They say it will be shot at Grand Crossing, our shooting grounds here, Feb. 20, 21 and 22. The match will be between Kansas City and Chicago, and not between Missouri and Illinois. This is rather against Chicago, as she has trouble in getting the last three men of the team, which she ought to pick outside of the city. This match is for $100 and 100 birds per man. Kansas City will probably shoot Messrs. J. Riley, J. & W. Anderson, J. K. Guinnotte, J. H. McGee, J. A. R. Elliott, Drury Underwood, Frank Smith, B. Rieger and Ed. Bingham. Chicago team is not yet certain, but by permission of Mr. Organ-Wadsworth I may name Messrs. R. B. Organ-Wadsworth, W. P. Mussey, C. E. Willard, John and Abe Kleinman, W. Payson, A. W. Reeves, M. Eich, W. W. McFarland and J. S. Orvis. There may be changes from this, but it is somewhere in the neighborhood of right. Now let down the bars and pull the collars off'm the dogs of war! There is blood on the face of the pale-visaged moon, and there will be twenty men scared clear through until after Washington's Birthday. E. HOUGH.

Jan. 8.—The South Chicago medal shoot was held at Grand Crossing to-day, 10 live pigeons, 30yds. rise, 80yds. boundary, Illinois State rules:

Geo Kleinman	1111111111—10	A W Reeves	0010111111— 7

Ties on 19 div. second, on 18 div. third; on 17: Eich 2, Laflin 5 and won, Dicks 0, Foss 8. RAVELRIOG.

SYRACUSE, Jan. 9.—The Onondagas had a club shoot to-day and Courtney made the boys hustle at a lively rate. He set the shooting pace so fast that all the contestants were handicapped, and the day ended without recovering from the "break." Courtney not only won in the first class, but also first money in the two match sweeps that followed. He was suffering from La Grippe, but it didn't seem to affect his shooting, which was first-class throughout. The shoot was for club medals, 25 bluerocks at 18yds., and 25 bluerocks at 30yds., for first class: 18yds. for both events, second class:

First Class.

Geo C Luther	18yds.	1011111111011011111110—21
	30yds.	1101111010011111111111011—20—41
J Montgomery	18yds.	1111101111111111011010001—20
	30yds.	1101101011101101001011—17—37
A G Courtney	18yds.	0111111111111111111111—24
	30yds.	1111111160110111110,101—20—44

Second Class.

H Chase	18yds.	1110101110000000001111111—13
	18yds.	1111111101111000,001111111—21—34
Fred Strange	18yds.	1111110111011011101111—21
	18yds.	1101111001101001101011111—17—38
Wm Prettie	18yds.	1010000101010201000 01100—11
	18yds.	1111100000011111111100011—16—27
Dr Neering	18yds.	0110010000011100 1110100—12
	18yds.	1011111011011111101010011—20—32
Dr Holden	18yds.	1111110100111101111101111—21
	18yds.	1000110011111011111101110—18—39
Harry Ayling	18yds.	1111101101000100,01—17
	18yds.	0001001010110110011101110—13—30

Courtney won Lefever medal in class A; Dr. Holden won K. & P. medal in class B.

Match No. 1, at 10 bluerocks, entrance $3:

Courtney	1111111111—10	Ayling	0111111010—7
Luther	1001111111— 8	Neering	1111011111— 9
Montgomery	0111111110— 8	Neering	1111101011— 8

Courtney first, Strange second, Montgomery and Luther div. third.

Match No. 2, same conditions as No. 1:

Courtney	1111111111—10	Strange	1111111001—8
Luther	1111111101—9	Neering	0000010111—4
Holden	1100001101— 6	Ayling	1111111101—9
Chase	1011100111— 7	Prettie	1010110011—6
Montgomery	1101111011— 8		

Courtney first, Luther shot out Ayling and won second; Montgomery shot out Strange and won third.

WORCESTER, Mass., Jan. 10.—At the meet this week at Coal Mine Brook Range of members of the Worcester Sportsman's Club the first event was the shooting off of the ties in the Norcross Trophy made at the last meet. The men tied were E. T. Smith, G. W. Russell, E. B. Burbank and P. W. Webber. The latter was sick and unable to be present, but is to be allowed to shoot later against the best score. The work of the three follows:

G W Russell	1111111111—10		1111011111—9—19
E T Smith	1111111111—10		1111101110—8—18
E B Burbank	11011w		

The remaining event was the next in the series of the Norcross Trophy contests. Each man had a possible string of 30 birds. The number broken by each man follows:

A B Franklin	30	Dr Bowers	24
G J Rugg	28	A L Gilman	23
Geo Sampson	28	C R B Claflin	23
E T Smith	28	E Welch	22
W E Johnson	25	C Crompton	21
C B Holden	25	E B Burbank	21
G W Russell	24	E F Swan	20
A R Bowdish	20
M A Linfield	19
H D Jourdan	18
W L Davis	17
C R Holman	15
W S Welch	12

SYRACUSE, N. Y., Jan. 7.—At our regular medal shoot here yesterday scores were as follows: Ten bluerocks, 3 traps, entrance $5—G. C. Luther and Jas. Montgomery each 8, div. third; A. G. Courtney 10, first; Fred Strange 9, second.

Medal shoot, Class A, 25 bluerocks at each distance:

	18yds.	30yds.		18yds.	30yds.
G C Luther	21	20	41	A G Courtney	24	19	43
J Montgomery	20	17	37				

Class B, 50 bluerocks at 18yds. for Lefever medal: Dr. Holden 39, Fred Strange 38, H. Chase 34, Dr. Neering 32, Harry Ayling 30; Wm. Prettie 30.

Ten bluerocks, $3 entrance: Geo. C. Luther 9, Jas. Montgomery 8, Fred Strange 8, Dr. Holden 8, A. Courtney 10, H. Chase 7, Dr. Neering 6, Harry Ayling 6, Wm. Prettie 7. Ties of 8 div. second. We are to shoot a return match with 10 men a side for the supper and all expenses with 10 men from Lyons, N. Y. We beat them the last time, and they gave us an elegant supper, and we had a fine time. Will give you full details next time, as I must go to the other shoot.—LA GRIPPE.

POHLMAN VS. MONAHAN.—G. Pohlman, of the Unknown Gun Club, and James Monahan, of the Northside Gun Club, shot at 25 birds each, 25yds. rise, for $50 a side, on Jan. 8, at Miller's Dexter Park, Brooklyn, on the Jamaica road. The contest resulted in a tie, but on the shoot-off Pohlman won. The birds were fast flyers and strong. The score follows:

Pohlman	0011110000000001011101113
Monahan	1000111100001011001001—13

In the shoot-off Pohlman killed 3 out of 5 and Monahan 2.

BROOKLYN, Jan. 8.—The Parkway Gun Club held a shoot at Miller's Dexter Park to-day. The birds were one of the finest lots of flyers ever tossed from the traps, and furnished capital sport for the well-known wing shots who faced the traps throughout the afternoon. The main event was the regular competition for the club badge. The score of the main event was as follows: E. Helgans 6, R. Phister 6, G. T. Savago 6, James Bennett 6, Bromwell 5, H. T. Selover 4, H. T. Bookman 4, P. Hale 3, M. Meyer 2, C. Stemheuser 2, and M. J. Borden 1. Helgan thus won the medal and Borden received the leather trophy. An extra event at 3 live birds per man followed, at 25yds. rise. In this event Buckman, H. Von Wyckhoff and R. Phister each killed 3; Savage, Meyer, Philman, Bromwell, Bennett, Selover and Helgans each 2; while Steinheuser and Borden each killed 1. In shooting off the ties for second money, miss and out, Selover killed 4 birds, Meyer 4, Bromwell 2, Bennett 3, Savage 1 and Helgans 0. The first two contestants divided. A second extra sweepstake, under the same conditions, resulted as follows: Helgans 4, Von Wyckhoff 3, Bockman 2, Bennett 4, Phister 3, Van Sicklen 3, Philman 5, Selover 4 and Charlick 5. It was too dark to admit of further shooting; the money was divided, after the birds were paid for.

RED BANK, N. J., Jan. 10.—The Riverside Gun Club held their weekly meeting to-day. Clay birds only were used as targets. The opening event at 10 singles resulted as follows: John Cooper won with 8, Fred Beal was second with 7, Wm Little third with 6, and Wm. Conover broke 5. Second event at 10 singles: John Cooper won with 7, Wm. Conover second with 6, Wm. Little and Fred Beal divided third, J. Bergen fourth with 5. M. Cornwell broke 4, David Belshaw 3 and Asa Whaymer 2. Third event 10 singles: John Cooper won with 10, M. F. Cornwell was second with 8, Oscar Hesse third with 7, Fred Beal fourth with 6, Asa Whawmer got 5, Wm. Conover 4, D. Belshaw 3, and P. Hendrickson 2. Final event at 10 pairs: John Cooper won with 8, Fred Beal was second with 7, Asa Whaymer third with 4, Wm. Conover broke 2.

PHILADELPHIA.—The following officers of the Wingohocking Gun Club, Germantown, have been elected: Pres., Joseph Thurman, Jr.; Vice-Pres., Mahlon Bolton; Treas., Roderick Provost; Sec., S. W. Keuhart; Field Captain, Harry Thurman; Executive Committee, Frank Kuhn, Theodore Mitchner, James Broadhurst.

ATLANTIC CITY, N. J.—The Atlantic City Gun Club has elected the following officers for the ensuing year: Pres., L. Adams; Vice-Pres., Dr. C. C. Raith; Sec-Treas., R. C. Griscom; Captain, C. C. Minerd; Executive Committee, W. Hayday, A. C. Griscom, Robert Stroud, R. C. Griscom and C. C. Raith.

WALNUT HILL, Jan. 8.—The opening shotgun meeting of the year was held on the range to-day, under the most favorable weather conditions, and with an unusually large number of contestants on the ground. It was expected that the 100-bird match between Bowker and Knowles would prove an exciting feature of the meeting, but the latter was badly out of form, owing to recent illness, and felt obliged to withdraw after the twelfth round. Bowker thus won the opal stud for which the match was shot, but Knowles was presented with a handsome split-bamboo trout rod as a consolation prize. The sweepstake events were hotly contested, and the scores made were extremely creditable, as the following summary shows: Five Keystone targets—Bowker 5, first; Crown, Dutch, Rule, 4 second; Knowles, Nichols, 3, third. Six standard targets—Bowker, Rule, Nichols, 5, first; Crown, Gregg, 4, second; Knowles 3, third. Five clay-birds, squad system—Crown 5, first; Bowker, Dutch, White, 3, second; Brooks, Nichols, Rule, 2, third; Gregg 1, fourth. Six standard targets—White 6 first; Bowker, Nichols, Rule, 5, second; Brooks, Short, 4, third; Bradbury, Crown, Knowles, 3, fourth. Seven clay-birds, Keystone rules—Chase, Gregg, Knowles, 7, first; Bowker, Crown, Nichols, White, 6, second; Dutch, Rule, Short, 5, third; Bradbury 4, fourth. Six standard targets—Black, Bradbury, Brooks, White, 6, first; Hosmer 5, second; Gregg, Knowles, 4, third; Rule 3, fourth. Six standard targets—Bowker, Crown, Nichols, White, 6, first; Hosmer 5, second; Knowles 4, third. Six standard targets—In this event there were 12 entries, Messrs. Bradbury, Bowker and Chase made clean scores. In shooting off the tie Chase won, and the prize, a bamboo fly-rod valued at $10, was awarded to him. Five keystone targets, squad firing—Chase 5, first; Bradbury 4, second; Black, Gregg, 3, third; Brooks 2, fourth. Seven standard target—Bradbury, White, 7, first; Bowker, Dutch, Gregg, Hosmer, 6, second; Shool 5, third. Ten Keystone targets, squad firing—Black, Brooks, Knowles, Rule, 10, first; Chase, Gregg, 9, second; Nichols, Perry, White, 8, third; Bradbury, Crown, Dutch, Hosmer, 7, fourth. Five standards—Brooks, Chase, White, 5, first; Black, Hosmer, 4, second; Bowker 3, third; Gregg 1, fourth. Fifteen Keystone targets, squad firing—Bowker, Short, White, 15, first; Brooks, Rule, 14, second; Black 13, third; Chase 12, fourth. Six standard targets—Black, White, 6, first; Knowles 5, second; Gregg, Rule, 4, third; Bowker 3, fourth. Five clay-birds—Chase 5, first; Crown, Rule, Short, 4, second; Bowker 3, third; Gregg, Knowle, 2, fourth.

BROOKLYN, Jan. 8.—This afternoon at Woodlawn Park the members of the Fountain Gun Club held their first shooting meeting of the season of 1890. The weather in the morning was delightful, but just as the shooting was about to begin the mass of heavy clouds which had been gathering in the west rolled over the shooting grounds, making things dark and dismal. So dim, indeed, was the light that it interfered materially with those engaged in the competition, although it was hardly midafternoon. The birds were a poor lot, in fact the worst in flight the men of the club have ever had to shoot at. C. W. Wingert, Louis T. Davenport and C. A. Seddons tied for first place with clean scores of 7 kills each. A. Alfred and H. W. Blattmacher tied with 6 kills each. W. Selover was all alone with 5. W. A. Stewart, W. E. Dudley and R. Grant scored 4 each, and F. H. Garrison 3. The tie for first place was shot off at once, and as fine a display of shooting skill was then witnessed as is often seen. Seddons missed his sixth bird and dropped out. Wingert and Davenport then shot round after round until the fourteenth, when Wingert killing and Davenport missing, the former took first position. These were all in Class A, and stood at 25yds. rise. Eddy, Blattmacher, Grant and Selover were also in Class A. Stewart in Class B, 23yds. Dudley and Garrison (Snapper) in Class B, 21yds. Just as the main event closed a heavy shower passed over the grounds, putting a stop to the shooting for a few moments. A sweepstake was then shot off, ties shot off, miss and out. Entrance $2, 3 birds each man, 3 moneys—Louis T. Davenport and C. W. Wingert killed all their birds and divided first money, after shooting out Detleffsen and Stell, who missed their first tie birds. Selover captured second money after shooting out W. H. Dudley, Grant and Garrison. Stewart took third without a competitor in his class. The two best shots of the day were made by C. A. Seddons. Both were almost straightaway birds, quartering a little to the left. Each bird was killed at a distance of 75yds., a remarkable distance to get a scoring shot.

FRANK CLASS.—The announcement that Frank Class would have a house-warming and a live-bird shoot at his new hotel just over the Passaic River, in Pine Brook, on Friday, Jan. 10, drew a large number to that place. The day was cold and raw, and the clouds seemed to be ready at any moment to send down a torrent. Many of the visitors had their shooting implements with them, and as John Erb had furnished a supply of good pigeons, they had lots of fun at the traps. The shooting was all of the sweepstake order, the conditions being 4 birds each man, $3 entry, 3 traps, Hurlingham rules to govern, and 3 moneys. The results were as follows:

First Sweep—Frank Class, Chris Reinhardt and John Riggott killed straight and divided first money. C. M. Hedden, George Innis, Jr., E. Jones and Hugh Leddy tied for second on 3 kills each, and shot off, miss and out, Hedden and Innis taking the pot by outshooting their opponents. Third money went in with first.

Second Sweep—Hedden and Riggott with 4 each, took first boodle. Class, John Erb, Sam Castle, Reinhardt, Jones, Leddy, Innis, Miller and Harrison tied for second, and on the shoot-off Jones killed 5 straight and took the pot. Third was again put in with first.

Third Sweep—Miller, Jones and Reinhardt tied on 4 each, and on the shoot-off Miller was shot out, the others dividing. For second Class, Erb, Castle Leddy and Riggott tied and shot off; Reinhardt and Jones proved to be the best stayers and captured the money. Third was split even by Hedden and Harrison.

Fourth Sweep—First was tied for by Hedden, Castle, Reinhardt, Leddy and Riggott with all down, and on the shoot-off Leddy and Riggott pocketed the cash. Enoch Miller and Class took second, while third was divided even by Erb and Jones.

Fifth Event—Castle, Leddy, Riggott and Miller killed straight and shot off, Castle and Riggott finally dividing first cash. Carl von Lengerke, Erb, Reinhardt, J. E. Wheaton and Jones tied for second and also shot off, Von Lengerke and Erb finally dividing. Third went to Hedden alone.

The final event was a miss-and-out, $2 entry, with 9 entries, Sam Castle captured the $18 by killing 9 straight, Jones missing his ninth, Hedden his seventh, the rest dropping out early.

DAVENPORT, Ia., Jan. 9.—Monday evening, Jan. 6, the Forester Gun Club held its annual meeting in the parlors of the St. James Hotel, and elected the following officers for the ensuing year: President, F. O. Davis; Vice-President, C. M. Leonard; Secretary and Treasurer, J. M. Howard; Board of Directors, F. O. Davis, C. M. Leonard, J. M. Howard, John Kray, C. Collins, Harry Young, E. Emerson. The treasurer's report showed the club to be in a good condition financially, being out of debt and with a balance on hand of $269.99. The new board of directors were authorized to erect a club house in the spring to cost from $300 to $600. Gold medals were awarded to C. Collins, E. C. Brannigan and J. M. Howard. It was decided to put up a cup, to cost not more than $15, to be contested for by the members in live bird matches. C. M. Leonard was designated as the first holder of the cup, and J. M. Howard has challenged him for a match, 25 birds a side, which will be shot next Friday. The one who holds the cup in four successive contests will be declared the champion of the club and will be entitled to keep the prize. At a meeting of the directors, held Tuesday evening, Jan. 7, the following were appointed to make arrangements for the February tournament: F. O. Davis, C. M. Leonard, J. M. Howard, John Kray, and Harry Young.—W. M. PURCE.

PHOTOGRAPHIC IDENTIFICATION CARDS.—New York, Jan. 9, 1890.—*Editor Forest and Stream:* The American Shooting Association have provided a very convenient and appropriate classification card, having on it outside a monogram with proper wording in gold letters; on the inside, printed on one side, is the classification, and on the opposite a photograph of the shooter. This at once identifies the shooter wherever he may go, and in many ways will serve him, principally as a card of introduction, and secure for him his proper place in shooting contests wherever he may be. The Association wants to place one of these in the hands of every shooter classified by it, and will do so for any one sending a photograph and fifty cents. The photograph will be reduced to proper size for card, and the original returned if desired. Already large numbers have been sent out, and without exception the holders say they would not be without them for twice the cost. In fact, they could not duplicate them themselves for less than that amount. They are so conveniently arranged that the classification can be changed at any time without charge to balance of card.—THE AMERICAN SHOOTING ASS'N L'D, Room 184 Stewart Building, New York City, S. M. TAYLOR, Manager.

NEW YORK, Jan. 7.—The members of the Unknown Gun Club elected the following officers at their annual meeting to-night: H. Knebel, Sr., President; J. Akhurst, Vice-President; R. N. Sillwell, Secretary; B. Van Staden, Treasurer. The club will continue to shoot on the second Thursday of every month at L. Miller's Dexter Park. Some valuable extra prizes have been offered by some of the members, besides the usual club medal, the Midas badge.

WEST JERSEY GUN CLUB.—Camden, N. J., Jan. 1.—*Editor Forest and Stream:* The West Jersey Gun Club, having just closed an eminently successful year, we think it fitting to send you a brief summary of our work, and ask if any similar organization can report a more active and prosperous period. To our membership we have added twenty active names, and established a revenue much in excess of our club needs. Our records disclose that over 25,000 targets have been shot during the year from our grounds, not including those used in our team matches with other clubs. On Christmas Day we shot 1,700 targets. Our new year opened to day with our regular medal shoot, and over 2,000 targets were shot, the number being limited only by our trapping capacity. Our team average for the year is 73 per cent. We are now arranging our schedule of matches for this year, and will be pleased to hear from clubs in this vicinity.—WEST JERSEY GUN CLUB.

WYALUSING, Pa.—The Wyalusing Rod and Gun Club was organized Jan. 7, with the following members: Dr. H. Rush, Al Ruff, J. M. Brown, J. S. Hamaker, N. A. Welles, J. A. Shuman, H. J. Lloyd, N. H. Allis, Fisher Welles, Lincoln Welles, F. H. Jarvis, I. M. Allis, A. W. Savage. Regular practice shoots at bluerock pigeons will be held weekly. Only members and guests of the club from a distance allowed to shoot. Rules of the American Association were adopted. The following officers were elected: Pres., N. H. Allis; Vice-Pres., Fisher Welles; Sec.-Treas., J. S. Hamaker; Executive Committee, J. S. Hamaker, chairman; J. A. Shuman, N. A. Welles. The club has been shooting for about two months past without being organized, and some very good good scores made. One object of the club is to see that the game laws are enforced, as they have not been in this vicinity.

NEWARK, Jan. 9.—At Erb's Park to-day the members of the Newark Gun Club held their first regular meeting of the year. Regular club match, 10 birds each man, Hurlingham rules, modified, to govern. A money investment was made by each man of $5, so that the competition was really a sweepstake as well as a monthly club match. The purse was divided into three moneys—for the 10 per cent., 9 per cent. and 8 per cent. John Erb and Carl Von Lengerke got clean scores and divided first money with 10 killed birds each man. Sam Castle and Chris Reinhardt captured second money on a tie of 9 killed each, and divided. John Riggott took third money. C. M. Hedden killed 4, J. Pentz and Gus Freche 3 each, while J. Wheaton, C. Heath and W. Hollis had to content themselves with 4 kills each man. Immediately at the conclusion of the club event, sweepstakes were got up and rapidly fought to a conclusion.

WELLINGTON, Mass., Jan. 11.—The storm to-day kept a good many gunners away from the regular weekly shoot of the Wellington Gun Club, although there was a sufficient number present to make the sport interesting. In the silver pitcher match, at 7 bluerocks and 8 clay-pigeons: Melcher won with a clean score. The other scores in this match were: Perry and Bond 12, White, Sanborn, Brooks and Chase 11, Lee 10, Dill, Short and Bradbury 9, Warren 7. The second shoot in the merchandise match, which was opened last Saturday, the scores in the silver pitcher match counting as the first contest, was shot at 15 bluerocks. The conditions of the match are that the man making the best three scores out of four at the end of the month to be declared the winner. The scores in this match to-day were: Perry, White and Dill 13, Bond and Brooks 12, Sanborn, Chase and Warren 11, Short 9, Bradbury 7. Sweepstakes followed.

SOUTH SIDE GUN CLUB.—At the regular semi-annual meeting of the South Side Gun Club, of Newark, N. J., Jan. 9, 1890, the following gentlemen were elected members of the Governing Committee: Asa Whitehead, L. H. Torrill, R. H. Breitnall, E. L. Phillips, President; W. R. Hobart, Secretary and Treasurer.

DAYTON, Jan. 9.—The Dayton shooters are waiting for the Cincinnati club to pay for the last match before entering into another one. At a practice shoot to-day Rolla Heikes scored 95, Scott McDonald 91 and Ed Rike 85 out of a possible 100.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

1,500 MILES IN AN ADIRONDACK BOAT.

PART III.

ERIE CANAL, Sept. 14.—Sunday.—A cold, foggy morning. I had to endure the criticisms of the boatmen as well as the low temperature while dressing, and was loth to turn out of the blankets. The water in the canal here is very clear and limpid, tempting one to an early morning bath. I rowed one mile to Palmyra, reaching its hotel at 7.15, but had to await the 8 o'clock Sunday morning breakfast. The intervening time was employed in playing hymns on the piano, thus effectually arousing all the guests. The breakfast was good, however, and I started on again at 8:30. Frequently I have to leave the boat and its precious baggage in suspicious-looking places, but thus far have lost nothing. When departing from the suburbs of the town a nice flock of plover flew up near me.

There was no wind to-day, but a strong current against me; and the eel grass, at places obscuring the water, was floating along in large islands. At the first sight of it this morning I foresaw a stop to my trip unless some contrivance was hit upon to avoid it, and viewed the situation with dismay. In sheer desperation finally the thought of elevating the boat's cutwater above the surface presented itself, and it was carried out by removing my traps and baggage to the stern. The rowing was harder and it prevented the boat running so fast, but I observed the satisfactory result with delight. The little boat would not hold inside, *i. e.*, under the deck, all the baggage and freight, so I had to put much on the deck abaft the coaming, a large box of plums and other such delicacies making quite a pile. This induced every one to think that I was peddling, and was provocative of much mirth at my expense. My joy was great at overcoming the eel grass, it being a positive pleasure to row over the matted masses of the pestiliferous weed without detention. The canal boats are often difficult to pass, and the delay thus caused is quite an item against my time.

At the end of the level, near Macedonville, I passed through four locks close together, being thus ushered on a seventeen-mile stretch, three miles of which brought me to Monroe county, and as far beyond the line was the town of Fairport. Then four miles to Bushnell's Basin, thence two miles to Certerville, and one mile beyond this little village, and near the end of the level, appeared Pittsford, where I arrived at 2 P. M., making from Palmyra nineteen miles and from Brighton twenty miles. Some of these little towns are beautiful, being well laid out, and having many pretty residences, broad, shady lanes and fine trees, mostly elms and maples. I passed many superb orchards to-day, mostly of Baldwin apples. The landscape, especially the last few miles was charming, though the houses were low. At Fairport the canal turns nearly south, having been northwest from Bushnell's Basin; after leaving Pittsford it goes north to Brighton, thence striking westward.

There seems to be quite a quantity of bass about, judging from the several fishing gangs out and I saw some heavy fish caught, too. They tell me they are caught running up to 2lbs. weight. The favorite spots for fishing are the little wooden bridges, over which the numerous lanes and roads cross the canal. The bass lie in the shade under these, and the fishermen lie flat on the boards above, with nothing but their heads visible. Sometimes a bridge would be lined with heads and poles extending thus. When a wily fisherman wants to change his ground he jumps from his perch on to a passing boat, and is thus carried to the next bridge.

About the middle of the morning I bought a watermelon of a farmer and ate it, together with a sprinkling of six or eight apples and plums, nearly eating out the larder of the small hotel at Pittsford, where I dined, besides. I was advised to-day by a canalboat gent, who seemed to take a lively interest in me, and whose request for the article had been refused, to huckster whisky along, thereby supplying thirsty souls, as a good living could be easily made by so doing. The advice was well-meant, but I could not relish it; doubtless it was sound, too, as everybody asks for a drink, and seem surprised at being refused. The prevailing opinion regarding my expedition is that I am going fishing, though sometimes I am a peddler, or rowing on a bet. This last is prevalent when I am pulling hard, and is perhaps the favorite idea; everybody becomes gloomy when told to the contrary. The following questions are put to me from canal boats I meet and continue to be shouted out as long as I am within hearing distance: "Whar you goin'?" "Whar you frum?" "Rowin' on a bet?" "What d' thar thing cost?" "How fast can she go?" "Got any whisky?" "Why don't you hitch on to a light boat?" After this, sometimes, "I don't begrudge you the rowin', but I'd like to have that there boat." And, "What'll you take for her?" Then the chaff element begins: "Say, boss, whar did you get that boat?" "In Philadelphia," I reply. "Now, then, come out o' that an' I'll larn yer," etc. On two occasions I just avoided a fight, the language becoming unbearable, and dignified silence having been of no avail; but generally the men and boys are a good-hearted set of roughs and would do a kind turn for one if necessary.

I left Pittsford at 4 P. M., and after the two miles to the end of the level there came five locks within a mile or two of each other, and at each gathered a curious crowd "to see the little skiff go through the lock." This last ushered me into a 60-mile level. I passed Brighton, at the end of one of the above short levels, and one mile from the last lock brought the handsome city of Rochester. I had to row some distance through the town, where the canal crosses the roaring Genessee River on a huge aqueduct, and a short distance further I stopped at a draworidge in the center of the city. I arrived at dusk, but the electric lights made everything very bright. It is but a short distance from Rochester to Lake Ontario. Irondequoit Bay comes far inland, and its head is near Brighton; the river forming it crosses the Erie Canal put a few miles west of Fairport. Rochester is 8 miles west of Pittsford by canal, and I have rowed to this point to day, 28 miles. There was but little eel grass in the water for the last 7 miles, and I made good time then by trimming the boat on an even keel.

At Rochester I left my craft in charge of the bridge tender and went to the Powers Hotel for supper. This is a very fine house, and the appearance of the city about the square reminds one of the best part of Boston. While writing up my log in the elegant reading-room a reporter appeared, note-book in hand; I tried hard to bounce him, but he would not be bounced; I therefore gave him my ideas about matters in general and nothing in particular, but it all appeared in the leading paper next day, for I was shown an account of it two days later 60 miles beyond. This was the first defeat of the kind, as I generally succeeded in getting off without committing myself. I was told, however, that my advent was heralded in a Rochester paper two weeks before I appeared; but how it was known is a mystery, as I always make a point of being very reticent. The reporter met me with, "You are here at last? We have have been expecting you for some time."

After purchasing some canteloupes, I left about 8:30. The canal for the next 2 miles led through the city, and was gloomy and dismal, with a great many street swing bridges. Under all of these I could pass but one, and that was raised for me after much shouting. This was a pedestrian railroad affair, and worked by water power. Rowing 2½ miles beyond Rochester, camp was made in the boat, moored to the bank by means of a handy fence post. My run for the day was 31½ miles.

Erie Canal, Sept. 15, Monday.—I slept very soundly until 7 A. M., and was not so chilly as the previous night, though the weather was very cold, having made some improvements, suggested by experience, in my sleeping arrangements. Rowing half a mile to the "four-mile grocery," a small shanty that distance from Rochester, where formerly was a canal-boat supply store, I prevailed on the Dutch proprietress to give me some breakfast. The result was altogether so filthy that I was forced to draw from my own larder, though the old lady was willing and obliging enough. It was a dirty little hovel, and I was glad to escape it, though in my haste I accidentally left my beloved coffee pot; henceforth no more chocolate.

I then rowed to Brockport, 16 miles from "four-mile grocery," passing Spencerport and Adams's Basin. At Brockport begins Orleans county. The town has 4,000 inhabitants, and is a pretty place, with many nice residences. I went to the Betty House, a quarter of a mile from the canal and from the railroad too, where I had a very good dinner. Since leaving Rochester the country has been flat, and covered with fine orchards, principally apple. The trees are well headed, with the branches well pruned and symmetrical, and the ground remarkably well cultivated. At Adams's Basin there is scarcely any other occupation than apple raising, and from this place great quantities are shipped to Philadelphia. The apple yield in western New York during the fall will exceed 4,000,000 barrels, representing about $10,000,000. There was a bad current on this level, which kept me back nearly 1 mile in every 5 or 6 rowed; while the grass was so troublesome that I had to elevate the bow as before.

I left Brockport at 3 P. M., and rowing on, passed the towns of Holley, Tuttles, Hulburton, Brockville, Hindsburg and Albion. The last mentioned was a large place, and boasted a drawbridge over the canal. Beyond this town I went two miles, and camped at dark, making 32½ miles to-day. Though the current, of course, continued strong, there was little head wind and eel grass during the afternoon. The country is a beautiful farming region, and besides splendid orchards and crops, I saw much fine stock of various kinds. Frequently the whole barnyard population is gathered on the banks, lining the water for some distance, while the paddling portion of the community would be in the canal itself. They all regarded me with unmixed astonishment and perplexity. The account of the trip in the Rochester *Herald* has evidently preceded my coming, as in several of the towns many people ran together at the sight of the boat, and frequently would line the bridges. The questioning I had to undergo was fearful; but as it is important to keep on good terms with everybody, all queries had to be answered. In one or two cases men actually rushed out from their work, 200yds. or so distant, with such exclamations as, "There he goes B'l," "Here no is," or "He's a comin'," and without except on they would shout out to know the size of the bet, this being the all-interesting part of it to their minds. Among the boating part of the community this or whisky is the first question, but I think that the balance is a little in favor of the whisky.

Clouds came up during the afternoon, and at dark looked very threatening; so when night came I "hit up" and went to work to sling the tent. Having found a nice grassy bank in a lonely spot, I hauled the boat out, and after fixing the tent over it I took a swim; then crawling into my quarters I ate a dozen nice peaches and crackers, and spent the rest of the evening in reading. The light attracts an infinite number of insects, great and small; and these creep over everything. The tent cover itself seems to be moving, as the bugs completely cover it while running about. Fortunately it is too cold for them, or else the mosquitoes would be thick also, as the country further back is quite swampy and uncultivated.

Erie Canal, Sept. 16, Tuesday.—I was up at 5:45, the wind blowing a gale, but the tent stood firm, and I had been undisturbed during the night, save by the roaring overhead. I tightened up my canvas decking, preparatory to launching, on account of having continually put heavy articles on it, using it for drying blankets, tent, etc., which had sagged it somewhat. I rowed one mile against a powerful west wind to Eagle Harbor, a little hamlet, where I had breakfast at a small cottage dignified by the name of "hotel." It was as neat and clean as could be, and the old fellow who kept it showed me some stuffed owls and loons he had shot on Lake Ontario.

I left at 8:30 and tried to row on, but the wind was fearful, preventing me from making a third of my usual speed. Growing stronger by degrees, it finally became so violent that to pull against it was impossible, and after striving hard for a mile from Eagle Harbor I got out and towed the boat, fastening one line amidships and taking a turn about my waist and taking the bowline in my hand, thus causing the boat to run parallel with the bank. This was continued until Middleport was reached, a small town 14 miles from Eagle Harbor, where I dined and rested a pair of weary legs, as the wind makes a serious undertaking of an attempt to walk against it; and all the morning I had this hard labor, while huge clouds of dust blew over the country. A few canal boats tried to run, but by far the most of them were tied up. I passed many large quince orchards with beautiful fruit, they seeming to flourish as well as the apples.

At Middleport the New York Central R. R. again meets the Canal, having deflected at Brockport. I passed this morning Knowlesville, Medina and Shelby Basin. At Medina, quite a large town, Oak Orchard Creek feeder comes in; this creek has been joined to Towanda Creek, several miles south, by a cut. The stream rises near Attica, and flows west into the Niagara River near Towanda. "Old Shelby" is a place of twelve ancient houses, and here the scene of the exploits of Mark Twain's character sketch is laid, and this is the spot that the famous character hailed from. The village looked as if it could produce some more like him too, as I beheld many nondescript specimens of humanity. But 8 miles stretches between the shore of Lake Ontario and Shelby Village. I was much impressed with it, having approached the venerable hamlet so suddenly, and longed to have a companion for a minute or two to talk it over. Instead of this I stopped a curious old chap who lived near at hand, and told him the story of Nicodemus Dodge, the above-mentioned hero, but he remained unmoved, merely remarking "Ther be some folks be that name hereabouts."

Not very much of the country could be seen, as the dust and wind were so blinding. I left Middleport again at 3 P. M., rowed two miles, at first keeping close to a high bank which partly broke the force of the hurricane, but after leaving this shelter I could not make a foot against it, and during several gusts to recover one's oar was an utter impossibility. Of course the only thing was to foot it again. So disembarking I trudged on once more, passing two or three towns, at one of which, Orangeport, I happened to see a pretty lass in a small store hard by. I was feeling very much in want of comfort in some shape or other, and so went in. This Western New York Hebe, however, was uncommunicative, save in shy glances and an embarrassed smile; so I drank a glass of cider to her health and went on my weary way. I reached Lockport, 12 miles from Middleport and 76 miles from the last bivouac, at 7:30 P. M., footsore and exasperated, having rowed but 4 miles all day.

It was probably the hardest day's tramping I ever had. The towpath being uneven, it was all that I could do to walk against the wind, and this pushing against my right side while the boat pulled the left around, made very laborious work. Some amusing scenes occurred among the few canalboats that were endeavoring to run, particularly when they passed each other. The wind at such a juncture invariably caused a collision, and afterward tangled their lines in great confusion. The country generally was flat, but fine and fertile; here and there were peach orchards, but apples still predominated.

At Lockport I once more got into the boat, and as it was very dark, and the prospect ahead was gloomy, I bribed some boys to run up and tell the lock keeper that a man with a pass wanted to be locked up. Five locks are here of large size and compact together, forming as many large steps, so it appeared at a distance. The walls of solid granite made an impressive sight, tending much to raise one's respect for the great Erie Canal. As all these locks are double, there are actually ten water compartments, each having 14ft. rise. They looked really terrible in the dark, with the water roaring through them like heavy thunder. It was fortunate that I found the boys, as no one would either have heard or noticed me in such a place, my boat being a mere speck in the great basin. The first lock, damp, reeking and cold, with dim lights 20 or 30ft. above on the parapet, together with the lower gate of the next, also 30ft. high, with the water thundering over its upper gates into the chasm where I waited, was a sight to unnerve one. I could neither see nor hear any one while going through, naught but the troubled waters of the huge gates appearing to work by magic or of their own accord.

When the last chamber is gained a singular sight meets one in looking down on those below. It is strange that a boat could rise so high on water in such a short distance. The heavy granite balustrades, steps and platforms presented a very fine appearance. I went to the Judson House, ate a hearty supper, and then pushed on west at 9 P. M. The canal, beginning half a mile from Lockport, is cut out of the solid rock for two miles, the walls rising 20ft. on either side; one could not get out of the water if swimming, as the walls extend upward in a perpendicular line. It is a dark, silent and lonely place. A ghostly canalboat or two passed by me and I saw a tug steaming toward Lockport, a sure sign of approaching Buffalo. High banks lined the water even after passing the cut, and the journey through was a very solitary one. The wind had nearly gone down, but there was an unusually strong current against me. I passed a fine guard-lock at Sulphur Springs, 5 miles from Lockport, and after rowing 1½ miles beyond this I tied up to a steep bank.

The night was very cold, not a house had been visible since leaving Lockport. While taking a swim about 10:30 P. M. I found the current so strong that I could scarcely swim against it. I have made 32½ miles to-day, rowing 10½ miles and walking 22 miles; so that I am justly tired. From Buffalo to Lockport there is but one level, divided into three divisions by two grand locks; so to-night I went to sleep with the happy consciousness of being on the last stretch of this stupendous canal, and having come nearly 330 miles from Albany. Just before reaching Lockport I passed into Niagara county; after Pendleton, half a mile west of my bivouac to-night, Erie county begins. This is my longest day's work so far, as I have been "going it" since 5:15 A. M., or 16¾ hours.

PHILADELPHIA, Pa. M. B.

[TO BE CONTINUED.]

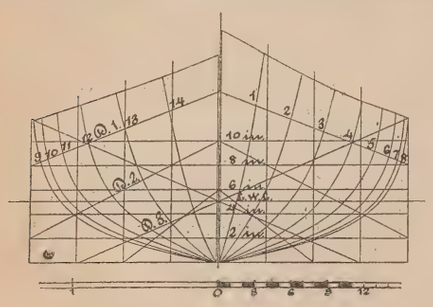
CORINTHIAN MOSQUITO FLEET.

THE annual meeting of the Corinthian Mosquito Fleet will be held at the Sturtevant House, Broadway and Twenty-ninth street, New York, on Jan. 20, at 8 o'clock P. M. The following amendments have been proposed:

By-Laws—Change Chap. I., headed "Meetings," to provide for the second meeting in April instead of May. Chap. III., Sec. II., change to read "three dollars" instead of "one dollar." Chap. III., Sec. III., strike out "May" and insert "March"; strike out "June" and insert "April." Insert the following under Chap. VII.: Sec. I.—The commodore shall fly a rectangular blue pennant having in its center a white star. Sec. 2—The vice-commodore shall fly a rectangular red pennant having in its center a white star. Change "Chap. VII." to "Chap. VIII." and to read as follows: These by-laws may be amended at any regular meeting of the association by a two-thirds vote of all present, the proposed amendment having been stated in the call for such meeting ten days in advance.

Sailing Rules.—Rule II.—All boats shall be classified according to their rig and load waterline measurement, time allowance being given in their respective classes on load waterline measurement, except canoes, which shall be classified and sailed according to the rules governing regattas of the American Canoe Association; this classification is subject to the decision of the regatta committee. Change the above and present rule to read as follows: All boats, except canoes, shall be classified according to their rig and load waterline measurement, time allowance being given in their respective classes on load waterline measurement. Canoes shall be classified and sailed according to the rules governing regattas of the American Canoe Association, except when in competition with other boats for fastest time over the course, in which event they will sail on the corrected time of this association. Insert the following under the present heading "Prizes": When five or more boats in a class start, a second prize shall be awarded. A prize shall be awarded to the boat making the best corrected time over the course in a regular regatta.

The following names have been proposed for membership: A. de F. Wheeler, Stratford, Conn.; M. T. Bennett, Jr., Garden City, L. I.; Wm. Boyce, New York.

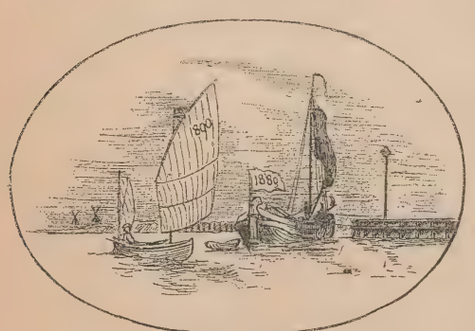


SOUTH BOSTON AND MASSASOIT CLUBS.—*Editor Forest and Stream:* In the FOREST AND STREAM of Jan. 2 appeared an article relating to the Massasoit C. C., of Boston, which contained a flagrant misstatement which I desire to correct. The writer says: "The club is really an offshoot from the South Boston C. C., and includes the latter club's founders in its roll of members." Whether made from ignorance or from some less excusable reason, the statement is grossly misrepresenting. The South Boston C. C. was organized with six founders Jan. 1, 1888; of these six founders, one, Wm. Barrett, left the club two years ago, while four of the remaining five, Jas. Craddock, Thos. Aickland, W. W. Hird and W. J. Martin, are still active members of the South Boston C. C. The fifth, J. A. Frizzell, is the only founder whose name can be found on the rolls of the Massasoit C. C.—JOHN J. MARTIN, Sec. S. B. C. C. (Boston, Jan. 11).

WINTER CANOEING.—The members of the Irrawadi C. C., of Davenport, Ia., have been making late fall cruises every year, but this season they have fairly beaten all previous records. On Thanksgiving Day the entire club had an all-day cruise up the Mississippi, and on New Year's Day several took a short cruise and were not seriously inconvenienced by the cold and not at all by the ice, as there is none in the river at this point. The boys are preparing for an active campaign in the spring.—C. M. PURCE.

A. C. A., CENTRAL DIVISION.—Com. Stanton has sent out the following notice: "To the executive committee and members of the A. C. A. Gentlemen—You are hereby notified that in accordance with Article VI., Sec. 1, of the Constitution, I have this day declared Mr. James K. Bakewell, of Pittsburgh, Pa., elected purser of the Central Division, in the place of Mr. F. F. Andrews, of Rochester, resigned."

A 15×31½ RACING CANOE.



THE canoe whose lines are here given has been raced for two seasons, and has proved a very successful boat, being very fast in smooth water, but at her best in a strong reefing breeze and a heavy chop sea, under which conditions she goes very well to windward, while being fast off the wind and reaching. She is sailed with a sliding seat and no ballast, the board weighing but 14lbs. Her rig consists of two Mohican sails, 75 in main and 40 in mizen, 115ft. in all, the area being well distributed fore and aft. The actual length of the canoe is 14ft. 10in., but we have extended the lines to 15ft., in uniformity with the lines of Fly, Vagabond and Charm, all other dimensions being unchanged. The displacement for a draft of 5in. is 325lbs. in salt water. The same design expanded to 16ft. would displace 347lbs. at the same draft. The canoe is raced at a draft of about 5⅛in. forward and 5¾in. aft.

BODY PLAN OF 15×31½ CANOE.

The bottom of keel has a shoe ⅜in. deep, which is not shown in the drawing. The boat is somewhat slow in stays, and would be improved by a moderate rocker to the keel, about 2in. in a length of 5ft. at each end. This is not shown in the table of offsets, but can be put in when laying down. The mainmast is 1ft. 2½in. from the bow; the mizenmast 11ft. 7½in. from bow. The centerboard is 26in. long, the fore end of slot being 5ft. from fore side of stem The board comes above the coaming, dropping the full 18in. when down. These lines are specially interesting in comparison with those of Fly and Vagabond, each of the three being radically different from the others. The following is a table of offsets:

Stations.	Heights	Half Breadths.								
	Deck.	Deck	10in.	8in.	6in.	4in.	2in.	Dia. 1	Dia. 2	Dia 3
0..	1 7	0¹	.....	.....	.....	.....	.....	.....	.....	.....
1..	1 5¹	3⁵	2⁵	2¹	1⁵	1¹	0⁵	3²	2⁴	1⁶
2..	1 3⁴	6⁶	5³	4⁶	3⁷	2⁷	1⁴	6³	5²	3⁴
3..	1 2¹	9⁴	8²	7⁵	6⁴	4⁷	2⁶	9¹	7⁵	5
4..	1 1²	11⁶	11	10²	9	7²	4²	11⁵	9⁶	6¹

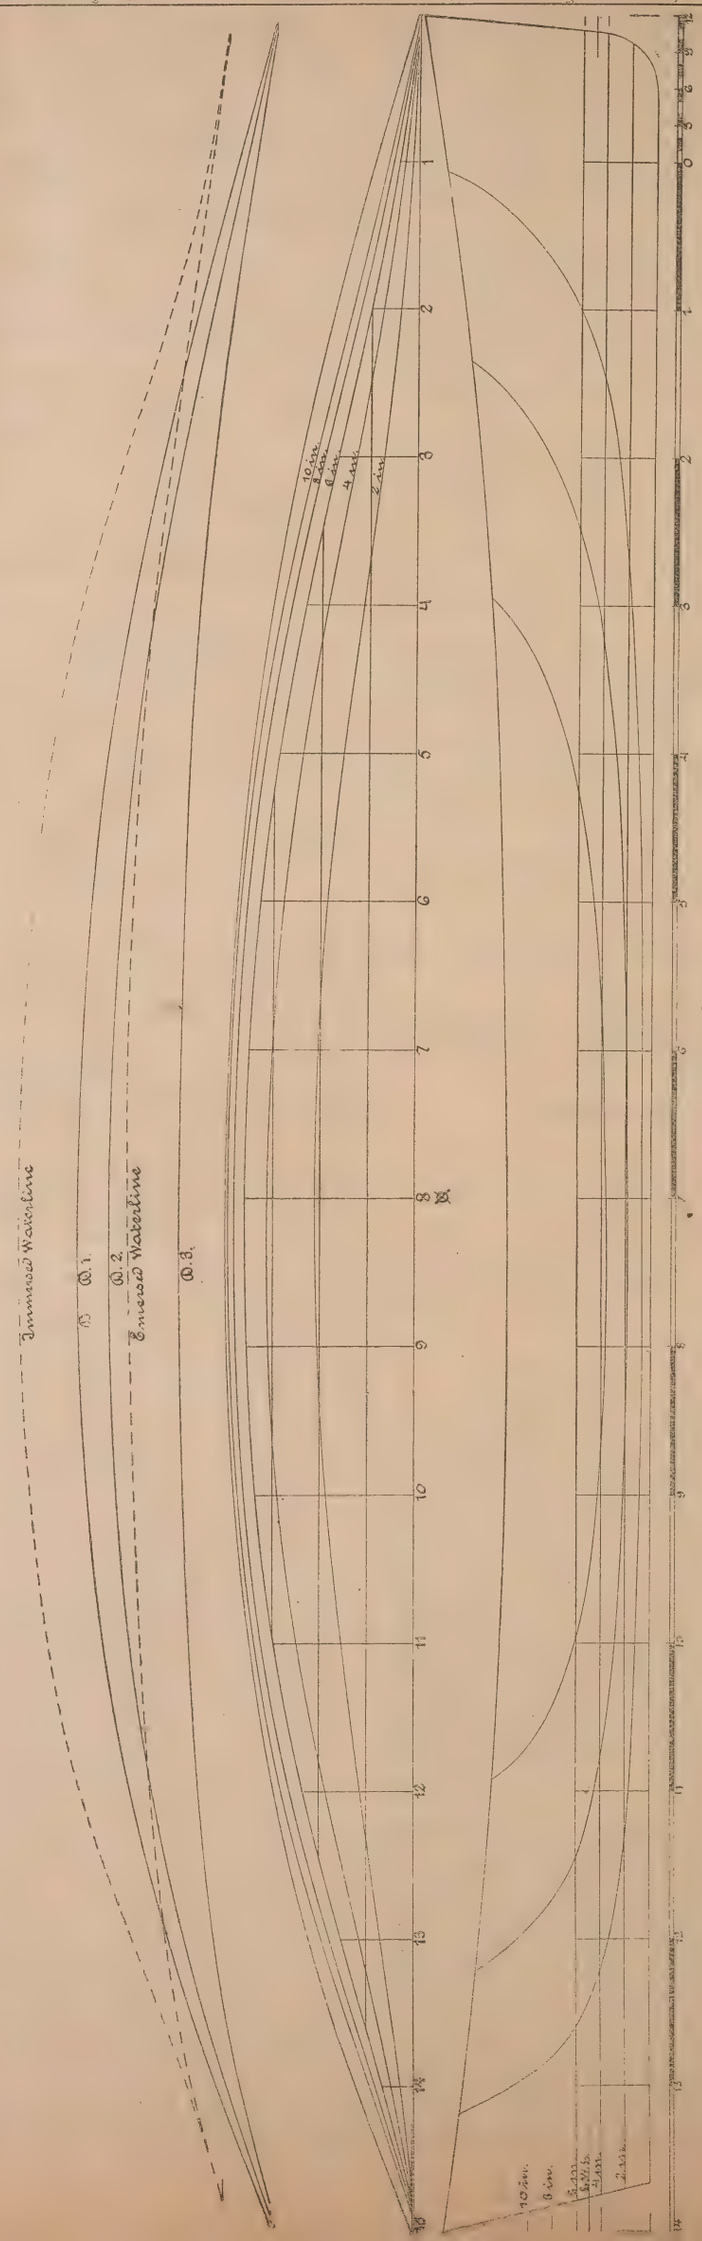
11..	1 0²	1 1⁴	1 1¹	1 0⁴	11⁴	9⁴	5⁷	1 1⁷	11⁵	6⁷
12..	1 0⁷	11³	10⁶	10¹	9	7¹	4³	11⁵	9⁶	6⁷
13..	1 2	8⁴	7⁴	6⁷	5⁷	4³	2⁶	8³	6¹	4⁶
14..	1 3³	4⁶	3⁵	3¹	2⁴	1⁷	1¹	4⁴	3⁵	2⁴
15..	1 4⁵	0¹	.....	.....	.....	.....	.....	.....	.....	.....

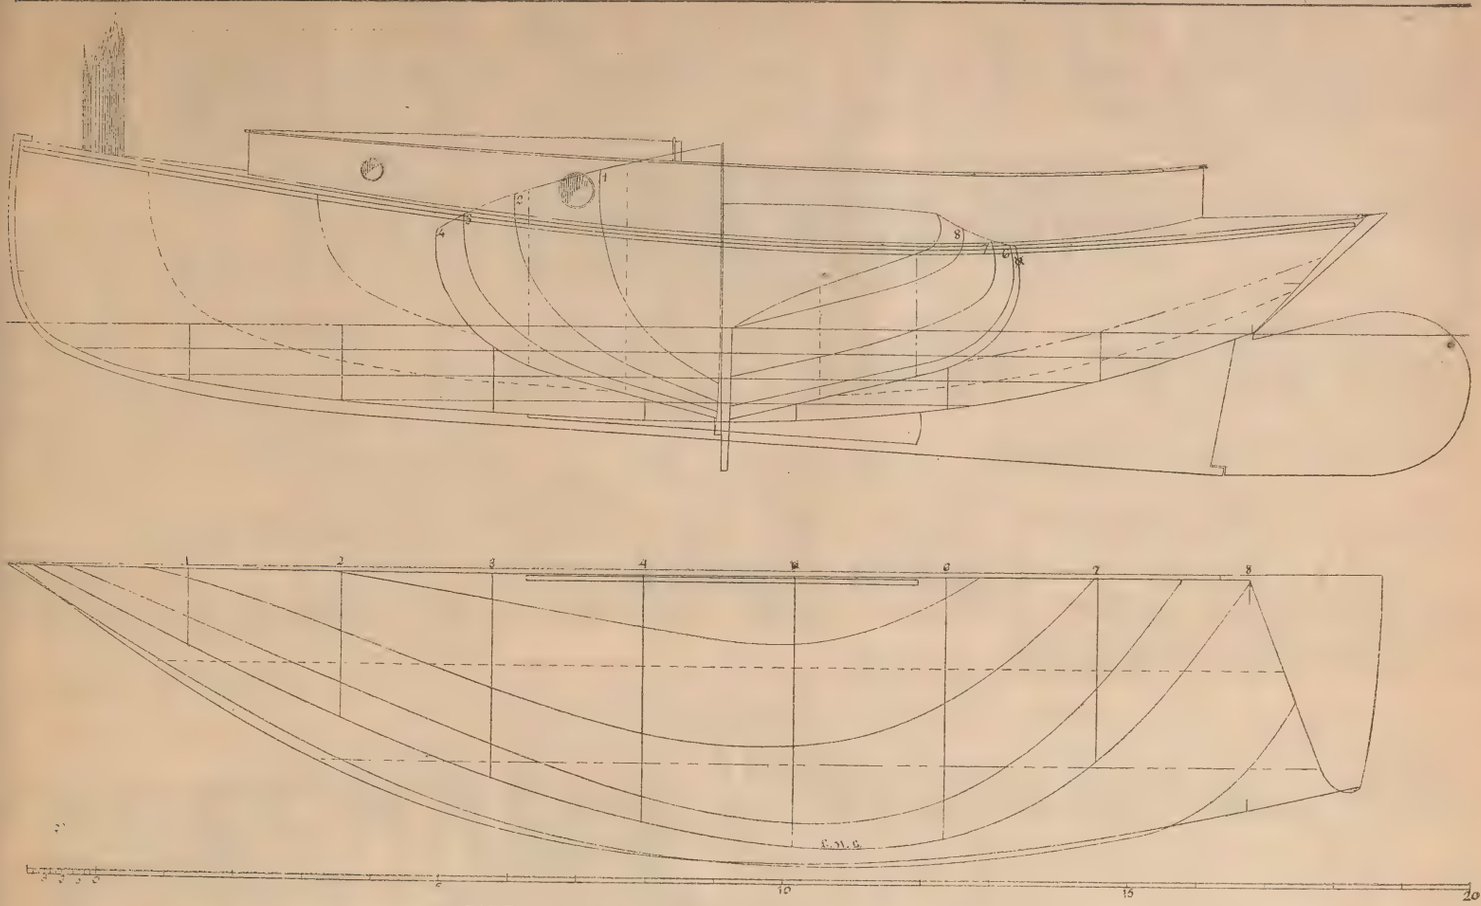
GLIMPSES OF THE A. C. A.—Under the above title Mr. S. R. Stoddard has published a very handsome series of photo-gravure pictures of the A. C. A. meet of 1889. The views of the racing canoes are among the best we have ever seen. The twenty pictures, which include the camp, the great A. C. A. circus and the racing fleet, are very well printed in different tints.

ORANGE C. C.—The Orange C. C., on the Passaic River, held their annual meeting of Jan. 8 in Arlington. The following officers were elected for the present year: Com., J. C. Massa; Vice-Com., G. Manley; Purser, R. W. Strachan, Jr.; Trustees, D. E. McMullen, C. W. Burroughs, C. G. Dans. The club proposes to put an addition on its house this spring.



NEW YORK C. C.—The first race of the season of 1890 was sailed on Jan. 14 over the usual course on New York Bay, being a private match between Walpus, W. W. Howard, and Kittiwake, Col. C. L. Norton. Kittiwake led for a time at the start, but was finally beaten by Walpus.

KNICKERBOCKER C. C.—Officers for 1890: Com., L. W. Seavey; Vice-Com., E. L. Hopkins; Sec., J. K. Hand; Treas., C. C. Foster; Meas., F. C. Moore.



A. C. A. MEMBERSHIP.—Atlantic Division—Geo. D. Gideon, Philadelphia, Pa.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

15×31½ RACING CANOE.

CAPE COD "CATBOAT" MAGIC. BUILT BY CROSBY BROS.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

THE CAPE "CATBOAT" MAGIC.

THE Magic, though in reality a "jib and mainsail" boat by virtue of her rig, is one of the family of Cape Cod catboats, made famous by such racers as Harbinger, Surprise, Mucilage and Kiowa. Though all were originally catrigged, and many still carry but a mainsail, there are some which use a jib at times, and others, like Harbinger, which carry it habitually, and are thus no longer catboats, but sloops. Magic was built in 1887 for Mr. Thos. P. Lewis, of Barnstable, Mass., by Crosby Bros., of Osterville, a firm well-known in connection with these craft. Her dimensions are:

Length over all	20ft.	
L.W.L.	17ft.	10½in.
Beam, extreme	8ft.	8in.
L.W.L.	8ft.	2in.
Draft without board	2ft.	1in.
Freeboard lowest	1ft.	3in.
Centerboard, length	5ft.	8in.
breadth	3ft.	4in.
pin from fore end of l.w.l.	7ft.	6in.
Mast, length	30ft.	
diameter at deck		7in.
Bowsprit outline	9ft.	
Boom	28ft.	
Gaff	17ft.	6in.
Hoist of mainsail	18ft.	6in.
jib	20ft.	6in.
Area of mainsail	512 sq. ft.	
jib	73 sq. ft.	

Magic held the championship of the Cape Cod Y. C., in the 18ft. class in 1887 and 1888.

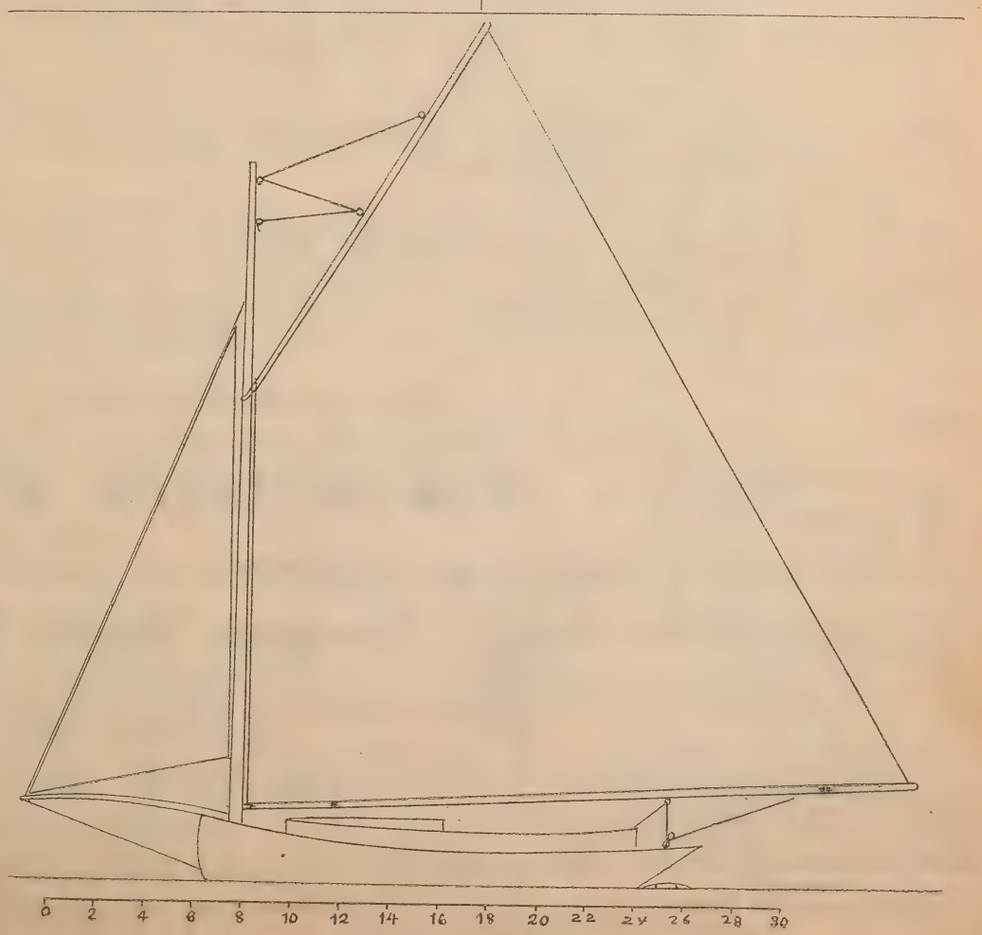
SEAWANHAKA CORINTHIAN Y. C.

THE annual meeting of the Seawanhaka Corinthian Y. C. was held at the club house on Jan. 11, with Vice-Com. Center in the chair. The following officers and committees were elected:

Trustees, Wm. B. Simonds and Chas. A. Post; Com., Robert Center, cutter Medusa; Vice-Com., Geo. H. B. Hill, schooner Miranda; Rear-Com., Ralph N. Ellis, schooner Iroquois; Sec'y, Leon F. d'Oremieulx; Treas., Walter C. Hubbard; Meas., John Hyslop; Fleet Surgeon, J. West Roosevelt, M.D.; Fleet Chaplain, Geo. R. Vandewater, D.D.; Race Committee, Wm. A. Haines, Morris M. Howland, Walter C. Kerr, J. Langdon Ward, Wm. B. Simonds; House Committee, Herbert L. Satterlee, Wm. A. Haines, Ashton Lemoine, Alfred Ely, Wm. B. Ogden; Committee on lectures and entertainment, J. Frederic Tams, Leonard Chenery, Lieut.-Comd'r U. S. N., Chas. A. Post; Committee on lines and models, John Hyslop, A. Cary Smith, Wm. P. Stephens; Library Committee, Henry W. Tyler, Henry W. Hayden, W. C. Brown. Committe on Exhibits, John F. Lovejoy, R. Alexander Rutherfurd, Geo. P. Blow, ensign, U. S. N.; Law Committee, Chas. W. Wetmore, Sidney Chubb, Henry P. Rogers.

The measurement committee made a recommendation to the effect that the proposed amendment regarding waterline length should be laid on the table, in order that the rules of the club should be in unformity with those of the New York and Eastern Y. C., which was done, the same committees being continued to confer with the committees of the other clubs in regard to uniform rules. The proposed changes in the details of measurement were all adopted. The clause relating to the spinaker boom was objected to on the ground that it was liable to be evaded, but was finally passed as proposed in order not to conflict with the same rule as adopted by the New York Y. C.; the committee being instructed to bring the matter before the other committees when they meet in order that the wording of the rule may be revised. The trustees' report showed the club to be in a prosperous condition; it suggested also that the club should endeavor during the coming seaeon to hold some races under conditions that should test as far as possible the merits of various rules of measurement. The other reports showed a membership of 318, or 11 more than last year; a fleet of 137 yachts, a gain of 20, and a net surplus of $1,000. The retiring treasurer, Mr. Simonds, has held the office for 11 years, while Mr. Foulke, the retiring trustee, has held the same office since the formation of the club. The first of the lectures on design and construction by Mr. A. Carey Smith was given on Jan. 7, and the second on Jan. 14. The annual dinner will be given at Delmonico's on Feb. 1.

DEATH OF CAPT. CUTHBERT.—Captain Alexander Cuthbert, of Belleville, Ontario, builder of the yachts Countess of Dufferin and Atalanta, died at his home on Jan. 14.



CORRECTED LENGTH AND "CANOE TYPE."

THE *Field* comments as follows on the recent report of the Eastern Y. C. committee:

"The Eastern Y. C., of Boston, U. S. A., appointed a committee, consisting of General Paine, Mr. Edward Burgess, and three others to consider the advisability of adopting a rating rule like that of the Seawanhaka Y. C. (as recently adopted by the New York Y. C.). The committee have reported that they are afraid to adopt a rule which is so easy on length and hard on sail—in these respects it is not so easy or hard as the Y. R. A. rule—because it might produce "an undesirable craft of the canoe type," to the extinction of the centerboard yacht.

"We certainly think these are groundless fears, even if the rule referred to be taken in conjunction with the new classification of sailing length instead of actual length of loadline. There certainly are no indications at present in this country (so far as yachts are concerned) that anything approaching a canoe type of yacht would succeed. Certainly the objection made to a simple sail area rule three years ago was that it might produce a canoe type of yacht in the smaller classes, and probably there were grounds for that apprehension, although it was not put to the test; but, at any rate, we do not see how the canoe type of yacht could exist without the centerboard even in small craft. If there is a deep fixed keel or 'dorsal fin,' such as the Humming Bird and others have, coupled with great beam, there is nothing 'canoe' about the type; if there is, then we might call the Jullanar of the canoe type, and she is usually spoken of as anything but an undesirable craft. The fact is, however, that both we in this country, and the best informed Americans, have now seen enough of the length and sail area rule to be convinced that a 'canoe type' of yacht is not possible under it. It may possibly yet come to that in the small classes of 5-rating and under, but the superiority of the type for match sailing would have to be very clearly proved before it became of universal adoption. And after all, if the type proved to be a bad one, it could easily be checked in its development."

WRECK OF A FOREIGN YACHT.—A very meagre report has come by cable from Cadiz to the effect that an English schooner, Inva by name, has been wrecked of the coast of Spain and 6 men drowned. The only yacht of this name is a schooner-rigged steam yacht, formerly the Argo, now owned by Count Straganoff and hailing from St. Petersburg.

SAIL PLAN OF MAGIC.

THE NEW YORK STATE NAVAL RESERVE.

THE Naval Reserve Artillery of the State of New York is now permanently established, and the actual work of drilling the newly enlisted members has commenced. The battalion has its headquarters on shore, where instructions by means of a model ship will be given as far as possible; and in addition broadsword, howitzer and machine gun practice will be given on board the Minnesota. The following orders have been issued:

GENERAL ORDER, NO. 1.

1. By virtue of an act of the Legislature of the State of New York, entitled, "An act to establish a State naval militia," Chap. 492, Laws of 1889, and pursuant to an election by the members of the First Provisional Battalion of the Naval Reserve Artillery, held Oct. 28, 1889, I hereby assume command.

2. George Edward Kent is hereby appointed adjutant of the battalion with the rank of lieutenant, and will be obeyed and respected accordingly.

3. The following named members having been duly elected captains of the respective companies, are hereby directed to assume command of the same with the rank of lieutenant, and will be obeyed and respected accordingly: First Company, S. Dana Green; Second Company, F. R. Calvin; Third Company, L. M. Mowbray; Fourth Company, W. P. Williams.

4. Headquarters of this battalion have been established at No. 873 Sixth avenue, New York city, where two members of the recruiting committee of each company will be in attendance every Tuesday evening at 8 o'clock until further orders.

5. All business of the battalion will be transacted by the board of officers.

6. The U. S. S. Minnesota, having been named by the Hon. Secretary of the Navy for the use of the battalion for two evenings per week, the same is hereby accepted. Notice of drills will be given on board said vessel. PHILIP B. LOW, Lieut. Commanding.

Official: GEO. E. KENT, Lieut. and Adjutant.

SPECIAL ORDER, NO. 1.

1. Monday and Thursday evenings of each week are designated as drill nights for this battalion. The first and third companies will drill on Monday evenings, and the second and fourth companies on Thursday evenings. Drill call will be sounded promptly at 8 o'clock. These orders to take effect immediately. By order of P. B. LOW, Lieut. Commanding.

Official: GEO. E. KENT, Lieut. and Adjutant.

Under the law lately passed by the State of Massachusetts, the Adjutant-General has authorized the organization of two companies of naval militia in Boston, and the Massachusetts Y. C. is now working for the enrollment of recruits. Quarters will be assigned in the new armory on Dartmouth street, and permission has been obtained to use the U. S. vessel Wabash for practice afloat.

THE LIMITATION OF SPINAKER BOOMS.

THE *Field* of Dec. 28, makes the following criticism on the wording of the spinaker boom clause lately adopted by the New York Y. C.:

"The New York Y. C. has formulated its new measurement rule and thus deals with the spinaker boom: 'The length of base line shall be modified in any case where the spinaker boom measures more than the distance from the fore side of mast to the forward point of base line' at the bowsprit end. The Y. R. A. rule reads: 'In all cases, if the distance from the center fore and aft line of the mast to the outer end of the spinaker boom (when shipped in its place and square to the keel) exceeds the distance from the fore side of the mast to the cranse iron on bowsprit end, the excess shall be added to the base line.' Of course the New York Y. C. regulation is much more simple; but at the time when the Y. R. A. rule was passed it was thought that any such simple regulation would lead to long shanks to goose necks, or to contrivances for shipping the boom on the rail, etc., hence the regulation, which at first sight certainly looks rather obscure. After all it is the spread which the boom and its connections can give the spinaker which has to be considered, and the Y. R. A. rule takes full account of it, and the New York rule does not."

The present wording leaves room for an evasion in the shape of a very long gooseneck, or of shipping the boom on the rail in very light winds, both of which are contrary to the spirit of the rule. The wording of the Y. R. A. rule is better, as it will prevent any such evasion.

WATERPROOFING FABRICS.

NO question is so often asked of us as that of the best method of waterproofing, our mail this week bringing two such inquiries. We have frequently printed receipts, that by means of alum and sugar of lead best. The following correspondence concerning this method has lately appeared in the *Field:*

"A porous waterproof cloth is the best for outer garments during wet weather for those whose duties or labor causes them to perspire freely. The best way for preparing such cloth is by the process adopted for the tunics of the French soldiers during the Crimean war. It is as follows: Take 2½lbs. alum and dissolve in 10 gallons of boiling water; then in a separate vessel dissolve the same quantity of sugar of lead in 10 gallons of water and mix the two solutions. The cloth is now well handled in this liquid until every part of it is penetrated, then it is squeezed and dried in the air or in a warm apartment, then washed in cold water and dried again, when it is fit for use. If necessary the cloth may be dipped in the liquid and dried twice before being washed. The liquor appears curdled when the alum and lead solutions are mixed together. This is the result of double decomposition, the sulphate of lead, which is an insoluble salt, being formed. The sulphate of lead is taken up in the pores of the cloth, and it is unaffected by rains or moisture, and yet it does not render the cloth airtight. Such cloth is also partly uninflammable. A solution of alum itself will render cloth, prepared as described, partially waterproof, but it is not so good as the sulphate of lead. Such cloth—cotton or woolen—sheds rain like the feathers on the back of a duck. As to cost, alum is 1½d. per pound and sugar of lead 8d. per pound, and doubtless each could be had for less in quantities. Experience will tell the amount of liquor necessary for, say, a score of capes; but anyway the process will be found to be sufficiently inexpensive and effectual.—W. V. W. [The details as given by our correspondent will be useful to many of our readers, but his explanation is not correct; the essential parts of the alum, namely, the sulphate of alumina and the acetate of lead (sugar of lead) are mutually decomposed, acetate of alumina and sulphate of lead being produced. The latter is a perfectly insoluble and useless white powder; it is the acetate of alumina that repels the water when dry upon the fibers of the cloth.—ED.]

"I have used many ways and materials to try and keep dry when shooting, but I must confess without much success, except at the expense of being drenched with perspiration. I read with much interest your process of waterproofing with sugar of lead, etc., which I have heard of before, but was always afraid to try, from a fear that there might be a danger of lead poisoning from wearing things so treated, especially as they would generally be worn when the skin was warm, and consequently more open. Perhaps, to satisfy my scruples, you will be kind enough to answer the annexed queries. 1. Is there any risk whatever of lead poisoning from wearing clothes treated with the solution of sugar of lead and alum as recommended in the *Field* of the 12th inst.? 2. Supposing it is quite safe to wear a coat so treated, would it be equally safe to wear knickerbockers and stockings treated in the same way, these being in immediate contact with the skin? [If properly prepared, the acetate of lead is all converted into sulphate of lead, which, being a white, utterly insoluble powder, should not be allowed to get into the cloth, and would be perfectly harmless if it got there.—ED.]" "Referring to a paragraph in your last issue, and your remarks thereon, I think it only right your readers should be cautioned how they use sugar of lead. Some years ago I tried the process in question through seeing it mentioned in your columns, and, although I only stirred the sugar of lead with a stick, and never touched it with my hands, the fumes caused me to be severely lead-poisoned, and were it not for good medical treatment, I think the result would have been fatal. As it was I lost 7lbs. weight in a fortnight, and felt the effects for months. I would much rather get wet than make my waterproofs for the future.—E. B. T. [Sugar of lead is not volatile, and it is probable that some may have been taken into the mouth unconsciously by our correspondent, as, though very poisonous, it is not readily absorbed by the skin, being constantly used in lotions and so-called hair-revivers.—ED.]"

UNIFORM RACING RULES.

IN view of the action of the New York Y. C., and in order to be in complete harmony with other clubs, the Measurement Committee of the Seawanhaka Cor. Y. C. at the last meeting made a recommendation that the amendment providing for a classification by corrected length, as recommended by them, be laid on the table. It was further moved that the same committee be continued to confer with other clubs on the subject of uniform rules. As the New York, Larchmont, Atlantic and Eastern clubs now have similar committees, it is likely that a joint meeting will be held very soon, in order that such work as is deemed advisable may be completed before the beginning of the season.

MASSACHUSETTS Y. C.—The annual meeting of the Dorchester Y. C. was held on Jan. 3 at the winter quarters in Boston, with Com. Soley in chair. A very important amendment was made to the by-laws, the name of the club being changed to the Massachusetts Y. C. The following officers were elected: Com., J. C. Soley, Diana; Vice-Com., W. T. Lambert, Bohemian; Sec'y, W. B. McClellan; Treas., H. B. Callendar; Meas., Hartford Davenport, Lydia Adams; Ass't Meas., C. H. Dood, Deuce. Directors, the commodore (*ex-officio*), H. W. Savage (Clytie), C. H. Nute, Erastus Willard, C. H. Whiting. Membership Committee, A. L. Jacobs, C. F. Rice (Winsome), Chester Guild, Jr., T. W. King (Ethel), E. H. R. Revere, J. Dearborn (Mirage), A. Underwood. Regatta Committee, L. M. Clark (Paradox), Phillip Little, W. O. Gay (Nomad), W. T. Mann (Aldo), C. H. Guild (Beetle). House Committee, A. J. Clark, Francis Gray (Psyche), Eben Putnam, Frederick Gray, E. N. Pierce. The total membership, including the names now under consideration, is 294. The following amendments were also made to the by-laws: Art. 20, Sec. 9. By adding the words, "The membership shall be limited to 300, but in case of yacht owners applying for membership the committee is authorized to increase that limit temporarily." Insert Art. 14 (and change numbers of following articles): "There shall be three standing committees as follows: Regatta committee, membership committee and house committee. No member of the club shall be a member of more than one standing committee at the same time, and no officer shall be a member of a standing committee. The club has made arrangements for leasing a club house on Rowe's wharf, and landing privileges on India Wharf.

LYNN Y. C.—At the annual meeting of the Lynn Y. C., held Jan. 7, the following board of officers were chosen for the ensuing year: Com., F. E. Baker; Vice-Com., H. L. Parker; Treas., J. W. Attwell; Sec'y, F. E. Newhall, 22 Newhall street, Lynn. Directors, B. W. Rowell, E. B. Newhall, H. K. Wheeler, J. W. Haines, E. H. Dunbar. Membership Committee, J. H. Tufts, W. A. Estes, F. Holbrook. The annual report of the treasurer showed an advance in a year from a debt of $800 to a surplus of $236, the annual receipts of the year $2,226.21, the expenditures $885.87. The net receipts of the recent banquet were $626.33. On Jan. 1, 1889, the club had outstanding debts of $830. Jan. 1, 1890, the entire debt had been paid and $200 added to the sinking fund and over $206 in the treasury. M. C. J. Blethen is to float a new catboat this spring, to be 20ft. 5in. over all, 17ft. waterline, 9ft. beam and 11in. draft. Com. Baker and H. K. Wheeler are building a 40ft. steam launch.

HULL Y. C.—The annual meeting of the Hull Y. C. was held on Jan. 11, with Com. Whitten in the chair. The following officers were elected: Com., C. V. Whitten; Vice-Com., J. J. Henry; Rear-Com., J. J. Souther; Sec., W. A. Cary; Treas., C. C. Hutchinson; Assist. Sec., H. W. Friend; Meas., W. E. Sherriff; Executive Committee, W. D. Lovell, J. B. Forsyth, W. B. Lambert and J. R. Hooper; Membership Committee, F. L. Dunne, C. S. Wade, H. W. Friend and H. Taggard; Delegates to the New England Y. R. A., J. F. Brown and F. M. Bond. The membership is now 252. The foundation of the new house being completed, the committee was empowered to contract for the building at a cost of not over $6,000. A proposal was made to change the club flag, but was not acted on at this meeting. Mr. W. D. Lovell was appointed Fleet Captain.

THE NEW JAMESON CUTTER.—The composite yacht now building by Fary & Co., of Southampton, for Mr. John Jameson, late owner of Irex, will be 111ft. over all, 83ft. 6in. l.w.l., 19ft. beam, 13ft. 6in. draft, and will have a centerboard, the trunk being below the cabin floor. She has the clipper stem and raking sternpost. Her lead keel weighs 70 tons. It is very unlikely that she will challenge for the America's Cup, in spite of the reports to that effect that have lately been current here. Mr. Jameson proposes to own the fastest British racing yacht in the future, as he has for some years in the past; and to that end has built to the largest practicable limits in order to realize the advantages which size gives. Capt. Wm. O'Neil, who has sailed Silver Star, Samoena and Irex, all Richardson boats, will command the new craft.

LARCHMONT Y. C.—At a meeting of the Larchmont Y. C. on Jan. 8, it was voted, after a long discussion, to raise the annual dues from $25 to $40.

SIPPICAN Y. C.—The Sippican Y. C., after rather a doubtful existence since its organization, will enter upon its fourth season, that of 1890, in an extremely flourishing condition. Nearly all the prominent yachtsmen of Buzzards Bay are among the members, and the fleet comprises many famous yachts. Among the other yachts are the catboats Mattie and Climax of the first class, Widgeon and Lestris of the second, Daisy, Hera and Edith of the third, and Capt. Bird's fast little sloop Ziuzara. The treasurer's report shows a clear surplus in the treasury. The club's headquarters are at Marion, Mass., on Sippican Harbor, a branch of Buzzards Bay. The races are sailed on the open waters of the bay. The following dates have been fixed for next season: July 19, open race; Aug. 16, club race; Aug. 30, open sweepstakes. Larger prizes will be offered in the coming races than in former ones, and therefore large attendance is expected.

WINTER CRUISING.—The only sailing yachts now cruising in Florida and the West Indies are Iroquois, Rear-Com. Ellis, Seawanhaka C. Y. C., and Whim. Both of these schooners were designed by Mr. A. Cary Smith for Mr. Chapin, the present owner of the large cruising schooner Yampa, by the same designer. Mr. Smith is now at work on a design for a fast-cruising centerboard schooner, similar to Iroquois, but 84ft. long. She will be of steel, with her board below the cabin floor. Augusta, steam yacht, was at Norfolk, Va., on Jan. 11, on her way to Jacksonville. Vedette, steam yacht, Mr. F. W. Vanderoilt, has been at Elizabeth City, N. C., for repairs, on her way south.

BROOKLYN Y. C.—Officers, 1890: Com., Benjamin F. Sutton; Vice-Com., Geo. P. Foote; Rear-Com., P. H. Jeannot; Pres., Daniel O'Reilly; Treas., Wm. Burk; Sec'y, Wm. Cogger; Meas., R. C. Hopkins. Regatta Committee, Willis Holly, W. A. Taylor and A. S. Richoffer. Membership Committee, Henry Reilly, Edward Chandler and O. E. Tredwell. Trustees, Edward F. Drayton, John P. Tribken, Willard Gornam, George H. Lyons, M. F. Tobin, John Cottier, A. M. Lochhead, Franklin Prentiss and J. J. Welsh.

PROCEEDINGS OF THE U. S. NAVAL INSTITUTE.—The last quarterly number for 1889 contains a very interesting article on the works of the Bethlehem Iron Co., by W. H. Jaques; a paper on "Our Future Navy," by Rear-Admiral Luce, U. S. N.; and a valuable paper on the Management of Boats in Surf, by Ensign A. A. Ackerman, U. S. N.; in addition to much other interesting matter.

HARLEM Y. C.—Officers, 1890: Com., F. Lalor; Vice-Com., W. J. Cooper; Recording Sec'y, W. H. Porter; Financial Sec'y, H. B. McAllister; Corresponding Sec'y, J. Hutchings; Treas., Charles Hutchinson; Meas., John A. Lalor; Steward, Robert Payton. Trustees, Geo. W. Fuller, J. C. Ebmeyer, Thos. Hendry, R. L. Fersenheimer and Ed. McEvoy.

HUDSON RIVER Y. C.—Officers 1890: Com., Henry F. Allen; Vice-Com., John E. Drew; Sec., Edward R. Wilson; Treas., Richard V. Freeman; Meas., James K. Tucker, and Steward, John P. Hufnagel.

THE MARITIME EXHIBITION.—The Maritime Exhibition, which lately closed in Boston, has not proved a financial success, the loss being stated at $50,000.

A CENTERBOARD PILOT BOAT.—Boston will soon have a novelty in the shape of a centerboard pilot boat; the only one, we believe, on the coast.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

V. K., Ithaca, N. Y.—We have no record of the fastest mile made by a greyhound.

W. A. W., Portland, Ore.—The design published this week should answer your purpose.

T. M., New York.—We are not at liberty to give the writer's address, but will forward a letter to him for you.

T. W. S., Fond du Lac, Wis., and S. W. D., Wellesley, Mass., will find directions for waterproofing in another column.

G. R. M., New Boston, Ill.—Write to the Patent Office, Washington, for a pamphlet giving full information for taking out a patent.

L. F. J., Trenton, N. J.—We know of no safe method to produce abortion in a bitch. Would advise you to let nature take its course. There have undoubtedly been cases where the influence of previous sires has been shown in the offspring, but such cases are so extremely rare that the matter is hardly worth consideration.

M. G. C., Cape Cod, Mass.—You may secure the live jack rabbits from Mr. H. L. Liebfried, Garden City, Kan. They cost $2.50 each boxed for express, and the express charge to New York is $3 for each rabbit. The Eastern Coursing Club secured their jacks from this source and we understand they were satisfied with the transaction.

W. R. C. W., Port Hammond, B. C.—The description of the animal, as given you by the old trapper (who is more afraid of a woman than a grizzly) is too meagre to enable us to identify the creature, but it is probably the shoti, sewellel, or mountain beaver (*Aplodontia leporina*), though the description does not quite answer to this.

W. D. C., Brooklyn, N. Y.—Does the law allow a citizen of this city or the vicinity to carry a pistol loaded or empty. If it does not, please inform me where, under what conditions and by whom can a license be granted and its cost? Ans. Apply to police captain of the precinct in which you live. He will, if you are a proper party for it, issue a license at a small fee.

A. S. R., Springfield, O.—Champion Gloster is owned by Mr. James L. Breese, Tuxedo Park, N. Y. He was whelped July 24, 1884, and is by Dashing Rover (Dash II.—Norna) and out of Trinket (Crack—Diana). He was very high commended at New York 1887. His field trial record is first Members' Stake and divided second All-Aged Stake, Eastern Field Trials, 1886; first All-Aged Stake and first Champion Stake, Eastern Field Trials, 1887; first Members' Stake, Eastern Field Trials, 1888; and second Members' Stake, Eastern Field Trials, 1889.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a series of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*
